ELECTRIC RAILWAY LEGAL DECISIONS

ADVERTISING LITERATURE

ALPHABETICAL INDEX TO ADVERTISEMENTS.

CLASSIFIED LIST OF ADVERTISERS.

Advertising, Street Car.
Corliss, Barron G., Flat Iron Bldg., New York.

Air Brakes—(See Brakes and Brake Parts).

Air Compressors—(See Compressors, Air).

Alloys and Bearing Metals.
Brown, H. P., 120 Liberty St., New York.
General Electric Co., Schenectady, N. Y.
Harrison Elec. & Mfg. Co., 169 South St., New York.
Lumen Bearing Co., Buffalo, N. Y.
Ohio Brass Co., Mansfield, O.
Ridlon, Frank, Co., 200 Summer St., Boston.

Aluminum Wire, Etc.
Aluminum Co. of America, Pittsburg.

Anchors.
Atlas Anchor Co., Cleveland, O.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
Miller Anchor Co., Norwalk, O.
Ohio Brass Co., Mansfield, O.

Armatures and Coils, Winding and Repairing.
Cleveland Armature Works, Cleveland, O.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.
Harrison Elec. & Mfg. Co., 169 South St., New York.
Marshall, R. W., & Co., 95 Liberty St., New York.
Ridlon, Frank, Co., 200 Summer St., Boston.
Stuart-Howland Co., Boston.

Armature Lifts.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago

Asbestos Materials.
Johns-Manville, H. W., Co., New York.

Axles—(See Wheels and Axles).

Babbitt Metals—(See Alloys and Bearing Metals).

Badges and Buttons.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
Recording Fare Register Co., New Haven, Conn.

Ballast Cars—(See Cars, Ballast).

Ball Bearing.
Symington, T. H., Co., Baltimore, Md.

Bases—(See Trolley Poles and Fittings).

Batteries.
General Storage Battery Co., 42 Broadway, New York.

Bearings.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.
Harrison Elec. & Mfg. Co., 169 South St., New York.
Lumen Bearing Co. Buffalo, N. Y.
McGuire-Cummings Mfg. Co., Chicago.
Marshall, R. W., & Co., 95 Liberty St., New York.
Nuttall, R. D., Co., Pittsburg.
Ohio Brass Co., Mansfield, O.
Ridlon, Frank, Co., 200 Summer St., Boston.
Symington, T. H., Co., Baltimore, Md.
Van Dorn & Dutton Co., Cleveland, O.

Bells and Gongs.
American Car Co., St. Louis.
Brill, The J. G., Co., Philadelphia.
Electric Service Supplies Co., 1020-24 Filbert St., Phila.

Bells and Gongs—Continued.
Kuhlman, The G. C., Car Co., Cleveland.
McGuire-Cummings Mfg. Co., Chicago.
Ohio Brass Co., Mansfield, O.
Reiter, G. C., Canton, O.
Stephenson, John, Co., Elizabeth, N. J.
Wallace Supply Co., Chicago.
Wason Mfg. Co., Springfield, Mass.
Western Electric Co., Chicago.

Black Lead.
Detroit Graphite Co., Detroit, Mich.
U. S. Graphite Co., Saginaw, Mich.

Block System—(See Signals).

Blowers—(See Mechanical Draft)

Blue Printing Machines.
Buckeye Engine Co., Salem, O.

Boilers.
Babcock & Wilcox Co., N. Y.
Fairbanks, Morse & Co., Chicago.
Green Fuel Economizer Co., Meteawan, N. Y.
Heine Safety Boiler Co., 421 Olive St., St. Louis.
Rossiter, MacGovern & Co., 17 Battery Pl., New York.

Boiler Cleaning Compound.
Dearborn Drug & Chemical Works, Chicago.
Johns-Manville, H. W., Co., New York.

Bonds, Rail.
Brown, H. P., 120 Liberty St., New York.
Chase-Shawmut Co., Newburyport, Mass.
Electric Railway Improvement Co., Cleveland, O.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.

Bonds, Rail—Continued.
Goldschmidt Thermit Co., 43 Exchange Pl., New York.
Johns-Manville, H. W., Co., New York.
Ohio Brass Co., Mansfield, O.

Brackets and Cross Arms.
Anderson, Albert & J. M., Mfg. Co., Boston.
Creaghead Engineering Co., Cincinnati, O.
Electric Railway Equipment Co., Cincinnati, O.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
Lindsley Bros. Co., Spokane, Wash.
Ohio Brass Co., Mansfield, O.
Ridlon, Frank, Co., 200 Summer St., Boston.
Stuart-Howland Co., Boston.
Western Electric Co., Chicago.

Brakes and Brake Parts.
Allis-Chalmers Co., Milwaukee, Wis.
American Car Co., St. Louis.
Brill, The J. G., Co., Philadelphia.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.
Kuhlman, The G. C., Car Co., Cleveland.
McGuire-Cummings Mfg. Co., Chicago.
National Brake & Electric Co., Milwaukee.
Stephenson, John, Co., Elizabeth, N. J.
Wason Mfg. Co., Springfield, Mass.
Westinghouse Traction Brake Co., Pittsburg, Pa.

Brakeshoes.
American Brake Shoe & Fdry. Co., Mahwah, N. J.
American Car Co., St. Louis.
Barbour-Stockwell Co., Cambridgeport, Mass.

CLASSIFIED LIST OF ADVERTISERS Continued.

Brakeshoes—Continued.
Brill, The J. G., Co., Philadelphia.
Kuhlman, The G. C., Car Co., Cleveland.
McGuire-Cummings Mfg. Co., Chicago.
Marshall, R. W., & Co., 95 Liberty St., New York.
Standard Brake Shoe Co., Aurora, Ill.
Stephenson, John, Co., Elizabeth, N. J.
Wason Mfg. Co., Springfield, Mass.
Wharton, Wm., Jr., & Co., Philadelphia.
Wheel Truing Brake Shoe Co., Detroit.

Bridges, Bascule and Concrete.
Wallace-Coates Engineering Co., Chicago.
Johann, F. A., 1624 Pierce Bldg., St. Louis.

Bridge Timbers.
Beidler, Francis, & Co., Chgo.

Brushes, Motors and Dyanmos.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.
National Carbon Co., Cleveland, O.
Ridlon, Frank, Co., 200 Summer St., Boston.
Speer Carbon Co., St. Marys, Pa.

Bumpers, Car.
American Car Co., St. Louis.
Brill, The J. G., Co., Philadelphia.
Kuhlman, The G. C., Car Co., Cleveland.
Stephenson, John, Co., Elizabeth, N. J.
Wason Mfg. Co., Springfield, Mass.

Car Cleaner.
Gillette Chemical Co., 42 Broadway, New York.

Car House Doors.
Kinnear Mfg. Co., Columbus, O.
Wilson, J. G., Mfg. Co., New York.

Car Replacers.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
Fairbanks, Morse & Co., Chgo.
Kalamazoo Railway Supply Co., Kalamazoo, Mich.
Ohio Brass Co., Mansfield, O.

Car Roof Paint, Canvas.
St. Louis Surfacer & Paint Co., St. Louis, Mo.

Car Seats.
American Car Co., St. Louis.
Brill, The J. G., Co., Philadelphia.
Hale & Kilburn Mfg. Co., Philadelphia.
Heywood Bros. & Wakefield Co., Wakefield, Mass.
Kuhlman, The G. C., Car Co., Cleveland.
Stephenson, John, Co., Elizabeth, N. J.
Wallace Supply Co., Chicago.
Wason Mfg. Co., Springfield, Mass.

Car Signs—(See Signs, Cars and Track).

Car Steps.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
Wallace Supply Co., Chicago.

Car Trimmings—(See Trimmings, Car).

Cars, Ballast.
Rodger Ballast Car Co., Chgo.

Cars, Dump.
Fairbanks, Morse & Co., Chgo.
Middletown Car Works, Middletown, Pa.
Rodger Ballast Car Co., Chgo.
Russell Car & Snow-Plow Co., Ridgway, Pa.

Cars, Passenger and Freight.
American Car Co., St. Louis.
Brill, The J. G., Co., Philadelphia.
Cincinnati Car Co., Cincinnati.
Detroit Carbuilding & Equipment Co., Detroit, Mich.
Electric Railway Improvement Co., Cleveland, O.

Cars, Passenger and Freight—Continued.
Fairbanks, Morse & Co., Chgo.
Jewett Car Co., Newark, O.
Johann, F. A., 1624 Pierce Bldg., St. Louis.
Kuhlman, The G. C., Car Co., Cleveland.
McGuire-Cummings Mfg. Co., Chicago.
Niles Car & Mfg. Co., Niles, O.
Pressed Steel Car Co., Pittsburg.
Rodger Ballast Car Co., Chgo.
Russell Car & Snow-Plow Co., Ridgway, Pa.
Standard Motor Truck Co., Pittsburg.
Stephenson, John, Co., Elizabeth, N. J.
Wason Mfg. Co., Springfield, Mass.

Cars, Pay-As-You-Enter.
Pay-As-You-Enter Car Co., 26 Cortlandt St., New York.

Cars, Rebuilt.
Detroit Carbuilding & Equipment Co., Detroit, Mich.

Cars, Second-Hand.
Detroit Carbuilding & Equipment Co., Detroit, Mich.
Marshall, R. W., & Co., 95 Liberty St., New York.
Zelnicker, Walter A., Supply Co., St. Louis.

Cars, Steel.
Middletown Car Works, Middletown, Pa.
Pressed Steel Car Co., Pittsburg.
Standard Motor Truck Co., Pittsburg.

Castings, Brass.
Star Brass Works, Kalamazoo, Mich.

Castings, Iron and Steel.
American Brake Shoe & Foundry Co., Mahwah, N. J.
Green Engineering Co., Com'l Nat. Bk. Bldg., Chicago.
Lorain Steel Co., Johnstown, Pa.
National Brake & Electric Co., Milwaukee.

Catchers—(See Trolley Retrievers and Catchers).

Cattle Guards.
Fairbanks, Morse & Co., Chgo.
Kalamazoo Railway Supply Co., Kalamazoo, Mich.

Cements, Cable and Transformer.
Massachusetts Chemical Co., Walpole, Mass.

Circuit-Breakers.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.
Western Electric Co., Chicago.

Coal Handling Machinery—(See Conveyors).

Coils—(See Armatures and Coils)

Commutators and Parts.
Cleveland Armature Works, Cleveland.
Electric Service Supplies Co., 1020-24 Filbert St., Phila.
General Electric Co., Schenectady, N. Y.
Harrison Elec. & Mfg. Co., 169 South St., New York.
Homer Commutator Co., Cleveland, O.
Marshall, R. W., & Co., 95 Liberty St., New York.
Ohio Brass Co., Mansfield, O.
Stuart-Howland Co., Boston.

Compressors, Air.
Fairbanks, Morse & Co., Chgo.
General Electric Co., Schenectady, N. Y.
National Brake & Electric Co., Milwaukee.
Westinghouse Traction Brake Co., Pittsburg.

Concrete Mixers.
Contractors' Supply & Equip. Co., Chicago.

Condensers.
Wheeler Con. & Eng. Co., New York.

Conduits.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
Western Electric Co., Chicago.

Contractors.
Arnold Company, 181 La Salle St., Chicago.
Byllesby, H. M., Co., Am. Trust Bldg., Chicago.
Columbia Construction Co., Milwaukee, Wis.
Creaghead Engineering Co., Cincinnati, O.
Green Engineering Co., Com'l Nat. Bk. Bldg., Chicago.
Register, A. L., & Co., 112 N. Broad St., Philadelphia.
Sanderson & Porter, 52 William St., New York.
Saxton, E., 841 Bladensburg R. Washington, D. C.
Sheaff & Jaastad, 88 Broad St., Boston.
Stone & Webster Engineering Corp., Boston.
Wharton, Wm., Jr., & Co., Philadelphia.
White, J. G., & Co., 49 Exchange Pl., New York.

Controllers and Attachments.
Durkin Con. Handle Co., Arcade Bldg., Philadelphia.
Electric Service Supplies Co., 200 Plymouth Bldg., Chicago.
General Electric Co., Schenectady, N. Y.
Harrison Elec. & Mfg. Co., 169 South St., New York.
Johns-Manville, H. W., Co., New York.
Marshall, R. W., & Co., 95 Liberty St., New York.
Western Electric Co., Chicago.
Westinghouse Electric & Mfg. Co., Pittsburg.

Conveyors and Coal Handling Machinery.
Green Engineering Co., Com'l Nat. Bk. Bldg., Chicago.
Northern Engineering Works, Detroit, Mich.

Cord, Bell and Trolley.
American Car Co., St. Louis.
Brill, The J. G., Co., Philadelphia.

Persistence in Advertising

LONG AGO some one said in reference to advertising, "Keeping everlastingly at it brings success." This is just as true today as it was yesterday and will be tomorrow.

¶ But sometimes a manufacturer, who wouldn't expect a sales force to break into a new territory to any extent much under a year's time, expresses surprise because the first few insertions of some new advertising do not produce immediate results.

¶ He is willing to give his salesmen ample time to become acquainted, but seems to think the advertising ought to commence doing business instanter.

¶ Probably he never read an advertisement that made him do immediately as the advertiser desired, yet believes that his advertising ought to make the reader get busy at once.

¶ Be fair! Do *real* advertising and then give it a fair opportunity to make good!

¶ Advertising will help sell your goods, if rightly done. Does it every day for others—will do it for you, too.

¶ You know electric railway men do not lie awake nights figuring how many advertisements they can answer the next day—but their minds *are* open to impressions through advertising—impressions that lead to sales.

¶ These impressions you can make only by "keeping everylastingly at it."

If you say the word, we will gladly send a representative to discuss an advertising plan for your particular business.

Electric Railway Review 160 Harrison Street CHICAGO, U. S. A.

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

A young man, 27 years of age, with ten years' experience, wants position as engineer or electrician; unmarried; habits strictly temperate; high-class references. Address "No. 710," care Electric Railway Review, Chicago.

Wanted—To make a change in the near future as manager or general superintendent of street railway by an experienced and successful general superintendent; correspondence solicited. Address "No. 517," care Electric Railway Review, Chicago.

Position by a single man, 29 years old, practical electrician and machinist, 10 years' experience, familiar with electric car and locomotive repairs, power and substation practices. Non-union man. Address "No. 630," care of Electric Railway Review, New York, N. Y.

A young man (29) with seven years' experience in every branch of the transportation department desires a position with a street railway company anywhere west. Best references as to experience and character. Address "No. 518," care Electric Railway Review, Chicago.

Position wanted as master mechanic or shop foreman by a competent man with extensive experience and splendid references. Understands city and interurban cars and equipments in every detail; an expert armature winder, can handle men and repairs economically and successfully. Position as winder accepted if given advancement. Employed but desires change. Address "No. 522," care Electric Railway Review, Chicago.

Auditor, experienced in electric railway and lighting and construction accounting, wants position with fair-sized company. Energetic and good systematizer. Best references. Address "No. 527," care of Electric Railway Review, Chicago.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

Position wanted—Graduate electrical engineer of five years' experience in the construction and operation of electrical and steam power plant apparatus, its operation and maintenance; has held position of responsibility with large corporation; can handle mechanical and electrical engineering propositions of various kinds successfully; familiar with machine shop practice and the handling of all types of labor; expert on turbo-generator sets. Location no object; 28 years old; unmarried; habits strictly temperate. Highest class references. Address "No. 521," care Electric Railway Review, Chicago.

Position wanted by young man (22), good habits, with interurban road; wishes to gain practical operating experience. No technical training. Good references. Address "No. 523," care Electric Railway Review, Chicago.

Position wanted by a thorough practical engineer and machinist; 16 years' experience with compound Corliss engines and turbines, A. C. and D. C. electrical apparatus. Age 35; efficient and reliable; references. Address "No. 520," care of Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

POSITIONS OPEN.

Twelve offices, covering entire street railway and manufacturing world. 1,000 technical and office positions open. Confidential service; write today, HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

MISCELLANEOUS WANTS.

You can sell second-hand cars, machinery and material through advertising on this page. Ask about the special rates. Electric Railway Review, 160 Harrison Street, Chicago.

BOOKS AND PUBLICATIONS.

Ask us about any book on electric railway and allied subjects. We publish some and sell all that are in print. The Wilson Company, 160 Harrison Street, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

If interested in any phase of steam transportation, you will find every development covered fully and accurately in The Railway Age. It is the leader and acknowledged authority in this field. Ask for free sample copies. The Railway Age, 160 Harrison Street, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

If you have copies of the Street Railway Review of February or June, 1906, or of the index for 1904, or of the Electric Railway Review of October, 1906, write us at once, stating condition and naming price for each copy. Address "No. 514," care Electric Railway Review, 160 Harrison street, Chicago.

Small Roads and Shop Kinks.

The average master mechanic of a small road is a mechanical genius and the problems which he must solve vary so widely in character that his position would not be well filled if he were not able continually to advance new methods for saving time and money. The earnings of a small road do not permit it to equip shops with many of the tools considered economical in the repair work of larger roads; therefore, it devolves upon the master mechanic to improvise shop methods that will permit him to repair his cars as cheaply as possible, substituting home-made apparatus for expensive machinery. He observes in his work that the few equipments of a small road must be inspected as rigorously as those on the larger roads and, to show the highest profit from his work, they must be kept in an equally high state of repair. In this issue of the Electric Railway Review the shop practice of the Allegheny Valley Street Railway, a comparatively small interurban road in Pennsylvania, is described by H. F. Mentzel, master mechanic. This article presents an interesting description of the very thorough methods of inspection practiced, and describes many shop practices that have been found satisfactory.

Pay-As-You-Enter Experiments in Pittsburg.

The plan of enforcing the pay-as-you-enter system of fare collection, without the use of cars especially built for the purpose, as attempted in Pittsburg last week, does not seem to have been a startling success. As reported in last week's issue of the Electric Railway Review, the Pittsburg Railways Company on December 24 began to require the passengers to enter by the rear platform and leave by the front platform and to pay their fares as they entered the car. It was stated that the object was to enable the conductor to remain on the rear platform in order to lessen accidents. This practice lasted less than a week. Many of the passengers absolutely refused to comply with the company's wishes and did everything in their power to handicap the conductors, such as by requiring them to change bills and by purposely boarding the cars in crowds. In a short time the conductors were completely discouraged and notified the company that they could not enforce the order. On December 30 the order was rescinded. It is stated that the climax came when a woman with a baby and a number of packages entered a car holding her nickel in her mouth and swallowed it while explaining her predicament to the conductor. We are not advised whether the Pittsburg Railways Company wished to make a test of the pay-as-you-enter idea before ordering special cars, or whether it hoped to make the plan succeed without the pay-as-you-enter cars, but in either case it seems extremely inadvisable to try such a plan without previous preparation of the conductors and the public. In Chicago, where the pay-as-you-enter cars have met with remarkable success since they were first put in service on November 24, the street railway company conducted an extensive campaign of education before trying the new methods. The conductors were carefully coached at the car barns for three weeks and the benefits to be derived from the new plan were outlined at length in the newspapers and in folders distributed to the public before the cars were put in service. As a result every conductor and most of the passengers knew exactly what to do when the time came. It is to be regretted that the future success of such an important improvement in street railway transportation, conducive to the welfare of the companies and the public alike, should have been allowed to be prejudiced by these apparently ill-advised experiments.

Decide to Form Traffic Association.

The decision to form a traffic association which shall be allied with the Central Electric Railway Association as a branch of that organization is of far-reaching importance. It means that the companies will consider questions pertaining to traffic in the thorough manner in which they have discussed subjects relating to operation, maintenance and engineering in the sessions of the association which it is now evident will have an allied body. The suggestion of the formation of a traffic organization has its foundation in the need for co-operation which actuated the steam railways in their establishment of similar organizations. As connections have been built between various interurban electric railways, the possibilities for local traffic have naturally and gradually opened the way for business affording longer hauls; and consolidation of the properties of various companies has increased the length of ride possible without change of cars. A traffic association will do more to facilitate and promote the movement of passengers and freight traffic between connecting interurban lines than traffic arrangements at random could accomplish. The new association will have abundant work laid out for it. Letters which have been published in the Electric Railway Review from some of those who are interested in the success of the organization indicate that it will be thought desirable to discuss means for the promotion of traffic at the various meetings. This is a subject upon which many successful general managers could be invited to address the association. The new association, if successfully started, will have an excellent opportunity to do valuable service for the interested roads.

Snow and Sand Boxes.

Last week we published in the Electric Railway Review, on page 981, a description of a special sand box, arranged to deliver the sand between the two wheels of the truck. The experience with this car on tracks covered with snow shows that such a method of delivering sand has two special advantages: First, with the delivery pipe between the wheels of the truck the sand is placed on the head of the rail, no matter whether the car be on curved or straight track. Second, when the track is covered with snow the front car wheels serve to clean the rail so that the sand delivered behind these wheels may be used effectively. How well this sanding scheme works out in practice is described in a recent communication from John A. Buggy, superintendent of the Delaware County & Philadelphia Electric Railway Company, who says: "It will, perhaps, be interesting to know that the sand car which we recently constructed and sent you a description of has been equipped with track scrapers for removing snow. During a recent storm we found the car very useful by reason of the fact that the scrapers in

front first removed nearly all of the snow; then the front wheels flattened down the small amount remaining on the track, so that the sand pipe distributed the sand on the rail and left a well-sanded rail for the rear wheels to take hold of. If we had used our earlier type of sand box and pipe construction the sand would have been thrown on the snow in front of the car and afterward swept away by the sweepers; or else, as we usually have done, we would have run into the drifts, removed part of the snow and then have applied sand in the rear of the car, backing the car to the rear for several feet upon the sanded rail, thus being able to get up speed and again run into the snow as far as possible, or until the wheels began to slip. Our experience with the car as remodeled, however, has been that with snow up to a foot deep and on level track we can continue straight along. Through a recent storm the work done by this car during one night more than paid for the alterations made."

THE YEAR'S PROGRESS IN ROLLING STOCK.

A brief review of the electric railway rolling stock in operation at the close of the year 1907 shows no marked change in car design as a whole, but it does show that there have been put into general use improvements which clearly indicate a decided advancement in rolling stock construction.

Considering first cars for city service, the most important development has been the widespread adoption of the pay-as-you-enter plan of fare collection. A change in body design from the earlier type of car used in heavy city service is required for the new method of collecting fares. It is necessary to have platforms of greater length and to rearrange the doors in the end bulkheads, providing separate entrances and exits. Otherwise, with the exception of details such as guide railings and door operating mechanisms, no radical changes are required to adopt the pay-as-you-enter feature for city service.

The past year has seen the continued introduction of all-steel cars for surface, elevated and interurban use. While riveted steel is yet new in this application, its satisfactory service in the steam railway field gives every assurance that the desired improvements in strength and maintenance costs of all-steel cars will be attained. Fostered by the satisfactory service of all-steel cars there is a rapidly growing tendency for a more general use of steel in the under and side framing of all types of cars. The demands for higher speeds in turn require stronger cars and these can only be obtained within economical limits by reinforcements of steel or steel construction.

There has been a marked advancement during the past year in the construction and use of what may be called utility cars. Such equipments comprise special cars for erecting and maintaining overhead construction, transfer cars equipped with small chain blocks, for carrying materials in yards and between shops, and heavy crane cars equipped with large motors and high lifting capacity swinging boom cranes. The latter mentioned equipments, equipped either with motor-operated or hand-operated lifting tackle, are especially valuable for wrecking purposes, and, when used in city service, for handling special track work when repairs are made during the day.

In principle trucks vary but little from those of a year ago, the improvements noted having been changes in details. For interurban service steel-tired or the forged and rolled steel wheels grow rapidly in favor; in fact, some of the more recently completed lines operate at such high speeds and use such heavy equipments that it would hardly be safe to use cast-iron wheels, because the flange thickness is so greatly restricted by city special work.

Car designers and builders now have standard dimensions for axles and other truck parts, to which the American Street and Interurban Railway Association, the Engineering Association and the Central Electric Railway Association have given their approval. These standards as recommended have been formulated only after a most thorough study by builders and purchasers. With these available it now remains for the manufacturers and purchasers of cars to adopt them if they would receive the benefits so long sought.

The general appearance of interurban car bodies approaches from year to year more closely that of the Pullman type. Few changes in body design have been made. Considering rolling stock in a general way, the equipments have grown in size to meet the demands of increased interurban traffic. The growth in length has, of course, been attended by a proportionate increase in weight, requiring motive power equipments of greater capacity. Much credit is due the manufacturers of railway motors for the improvements which they have made in the design of motors. With the very limited space available between the axles of a car a serious problem confronted the motor manufacturer when units of higher power were demanded for fast interurban schedules. These conditions have been met by refinements within the motor case, so that increased power is now available within the long since well-filled clearance space.

Probably the most important advancement in motor design, and one which has permitted the demands for motors of larger capacity to be met, is the use of commutating pole or interpole motors. Briefly, such motors differ in no way from the more familiar types, except that between each pair of field poles is a thin auxiliary pole, the field of which serves to assist in reversing the current in an armature coil as that coil passes under a brush. The result is a great improvement in commutation through a wide range of loading.

Improvements of value have been made in control apparatus during the past year. These have been matters of detail rather than of principle. The most marked change in control work, other than these detail improvements, has been the more general use of the bridge form of transfer from series to parallel connection, which avoids the opening of the circuit of either motor during the transition and thereby continues the torque of both motors through acceleration. For high-speed equipments this refinement of control is especially desirable. On heavy city equipments, and especially those which haul trailers, the contactor or unit switch is finding a more general use in connection with platform controllers.

Much attention has been paid during the past year to improving the insulation, as well as the commutation, of railway motors. These improvements are demanded by the gradual increase in the operating voltage. Interurban roads are now operating with trolley voltages of 11,000 and 6,600 alternating and 1,200 volts direct current. The control apparatus for the alternating-current motors feeds the motors at a maximum pressure of about 250 volts, but the tendency for heating and insulation breakdown is proportionately greater than with direct current. Therefore especial measures have been taken to improve insulation. With the 1,200-volt direct-current equipments the pairs of motors on each truck are connected in series, so that the insulation requirements vary in no way from those on 600-volt roads.

For interurban work the automatic air brake is being quite generally installed on new equipments. The improved service offered by such brakes is required wherever cars are to be operated in multiple—and there are now few interurban roads which are not prepared or preparing to run their cars in trains. Several of the more recently built interurban roads have equipped their cars with controllers provided with "deadman" handles. These assure a quick stop should the motorman accidentally remove his hand from the controller handle. This improved controller detail comprises attachments which, on being released by the removal of the motorman's hand, instantly and automatically cut off the current being fed to the motors and apply the emergency air.

These few improvements mentioned do not complete the

record of rolling stock progress for 1907. They may be classed rather as general improvements applicable to either interurban or city cars as separate classes. In addition to the general improvements there has been carried on in the shops of the various roads much creditable work tending toward the betterment of the cars on individual systems by adding improvements and small changes in designs, which adapt the rolling stock more satisfactorily to local conditions.

ROLLING STOCK ORDERED IN 1907.

Following the practice established last year the Electric Railway Review presents in this issue a detailed statement of the rolling stock equipment ordered in 1907 by the street and interurban railways of North America. The statistics show that during the year 1907 orders were placed for 6,216 cars and 95 electrical locomotives, a total of 6,311 equipments. Compared with the previous year this is an increase of 184 equipments, which may be considered as quite satisfactory when it is remembered that the steam railroads ordered during the same period 1,741 less passenger cars and 158,604 less freight cars than they did during the year 1906.

Rolling stock statistics recently compiled by The Railway Age show that during 1907 the steam railroads ordered a total of 1,791 passenger cars. The electric railways during the same period, as shown by the table presented in this issue, ordered 4,810 passenger cars. In other words, the passenger equipment orders for electric railway service exceeded those for steam railway service by 3,019 cars. The statistics presented in the Electric Railway Review on January 5, 1907, covering the year 1906, when compared with rolling stock statistics for steam railroad use, showed that during the year 1906 the electric roads ordered 57.3 per cent more passenger cars than the steam roads. Bearing this in mind it is quite remarkable that a similar comparison for this year shows that the electric roads have ordered during 1907 269 per cent of the number of passenger cars ordered by the steam railroads.

Considering the totals of the electric railway cars ordered during the year 1907, as compared with the year 1906, we find that for city use there were ordered last year 3,483 equipments. These 3,483 equipments, compared with 3,730 in 1906, show a decrease of 247 in 1907 orders. For interurban passenger service there were ordered 927 cars during 1907, as compared with 1,204 for the year 1906, a decrease of 277. There were ordered in 1907 for passenger service on elevated railways 400 cars, an increase of 81 over the 319 cars ordered in 1906 for similar service.

While the statistics of orders for passenger cars, with the exception of those for elevated service, show a slight decrease for 1907 as compared with 1906, the orders for freight equipment on street and interurban railways, on the other hand, indicate a remarkable growth in that field. During 1907 orders were placed for 1,406 freight cars, which, as compared with the orders for 851 placed during 1906, shows an increase of 655 cars. In 1906 a total of 23 electric locomotives were ordered, which number has been exceeded in the year just ended by 72, there having been 95 locomotives ordered in 1907 for electric railway freight service.

It is indicative of the rapid growth of freight traffic on interurban roads that the orders placed for freight equipment aggregate close to 24 per cent of the total orders during 1907.

The electric railway companies are becoming more active in car building. This year, out of a total of 6,311 cars ordered, 772, or 12.2 per cent, are to be built in company shops. In the year 1906 10.4 per cent of the orders were placed with company shops, which, compared with the figure earlier mentioned, shows that the roads are gradually building a larger proportion of their rolling stock.

Unfortunately there are not available figures showing the total number of rolling stock equipments in North America at the beginning of the year 1907. Considering, however, that the totals presented in American Street Railway Investments, compiled from reports gathered over a period of several months, may be assumed as correct for the close of the year 1906 there were in operation at the beginning of 1907 87,652 street and interurban railway cars. The addition of 6,311 cars in 1907 represents an increase of 7.2 per cent and makes a total of 93,963 cars. A similar comparison made a year ago showed that the increase during the year 1906 was 7.4 per cent.

At the beginning of 1907 the total street and interurban railway track mileage in the United States and Canada was estimated to be 38,082 miles. This total represents an increase of 3,976 miles in one year, and if a similar increase has taken place during 1907 there are today 42,058 miles of street and interurban railway track in the United States and Canada, with approximately 2.23 cars per mile of track.

The electric railways at large are to be congratulated because of their remarkable growth during the past decade and it is especially gratifying at this time to learn that the rolling stock equipments ordered during 1907 show a considerable increase.

NEW TRACK CONSTRUCTION IN 1907.

While the year 1907 has been a prosperous one for the electric railways and a memorable one from many points of view, one of the most important and striking features of the development has been the amount of new construction completed. Figures showing the total amount of new mileage for the year are unfortunately not yet available, but there are many indications that 1907 will equal if not surpass the record of any previous year in this respect. At the close of 1906 the electric railway mileage of the country was 36,212, having increased 3,695 miles, or 11.4 per cent during the year. The increase in steam railway mileage during 1906 was 6,100. The new track added by the steam roads during 1907 amounted to 5,874 miles, a slight decrease from the figures of the preceding year. It is not believed, however, that electric railway construction has been affected by the same causes as the steam roads, and a total of close to 40,000 miles at the close of 1907 would not be surprising.

While the weak condition of the money market, which has prevailed for the past three months, has undoubtedly lessened the amount of new construction to some extent, the effect has not been so great as might have been expected, or as it has been in the case of the steam roads. Its effect is more likely to manifest itself in the results for 1908. Most of the important new enterprises, which have been carried to completion during 1907, were financed during the prosperous times of 1906, and early 1907. They were thus so nearly completed by the time the financial stringency began to be felt, that it was too late to stop work and it was necessary to complete the lines in order to protect the capital invested. Moreover, the business of the electric railways is in such small units that it is not so sharply affected by a financial stringency and there has not been the same occasion for curtailment as in the case of the steam roads.

Although many smaller extensions have undoubtedly been postponed on account of the lack of currency the greatest effect of the panic has been on the embryo railroads, those which had secured right of way and franchises and were seeking to finance their projects. Most of these have been obliged to postpone their plans altogether until a more prosperous period and as a panic affects the strong and weak alike the set-back will be evident when the mileage for 1908 is compiled.

While the increase in mileage applies generally throughout the United States, the new construction work has been most active in the far western states of Washington, Oregon and California, and in the central states Indiana, Ohio and Illinois. Figures for the state of Indiana, as compiled by the

state railroad commission, bring out the striking fact that the increase in electric interurban railway mileage in that state during 1907, 426 miles, is greater than the increase in steam railroad mileage in any state, Louisiana leading with 422 miles. There are now 1,538.93 miles of electric railway in Indiana, not including street railways, as compared with 1,113 in 1906 and with the steam mileage of 7,239.55.

A large proportion of the new track put in service during 1907 has been built by new companies, although the existing lines have been active in extending their properties by connecting short lines in order to form through routes and by building feeders. The greatest development of the year is seen in the number of long interurban roads that have been put in operation. The city lines have made important extensions, but in general their greatest efforts have been concentrated on betterments and improvements in power houses, rolling stock, etc., and in rebuilding their tracks. It is in the construction of long interurban roads, that is roads over 40 or 50 miles in length, built according to the highest standards of steam railroad construction, and in many cases operated in direct competition with the steam railroads, that the year has made itself most memorable. Most of these have been described at length in the columns of the Electric Railway Review.

The new lines in Indiana that have been opened during the year include four which are over 30 miles in length: the Indianapolis Crawfordsville & Western Traction Company from Indianapolis to Crawfordsville, 45 miles; the Lafayette-Logansport line of the Ft. Wayne & Wabash Valley Traction Company; the Indianapolis & Louisville Traction Company, which operates with 1,200-volt direct current from Seymour to Sellershurg, 41 miles, and by its connection with the Indianapolis Columbus & Southern and the Louisville & Northern completes a through ronte from Indianapolis to Louisville; and the Marion Bluffton & Eastern Traction Company, operating from Marion to Bluffton, 30 miles. In this connection it is worthy of note that the Terre Haute Indianapolis & Eastern Traction Company has completed a connection between the lines radiating from Indianapolis and the Terre Haute system, and now operates a total of 351 miles. The Chicago Lake Shore & South Bend Railway has been nnder active construction since last spring, and will connect South Bend, Ind., with Chicago, Ill., a distance of 81 miles. Much of the track has been laid and it is hoped to begin operation before summer.

In Illinois the greater part of the new construction has been done by the Illinois Traction System, which has completed during 1907 a single-phase line from Peoria to Bloomington and lines from Clinton to Bloomington, Champaign to Decatur and Lincoln to Mackinaw. Preliminary work is now in progress for the long-talked-of extension to Chicago and active work is being done on the $2,500,000 bridge over the Mississippi river at St. Louis. The Elgin & Belvidere Electric Company, which completed its track in 1906, did not, however, begin operating its line from Elgin to Belvidere, 36 miles, until February, 1907. The Chicago & Southern Traction Company also laid most of the track for its extension from Harvey to Kankakee during 1906, but did not begin operation until November, 1907.

Ohio was very completely served by electric lines at the close of 1906, with a total of approximately 2,600 miles. Consequently most of the new work during 1907 has been in the way of short links to complete the network. The Youngstown & Southern Railway has added 26 miles of new line from Youngstown to Leetonia, and with the completion of the Youngstown & Ohio River Railroad will offer through service from Youngstown to East Liverpool, about 45 miles. Other important enterprises now under way in Ohio are the Lima-Bellefontaine extension of the Ohio Electric Railway, 45 miles, the electrification of the Columbus & Lake Michigan line from Defiance to Lima, and the completion of the Lima & Toledo line, both by the same company,

In Wisconsin the Milwaukee Northern Railway has completed the first section of its line out of Milwaukee and expects to extend to Sheboygan and Fond du Lac. The Milwaukee Electric Railway & Light Company has also completed a number of short extensions.

The most interesting and important of the new additions to the electric railway map is doubtless the single-phase line of the Spokane & Inland Railway in Washington. This road is operated as a division of the Inland Empire System and extends south from Spokane to Spring Valley Junction, where it divides into two branches, one to Colfax, and the other to Palouse, a total distance of 116 miles. An extension to Moscow, Idaho, 16.5 miles, is now under construction and a line to Lewiston, Idaho, 43 miles farther, is contemplated. Much of the Spokane & Inland's track was laid during 1906, but the road was not put in operation until last year.

Several important projects for new lines in Washington are well under way, but have not yet reached the stage of accomplishment.

In Oregon the Oregon Electric Railway is now completing its line from Portland to Salem, 53 miles long, and it is announced that operation will begin this month.

California also has an impressive amount of new track to its credit. The Ocean Shore Railway, which will connect San Francisco and Santa Cruz, a distance of 81 miles, has completed a large proportion of its construction, but was unexpectedly delayed in its work by the earthquake last spring. The Northern Electric Railway has opened several new lines during the year and when the lines now under construction and rapidly approaching completion are finished, will have a total of 165 miles of track. The Los Angeles-Interurban and Pacific Electric Railway system has also opened several extensions and now has a total of 550 miles of single track, besides 25 miles of side track.

In the middle west the most important new line is the Ft. Dodge Des Moines & Southern Railroad, which began operating from Ft. Dodge to Des Moines, Ia., 85 Miles in November, using an electrified portion of the Newton & Northwestern steam road.

In Pennsylvania, which like Ohio was already covered by a network of short lines, the greatest activity has been shown in short extensions of existing lines and although several ambitious enterprises have progressed during the year the only extensive new lines placed in operation are the single-phase line of the Pittsburg & Butler Street Railway and the line of the Philadelphia & Western, from a connection with the Philadelphia system to Wayne, 11.8 miles.

In the south a large number of important projects are now being carried out which will add greatly to the transportation facilities of that section. The Texas Traction Company of Dallas, while it has not laid much of its track, has finished the grading and bridge work for 65 miles of line, from Sherman to Dallas, Tex., which will be operated by single-phase current. The Stone & Webster Engineering Corporation has extensive plans for the development of Texas, which will probably be delayed until the financial situation improves.

In the east a large number of small connecting lines have been built although the construction has not been so active as in the newer localities of the west. The Washington Baltimore & Annapolis Electric Railway has practically completed its line from Baltimore to Annapolis, 36 miles. The especial features of interest in the east are the electrification of portions of four steam railroads, the New York Central, the New York New Haven & Hartford, the Erie, and the West Shore, all of which have been placed in operation during the year just past.

The first car was operated over the new line of the Illinois Traction System from Lincoln to Mackinaw, Ill., on December 31. Regular service on a 2-hour headway was started on January 1. The distance is 27 miles.

ELECTRIC RAILWAY ROLLING STOCK ORDERED IN 1907.

A detailed statement of the electric railway rolling stock equipment ordered by the roads of North America during the year 1907 is presented herewith. One year ago, in the Electric Railway Review for January 5, 1907, there were published for the first time similar statistics covering the purchases during the year 1906. The figures here presented are compiled from official sources and from the regular weekly records of the Electric Railway Review. These statistics are as complete and accurate as it is possible to make them in the time available for their compilation. The records as presented show equipment ordered from company shops as well as those for which orders were placed with car manufacturers.

It is interesting to note that this year the grand total shows a healthy increase over that for 1906. The passenger car orders except for elevated service are less than a year ago, but orders for freight cars and electric locomotives for freight handling show a decided increase. The totals show orders for 3,483 cars for city passenger service, 927 for interurban passenger service, 400 for elevated service, 1,406 freight cars and 95 electric locomotives. These totals for 1907 compare with those for 1906 as shown by the following summary:

	1906.	1907.
Passenger cars, city	3,730	3,483
Passenger cars, interurban	1,204	927
Passenger cars, elevated	319	400
Freight cars	851	1,406
Electric locomotives	23	95
Total	6,127	6,311

That the electric railway companies are rapidly increasing their car building facilities is evidenced by the statement that 772, or 12.2 per cent. of the equipments ordered in 1907 were to be built in company shops, as compared with 10.4 per cent for the year 1906.

RECEIVERSHIPS AND FORECLOSURES DURING 1907.

The list of electric railways for which receivers were appointed in 1907 shows plainly the effect of the condition of the money market. Most of the companies which became involved in financial troubles were small, but they include both established systems and new lines under construction which found themselves unable to meet obligations because of the inability to raise capital to prosecute their plans as stringency in the money market became more acute.

The most serious receivership proceedings inaugurated during the year were those involving the New York City Railway and the Metropolitan Street Railway of New York. As the investigations before the public service commission, first district, have disclosed, the difficulties of these companies were deep-seated. Although they culminated in the troublous times of last year, the causes were in nowise related to current conditions. The distress of these companies, furnishing urban transportation in one of the most densely settled passenger traffic territories in the world, had their foundation in abnormal overcapitalization and manipulation. While no one can say at this time how long the receivership of these properties will last, it is believed that the allied lines forming the other principal part of the Interborough-Metropolitan Company will not be involved in the drastic proceedings to which resort has been had for the leading surface roads in the merger.

It was anticipated that the receivership of the Chicago Union Traction Company, which has continued for nearly five years in the second largest city in the country, would be ended in 1907, but the difficulty of reconciling the various interests prevented the consummation of the reorganization of this property. Although the formal receivership may last for an indefinite time, complete arrangements have now been made for the reorganization of this property.

The list of receiverships established in 1907 shows a total of 26 roads operating 972 miles of track and having outstanding $87,262,500 bonds and $86,525,195 stock, making an aggregate capitalization for all of the companies of $173,787,695. The companies follow:

Receiverships Established in 1907.

Railway—	Miles of track.	Stock.	Bonds.
Auburn & Turner Railroad, Lewiston, Me.	9	$ 100,000	$ 5,000
Vicksburg (Miss.) Railway & Light Company	9	500,000	325,000
Southern Light & Traction Company, Natchez, Miss.	7	456,700	340,000
Indianapolis Newcastle & Toledo Electric Ry., Newcastle, Ind.	140	3,500,000	4,500,000

Washington Traction Company, South Charleston, O.	14	.....	.....
Mt. Mansfield Electric Railroad, Stowe, Vt.	12	510	200,000
Trenton Lakewood & Atlantic Railway, Trenton, N. J.	40	80,000	.....
Conneaut & Erie Traction Company, Erie, Pa.	35	800,000	1,179,500
Shelbyville & Ohio River Electric Railroad	..	150,000	1,000,000
New York City Railway	517	20,000,000	1,761,000
Metropolitan Street Railway, New York	..	52,000,000	70,814,000
Wilmington New Castle & Southern Railway	14	329,985	300,000
Indianapolis Huntington Columbia City & Northwestern Railway, Indianapolis	..	1,500,000	200,000
Washington Arlington & Falls Church Railway, Rosslyn, Va.	25	100,000	350,000
Syracuse & South Bay Railway, Syracuse, N. Y.	..	120,000	300,000
Cleveland & Sharon Electric Ry.	41	2,500,000	2,500,000
Pittsburg & Allegheny Valley Railway, Pittsburg, Pa.	20	750,000	1,100,000
Totals	972	$86,525,195	$87,262,500

The difficulties of the Atlantic City & Suburban Traction Company were the result of too heavy a bonded debt and of competition. It is expected that the property will be sold under foreclosure in March and returned to its owners. The receivership of the Catskill Electric Railway followed foreclosure of the mortgage on the property. The Mt. Mansfield Electric Railroad was placed in the hands of a receiver early in the year, but was sold under foreclosure in December and will be reorganized and established anew. The Trenton Lakewood & Atlantic Railway, the Shelbyville & Ohio River Electric Railroad, the Indianapolis Newcastle & Toledo Electric Railway, and the Indianapolis Huntington Columbia City & Northwestern Railway were under construction. The Auburn & Turner Railroad has been in the hands of a receiver since May 16, 1907, and all bills since that time have been paid and the receivers have expended $1,500 on improvements and have had a considerable cash balance in the bank at all times. Nothing has been done toward disposing of the property by sale owing to conditions of the money market, but there are several possible buyers for the road.

The receivership of the Vicksburg Railway & Light Company was caused by the financial condition of the company and disagreement among those who controlled it. The Southern Light & Traction Company of Natchez, Miss., was placed in the hands of a receiver on account of a decision of the Mississippi supreme court declaring that the company was operating in violation of the anti-trust law of that state. The property of the Rockland South Thomaston & Owl's Head Railway of Lewiston, Me., was sold at foreclosure, but the court refused to confirm the sale and no subsequent sale has been held. The Canyon City Florence & Royal Gorge Interurban Railway of Canyon City, Colo., was placed in the hands of a receiver in January. The property has not been sold at

foreclosure or otherwise, but it is being purchased as needed and found useful by the Canyon City & Royal Gorge Railway, which is building an electric line from Canyon City to the top of the Royal Gorge, 25 miles. No assumption of the property of the old company is contemplated by the new company. The Mineral Wells Electric System was not incorporated and no stock or bonds were outstanding on the property.

The receivership of the Mattoon City Railway and of the Central Illinois Traction Company resulted from the serious wreck on the interurban line between Mattoon and Charleston in August last. Plans are being made for the settlement of the difficulties of the company and it is probable that the lines will be restored to their owners before long. The Syracuse & South Bay Railway of Syracuse, N. Y., went through foreclosure proceedings in February and the property was purchased by C. D. Beebe and transferred to the Syracuse & South Bay Electric Railroad. This company is now engaged in completing the road, which will be a double-track line from Syracuse to South Bay, a distance of 12 miles, and will, it is expected, be in operation on or before June 1, 1908. At the time of foreclosure only one track had been laid and it was in an uncompleted condition.

The number of foreclosure sales is much smaller than the list of receiverships. As conditions in the money market became more acute as the year progressed, there was less encouragement for roads which had sought the protection of the courts to re-establish their corporate positions than if all conditions had been favorable. The following shows the list of foreclosure sales in the year:

Foreclosure Sales in 1907.

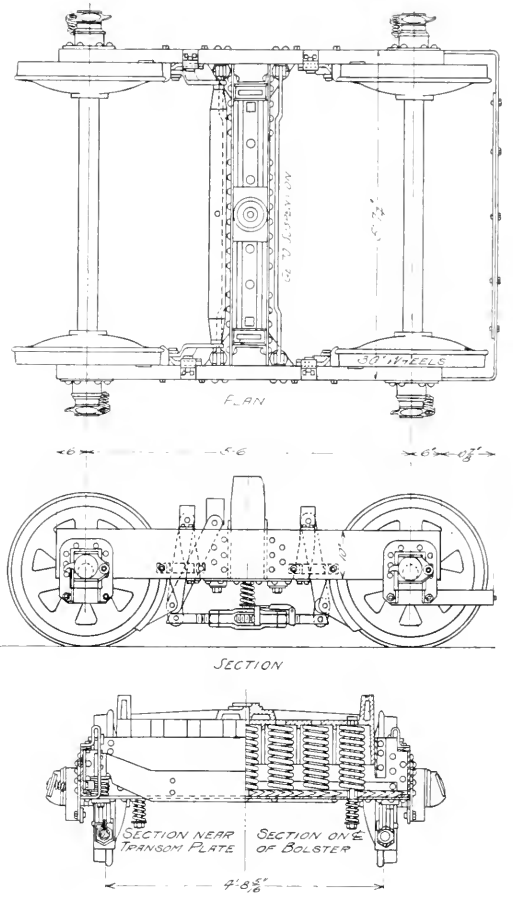
Railway—	Miles of track.	Stock.	Bonds.
Newtown (Pa.) Electric Street Railway	28	$ 300,000	$ 300,000
Hudson Pelham & Salem Electric Railway	29	365,000	365,000
Henderson (Ky.) City Railway	10	250,000	150,000
Rockland South Thomaston & Owl's Head Railway	4	.....	100,000
Syracuse & South Bay Railway, Syracuse, N. Y.	..	120,000	300,000
Mt. Mansfield Electric Railroad, Stowe, Vt.	12	510	200,000
Philadelphia & Easton Railway, Doylestown, Pa.	33	1,025,000	825,000
Chicago Electric Traction Co.	31	2,000,000	650,000
South Middlesex Street Railway.	16	100,000	100,000
Chicago General Railway	21	500,000	1,727,500
Totals	184	$4,660,510	$4,717,500

The Newtown Electric Street Railway was acquired in the interest of the Newtown Langhorn & Bristol Street Railway and was afterward acquired by the new Bucks County Electric Railway, which acquired several connecting properties in and near Newtown, Pa. The Hudson Pelham & Salem Electric Railway had been in the hands of a receiver since December 11, 1904. When the receiver was appointed the company had $365,000 bonds and a like amount of stock outstanding; but the property was sold at foreclosure on July 19, 1907, and was purchased by the Hudson Pelham & Salem Street Railway Company, which with the same mileage has issued $200,000 bonds and $200,000 stock. The sale at foreclosure of the property of the Chicago Electric Traction Company ended a receivership which had lasted since 1900. The property was acquired in the interest of the Chicago & Southern Traction Company, which is building a line to Kankakee and had been operating over the tracks of the Chicago Electric Traction Company in order to secure a Chicago entrance. The property of the Chicago General Railway had also been in the hands of a receiver since 1900.

The Nashville Interurban Railway, which is building from Nashville to Franklin, Tenn., has closed a power contract with the Nashville Railway & Light Company.

CLASS I TRUCK USED AT OAKLAND.

A special type of truck known as the "Class I" truck is used on all city equipments of the Oakland Traction Company at Oakland, Cal. From the illustration presented it will be noted that the principal side members of this design of truck are channel iron sections cut out at the ends to saddle over the journal boxes. No springs are used in the truck except those nested between the truck bolster and the transom. The truck bolster is a single casting made to move vertically within the confines of the transom. It



Oakland Traction Company—Class I Truck for City Service.

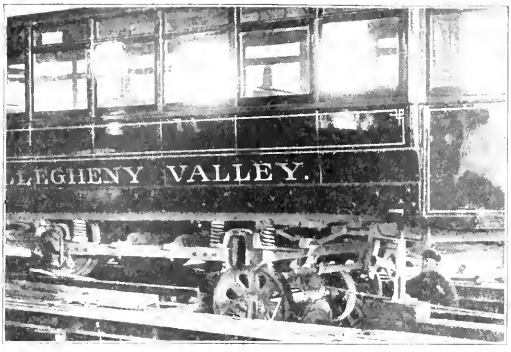
is supported by seven coil springs mounted as shown in the illustration. This type of truck has an advantage in that a large proportion of its parts are structural steel sections, which can be purchased in the open market and assembled with facility. These trucks as described and illustrated are built complete in the Emeryville shops of the Oakland Traction Company. Each truck carries two GE-70 motors

It is announced that the Utah Light & Railway Company, Salt Lake City, Utah, will begin this summer the erection of a 10,000-horsepower power plant at the Devil's Gate, on property owned by the Harriman interests, and that its construction will cost about $500,000.

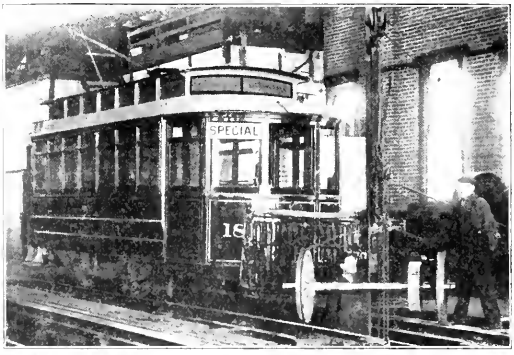
SHOP PRACTICE OF THE ALLEGHENY VALLEY STREET RAILWAY.

BY H. F. MENZEL, MASTER MECHANIC.

The Allegheny Valley Street Railway Company operates an interurban line from Natrona to Aspinwall, Pa., 19 miles, and a local line from Natrona to New Kensington, 7.8 miles. These



Allegheny Shop Practice—Changing Wheels from Single-Truck Car.



Allegheny Shop Practice—View of Wheels Being Raised from Repair Pit.

are both single-track lines laid with 7-inch girder rail. The interurban division has a double overhead trolley, which construction required no switches at regular turnouts. Believing that some of the shop practices on this line may be of interest to those engaged in similar work on other lines, I shall describe in detail our methods of inspection and repair work.

Rolling Stock.

The equipment which is now operated includes ten 45-foot double-truck cars. Each of these cars is equipped with four Westinghouse 101-B motors. The control on eight of the cars is the Westinghouse electro-pneumatic type and on the other two cars the General Electric type M control is used. There are also ten 31-foot single-truck cars with Westinghouse No. 68 motors and B-23 controllers and two 28-foot single-truck cars with Westinghouse 38-B motors and K-11 controllers. The voltage on the line is 550.

The regular week-day schedule requires six interurban and four local cars, but as the traffic is heavy on Saturday and Sunday we sometimes need our entire equipment out on the road. On days of heavy travel, we couple our multiple-unit cars, running them in 2-car trains. Frequently three or four extra cars are required for special runs during the afternoon and evening.

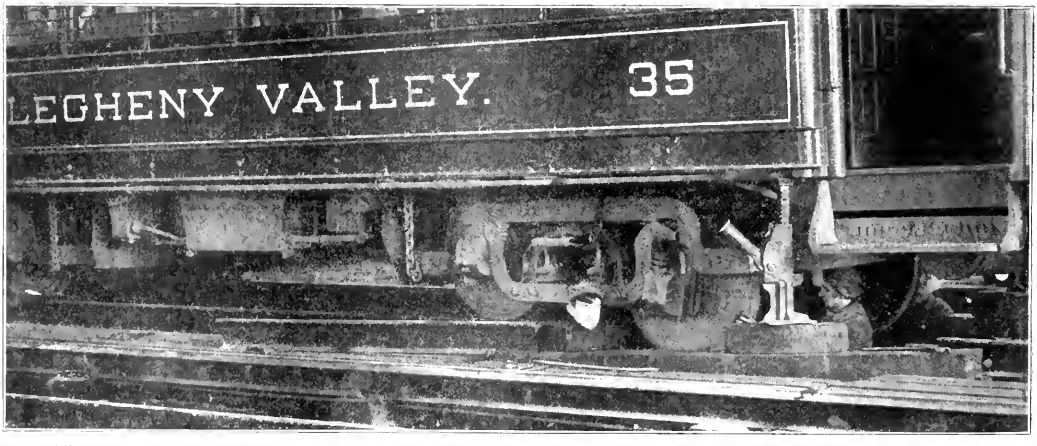
All our repair work is done in the daytime, so that the night shop men act only as inspectors, except for such light duties as oiling cars, changing trolley wheels and adjusting brakes.

Car House Inspection—Night.

Our night men do no armature changing or repairing, unless it is a trivial repair such as a burned-off motor lead or brush spring or a controller finger.

As each car is taken off the road at night it is run over a pit by the inspectors and the brakes are adjusted, if necessary. Then the motors are inspected for armature clearance and all bolts gone over and if car is equipped with air the pump motor is shut off and the air reservoir drained. We have a bulletin board placed in the shop, and if a car is found to have low armature bearings and bad shoes the inspector does not renew the shoes or inspect the car further. He runs it off the pit track and devotes his time to other cars. He then marks up the car on the bulletin board, thus:

"Car No. 39 low armature bearings No. 2, motor, bad shoes,



Allegheny Shop Practice—Method of Supporting Body and Truck When Changing Wheels on Interurban Equipment.

not inspected." This car remains marked up this way until repaired, then is marked up, "Car No. 39, O. K."

Starting Cars from Car House.

All interurban cars are known by numbers and local cars by letters and a list is hung up in the crew room each morning, showing which car goes on any run, and where placed, thus:

"Car No. 34, run No. 2, time 5:02 a. m., No. 4 track, operating barn.

"Car No. 17, run No. A, time 5:27 a. m., No. 2 track, storage barn."

No car washing is done at night. The cleaner sweeps all cars, keeping up fires and cleaning cuspidors. All cab windows in the car are cleaned first, the remaining time is then devoted to cleaning body windows.

H. E. Henry Repairman

Allegheny Shop Practice—Car Inspection Report.

Inspection—Daylight.

Inspection of cars with Westinghouse multiple control is made about every seven days. Each car is provided with hose connections for air and the inspector first blows out the motors and all the control apparatus. The brakes and trucks are inspected next. Then armature clearance.

The batteries for the control are next inspected and refilled, if necessary, and every 30 days they are removed and recharged as the charging given them by pump motors varies according to time the pump motor is operated.

After this inspecting has been done, one man operates the control while another inspects the line switch, reverser and switch group. Any switches found coming in or dropping out of circuit slowly are removed and repaired. The fingers are adjusted and a drop light is held at back of the switches to facilitate the inspection of the contacts of the switches controlling the motor circuits.

Next is the air inspection. The supply pipe and train line are examined for leaks. Then the brake pipe is filled to 50 pounds pressure and inspected. The brake valve is taken apart and oiled. The governor is inspected and its piston oiled, and if the governor is not cutting in and out properly, it is reset.

We have no printed forms for air brake shop tests. We use a typewritten form as illustrated. These are filled out and the records made when the air brake apparatus has had an overhauling. The blanks are kept for reference and also to encourage the repair man in doing good work. We have found that their use creates a rivalry among the men, each striving to have the best report on tight piping. We pay particular attention to the brake equipment. The illustration was made from actual report, and I think the report a good one. This test as reported was made after the pump had been cleaned with gasoline and filled with new oil, the brake cylinder had been oiled and cleaned and the piping inspected.

Our air pumps and brake cylinders are taken from under the car every six months or as closely to that interval as possible, cleaned and the necessary repairs made. Since equipping our cars we have changed the suction of the air pump and piped it from the inside of the car. The suction pipe end is in a box 8 inches square having screened sides. This box is filled with curled hair and at each inspection the hair is removed and cleaned.

Allegheny Valley St. Ry. Co.

Voltage Variation 500 to 525 V. W. Simmen Inspector.

Allegheny Shop Practice—Air Brake Inspection Report.

After all control, motor and air apparatus has been inspected and repaired, the oiling is done and an inspection card illustrated is filled out and given to the shop foreman.

The inspection of G. E. type M control is made in the same manner. When two or three car trains are sent out from the shop, they are made up and the control is operated from each end of the train before being put into service.

Changing Armatures.

If an armature is to be removed it is secured to the upper half of the motor and lower half dropped. The armature is then removed with an armature jack.

All our air equipped cars are provided with hose connections. If we change an armature in a car not having air equipment, a hose is connected to any air car that may be handy so that all armatures when changed or fitted with new bearings may be blown out as well as the motors.

We turn all our bearings to fit. When an armature shaft is badly worn it is turned off true with no attempt to standardize the sizes as we would not get enough of the same size to justify us in making special size mandrels.

Changing Wheels.

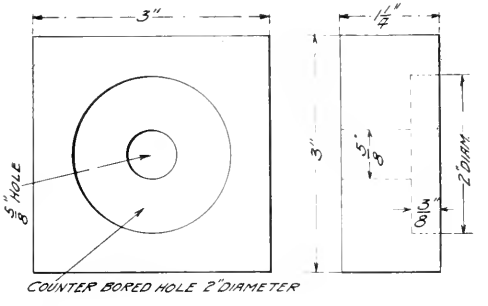
As the illustration shows, we have a section of our pit-track that is removable. We change the wheels on our double-truck cars without removing the trucks. Two long rack jacks

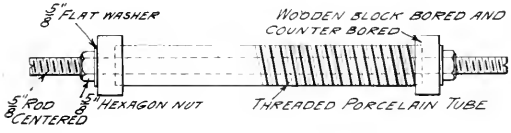
are placed in the pit so that [illegible] catch the axle inside of the gear wheels.

On single-truck cars we place a timber across the trap and raise the motor off the axle with a turn-buckle. This puts the weight of the motor on the car body instead of on the truck. A jack is placed on each side of the car body and at the end where the wheels are to be changed. Then the body and the truck are raised until the weight is off the wheels. The pit jacks are then raised until the wheels are clear of the track, which is then removed. The old wheels are then dropped into the pit, rolled to one side and the new wheels are put in.

It takes longer to remove gear cases, axle bearings and journal box bolts than it does to change wheels. Two men in our shop will change 3 pairs of wheels in 10 hours on the small cars.

The wheels on large cars are changed in the same way, except that as the truck is not fastened to the body, as on our single-truck cars, we first lift the body clear of the truck. Then at one end we place barrels in the pit to support the truck, and at the other end a timber is placed across the end of the truck and supported on each side by jacks. We have had a great deal of trouble with chipped and broken flanges





Allegheny Shop Practice—Scheme for Winding Heater Coils.

from cast wheels and are changing to steel tired and rolled steel wheels as rapidly as possible.

Car Washing.

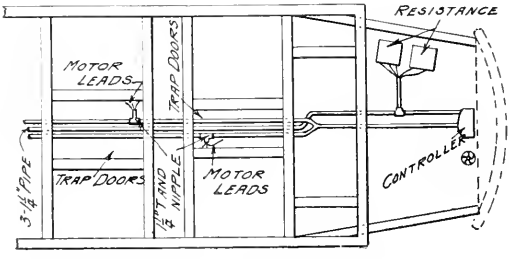
All car washing is done by daylight. Cars are placed on the washing track after having been swept out. Cars are washed roof and all with the hose. The body is washed with soap and rinsed and wiped dry with a chamois skin. The inside of car and cabs are washed in the same way, if necessary; the seats are removed and the dust is blown out with an air hose.

Windows are cleaned last; we have been using "bon-ami" with success on windows. Cars are not washed at any stated time, the decision of the time being left to the barn foreman as cars are washed under his direction.

Car Wiring.

Our single-truck cars are all fitted with cross seats and no provision is made for running motor cables in the cars. Formerly we had considerable trouble with cable cutouts in wet weather, these being caused by water thrown by the wheels. To provide against the recurrence of such troubles, in fitting these cars for winter service we remove all cables and replace them in conduit. The cross sills of cars, with the exception of end sills, are based for 1¼-inch pipe conduit. We put three pipes lengthwise of the car, as shown by the sketch. The center pipe is used for the resistance leads and the two outer pipes contain the motor wires. These pipes are run within 8 inches of each end of the car body. From the end of the pipes the wires are carried to the controllers and resistances through the regular canvas hose. At the ends of the piping the wires are protected with canvas hose to prevent chafing.

The trolley ground wires are run under the car, the trolley connection on one side of the traps and the ground wire on the other. The wires of the different motors are put in in

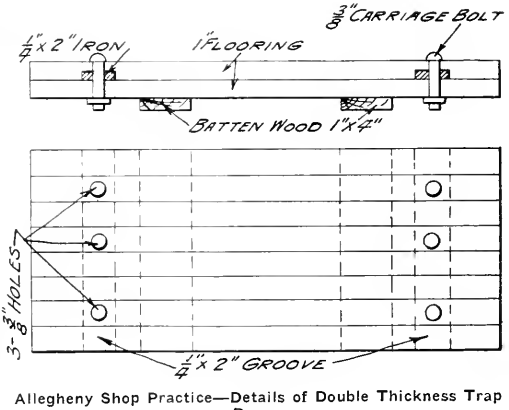


Allegheny Shop Practice—Arrangement of Conduits for Motor Wiring.

separate pipes. We have neither had trouble from cables since making these changes nor do we expect any.

Floors.

Our cars have double floors and a special construction is used to make a satisfactory trap door of double thickness. An accompanying sketch shows our method of bolting together the two thicknesses in the trap doors. The underside of the upper flooring is grooved, ¼ by 2 inches, 4 inches from the ends. In these grooves is placed an iron strap ¼ by 2 inches



Allegheny Shop Practice—Details of Double Thickness Trap Doors.

in section. Bolts, 3 by ⅜ inches, passing through the iron hold the double flooring together. A wood batten, 1 by 4 inches, is fastened underneath as shown. This construction affords a trap door that will not split lengthwise, a trouble often occurring in the usual form of trap.

Rewinding Headlight Resistance.

Accompanying sketches show our way of rewinding porcelain resistance tubes used in the resistance boxes of Crouse-Hinds arc headlights for 500-volt street railway circuits. One

block is removed, the tube put on, and the block replaced; the centering tube nuts are then drawn tight and the whole placed in a small lathe. Five minutes is all the time required to wind the wire on the tube. This scheme, while not original, is nevertheless handy.

Trolley Wheels.

We use Bayonet trolley harps only, and 6-inch felt-oiler trolley wheels made by the Detroit Trolley Wheel Company. When we receive new wheels, we put them in a tank filled with a light body oil, allowing them to remain there at least five hours. The tank is fitted with 24 hooks arranged along the side. When the wheels are lifted out of the oil a new axle pin is inserted in each one and they are then hung on the hooks until needed for a car. We always keep, in the storeroom, 12 wheels fitted to their harps, so that when required for use all that it is necessary to do is to place one on a pole and fill the reservoir of the wheel with oil. We find that by soaking the wheels as described, we can wear 9 out of 10 wheels through and still have the bushings in good condition. The reason for this result is easily understood: When wheels are put in service without soaking, the oil which is put in the reservoir is soaked up by the felt and none is left for future oiling, but if the wheels with felts in them are soaked first the oil finally put in is not taken up except to lubricate the bushing directly. This plan has given us excellent results.

MEETING CALLED TO FORM CENTRAL ELECTRIC TRAFFIC ASSOCIATION.

For the purpose of organizing a traffic association, a meeting of traffic officials of electric railways in the Central Electric territory will be held at the Algonquin hotel, Dayton, O., on January 22. The call for the meeting has been issued by F. D. Norveil, general passenger and freight agent of the Indiana Union Traction Company, Anderson, Ind. Mr. Norveil believes that the organization will be successfully established at this meeting and that it will prove to be of vast benefit to the electric railway interests in the territory which will be included, Ohio, Indiana, Illinois, the southern part of Michigan and the northern part of Kentucky. Mr. Norveil's letter, an abstract of which follows, shows that the proposed traffic association will not only have the cordial support of the Central Electric Railway Association, but will be a part of that organization:

Letter of F. D. Norveil.

Pursuant to the call for a meeting for the purpose of forming a traffic organization, composed of the traffic officers of the various electric lines in Indiana, Ohio, part of Michigan, Illinois and Kentucky, comprising practically the same territory as that which makes up the Central Passenger Association's territory, I would call your attention to the report of an impromptu meeting held at Indianapolis on November 20, 1907, when the subject was informally discussed. In view of its favorable reception by the representatives of the lines present on that day, and the almost unanimous replies received from various other traction lines in the states named, in favor of such an organization, and with the consent of the president and officers of the Central Electric Railway Association, we have set the day for the first meeting of the proposed traffic association. The meeting will be held at the Algonquin hotel, Dayton, O., on Wednesday, January 22, 1908. As this is the day before the regular annual meeting of the Central Electric Railway Association, which will be held at the same point, we would be glad if you would arrange to come prepared to make a two days' stay, devoting Wednesday to the preliminary organization of the traffic association, and spending Thursday at the Central Electric Railway Association's meeting. A banquet will be held at the Algonquin hotel on Thursday night, which we would be glad to have you attend. We are sure that you will derive much pleasure, and certainly great benefit from such a meeting and it will result in good to the traction lines interested.

In order that all electric railway organizations may remain closely allied, the president and officers of the Central Electric Railway Association, have consented to the formation of such an organization as a branch of that body.

This meeting is therefore indorsed by the Central Electric Railway Association, as attested by the signature of the president hereto attached.

Report of the Indianapolis Meeting.

The report of the meeting at Indianapolis on November 20, which is signed by the secretary, J. F. Starkey, follows:

On October 2, 1907, at a meeting called by the railway commission of Indiana for the purpose of adopting a uniform size of tariffs, and a system for filing same, the clerk of the commission appointed a committee of interurban traffic men for this purpose. On November 20, this committee invited all of the Indiana traffic officers to attend a meeting held at the Indiana state house to ratify the report of the committee.

After the adjournment of the committee, members of the various Indiana lines suggested that a meeting be held for informal discussion regarding a permanent traffic organization. This meeting was held at the Terminal building, and following is a list of the officials present:

F. D. Norveil, general passenger and freight agent Indiana Union Traction and Terre Haute Indianapolis & Eastern Traction companies.

W. S. Whitney, general passenger and freight agent Ohio Electric Railway.

J. B. Crawford, superintendent transportation Ft. Wayne & Wabash Valley Traction Company.

C. T. Price, passenger agent Western Ohio Railway.

A. G. Kelley, auditor Ft. Wayne & Springfield Traction Company.

C. G. Lohman, general superintendent Chicago South Bend & Northern Indiana Railway.

J. W. Mettlen, general freight agent Indianapolis Crawfordsville & Western Traction Company.

R. J. Thompson, assistant secretary and treasurer Indianapolis & Louisville Traction Company.

M. E. Graston, division passenger and freight agent Indiana Union Traction Company.

J. F. Starkey, division passenger and freight agent Indiana Union Traction Company.

J. H. Crall, division passenger and freight agent Indiana Union Traction and Terre Haute Indianapolis & Eastern Traction companies.

George S. Henry, traffic manager, Indianapolis & Cincinnati Traction Company.

After an informal, brief discussion on the matter of through freight rates and percentages, Mr. Norveil was appointed chairman, and he called the meeting to order, appointing Mr. Starkey secretary.

The chairman stated briefly the object of the meeting, which was that we might discuss the idea of the formation of a traffic organization, as a branch of the Central Electric Railway Association, which would be composed of the members of the traffic departments of the several interurban lines, represented and interested, and whose duties would be to formulate and compile tariffs, and joint arrangements whereby through traffic might be secured on a basis that would be beneficial and satisfactory to all concerned. After some discussion—in which all present seemed to be of one mind concerning such organization, that of the affirmative—the chairman stated that he thought it wise to have a committee appointed to formulate some sort of constitution for the proposed organization, such committee to present the constitution at the next meeting to be approved or modified, as deemed best at the meeting. Joint passenger and freight rates are to be in the hands of the association. The joint association was preferred at first, but if desirable, later on, a separation would be made, one association being formed for the passenger department, and another for the freight department.

On motion by Mr. Lohman, seconded by Mr. Graston, for the appointment of a committee of five to formulate the constitution, Mr. Price suggested that nine be appointed instead of five, and this being agreed upon, the chairman appointed the following as a committee:

W. S. Whitney, chairman, Columbus, O.
Charles F. Price, Lima, O.
George S. Henry, Indianapolis, Ind.
R. J. Thompson, Louisville, Ky.
A. G. Kelley, Ft. Wayne, Ind.
B. R. Stephens, Springfield, Ill.
George M. Parker, Detroit, Mich.
F. D. Norveil, Indianapolis, Ind.
J. O. Wilson, Cleveland, O.

After a brief discussion as to the territory this organization should cover, it was decided to include Indiana, Ohio, lower Michigan, and a portion of Illinois, and the northern part of Kentucky. The matter of expense incident to the initial work of the organization was discussed, but no decision was reached. It was decided that the chairman, Mr. Norveil,

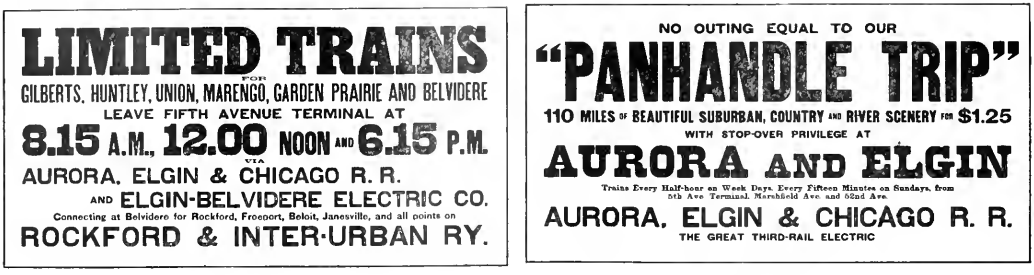
should ask the various lines interested their opinions regarding the issuance of a joint interline passenger tariff looking to the furtherance of through traffic.

At the meeting of the Central Electric Railway Association, referred to in the foregoing, the annual election of officers will he held.

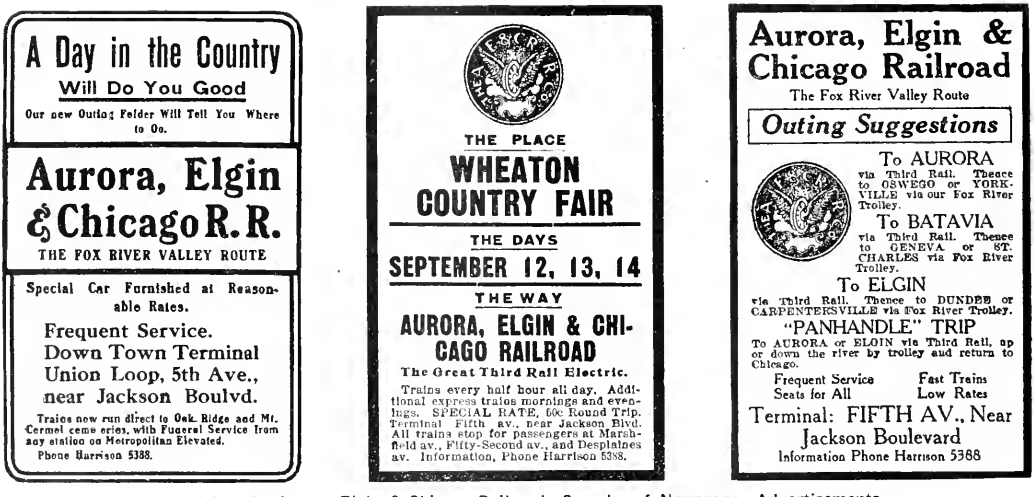
ADVERTISING THE AURORA ELGIN & CHICAGO RAILROAD.

The Aurora Elgin & Chicago Railroad was successfully advertised in the summer traffic season of 1907. Small advertisements were published frequently in the daily newspapers in Chicago to direct attention to the short trips offered by this company, both on its own lines and through connections with other railways. With the approach of winter weather the advertising of this character was discontinued and efforts are now being made to attract business to the lines of the road in other ways. Richard Breckinridge, the traffic agent, had posters printed urging people who contemplate the construction of suburban homes to investigate the beautiful country along the Aurora Elgin & Chicago. These posters are carried in the cars of both the Aurora Elgin & Chicago road and the Metropolitan West Side Elevated Railway of Chicago, the tracks of which are used by the Aurora Elgin & Chicago in gaining entrance to the central business district of the city of Chicago. Mr. Breckinridge has advertised at numerous times within the last few years with the idea of attracting the attention of more purchasers of real estate to the district tributary to the road. He tried at first to interest people by working through different real estate firms, but did not find this method successful. When inquiries are received now by Mr. Breckinridge in response to his direct advertising, he refers the seekers after information to the principal real estate agents in Chicago or in the various towns who are posted concerning the particular class of property desired, believing that in this way he will accomplish much better results with people who are attracted by the country life and the unusual transportation facilities afforded by the road.

Other car posters have been used successfully by Mr. Breckinridge. The one which advertises the "Panhandle Trip" has been effective in making famous that ride of 110 miles for $1.25 from Chicago to Aurora and Elgin and return to Chicago. If close connections are made the round trip can be completed in four hours and 25 minutes. This trip is made entirely on the lines of the Aurora Elgin & Chicago road.



Advertising the Aurora Elgin & Chicago Railroad—Posters Placed in Cars.



Advertising the Aurora Elgin & Chicago Railroad—Samples of Newspaper Advertisements.

Daily Newspaper Advertising.

The effect of the advertising in the Chicago daily newspapers was manifest in large traffic in innumerable instances during last summer. Samples of the advertisements which were published are given in this issue. Mr. Breckinridge found that publication of these advertisements, measuring about four inches or 56 lines of newspaper space, attracted sufficient people to make a perceptible difference in traffic on all the days when the weather was favorable. The copy for

the advertisements was changed with nearly every insertion, but in most of them the trade-mark of the road appeared. When any special event was to take place at any point on the line it was advertised specially if weather conditions appeared favorable. For instance, when Judge Ben B. Lindsey, of the Denver juvenile court, spoke at the Aurora Chautauqua in Aurora, on Sunday, August 11, advertisements were published in the papers on August 10, calling attention briefly to the fact and to the frequent trains on the "great third rail electric."

During some of the hottest summer weather advertising was published on Saturday mornings. One week the advertisement was headed "Every Day is Cool on the Aurora Elgin & Chicago." On another Saturday it was announced that the Aurora Elgin & Chicago "Offers Outings for All Summer Long in Chicago's Greater Park, the Fox River Valley." After calling attention to the time of trains and the location

Advertising the Aurora Elgin & Chicago Railroad—Sample of Poster Placed in Cars.

of the downtown terminal this advertisement added "High Speed Without Cinders, Dust or Smoke; Beautiful Scenery, Modern Cars, Low Rates."

Rates of Fare.

Other advertising issued by the road includes booklets with maps and half-tone pictures of scenes on the lines. The booklets also contain the rates of fare, which are as follows:

Rates of fare subject to change without notice and distances between Fifth avenue terminal station, Chicago, and—	Miles.	Single-trip fare.	Round-trip fare.	Fare by using $5.00 interchangeable coupon ticket.	54-ride monthly individual ticket.	60-ride monthly individual ticket.
Maywood	11.0	$0.10	$0.20	$.....	$....	$.....
Bellewood	13.0	.15	.30	.....	.....	.....
South Elmhurst	16.0	.20	.40	.16⅔	5.70	6.30
Lombard	20.5	.25	.50	.20⅝	6.00	6.65
Glen Ellyn	23.0	.30	.55	.25	6.40	7.10

Elgin	42.0	.60	1.10	.50	9.00	10.00

Tokio, Japan, has 90 miles of electric railways, exclusive of suburban lines, all under the management of one Japanese company. The 700 cars in daily use carry an average of 300,000 passengers, and have already displaced more than half the jinricksaws. A 2½-cent fare and complete transfer system is in force, but as yet there are no unions. Wages are on a minimum basis of $6 per month for both conductor and motorman. The track is narrow gauge, owing to the narrow streets. All the cars, etc., are made in Japan from American and European ideas.—Exchange.

A SUGGESTION TO ELIMINATE OVERCROWDING OF SURFACE CARS IN NEW YORK.

The transit committee of the City Club of New York, which has made extensive investigations of the city's transportation problems, on December 28 sent to the public service commission a letter protesting against the proposed ordinance to regulate the number of passengers to be carried on the surface cars. In place of such a regulation, the committee proposes a plan of requiring the company to operate cars providing a definite number of seats. The letter is as follows:

The receivers of the New York Railway Company have submitted to your commission a draft of a regulation or ordinance, designed to limit to 65 the number of passengers that may ride on a street surface car at any one time. They ask your endorsement of this proposed measure.

Believing you will welcome an expression of opinion from any citizens interested in and studying the transit problem of the city, we submit for consideration our views on the proposed regulation.

We believe it is an unwise measure for the following reasons:

(1) Your commission appears to have ample power to so regulate the handling of cars as to furnish the greatest possible convenience to the public.

(2) It is inexpedient to attempt to regulate the number standing in cars by limiting the load, because (a) the American public is unaccustomed to such restrictions, and would not readily adapt itself to this form of regulation; (b) the enforcement of such a regulation, if in the form of an ordinance, would necessarily rest in the hands of the police, and these officers would not be likely to enforce it. An ordinance has been on the books for many years, section 57, revised code of ordinances, which requires that no electric car in Brooklyn "shall carry more passengers than 50 per cent more than its seating capacity." There is no pretense of enforcing it. (c) Such a regulation becomes a dead letter through lack of enforcement, and the public, seeing overcrowding after its enactment as bad as before, would lose faith in all attempts at regulation, and would come to believe that overcrowding is an unavoidable evil.

We desire to propose a form of regulation which we believe will do all that can wisely be done to equalize the load carried by each car.

Where increased transit facilities were needed the commission has heretofore issued orders for an additional number of cars to be run between certain hours. This method has undoubtedly secured a larger number of cars, but has not secured the full number of seats needed or possible in general, since the cars in use are small, with but two longitudinal side seats, and are constructed to accommodate standing rather than sitting passengers. What is desired, we assume, is that such a type of car shall be used as will furnish the greatest possible number of seats in a given period.

We therefore suggest that the commission periodically ascertain the traffic needs of every line and thereupon require the operating company to furnish during every 5-minute period a designated number of seats, rather than a stated number of cars. If the track capacity has been reached with the present type of cars, such order would make it necessary on the part of the operating company to increase the seating capacity of each car.

This form of regulation has the following advantages:

(1) The enforcement remains in the hands of the commission.

(2) It is definite and enforceable.

(3) A would-be passenger may choose whether he desires to ride on a crowded car or to wait for other cars, which, under this regulation, he may be assured will speedily come.

(4) It tends to induce the operating company to furnish cars with a maximum number of sittings rather than a maximum standing room as at present. It may cause them to experiment with larger cars or double-decked cars, or some type which will furnish the maximum number of seats per unit.

We believe that regulation of the running of cars by the above method would not only secure to the public the best accommodation possible with the present type of cars, but would also tend to cause the operating companies to secure a type of car that would utilize the tracks to their fullest capacity.

The Georgia Railway & Electric Company of Atlanta, Ga., announces that approximately 46,000,000 passengers were carried on its lines during the year 1907, an increase of 6,000,000, or 14 per cent over 1906.

DEPRECIATION OF CARDIFF ELECTRIC TRAMWAY AND LIGHTING UNDERTAKINGS.*

In a report to the chairman and members of the "Electrical Lighting, and Tramway" committee, John Allcock, the Cardiff city treasurer and controller, deals with the question of depreciation in regard to both the tramways and lighting undertakings as follows:

Tramways.

I have recently given further attention to this question, and have been supplied by the city electrical engineer and manager with the rates of depreciation which he considers represent fair wear and tear, based upon his expert knowledge of the condition of the Cardiff plant, and the undertaking generally. I have extracted the expenditure of the various sections of the work as shown by the following table, and against such cost I have calculated the annual amount of depreciation which is necessary, and in a further column the sinking fund, which has been set aside to redeem the loans which have been raised on those parts of the undertaking which are subject to depreciation.

		Depreciation.		Sinking fund instalment.	
Purpose—	Expenditure.	Per cent.	Amount.	Years.	Am't.
Track and bonding....	£209,369	5	£10,468	30	£4,225
Cars	79,602	10	7,960	15	4,202
Buildings	115,365	2½	2,884	30	2,328
Buildings	8,500	2½	212	25	230
Engines and generators	41,591	5	2,079	30	839
Engines and generators	22,500	5	1,125	25	597
Boilers, pumps, economizers	15,544	5	777	30	313
Boilers, pumps, economizers	6,350	5	317	25	168
Mechanical stokers and coal bunkers.....	1,736	5	86	30	35
Mechanical stokers and coal bunkers.....	2,550	5	127	25	67
Steam and other pipes.	8,485	5	424	30	171
Steam and other pipes.	6,374	5	318	25	169
Switchboards and instruments	5,933	7½	444	30	119
Tools, plants, etc.....	4,268	7½	320	30	86
Conduits and cables....	53,957	3	1,618	30	1,088
	£582,124		£29,159		£14,637

In the foregoing calculations, nothing has been provided for the depreciation of the accumulators. The reason for this is that they are being maintained by the Tudor Accumulator Company for a period of ten years from July, 1901, and it does not appear necessary during the continuance of this contract that further provision should be made.

If, however, the present conditions were altered, it would be necessary for me to submit a further report on this particular expenditure.

Annual depreciation as per foregoing table..... £29,159
Annual charge for sinking fund..... £14,637

Annual amount to be provided in addition to sinking fund..... £14,522

Note.—Of this amount the committee has already approved the provision of $5,500 as per resolution dated February 22, 1907, leaving a further annual sum of £9,022 still to be provided.

I do not think I need labor the point as to whether a provision for depreciation is necessary—this, I feel, will be readily conceded. There is, however, a question as to how such depreciation should be calculated, and I recommend that the committee approve the principle of setting aside as a depreciation fund the difference between the actual depreciation, based on the life of the several parts, and the sinking fund, which has been set aside in respect thereof.

The argument has been advanced that the corporation, in addition to maintaining a sinking fund, should also provide for the full depreciation on their various undertakings, but I do not agree with this contention, as the outcome of such a practice would mean that the present generation would redeem the loans, and at the end of the time an amount equal to the whole of the capital invested would be in hand in addition, in the shape of a depreciation fund, notwithstanding the fact that the undertaking had been kept up to date as far as this was possible out of revenue. To provide sinking fund and full depreciation would inflict a double burden upon the present generation which I do not think fair, and I feel that if a certain amount is set aside each year, based upon the difference between the depreciation and the sinking fund, that the corporation will have done all that can reasonably be expected.

Some portion of the existing materials could be utilized when the track is reconstructed, and there may possibly be a sum in hand on this particular section which would exceed the actual amount required for reconstruction, calculated at £4,000 per mile, but the sum in hand would not exceed the balance of loan remaining due on the track, and which had not already been provided by means of a sinking fund. The question of obsolescence of plant may in the future operate on the subject of depreciation, but, as a matter of fact, it is impossible to state with any degree of definiteness the liability which might accrue under this heading as it entirely depends upon improvements in machinery and also the introduction of labor-saving appliances, etc.

Electric Lighting.

The city electrical engineer and manager has kindly supplied me with the various rates of depreciation which, in his opinion, represents the annual fair wear and tear of the various portions of the electric light undertaking. In this case, also, I have extracted the expenditure of the various sections of the work which are subject to depreciation, and they are shown by the following table, with the annual amount of such depreciation and the annual charges for contribution to sinking fund.

		Depreciation.		Sinking fund instalment.	
Purpose—	Expenditure.	Per cent.	Amount.	Years.	Am't.
Buildings	£ 20,342	2½	£ 539	25	£ 539
Machinery	41,980	5	2,099	25	1,114
Mains and services	105,361	3	3,160	25	2,796
Transformers, motors, etc.	30,436	5	1,521	25	807
Meters	10,800	7½	810	25	286
Electrical instruments..	4,660	7½	349	25	123
	£213,579		£8,478		£5,655

A provision has not been made for accumulators, as the conditions are similar to those which obtain in the tramways department.

From this it will be seen that the loan charges necessitate payments to the sinking fund amounting to £5,655 per annum. The period sanctioned for the loans does not represent the life of the various sections of the undertaking and the full depreciation works out at £8,478 per annum. The difference between these two sums, namely, £2,823, is the amount which I recommend to be set aside in addition to the sinking fund, in order that when the effective life of the various portions of the plant and machinery comes to an end, due provision will have been made for the repayment of the original loan, viz., sinking fund in hand, plus depreciation fund.

Generally.

The rates of depreciation are based upon the supposition that they will operate in each case from the date of the opening of the works. This in the case of the tramways would be 1902, and electric light 1895, and the committee may be met with the statement ha such depreciation should be provided from these dates, calculated on the capital expenditure at the end of each financial year. I would, however, point out that there are no funds available for this purpose, and, under all the circumstances, I recommend that the first payment to the fund be dealt with in the current year's accounts, and that the future profits be also transferred to depreciation funds until such time as the amount standing to the credit thereof equals the amount which should be in the fund. If in any year the profits should be insufficient to meet the charges recommended for depreciation, I suggest that such liability should be the first charge on future profits.

Arthur Ellis, city electrical engineer and manager, entirely agrees with the views expressed in this report.

At a meeting of the committee the report was adopted.

*From Electrical Engineering (London) December 19, 1907.

The Ohio Electric Railway Company is building a power house near Lewistown reservoir for the Bellefontaine-Lima line, now nearly completed, and is erecting a substation near West Liberty for the Bellefontaine-Springfield line, which has been in operation for about two years. When the new Lima line is opened, about April 1, it is stated that the company will open a pleasure resort at the Lewistown reservoir, which has been made a state park, and will arrange an hourly service in each direction between Bellefontaine and Lima and Springfield.

RECEIVERS APPOINTED, THEN DISCHARGED, FOR CHICAGO & MILWAUKEE ELECTRIC RAILROAD.

On a petition of attorneys for the holder of 25 shares of stock, Judge Tuthill of the Cook county circuit court appointed receivers for the Chicago & Milwaukee Electric Railroad on December 31. As this step was taken without notice to the road, all concerned took immediate measures to adjust the differences which precipitated the receivership, with the result that on January 3 attorneys for the principal interests involved appeared before the court and secured the discharge of the receivers.

Charles G. Dawes, formerly comptroller of the currency and now president of the Central Trust Company, Chicago, ex-Mayor Carter H. Harrison of Chicago and Gordon A. Ramsay were named as receivers, but only Mr. Ramsay qualified.

The bill on which the action of the court was based was filed by Tolman, Redfield & Sexton, representing Charles J. Monahan, the owner of the 25 shares of stock. The bill alleged manipulation of stocks and bonds by Albert C. Frost, president of the Chicago & Milwaukee Electric Railroad, and charged that through "dummy" directors Mr. Frost had secured large, if not the controlling, interests in the following corporations:

Chicago & Milwaukee Electric Railway, an Illinois corporation, with capital of	$1,000,000
Chicago & Milwaukee Electric Railroad, an Illinois corporation, with capital of	5,000,000
Chicago & Milwaukee Electric Railroad, a Wisconsin corporation, with a capital of	300,000
Chicago & Milwaukee Electric Railway, a Wisconsin corporation with a capital of	100,000
Waukegan Fox Lake & Western Railway, an Illinois corporation, with a capital of	100,000
Kenosha Electric Railway, a Wisconsin corporation, with a capital increased from $50,000 to	1,000,000
Chicago & Milwaukee Power Company, an Illinois corporation, with a capital of	5,000,000
Ravinia Park Company, an Illinois corporation, with a capital of	200,000
The Racine Stone Company, a Wisconsin corporation, with a capital of	100,000
The Libertyville Trotting Association, an Illinois corporation (capital not given)	
The Alaska Central Railroad Company, a Washington corporation (capital not given)	
A. C. Frost & Co., a firm or copartnership	

Mr. Frost is said to have been connected in his dealings with the railroad company from 1897 to 1902 with "his client," whose name was not given. The "client" is understood to have been George A. Ball, a glass manufacturer of Muncie, Ind., who announced promptly that he still has an interest in the companies and is satisfied with the management.

The bill declared that when Mr. Frost announced to the directors that the business of the company required improvements in the line of the railroad from Evanston to Waukegan, a power plant at Highwood, reconstruction of trolley lines and a second line of track from Highland Park north, the work was done by the Republic Construction Company, of which Mr. Frost was president.

Following the action of the court conferences were held all day on January 1 between two of the receivers, John S. Miller, representing Mr. Frost, and representatives of various other interests. It was impossible for the attorneys to reach an agreement on that day, but the fact was developed that larger interests than those divulged in the bill setting forth the rights of the holder of 25 shares of stock were involved. Among those who participated in the conferences were G. L. Francis, R. Cassels and Amelius Jarvis of Toronto, representing large bondholders in Canada.

The final result of the conferences, which lasted all day and until midnight on January 2, was the agreement to appear before the court on the morning of January 3 and ask for a termination of the receivership. Mr. Dawes issued the following statement concerning the agreement which was signed by the various interests:

In this connection I will say that this is the result of the negotiations among the parties in interest, lasting now continuously for two days and a night, in which, without exception, every difference has been sunk by all in their co-operation for what was believed to be for the common good. These concessions have not been small. They have been many and large. In view of the very great variety and extent, both direct and collateral, of the interests involved, not only here but abroad, the outcome is most satisfactory. It only indicates that among business men the spirit of co-operation for good in a common cause can yet be appealed to with confidence and safety.

Mr. Tolman made a statement in which he said:

None of our demands has been denied. Our charges of fraud and manipulation, however, fall of their own weight, and they are buried and forgotten. The whole trouble will now be smoothed out in a private and peaceable manner and not in court. All interests have been provided for in the stipulation of settlement. Trustees will be appointed in any cases where the situation demands. In this manner the rough edges will be ironed down and claims gradually but certainly met.

Mr Frost has issued a statement as follows:

Although the action taken was a most unfortunate one, especially as it was taken on the eve of the company's semi-annual payment of interest, the company's finances have not been affected. The January interest coupons, amounting to $250,000, are being paid as presented and the funds are provided to meet all other obligations of the company, as well as the completion of the road into Milwaukee early this spring. For the purpose of having the charges in the bill, that stocks and bonds of this company have been used for building up other enterprises, proved to be absolutely false, I have executed a document by which Mr. Dawes will have the right to examine into this question, and if he finds that funds or securities of any kind have been used for the building up of other enterprises these funds and securities will be immediately placed in the possession of the company. The facts are that this company has issued no bonds or stocks for nearly three years, during which time nearly $500,000 has been expended on its property for permanent improvements and betterments. I take this opportunity of stating that Mr. Dawes worked untiringly two days and a large part of one night in his effort to have the receivership dismissed and the property restored to the company for the good of the community and the large number of investors interested.

STEAM RAILROAD CONSTRUCTION DURING 1907.

Figures compiled by The Railway Age show the number of miles of new track built by the steam railroads during the calendar year 1907 in each state as follows:

State—	No. lines.	Miles.	State—	No. lines.	Miles.
Alabama	14	185.60	Nebraska	4	40.70
Alaska	2	27.08	Nevada	9	189.21
Arizona	1	26.66	New Jersey	1	.56
Arkansas	16	138.14	New Mexico	6	121.45
California	14	253.46	New York	12	98.99
Colorado	7	79.29	North Carolina	12	155.77
Dist. of Columbia	1	6.90	North Dakota	5	197.45
Florida	10	320.00	Ohio	3	19.98
Georgia	9	157.99	Oklahoma	4	160.80
Idaho	7	124.68	Oregon	6	57.57
Illinois	11	106.47	Pennsylvania	27	147.67
Indiana	7	108.32	South Carolina	9	73.02
Iowa	4	78.00	South Dakota	7	385.83
Kansas	3	16.70	Tennessee	12	40.79
Kentucky	9	60.33	Texas	25	381.09
Louisiana	22	422.41	Utah	4	36.10
Maine	1	33.00	Vermont	1	5.09
Maryland	1	.70	Virginia	13	206.45
Michigan	13	66.08	Washington	7	311.01
Minnesota	10	217.36	West Virginia	14	94.47
Mississippi	19	261.59	Wisconsin	7	117.84
Missouri	11	91.11	Wyoming	3	74.64
Montana	2	175.90			
Total in 45 states and territories				374	5,874.25

Note.—It will be noted that the total number of lines given is not the sum of those in each state because of the fact that several lines extend into two or more states. During 1906 the steam roads built 6,100 miles of new track. The decrease for 1907 is therefore 226 miles.

The Brooklyn Rapid Transit Company will reduce its line of $16,000,000 fire insurance with stock companies to $3,000,000. The rest of the risk will be carried directly by the company.

INTERURBAN MAP OF THE CENTRAL STATES.

WITH INSET.

Following the practice of the past two years we present herewith as a supplement to the first issue of the year a map showing the electric interurban railways of the central states, operating, under construction or projected. A comparison with the maps issued in January, 1906, by the Street Railway Review, and on January 5, 1907, by its successor, the Electric Railway Review, affords an interesting study of the progress of electric railway construction in the territory where the development of interurban roads has been most pronounced. The greater part of the new track has been laid as extensions of existing systems, although several important new roads have been built, especially in Indiana, where the increase in mileage during the year just past amounts to 426 miles. A detailed statement of the mileage of the Indiana lines appears below.

This map, for which we are indebted to The Arnold Company of Chicago, has been carefully brought up to date from official reports, and is believed to be very complete. However, if errors are observed, the Electric Railway Review will be grateful for any information that will assist in making its records more complete.

INTERURBAN MILEAGE IN INDIANA.

Statistics compiled by the Indiana railroad commission show that there are 1,538.93 miles of interurban railroad in the state against 1,113 miles last year, an increase of 426 miles. These statistics do not include street railways. There are 30 electric railway systems in operation in the state, the one of largest mileage being the Terre Haute Indianapolis & Eastern Traction Company, with 351.40 miles. The shortest line is the French Lick & West Baden, operated between those two towns, a distance of 1.9 miles.

The following table exhibits the total and division mileages of the various companies, the letter A indicating that the road operates partly by steam power and the letter B that gasoline motor power is used:

	Miles.	Total miles.
Angola Railway & Power Company—		
Angola-James Lake	.....	3.75

Total mileage	.....	1,538.93

President W. H. Fledderjohann of the Ft. Wayne & Springfield Railway Company has asked the board of public works and the mayor of Ft. Wayne, Ind., to be allowed to run cars every three hours instead of every hour as provided in the franchise. Mr. Fledderjohann says that owing to the money stringency the operation of an hourly schedule will result in a financal loss to the company.

It is reported that the question of a bond issue for the purpose of constructing a subway system will be placed before the people of San Francisco at an early election. A number of prominent business men are said to have been planning the enterprise for over a year and a petition to the board of supervisors asking for the issuance of $4,500,000 of bonds is now being prepared. Supervisors M. I. Sullivan and Isidor Jacobs are named among the supporters of the project.

AMERICAN STREET AND INTERURBAN RAILWAY ASSOCIATION.

President C. G. Goodrich of the American Street and Interurban Railway Association has issued a letter to the general managers of member companies, announcing the establishment of a statistical bureau of information. The letter reads as follows:

While necessarily much of the time of the secretary and his assistants during the past two years has been devoted to various matters incident to the general upbuilding of the organization, considerable attention has been given to the establishment of a statistical bureau of information at the association headquarters.

Realizing the great value which such a central source of information may become to the member companies, your executive committee has recently made arrangements whereby the secretary will, from now on, be assisted by a statistician who has had several years of practical experience in this line of electric railway work.

The association already has a valuable statistical library, and this will be enlarged from time to time so that eventually it will contain copies of practically all governmental, state and municipal laws, reports and documents of general value to our members, as well as copies of various books, pamphlets, reports and other statistical data bearing upon the general subject of street and interurban railways.

As fast as data are obtained they will be placed in bulletin form and issued to the member companies. It is expected that such bulletins will be issued monthly hereafter, and the first one, containing confidential information on wages of conductors and motormen, will be ready for distribution in January, 1908.

While a number of lines of investigation are already well under way, there are undoubtedly many other subjects which might be investigated to great advantage to the member companies. As the primary value of the association is to be of real service to all of its members, you will aid very materially in accomplishing its purpose if you will kindly address a letter to the secretary, informing him what investigations in your estimation might be carried on by the association to the best advantage, not only of the member companies in general, but of your own company in particular. There is no question but that the association work can be of value to your company, but to accomplish this result we must have your hearty co-operation.

Bernard V. Swenson, secretary-treasurer of the association, has also issued two circular letters, under date of January 2, 1908, to members and associate members, from which the following extracts are taken:

Much has been accomplished by the committees of the various associations during the past year, probably the most important and far-reaching in value to the member companies being the work of the standardization committee of the Engineering association, the classification committee of the Accountants' association and the insurance committee of the American association.

The Atlantic City convention was the most successful one which has ever been held by the various associations and the several reports contain much that is of interest and value to the member companies. The proceedings of the Accountants' and Claim Agents' associations have already been distributed to the member companies in pamphlet form, and those of the American and Engineering associations will be completed and sent out within another week. The cloth bound volumes, containing the proceedings of all four associations, will be ready for distribution by January 18, which is exactly three months after the close of the convention.

At the 1907 convention the executive committee was requested to take steps toward the organization of a fourth affiliated association which would take over all of the general work of the American association relating to transportation, traffic and operation, leaving the American association free to devote its time to executive matters and questions of broad policy. It is expected that this new association will be organized in the near future and a communication relative to this matter will soon be sent to the member companies.

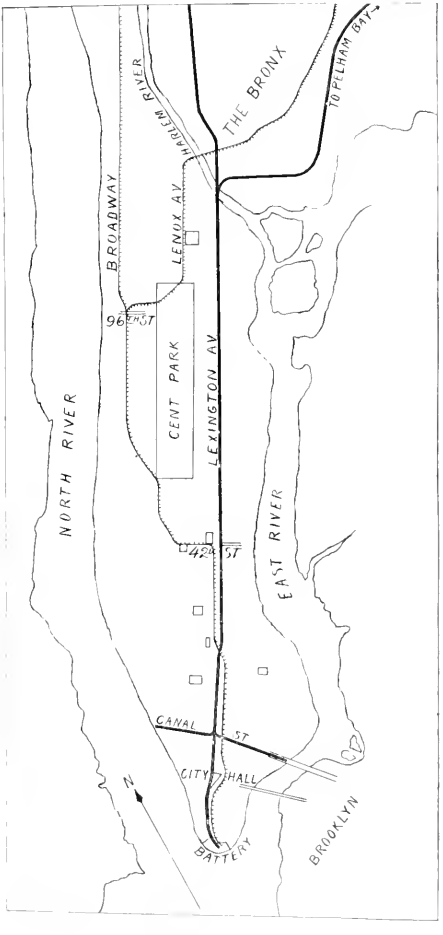
Since the convention last October much important work has been done by the American and Accountants' associations in connection with the classification of accounts, which is soon to be adopted by the interstate commerce commission. A communication relative to this matter will be sent to each member company in the near future.

The report of the treasurer for the year ending October 1, 1907, showed total receipts of approximately $25,000 and expenditures of practically the same amount as the receipts. The expenditures during the year 1907-1908 will probably be somewhat more than those of the year 1906-1907, as the work of all of the associations is becoming broader and more comprehensive. It is therefore quite essential that the old member companies continue in their support and that the membership be increased during the coming year. During the year just past the membership increased approximately 15 per cent, and it is expected that, with a more active campaign for membership, the increase during the coming year will be considerably greater.

Considerable attention has been devoted to the question of a suitable badge to be worn by associate members and several designs have already been submitted to the secretary. It is expected that the executive committee will take some action in this matter at its January meeting.

NEW SUBWAY ROUTE RECOMMENDED BY PUBLIC SERVICE COMMISSION OF NEW YORK CITY.

Almost the last official act of the public service commission of New York City in the first year of its existence was



Subway Route Recommended by the Public Service Commission of New York City.

the recommendation of a new subway route to meet the requirements of the boroughs of Manhattan and the Bronx. As shown on the accompanying sketch map, the new route starts from the Battery and closely parallels the existing subway, on

one side or the other of the latter, as far as Forty-second street. Instead of deflecting at this point the proposed new route continues straight ahead under Lexington avenue to the Harlem river. After passing underneath the river the route diverges, one line continuing in a general northeasterly direction toward Pelham Bay and Mamaroneck and the other proceeded in a general northerly direction to and underneath Jerome avenue.

At Canal street branches will extend to the North and East rivers, at the latter point connecting with the approach of Manhattan bridge to Brooklyn.

The estimated cost of the work is $60,000,000 and it is proposed to have the plans ready for inviting bids about March 1, 1908.

As will be seen from inspection of the sketch, the route follows to a considerable extent the route of the proposed Lexington avenue subway, plans for which were prepared early last year and described in the Electric Railway Review of April 13, 1907, page 486. The former plans failed to meet the approval of the authorities and the matter has been held in abeyance up to the present time.

Prepared as these plans will be, under the authority and with the approval of the commission in advance, it is probable that something tangible will result in the addition of transportation facilities for the Broux, which needs them so badly. At first glance it appears that the routes, so far as that borough is concerned, are well located to serve the needs of that extensive section without serious interference with existing routes of travel. So far as the downtown section of Manhattan is concerned, the proposed route is criticized in some quarters as following too closely the existing lines of travel. But the central avenue of downtown Manhattan is and probably always will be Broadway, and the distance from Broadway in each direction to the river and to the business establishments located in the intervening territory is so short that it appears that the greater number of passengers are served by locating the route in that vicinity.

A feature that commends itself is the directness of the route. It is substantially a bee-line from the Battery to the Bronx. It is proposed to make it entirely independent of the existing subway, under which it will pass in the neighborhood of Twelfth street, and to make connection with the New York Central at Forty-second street and at Mott Haven (One Hundred and Thirty-eighth street). It will run close to the Steinway tunnel at Forty-second street and to the Blackwell's Island bridge at Fifty-ninth street. At the lower end by a swing to the west at City Hall it will pass close to the end of the Hudson Companies' tunnels and be sufficiently close for another connection at Ninth street. On the Brooklyn side, also, connection would be easy with the authorized Fourth avenue line.

The commission expresses the view that by reason of these numerous possible connections the proposition will be an attractive one from the financial point of view.

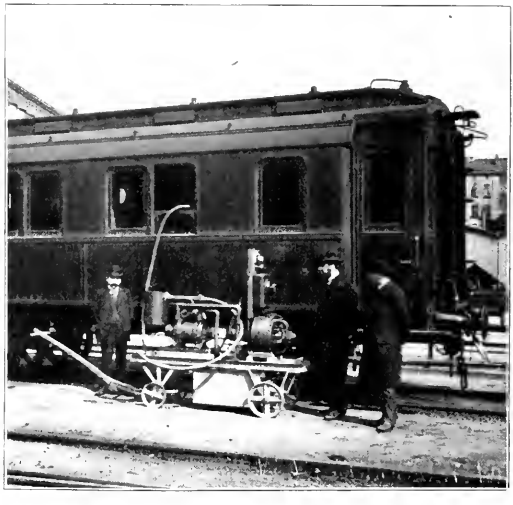
Malicious Destruction of Property.

Vigorous steps should be taken to punish severely the men or boys who either through wanton mischief or with criminal intent take wire from transmission lines in lonely districts or destroy insulators by using them as a mark to shoot at. One instance is told by our Peoria correspondent: "The lightning storm of last week developed trouble on the Illinois Traction Company's high-tension transmission line. The trouble was finally located, and was found to be caused by hunters shooting away the high-tension insulators. Twenty-two were found to be defective and all had to be replaced. The company has posted a notice offering a reward of $50 for information that will lead to the arrest and conviction of the guilty persons." This is no isolated case, nor is Illinois the only state in which these depredations are committed. We have heard of some very ingenious methods adopted to take wire from poles even when transmitting current at high potential, but it would serve no useful purpose to set forth how this perverted cleverness is manifested. But the tampering with transmission circuits is a serious matter to power-generating companies, particularly exasperating because usually there is no trace to the offenders. If existing laws are inadequate, others more stringent should be enacted before the power companies resort to the last expedient of patroling their lines by armed guards.—The Western Electrician.

GERMAN AIR CLEANING APPARATUS.

The system of cleaning cars, residences and offices by compressed air is now being extensively employed in this country as well as in Europe, the vacuum air cleaning system being a modification which is also largely employed. With this apparatus dust suckers carry the dirt into receptacles provided for the purpose and exhausted by pumps. For car cleaning and the cleaning of depots and station offices, a portable, electrically driven vacuum pump or compressor is used. This pump is mounted on a truck with an electric cable coiled on a wheel for providing electric current from any nearby source. A hose connects the pump with a dust sucker. By simply moving this sucker over the car seats or the office furniture the dust is removed rapidly and effectively.

In Germany the apparatus shown in the accompanying illustration is utilized extensively for cleaning the walls,



Portable Vacuum Cleaning Outfit.

drapery and furniture of many homes, apartment houses and flats. A permanent pipe is connected to the outside wall of a building, with terminal hose connections near the windows. At the street level a terminal connection is provided to which may be attached a pipe from a portable vacuum pump. The motors, which are of small capacity, are operated from any lighting circuit.

The following statistics, compiled by The Railway Age, give the number of locomotives and passenger and freight cars ordered by the steam railroads of the United States, Canada and Mexico during 1907 and the preceding six years:

	1901.	1902.	1903.	1904.	1905.	1906.	1907.
Locomotives	4,340	4,665	3,283	2,538	6,265	5,642	3,482
Passenger cars..	2,879	3,459	2,310	2,213	3,289	3,402	1,791
Freight cars.....	193,439	195,248	108,936	136,561	341,315	310,315	151,711

RECENT ELECTRIC RAILWAY LEGAL DECISIONS.

BY J. L. ROSENBERGER, LL. B., OF THE CHICAGO BAR.

Suddenly Turning Team to Cross Track.

Metropolitan Railway Company v. Fonville, 91 Pacific Reporter, 902.—The supreme court of Oklahoma holds that a driver of a vehicle who suddenly turns his team to cross a street railway track without looking and listening for an approaching car, and without taking the ordinary care and precautions imperatively required of all who place themselves in a similar position of danger, is guilty of contributory negligence as a matter of law.

No Error in Excluding Evidence of Having No Report of Accidents.

Randazzo v. Brooklyn Heights Railroad Company, 106 New York Supplement, 193.—The supreme court of New York, appellate division, second department, holds that in a personal injury case where there was no evidence that the defendant required, or that it was customary for reports of accidents to be made by its employes, there was no error in excluding evidence that there was no report of the alleged accident in question on the files of the company, as such evidence could have no weight.

Reasonableness of Speed.

Smith v. Connecticut Railway & Lighting Company, 67 Atlantic Reporter, 888.—The supreme court of errors of Connecticut says that the reasonableness of the speed at which a car is run is to be measured by the relation of that speed to the particular circumstances under which it is maintained. A speed of 20 miles an hour might not be unreasonable in the open country, where the view is unobstructed, and there are no travelers in sight. A speed of three or four miles an hour might be unreasonable in a crowded street, when other vehicles or pedestrians were on the tracks in front, or obviously on the point of crossing them.

Liability for Injury from Acceleration of Speed After Passenger Has Gone on Platform to Alight After Signal.

Ranous v. Seattle Electric Company, 92 Pacific Reporter, 382.—The supreme court of Washington says that cases might be cited establishing: (1) That a street car passenger, who leaves his seat when the car is approaching his destination and goes to the platform for the purpose of alighting when the car comes to a stop, is not as a matter of law guilty of contributory negligence. (2) That a street railway company is not liable to such a passenger for injuries resulting from the ordinary jolting or jerking of the car, or the acceleration of its speed for the purpose of reaching its usual stopping place.

But this case presented a different question. The plaintiff was not injured by the ordinary jerking or jolting of the car in reaching its usual stopping place, nor by the acceleration of its speed for that purpose. The testimony on her part tended to show that at the time of paying her fare, or surrendering her transfer, she made known to the conductor in charge of the car her desire to alight at Sixth avenue, and between Seventh and Eighth avenues she made a like request. As the car passed Seventh avenue the conductor sounded the bell. As the car approached Sixth avenue at a slow rate of speed, she arose from her seat and proceeded to the back platform of the car, with the intention of alighting from the car when the same should come to a stop. As the car reached about the center of Sixth avenue its speed was suddenly accelerated, and the lurch caused by such acceleration threw the plaintiff from her position on the back platform of the car into the street. The evidence, the court holds, was sufficient to justify a verdict in her favor.

As to the contention that the conductor and motorman did not know that the plaintiff was on the platform or in a place of danger, the court says that if the bell was sounded to stop the car at Sixth avenue, as the plaintiff contended, the operators in charge of the car were bound to know that passengers might and constantly do act upon the warning thus given.

Kind of Employes Required for Exercise of Highest Care—$3,500 Verdict Sustained.

Connell v. Seattle Renton & Southern Railway Company, 92 Pacific Reporter, 377.—The supreme court of Washington says that it seems almost axiomatic that only very careful, prudent and experienced operators of cars can exercise the highest degree of care.

The plaintiff in this case, it appeared, was standing and holding to a strap in a car crowded full of passengers. The force of a collision with another car threw her violently in the mass of passengers, and she was much bruised about her side and injured about her ribs and spine. She was shown to be very nervous after the accident, although she was reasonably strong and well before. For years she had worked and earned her own living expenses. At the time of the injuries she was employed in a store in the alteration of ladies tailor-made gowns; but after the accident she had been unable to follow that vocation, or any other. Under such evidence the court will not say that a verdict for $3,500 in her favor was excessive.

Validity of City Ordinance Prohibiting the Sale, Giving Away or Receiving of Transfers.

City of Chicago v. Openheim and others, 82 Northeastern Reporter, 294.—The supreme court of Illinois says that the defendants were arrested on a charge of violating a city ordinance prohibiting any person from selling a street railway transfer ticket issued by a street railway company within the city, given to a passenger for the purpose of authorizing him to transfer from one car line to another without the payment of additional fare, as also prohibiting any person from giving away such transfer ticket for the purpose of enabling the person to whom given to use or offer it for passage upon any street railway car or cars, and further prohibiting any person from receiving any transfer ticket in the manner prohibited by the ordinance, and from using, attempting to use or offering the same for passage upon any street railway car or cars.

Upon a hearing in the municipal court, without a jury, all of the parties were discharged. The supreme court holds that such disposition of the cases was erroneous, as the ordinance was valid, contrary to the opinion of the lower court.

The supreme court says that this ordinance was enacted for the benefit of passengers wishing to make a trip which necessitated the use of more than one line of the street railway company. It was not within the contemplation of the city council, in adopting the ordinance, that a person wishing to make a trip to a point reached by the initial line of passage should have the right to demand a transfer ticket for the purpose of selling it to someone else, to be used in making a trip over a connecting line of the street railway company. When a passenger pays his fare on the street railway he is entitled to a transfer ticket if in making his trip he desires to transfer from one line to another upon which transfers are issued, and such transfer is good upon the line over which it is issued if used at the place and within the time required. Limiting it to the use of the person to whom issued is not taking it away from him so that he is divested of his title and possession, and does not therefore deprive him of his property.

Nor was the court's opinion changed by the argument that the ordinance prohibits the selling or giving away of street railway transfer tickets without any limitation or restriction and without any regard to the place where issued or the time

when issued, so that if a person to whom a transfer had been issued should sell or give it away at any time after the right to use it had expired, or at any place, however distant, from the place where it was authorized to be used, such person would be subject to the penalties provided by the ordinance for its violation.

Tracks Treated as Property of Company Using Them—Ownership of Car and Division of Fares Immaterial—Car Cleaning and Repairing May be Delegated.

Beckman v. Meadville & Cambridge Springs Street Railway Company, 67 Atlantic Reporter, 983.—The supreme court of Pennsylvania says that the tracks at the point where the plaintiff's husband was killed were the property of the Meadville Traction Company, but were in joint use by that company and the defendant under a traffic agreement. For the purposes of this case, therefore, they were to be considered as the property of each in turn while in use by it.

Under the agreement the cars of the defendant were to be cleaned and repaired by the traction company. Two cars of the defendant had been delivered under this arrangement to the traction company, which dismantled one of them, attached it by chains to the other, and started both toward the car barn for cleaning and repair. On the way the coupling chains broke and the dismantled car ran on a down grade at increasing speed until it collided with the car of the defendant on a siding, in which latter car was the plaintiff's husband.

The fact that the colliding car was the property of the defendant was immaterial. For the time being it was the property of the traction company, having been delivered to it for repair and not yet returned. Whether it was on its way to the car barn for further work or for storage or for delivery was not material. It had not been returned to the defendant, but was still in the hands and under the control of the traction company, which for this purpose was an independent contractor.

Cleaning and repairing cars was no part of the defendant's franchise which could not be delegated. It was the ordinary case of an independent mechanic receiving an article for repair, and while in custody of it so using it as to injure another person. If the traction company had hauled the car out to the other end of its road for the repairs and the accident had taken place there, where the defendant's cars did not run, no question would have arisen as to the defendant's liability. Yet the case was no different. Neither the ownership of the colliding car nor the place of the accident had any relevancy at all to the question of the defendant's liability.

The negligence, if any, from which the accident resulted was, so far as the evidence showed, that of the workmen who attached the dismantled car to the one drawing it. They were the employes of the traction company. Some effort was made to show that the defendant paid for their services, but the evidence only went so far as to show that as between the two companies the traction company was to repair and clean the cars at cost, and that it therefore kept an account, among other things, of the wages paid for such services, and the defendant paid on that basis. The workmen themselves were employed, controlled and discharged by the traction company and were in no sense coemployes of the defendant.

Another effort was made to hold the defendant liable on the ground that by the agreement it paid the traction company $2\frac{1}{2}$ cents for every passenger it carried over the latter's lines, and therefore when the plaintiff's husband paid his fare there arose a joint obligation of both companies for his safe carriage. But there was no basis for such claim. The defendant under the agreement was a lessee of running rights over the traction company's tracks, and the division of fares was only a method of estimating the rental to be paid. The traction company remained in the sole ownership and control of the road, and the defendant no more entered into a joint liability by that arrangement than any other tenant by an agreement to pay rent to his landlord. The class of cases arising from accidents caused by defective roadbed running regulations, etc., for which the joint users of the road are equally liable to their passengers, had no applicability to the facts of the present case.

Summing up the whole case, briefly, it showed the defendant using what must be treated as its own track, lawfully and without negligence, and having its passenger killed by the act of a third party, over whom it had no control, and for whose action it was in no wise responsible. The presumption of negligence arising from the death of a passenger by collision having been fully rebutted, and there being no evidence to show negligence in fact, a verdict should have been directed for the defendant.

Rights of Passenger Carried Beyond Destination and Injured After Leaving Car with Advice of Conductor.

Stevens v. Kansas City Elevated Railway Company, 105 Southwestern Reporter, 26.—The Kansas City court of appeals holds that if the plaintiff informed the conductor of the place where she wished to depart, the place thus designated being a regular station, it became the duty of the conductor to stop the car at that place, call its name or otherwise notify her that she had reached it, and to hold the car a reasonably sufficient time for her to leave it in safety. The relation of passenger and carrier does not cease until the carrier transports the passenger to his destination, and affords him a reasonable opportunity to alight in safety from the vehicle.

Where the passenger is induced to forego the right to be carried to his destination by the representation that he can reach it in safety by following proffered directions, he is justified in relying on the superior knowledge of the trainmen, and should not be held to have abandoned his contract right to be carried to his destination, and there permitted to alight in safety. Constructively he remains a passenger until he reaches that point, and is entitled to recover for any injuries he may sustain from following the negligent directions he received from the carrier's servants. The directions being given by the conductor in an attempt to perform the contract of the carrier are within the scope of his employment, and bind the carrier to answer in damages for the injuries caused by them.

If, however, the plaintiff failed to give timely notice of her intended destination, and when the car stopped at that point to permit passengers to alight remained in her seat, she was not entitled to recover from the fact that the conductor afterward negligently directed her relative to the best way to reach her destination. The court does not agree with counsel for the defendant in the proposition that, when the car left that point, she had ceased to become a passenger, and the defendant owed her no contractual duty. The fare she paid entitled her to ride to the end of the line if she chose. On receiving timely notice from her, it was the duty of the defendant to stop at any regular station and give her a reasonable opportunity to alight. If she failed to give such notice and was carried past the point where she intended to stop, that was her fault, and, although she still continued to be a passenger until she left the car, the defendant owed her no duty to carry her back to her destination under the contract then in force. If she decided to leave the car at the next stopping place and return afoot, the defendant would be in no wise responsible for the consequences of such decision, and when it stopped the car and permitted her to alight it fully discharged its contractual duty, and, from the instant she stepped in safety to the street she ceased to be a passenger. In stepping to the street, under such an hypothesis of facts, the plaintiff voluntarily abandoned her status as passenger and thereafter she could follow the advice or directions the conductor had given her, or proceed in any other way, but in either event the defendant should not be held responsible for her future mishaps.

News of the Week

Car Operated Through Hoboken Tunnel.

One of the new steel cars which will be operated through the Hudson Companies' tunnel under the Hudson river made the first complete trip from Morton street, Manhattan, to Hoboken, N. J., on December 28. E. M. Hedley, superintendent of the Hudson River Tunnel Company, acted as motorman and a number of officials and engineers made up the party.

Strike on the Local Lines of the Indiana Union Traction Company.

A strike was declared on January 1 by the motormen and conductors employed on the local lines of the Indiana Union Traction Company at Anderson and Muncie, Ind., who are members of the Amalgamated Association of Street and Electric Railway Employes. From reports it seems that the men's reason for the strike is that the company on December 31 signed a 3-year wage contract with the Brotherhood of Interurban Trainmen, of which most of the company's trainmen are members, instead of with the Amalgamated association. Members of the Amalgamated association presented an ultimatum to the company on Monday threatening a strike if the contract with their association was not signed by 6 p. m. The schedules provided for in the two contracts are said to be practically the same. General Manager H. A. Nicholl replied that he had signed a contract with the brotherhood as representing the majority of the employes and that no reduction of wages for either interurban or local men was contemplated.

Strikebreakers from Chicago were placed on the cars in Muncie and Anderson on Tuesday when the men walked out. This action was followed by a riot at Muncie on Tuesday afternoon. The men on the cars were attacked by a stone-throwing mob of strikers and sympathizers and retaliated by shooting. Two bystanders were shot, a street car was demolished and an interurban car was badly damaged. Several persons received injuries. The rioting did not cease until every car was sent to the barns.

On Thursday, when the company again attempted to run cars, the rioting was resumed and the cars had to be taken back to the barns. On Friday morning two cars were wrecked by the strikers. As we go to press we are advised by telegraph that four companies of the Indiana militia are assembled at Indianapolis and four others are waiting outside of the city, having been summoned by Governor Hanly, who awaits word from Adjutant-General Perry before sending them to Muncie. Cars are running at Muncie under police protection, but the company has cars lined up at Indianapolis ready to transport the soldiers to Muncie at a moment's notice if necessary.

To Discuss Form of Annual Report.—The Ontario Railway and Municipal Board has fixed January 21 as the date upon which it will receive a deputation of Ontario members of the Canadian Street Railway Association for the purpose of discussing objections to the form of the annual reports required by the board.

American Institute of Electrical Engineers.—A meeting of the Worcester Polytechnic Institute section of the American Institute of Electrical Engineers was held at Worcester, Mass., on January 3. J. A. Sandford, Jr., addressed the meeting on the subject of "Requirements, Manufacture and Present Good Usage of Porcelain Insulators for High-Voltage Lines."

Recent Accidents.—About twenty persons are said to have been injured in a head-on collision on December 28, between two cars of the Eastern Pennsylvania Railways Company on the line between Tamaqua and Lansford. The accident occurred on a single-track line shortly after midnight during a heavy fog, which prevented the motormen from seeing the cars until too late.

Railway Signal Association.—A regular meeting of the Railway Signal Association will be held at New York, N. Y. (Engineering Societies building, Room No. 6), on January 14, beginning at 10 a. m. The programme includes discussion of the reports of the committees on "Automatic Block Signals" and on "Electric Interlocking" and a paper by F. R. Cook on "Economical Operation of Electric Signals and Care and Maintenance of Storage Batteries in Signal Work."

New York Commission to Continue Investigation.—Chairman Willcox of the New York public service commission has announced that the commission will continue at an early date its investigations into the financial affairs of the various transit lines of the city. The commission also proposes to turn its attention to the new East Side subway, the removal of the New York Central tracks from Eleventh avenue, the building of future subways and hearings on service orders.

Decision Favors Dallas, Tex., Students.—Judge Tucker of the district court at Dallas, Tex., has rendered a decision in favor of college students, who brought suit to compel the Dallas Consolidated Electric Street Railway to issue half-fare tickets. The court holds that the act of the legislature of 1903, requiring street railway companies to issue half-fare transportation in certain cases to students not over 16 years of age, is still in force, and that it was not repealed by the anti-free pass law of the thirtieth legislature. The court also holds that the word "grades," as used in the act of 1903, refers to the students and not to the school.

Electrification of Sarnia Tunnel Nearing Completion.—The power house, overhead construction, track bonding and practically all other work in connection with the electrification of the Sarnia-Port Huron tunnel of the Grand Trunk under the St. Clair river has been completed and three of the electric locomotives have been received. A preliminary test of the electrical equipment was made during the latter part of last month and it is expected that regular operation of trains through the tunnel by electric locomotives will be commenced in a few weeks. The power station units are two 1,250-kilowatt Parsons turbine generators to furnish single-phase current at 3,300 volts potential direct to the trolley.

No-Seat No-Fare Hearing.—Six cases selected by the council for the city of Jersey City, N. J., to test the no-seat no-fare ordinance recently upheld by the state supreme court were heard before a police justice on December 30. The North Jersey Street Railway, against which the cases were brought, was represented by Col. E. W. Hine, assistant to the president, and William D. Edwards, of counsel. Several witnesses for the city testified that they had boarded the company's cars, leaving the Pennsylvania ferry terminal, and refused to pay fare until given seats. They had been informed by the conductors that no seats were available, but that they must pay fare or leave the car. The cases were all postponed until the following day, when the court aquitted the company in one case and fined it $50 in another.

Oregon Electric Railway's New Line Opened.—Regular service from Portland to Salem, Ore., was begun by this company on January 1, with the operation of one car a day between the terminals of the road. As rapidly as possible more equipment will be provided and it is expected that by February 1 eight trains will be running in each direction daily. There are nine regular passenger and freight stations, located as follows: Portland, Multnomah, Tualatin, Tonquin, Wilsonville, Donal, West Woodburn, Waconda and Salem. A temporary arrangement for fares based on the 3-cents-a-mile basis has been announced with round-trip, commutation and week-end tickets at reduced rates. The permanent schedule of fares will be arranged as soon as the details incident to the opening of the line have been worked out. Power for operating the road is obtained from the Portland Railway Light & Power Company. The road, as completed, is 50 miles long. It is proposed, however, to build during the coming year a branch from Portland to Forest Grove, 26 miles long, and one from Salem to Albany and Eugene, Ore., 68 miles long. It is planned to have the Forest Grove branch completed by August 1 of this year.

Philadelphia Rapid Transit Company Refuses to Deal with Union.—The strike which the employes of the Philadelphia Rapid Transit Company threatened about two weeks ago has not yet been declared and the general opinion in Philadelphia seems to be that there will be no strike. Mayor Reyburn, at the request of the Central Labor Union, has attempted to arrange for a conference between the officials of the company and the union to discuss the demands of the men for an increase in wages and better working conditions. The directors held a meeting on December 26 and passed resolutions, which were communicated by the mayor to the Central Labor Union, to the effect that they deemed any conferences between the company and the union inadvisable and unnecessary. The directors stated that "the company has already exceeded its abilities in remunerating its employes and any conference could not possibly result in any benefit or change other than enabling outside organizations to levy heavy contributions upon them with no possible benefit in return. President Mahon and other officers of the union have been in Philadelphia, but have not announced any decision to declare a strike. A large number of strikebreakers in the employ of John Farley are still quartered at Willow Grove Park in anticipation of any trouble, but many of them have left the city.

Traffic and Transportation

Advertise Service in Chicago.

Various electric railways in Chicago had advertisements calling attention to their service in the statistical issues of the daily newspapers published on December 31 or January 1. The Chicago City Railway published full-page advertisements headed "The city gets 55 per cent." Illustrations were given of the new pay-as-you-enter cars with the date 1908, of horse cars pulled through the snow in 1859 and of cable cars with the date 1882. The advertisement was a statement of the position of the company under its new ordinance and described the advantages of the pay-as-you-enter plan and the new system of car dispatching. The following shows the character of the advertisement: "The Chicago City Railway Company proposes to broad-base its future operations upon a degree of public confidence and co-operation impossible in the past. * * * The company holds that under its partnership agreement with the city an unjust claim enforced against it is on a par with the bogus judgment against the municipality. * * * The City Railway is bending every effort to render travel on its lines safe as well as comfortable. The life or limb of a patron is neither an achievement nor an asset. On the contrary, it is a moral horror and a financial loss."

The advertisement of the South Side Elevated Railroad contained a view of Kenwood junction. The Metropolitan West Side Elevated Railway advertised its accessibility to factory sites. The Northwestern Elevated Railroad advertised "Nearly 600 trains each way every 24 hours. The excellent transportation facilities offered by this line should appeal to every prospective purchaser of a home."

Petition of Electric Railway for Joint Rates with Steam Roads Denied.

The interstate commerce commission has rendered a decision, through Commissioner James S. Harlan, denying the petition of the Chicago & Milwaukee Electric Railroad to have the Illinois Central Railroad and its controlled line, the Yazoo & Mississippi Valley Railroad, establish through routes and joint rates for the transportation of cabbages from points on the electric road to stations on the steam road. The report of the commission decides:

"Notwithstanding the fact that the issue, as made on the pleadings, covers all points on the lines of both companies and calls for joint through rates on general traffic, the testimony on the hearing was directly solely to the need of the complainant for an outlet to southern markets for the cabbage product of that part of southern Wisconsin through which its line passes and which seems to be devoted largely, if not exclusively, to the production of cabbages.

"The application is contested by the principal defendants, as well as by the Chicago & Northwestern Railway, which, on the stipulation of the parties, intervened after the hearing and became a party defendant, on the ground that the cabbage district in question is already served by reasonable and satisfactory through routes.

"Although it does some local freight business between Evanston and Lake Bluff, the principal traffic enjoyed by the complainant between those points is such as pertains to any interurban street car company. But from Lake Bluff the petitioner has constructed a branch line to Rockefeller, which affords it a larger opportunity for conducting a general freight traffic.

"The fact that the complainant has no refrigerator cars of its own in which to move cabbages, if the through routes desired are established by the commission, is not only admitted by the petitioner, but it also confesses that the commission would be unwarranted in compelling the establishment of joint rates and through routes unless the Illinois Central Railroad will voluntarily supply the necessary cars after the routes and rates have been established, or unless the complainant, as a matter of law, can compel it to do so. The record indicates the unwillingness of that defendant to supply the required empty cars to the complainant. And the complainant meets that situation by maintaining that after the through routes and joint rates have been established it will have further redress against that defendant on the ground that if the Illinois Central Railroad, notwithstanding the custom which requires the carrier having the long haul to supply the cars, should refuse the complainant this privilege while supplying cars under similar conditions to other small carriers, its refusal would be an unjust and illegal discrimination that could and ought to be corrected by this commission.

"The defendants insist that reasonable and satsifactory through routes now exist over which the cabbage product of the district described in the petition may readily and promptly find an outlet to the desired markets in the south. The complainant on the other hand denies that a reasonable and satisfactory through route exists; and in this connection its counsel puts an interpretation upon the provision of law under which the commission is authorized to act in such cases that has not heretofore been suggested. And counsel for the complainant insists that the contention of the defendants that 'the territory through which the petitioner is operating is also served by the Chicago & Northwestern Railway and that reasonable and satisfactory rates (routes) now exist' is based upon 'a perverted reading of the proviso' of that clause. Counsel's own reading of it apparently is that there are no reasonable and satisfactory routes because 'there is no joint rate or through route from points on the petitioner's line to points upon the line of the Illinois Central.' In other words, his contention seems to be that it does not satisfy the requirements of the law if the neighborhood or territory, in which the shipping community is and through which both lines run, is already served by a reasonable and satisfactory through route; but that the law means that if there are already no reasonable and satisfactory through routes to the markets in question from points on his line in that neighborhood or territory the commission has the authority to and must establish such through routes.

"We are unable to perceive the force of this suggestion. It proceeds apparently on the theory that the sole object of the provision above quoted was to afford a means by which new lines, with the aid of the commission, may profitably force their way into shipping districts built up and already well and adequately served by older lines, and thus seize and divide with the latter such traffic as may be offered for movement. If that be the import of the clause in question, it is too well concealed to be readily discernible. With the development of the power of the commission to regulate rates and to protect the public interests by readjusting them when in excess of reasonableness and fairness, the need of competing lines becomes less vital to shipping communities whose transportation facilities are already ample. And had the congress intended thus to interfere in the competitive struggles of carriers for traffic it cannot be doubted that its policy would have been announced in more definite language. We regard it as clear that the purpose of the clause was to afford relief to shipping communities, and not to aid carriers to acquire strategic advantages in their contests with one another. While it may not be doubted that a railroad company is competent to file a complaint before us under the clause in question and to demand an order establishing through routes and joint rates with its connections, its right to such relief is to be tested by the needs of the community which it seeks thus to serve, and not by the fact that stations on its line in such communities have not been accorded such routes and rates by connecting lines.

"The only question therefore that remains to be considered is whether, in the language of the proviso, any 'reasonable or satisfactory through route exists' from the cabbage producing district described in the record to the southern markets which the complainant desires to reach. Under all the facts and circumstances disclosed upon this record, we must hold that the district in question already enjoys the advantages of reasonable and satisfactory through routes. A freight receiving station in an agricultural community that is close at hand to one farmer or producer must of necessity be farther away from his next neighbor. And unless it be that every farmer is entitled to have the rails run to his own door a farming community that is required to haul its products no farther than three-quarters of a mile to a mile and a half, as shown in this record, in order to reach the freight receiving stations of well-established lines, must be held to be reasonably well served. That the shipping district here referred to has been well served by the Chicago & Northwestern Railway is shown by the fact that it has enjoyed a prosperity and growth beyond the average of concededly prosperous farming communities.

"It is scarcely necessary to add that the apprehension of counsel that the merits of complainant's contention may be prejudiced or obscured by the fact that it is an electric line is without foundation. The act makes no distinction between railroads that are operated by electricity and those that use steam; nor has the commission thought at any time to make such distinction. Both are subject to the act when engaged in interstate transporattion and are entitled to equal consideration in any controversy before us. Moreover, progress in the science of electricity and the rapid increase of new devices for its application have led many practical railroad men to think that we may be measurably near its general use as the chief motive power in transportation. The complaint must be dismissed, and it will be so ordered."

Improvement in Service Ordered in New York.—The public service commission, first district, has ordered the New York City Railway to increase by 50 per cent the number of cars operated in Eighth avenue after midnight, and by 20 to 25 per cent the number at other hours. The New York City Interborough Company has been ordered to re-establish service on the line in Aqueduct avenue, from One Hundred and Fifty-fifth street to Kingsbridge road.

Change in Fares by Pittsburg Railways Company.—We are advised by an official of the Pittsburg Railways Company that the change in fare on the night cars to Allegheny was caused by the merging of Allegheny into Pittsburg, making them one municipality. During the last year the Pennsylvania legislature enacted a law providing that the street railways in second-class cities should not charge over one fare. Heretofore the Pittsburg Railways Company had been charging double fare on night cars. This company is testing this law in the supreme court at present, but believes it is better policy to comply with the law than to have any disturbances on the cars, until the decision of the supreme court is rendered.

Reduction in Fares by Atlanta Northern Railway.—A voluntary reduction of 28.5 per cent in passenger fares has been announced by the Georgia Railway & Electric Company on the Atlanta Northern Railway, the subsidiary line which operates between Atlanta and Marietta. The reduction was effective as of January 1, 1908. Beginning that day family commutation tickets were placed on sale. The reduced rate, while not ordered, was submitted to the Georgia railroad commission and received its hearty approval. The officials of the company state that they put the rate into effect as an experiment and have the permission of the board to discontinue it if in their opinion it is unsatisfactory. The Atlanta Northern road was put into operation in 1905, on a basis of two cents a mile, when the Western & Atlantic Railroad was charging three cents a mile. Some time after the line was placed in regular operation a reduction in fares was made and individual tickets, good for fifty-four trips, were sold, making the fare between Marietta and Atlanta less than a cent a mile. In the meantime the regular single-trip fare remained the same. Now, however, the family commutation ticket will permit practically evry patron to ride at about a cent a mile.

Low Rate to Amusement Park Not Discriminative.—The Indiana railroad commission has decided that the rates charged by the Indiana Union Traction Company between Indianapolis and Broad Ripple are not discriminative, as complained by citizens of the latter town. The company charges a 10-cent fare each way between Indianapolis and the town of Broad Ripple, and also sells round-trip tickets from Indianapolis to the White City amusement park, located at Broad Ripple, for 10 cents, with an extra charge of 10 cents for admission to the park. The citizens claimed that it was discrimination to require them to pay 20 cents for a trip to Indianapolis and return while people from Indianapolis could ride to the park and back for 10 cents. The commission says "there is no well-founded objection to the round-trip fare from the city to Broad Ripple park. The purpose of this rate is to induce a flow of traffic from a city of over 200,000 inhabitants to a place of amusement and recreation. Such a place well conducted is to be encouraged, as it furnishes an additional point for recreation and rest for the residents of congested districts in the city."

Justice Davis of the New York supreme court has reserved decision on the application of the New York City Railway to vacate an order for the examination of its nine directors before a referee. The order was obtained by Attorney-General Jackson of New York state and the petition recited that the appointment of receivers by the federal court was brought about by collusion between the Pennsylvania Steel Company, the Degnon Contracting Company of New Jersey and the New York City Railway Company. In his argument before the court Samuel Untermyer said: "The attorney-general seeks to dissolve the corporation, upon the grounds that the corporation has been insolvent for at least one year, and he must show this to the satisfaction of the court. His complaint has no bearing on the issue, and he seeks to examine the directors on what we claim to be matters extraneous to the main issue, which is whether or not this company has been insolvent for more than a year."

A concrete dam 50 feet high and 400 feet long, containing 24,000 cubic yards of concrete, has just been completed for the La Crosse Water Power Company at Hatfield, Wis. There is to be installed a 16,000 horsepower electric transmission plant covering a radius of 90 miles of territory.

Construction News

FRANCHISES.

Bloomfield, N. J.—The Public Service Corporation of New Jersey will soon make application for permission to double track its line from Glenwood avenue, in Orange, to Bloomfield Centre, N. J. The company also desires to extend its Orange & Passaic Valley line from the present terminus at Bay avenue to Brookdale and ultimately to Paterson, N. J.

Defiance, O.—K. V. Haymaker of Defiance, has secured a 25-year franchise for the operation of the proposed Detroit Defiance & Ft. Wayne and the Defiance Paulding & Ft. Wayne electric lines through the city. The last-named road owns eight miles of the old Wabash & Erie canal bank and will be built from Detroit to Ft. Wayne by way of Wauseon, Lyons, Defiance, Paulding and New Haven, Ind. The council also has granted a franchise to the Toledo Wabash & St. Louis Electric Railroad in which C. D. Whitney and others, of Toledo, O., are interested.

Millville, N. J.—A franchise has been granted to a Buffalo syndicate for the construction of a 36-mile interurban railroad from Millville to Ocean City, N. J. Right of way is said to have been secured from the property owners along the proposed route and construction may be started in the spring. The names of those interested were not made public.

Streator, Ill.—The Illinois Traction System has officially accepted the 50-year franchise granted by the city council about a week ago for the Chicago Peoria & Ottawa Railway, which is to be part of the system's line to Chicago.

TRACK AND ROADWAY.

Americus Railway & Light Company, Americus, Ga.—It is announced that construction work on this company's 4-mile street railway system in Americus will be started some time this month. A. N. Walker, of the South Carolina Public Service Corporation, will superintend the work. (Mentioned September 28, 1907.)

Atlanta, Ga.—Joel Hurt of Atlanta is said to be interested in a proposed interurban railway which will connect Atlanta and Decatur, a suburb of Atlanta. The line will start from a point near Hurt park and reach the city limits of Atlanta over the extension of Ponce de Leon avenue. It is stated that no definite plans have been laid, but the building of other lines by the new company radiating from Atlanta is probable. The promoters are residents along the route or are property owners in the vicinity of the proposed line.

Aurora, Mo.—Surveys for an interurban railway which will connect Springfield and Joplin, Mo., have been made by Henry L. Davis, city surveyor. (New road.)

Burlington, Ind.—It is reported that A. A. Newer of Burlington, Ind., and others are interested in a project to build an interurban line from Logansport to Frankfort, Ind., via Burlington.

Charleston & Summerville Electric Railway, Charleston, S. C.—This company, which has completed considerable grading on its proposed line from Charleston to Summerville, S. C., 27 miles, has been reorganized with the following officers: President, Julius G. Hoeke, 15 Whitehall street, New York; secretary and treasurer, George Tupper, Summerville; general counsel, St. Julien Grimke, Charleston. (Mentioned December 14, 1907.)

Clarkston, Wash.—A syndicate of Chicago men is said to be planning the construction of a 40-mile electric line in Washington, connecting Anatone, Asotin, Vineland, Clarkston and Lewiston. It is stated that the syndicate will invest about $1,500,000 and local capital is being sought to increase the amount to $2,000,000. Committees have been appointed to secure 25 per cent of the stock subscriptions from local capital, no payment being required until the road is built and in operation. Active construction work is promised as soon as the local stock has been subscribed and will be finished in two and one-half years. Surveys have been started from Asotin to Anatone, 14 miles, with an elevation of 2,200 feet. Frank McKean, chief engineer. (New road.)

Denver & Interurban Railway, Denver, Colo.—Announcement is made of the formal opening of the Ft. Collins division of this road on December 28, when a party of officials of the company and about 200 invited guests made the initial trip over the line. It is stated that cars will now be operated regularly over the four miles of city track now completed in Ft. Collins. Current is supplied by the Northern Colorado Power Company at Lafayette, Colo. The road is owned by

the Colorado & Southern Railroad. Numerous extensions are planned for 1908, among which are the equipping for electrical operation of the Eldorado Springs (steam) Railway and 16¼ miles of extension from Denver to Louisville Junction, the grading for which has been completed. H. W. Cowan is chief engineer, Denver, Colo.

Evansville Henderson & Uniontown Traction Company, Henderson, Ky.—It is reported that this company, which proposes to begin construction in the spring on a line from Evansville, Ind., to Henderson, Ky., has filed amended articles of incorporation increasing the capital stock from $10,000 to $100,000.

Indianapolis & Cairo Traction Company, Indianapolis, Ind.—Charles McDermott, secretary of this company, writes that this line has been surveyed from Indianapolis to Sullivan, 80 miles. Grading has been completed from near Robison to Olney, 16 miles. When completed, the road will connect Indianapolis and Cairo, Ill., a total distance of 258 miles, and will serve the following intermediate towns: Sullivan and Robison, Ind., Olney, Fairfield, McLeansboro, Marion, Vienna, and Mound City, Ill. A. L. Hassler, president, 411 State Life building, Indianapolis; Charles McDermott, secretary. (Mentioned December 28, 1907.)

Knoxville (Tenn.) Railway & Light Company.—Ford, Bacon & Davis of New York, who has been engaged for the past four years in rebuilding this company's entire system, have completed the work and removed the construction forces from the city. All of the track has been laid with 90-pound rails.

Lake Erie Bowling Green & Napoleon Railway, Bowling Green, O.—It is stated that this company is planning to extend its line westward from Bowling Green to Tontogany, O.

Lancaster County Railway & Light Company, Lancaster, Pa.—This company has installed a 1,500-horsepower engine in its power station at Hebron, Pa.

Louisville & Interurban Railroad, Louisville, Ky.—Seven miles of new track on the extension out the Bardstown road from Louisville have been completed and placed in operation. The entire extension, which will be 14 miles long, is expected to be completed in the spring.

Monterey, Cal.—It is stated that financial arrangements have been concluded for the construction of an electric railway from Monterey to Carmel-by-the-Sea. Surveys are being made by H. B. Fisher, chief engineer, San Jose, Cal. Frank Powers, of the Carmel Development Company, San Francisco, is interested in the new line. (New road.)

Olney, Ill.—At a meeting held in Olney on December 24, a company was organized to build an electric line from Olney to Mt. Carmel and Evansville, crossing the Wabash river at Mt. Carmel.

Omaha & Council Bluffs Street Railway, Omaha, Neb.—The extension of the Sherman avenue line of this company from Thirty-sixth street and Ames avenue was opened on December 24 to Forty-second street and Grand avenue. The extension from Forty-fifth and Grant streets to the Deaf and Dumb Institute was placed in operation on December 25.

Ontario West Shore Electric Railway, Goderich, Ont.—This company which was formed to construct a railway between Goderich and Kincardine, Ont., has asked the city of Goderich to guarantee its bonds to the extent of $150,000. The company is empowered to issue bonds to the extent of $15,000 per mile of single track.—About 35 miles.

Pacific Electric Railway, Los Angeles, Cal.—It is expected that the 8-mile extension which this company is building from Los Nietos southeast to La Habra, will be completed and in operation by June 1, 1908.

Paul Smith's Railroad.—The first electric railroad to serve the Adirondacks region in New York state will be completed, it is stated, in about ten days, when the line recently constructed between Clear Lake Junction and Paul Smith's will be opened for traffic. The road is seven miles long, with a grade of about 1 per cent, and lies through one of the finest forests in the state of New York.

Peru, Ind.—Benjamin E. Wallace, James O. Cole, Jerome Herff and Harry Masters, all of Peru, Ind., who organized a company about two years ago for the construction of an electric line from Peru to South Bend, Ind., by way of Rochester, Argos and Plymouth, have interested Indianapolis capitalists in a revival of the project and it is said the company will soon be incorporated. It is stated that the new line will operate in connection with the Indianapolis and Peru branch of the old Union Traction Company of Indiana line, now leased and operated by the Indiana Union Traction Company.

Pittsburg Harmony Butler & Newcastle Railway, Pittsburg, Pa.—This company's bridge over Connoquenessing Creek, near Ellwood City, Pa., which was under construction was destroyed by high water last week. The loss in estimated at $25,000. The destruction of the bridge will materially delay the completion of the line from Pittsburg to Newcastle, upon which work was well advanced. James Bryan, of Pittsburg, is chief engineer.

Portland Eugene & Eastern Railway, Portland, Ore.—A. Welch, chief engineer and manager of this proposed 82-mile electric line, writes that four miles of track have been laid and the overhead construction completed in Eugene, since January, 1907. The road traverses a very level country from Eugene to Salem, Ore., by way of Springfield Junction, Albany and Turner. Power for the operation of the completed portion is being purchased from the Willamette Valley Company at Eugene. A substation of 250-kilowatt capacity has been built. Surveys have been completed for the entire distance, 82 miles, and grading will be started in the near future. J. O. Storey, president; A. Welch, manager and chief engineer, Portland, Ore. (Mentioned December 14, 1907.)

San Diego, Cal.—Construction work has been started on the proposed electric railway from San Diego, to Delmar, Cal. It is stated that this will form part of an extension which the Pacific Electric Railway Company intends to build along the coast to San Diego. W. H. Keller and C. H. Kirchoff, of Los Angeles, obtained the franchise. (New road.)

Seattle, Wash.—K. Allenbaugh, Seattle, Wash., is reported as saying that a new electric railway project is being considered by Seattle capitalists. As now planned the new road is to be constructed from a point near Buckley, Wash., to the Cowlitz pass, a distance of 56 miles, describing a semicircle around Mt. Rainier. The line will follow the course of the White river from Buckley until it reaches the highest point east of Mt. Rainier, from whence it will follow another stream to the coal fields of Cowlitz pass, serving a rich mineral and timber section.

Spokane & Newport Electric Railway.—Engineers are surveying in this vicinity for this proposed road between Spokane and Newport, Wash. It is stated that financial backing has been secured and that construction work will be started the coming year. Power for the operation of the line will be obtained from Albani Falls, adjoining Newport on the east. (New road.)

Tampa & Sulphur Springs Traction Company, Tampa, Fla.—Ties and other material have arrived and work was begun last week on the Michigan avenue extension of this company's line to West Tampa.

Twin City Rapid Transit Company, Minneapolis, Minn.—It is announced that an extensive programme of improvements at Lake Minnetonka is now being planned, including the electrification of the Minneapolis & St. Louis leased line from Minneapolis to Tonka Bay. In order to complete the line a short stretch of track will have to be built from Excelsior to Manitou Junction. The grading is already completed. It is stated that an amusement park and new boat and railway terminals may be built at Tonka Bay.

Yakima Valley Transportation Company, North Yakima, Wash.—The first car was operated over the line of this company on December 24 when A. J. Splawn, president, with a party of officials and directors, made the run from West Yakima Valley to the end of the line, about six miles west of North Yakima, and return. Regular service on a half-hour schedule was started on Christmas day. (Mentioned November 9, 1907.)

POWER HOUSES AND SUBSTATIONS.

Charleston (S. C.) Railway Gas & Electric Company.—This company has recently made a number of important improvements at its Meetings street power plant, which supplies current for all the city and commercial lights of Charleston as well as the 41-mile railway line. An addition to the boiler room 125 by 80 feet in area has recently been built, and during the past month two additional 500-horsepower Babcock & Wilcox double-deck boilers have been installed. The boiler equipment now has a capacity of 7,500 horsepower and provision has been made for an additional 2,000 horsepower. A Deane duplex boiler feed pump has also been installed and a new boiler feed tank of 50,000 gallons capacity has recently been completed. The power house is favorably situated at present for the receiving of fuel and plans are being formulated for the installation of an automatic conveyor from the storage yard to the boiler room.

Springfield (Mass.) Street Railway.—It is announced that this company expects to complete the installation of a 2,000-kilowatt generator and engine within the next few weeks.

Personal Mention

Mr. A. G. Moser, general manager and purchasing agent of the Chillicothe (O.) Electric Railroad Light & Power Company, has resigned, effective on January 15.

Mr. Arthur J. Gils, heretofore auditor of the Hudson Valley Railway Company, with headquarters at Troy, N. Y., has been elected assistant secretary-treasurer of the company.

Mr. Louis H. Mountney, superintendent of the Lewistown Milton & Watsontown Passenger Railway at Milton, Pa., has been appointed superintendent of the Carbon Street Railway, Manch Chunk, Pa.

Mr. Martin Ackerman has been appointed superintendent of the Youngstown & Ohio River Railroad Company, with headquarters at Salem, O. Mr. Ackerman formerly was trainmaster of the Lake Shore Electric Railway.

Mr. James J. Doyle has resigned as general superintendent of the Eastern Ohio Traction Company at Gates Mills, O., and will be succeeded by Mr. Joseph Emery, with the title of superintendent of the Cleveland & Eastern division.

Mr. F. J. Marsh has been appointed superintendent of the Cleveland & Garrettsville division of the Eastern Ohio Traction Company, with headquarters at Chagrin Falls, O., succeeding Mr. C. A. Denman, resigned. Mr. Marsh heretofore has been dispatcher at Gates Mills.

Mr. S. B. Lucas has been appointed master mechanic of the South Chicago City Railway and the Hammond Whiting & East Chicago Electric Railway, with headquarters at South Chicago, Ill. Mr. Lucas formerly was division master mechanic of the Indiana Union Traction Company at Muncie, Ind.

Mr. Levi Paxson, heretofore chief engineer of the Evansville Princeton & Vincennes Interurban Railway, with headquarters at Ft. Branch, Ind., has been appointed electrical engineer of the Evansville & Southern Indiana Traction Company at Evansville, Ind., with entire charge of power stations, substations and overhead construction of the city and interurban lines.

The express auditing department of the Illinois Traction System was removed from Springfield to Champaign, Ill., on January 1 and the work of that department has been consolidated with that of the general auditor's office. George Ostemeier, who has been in charge of the express auditing, has been appointed chief clerk to Traffic Manager B. R. Stephens at Springfield.

Mr. Edwin M. Walker, formerly purchasing agent of the Columbus Railway Light & Power Company, Columbus, Miss., has been appointed general manager of the Citizens' Railway & Light Company, at Muscatine, Ia., succeeding Mr. H. J. Clarke, resigned. Mr. A. L. Gillette, of the St. Paul (Minn.) Gas & Electric Company, has been appointed general superintendent of the company.

Mr. H. S. Potter, for the past three years superintendent of the El Paso Electric Railway at El Paso, Tex., has been appointed general superintendent in charge of both the railway and lighting departments. Mr. George F. Morse of Jacksonville, Fla., has been appointed to fill the new office of superintendent of transportation and will assume charge of the detail work hitherto looked after by Mr. Potter.

Mr. F. C. Crane, passenger and freight agent of the Rochester & Eastern Rapid Railway, Rochester, N. Y., has been appointed general passenger agent of the Eastern Pennsylvania Railway of Pottsville, Pa., under the operating management of J. G. White & Co. Mr. Crane's duties will be particularly the improvement of summer resorts on the Eastern Pennsylvania Railway system in Schuylkill county, and the building up of the excursion business.

Mr. William E. Rolston, who recently was appointed master mechanic of the Cleveland Southwestern & Columbus Railway, with headquarters at Elyria, O., was born on March 23, 1870, at Toronto, Can., where he received a common school education. In 1884 he removed to Streator, Ill., where he attended the high schools, finishing his technical education at the Armour Institute of Technology, Chicago. In 1898 he was appointed engineer in charge of the power station of the Chicago General Railway, where he remained until 1900, when he resigned to become chief engineer of the Dayton & Troy Electric Railway, Dayton, O. He remained with this company until 1906, serving successively as chief engineer, general superintendent and master mechanic until his appointment a few months later as superintendent of motive power for the Canton division of the Northern Ohio Traction & Light Company. In November, 1906, he resigned to become division superintendent of the Buffalo & Lake Erie Traction Company, with headquarters at Fredonia, N. Y., where he has remained until his present appointment with the Cleveland Southwestern & Columbus Railway.

Mr. H. C. Donecker has recently been appointed to the position of office manager of the American Street and Interurban Railway Association. Mr. Donecker has had a number of years of practical experience in various lines of street railway work. He was first associated with the Lorain Steel Company (then The Johnson Company) of Philadelphia and Johnstown, Pa., during the years 1890 to 1894. He then became connected with Hon. Tom L. Johnson, now mayor of Cleveland, and his brother, Mr. Albert L. Johnson, in the construction and operation of the Nassau Electric Railroad of Brooklyn, N. Y. Leaving there early in 1899, he went west with Mr. J. J. Coleman, who at that time assumed the general managership of the newly formed St. Louis Transit Company. Mr. Donecker remained with that company until late in 1900, when he became connected with Col. Giles S. Allison, of the Security Register Company of St. Louis, and remained engaged in that work until the first of the year 1906, at which time he entered the service of Ford, Bacon & Davis of New York City, where his work has been almost entirely of a statistical nature. Mr. Donecker's experience and his training as a statistician will undoubtedly be of great value to the association.

Col. Edwin Warren Hine, whose portrait is presented herewith, on January 1 assumed the duties of secretary of the Public Service Corporation of New Jersey, Newark, N. J., succeeding Mr. Frederick Evans, resigned. He retains his present office as assistant to the president, with the especial function of treating with the public and meeting municipal bodies. Colonel Hine was born in Litchfield, Conn., on March 17, 1854, and received his early education at Mahoney Academy in Ohio. His education was completed at the high school of Washington, D. C. After leaving school he was engaged for a short time in the stationery business, but in 1874 he located at Orange, N. J., and established a prosperous flour and feed business. In 1888 he became interested in the Harvey Steel Company and in the following year was made a director of the company. From 1878 to 1890 Colonel Hine actively engaged in the politics of his locality, serving for eight years on the Essex county board of chosen freeholders and for three years as a director. From 1887 to 1890 he was sheriff of his county. During the Spanish-American war he saw seven months of service with the Seventh army corps stationed at Jacksonville, Fla., under the command of Maj.-Gen. Fitzhugh Lee. His connection with street railway interests dates from 1887, when he was one of the incorporators and directors of the Orange Crosstown Railroad Company, now the Orange & Passaic Valley Railway and a part of the Public Service Corporation of New Jersey. In 1897 he and his associates, Messrs. Chandler and Riker, organized the Westfield & Elizabeth Street Railroad Company, incorporated to build an electric line between Elizabeth and Plainfield, N. J., and opened for traffic in 1899. This property, with the Plainfield Street Railway, the Elizabeth Street Railway and the Rahway Electric Street companies afterward was merged under the name of the Elizabeth Plainfield & Central Jersey Railway Company, of which Colonel Hine was treasurer and managing director until its absorption by the Public Service Corporation. In January, 1904, he was appointed assistant to the president of this company with supervision of the street railway department, since which time his energies have been successfully devoted to the harmonizing of the various departments of the company; and it is to his personal popularity that the change in public sentiment from its former antagonistic spirit to the present favorable attitude is attributed.

Col. Edwin Warren Hine.

Financial News

Blue Ridge Light & Power Company, Staunton, Va.—This company has given a trust deed to J. M. Perry as trustee to secure an issue of $100,000 of 10-year 6 per cent bonds.

Boston Suburban Electric Companies.—Announcement is made that the trustees have voted to defer the declaration of the dividend usually paid in January on the preferred stock.

Buffalo & Lake Erie Traction Company, Buffalo, N. Y.—This company has issued $250,000 additional first refunding mortgage bonds making a total outstanding of $4,755,000.

Charleston & Summerville Electric Railway, Charleston, S. C.—A syndicate has acquired the holdings of A. J. Warner and Ogden Edwards, the president, and the following new officers have been elected: President, Julius G. Hocke; secretary and treasurer, George Tupper; general counsel, Julien Grimke. The foregoing and F. S. Wright and W. O. Sprigg have been elected directors.

Massachusetts Electric Companies, Boston.—Gordon Abbott, the president, in response to questions submitted by shareholders at the annual meeting in Boston on December 18, said that the trustees will not declare a scrip dividend representing back dividends until the corporation is in a position to resume the payment of dividends at the regular rate of 4 per cent annually. He added: "The Massachusetts Electric Companies in the last fiscal year received about $880,000 in dividends from its subsidiary companies. If the subsidiary companies had been able to sell an issue of $750,000 bonds authorized by the railroad commission the trustees would have been in a position to have declared a dividend on Massachusetts Electric preferred shares this fall. As a sale of these bonds was impossible under the financial conditions then prevailing, the trustees thought it wise to loan the money received in dividends from subsidiary companies back to them. This money will of course come back to the holding company when the subsidiary companies are able to dispose of their bonds. The trustees had to decide whether to pay the dividends on Massachusetts Electric preferred stock or stop work on the additions and improvements on the subsidiary companies, and we choose to continue the improvement of our property and defer the resumption of dividends."

Oregon Electric Railway.—The following new officers have been elected: President, George B. Moffatt of Moffatt & White, New York; vice-president and general manager, Guy W. Talbot; secretary, George F. Nevins, who will also be traffic manager and auditor; assistant secretary, A. E. Goddard; treasurer, H. W. Brower; assistant treasurer, Fred B. Reed; superintendent, C. A. Coolidge; general counsel, R. B. Moffatt, New York; counsel, Carey & Kerr, Portland; chief dispatcher, C. J. Phillipp; chief surgeon, Dr. Ernest Tucker; electrical engineer, H. Milliken; roadmaster, F. W. Prahl; master mechanic, W. O. Fragmeier. The following directors have been elected: Charles M. Pratt, A. C. Bedford, George Barclay Moffatt, William A. White and Sidney Z. Mitchell, all of New York, and Guy W. Talbot and B. Cookingham of Portland.

Third Avenue Railroad, New York.—Kuhn, Loeb & Co. of New York have offered to purchase at face value, from January 2 to February 29, 1908, at the Central Trust Company, New York, the semi-annual interest coupons due on January 1, 1908, from such of the first consolidated mortgage 4 per cent bonds as may be deposited with the Central Trust Company under the bondholders' agreement. In a letter dated December 27, 1907, and addressed to J. N. Wallace, chairman of the bondholders' committee, Kuhn, Loeb & Co. say: "It is apparent that the Third Avenue Railroad Company is likely to default in the payment of the interest due January 1 next upon its first consolidated mortgage 4 per cent gold bonds, and that the bondholders' committee, of which you are chairman, will not, by that date, have completed its examination of the affairs of the company, the results of which examination must be known before the bondholders can form an intelligent judgment as to the value of their security and before your committee can consider any plan for the rehabilitation of the bonds. We have accordingly determined, inasmuch as most of the bonds of the above issue were placed by us—at a time when the bonds were universally considered to be investments of the highest rank—to offer to purchase at its face value the January 1, 1908, semi-annual interest coupon from all bonds deposited with your committee before the first day of March next. We are making this offer in order that bondholders may not suffer for lack of opportunity for full investigation and in order that through our purchase of the January coupon bondholders may receive their income until the condition of the property is ascertained by the examination now being made on behalf of your committee." There are outstanding $37,560,000 of these bonds, which are part of an authorized issue of $50,000,000, the remaining $12,440,000 being reserved to take up various prior liens. In December, 1900, Kuhn, Loeb & Co. placed most of the bonds, which were sold at 104½ and accrued interest. They have sold recently at 49½. At the time the bonds were brought out there was an equity behind them of $100,000,000, on the basis of market prices then ruling. In a letter addressed to the bankers at the time, H. H. Vreeland, president of the Third Avenue Railroad and the Metropolitan Street Railway, said in part: "It is estimated that after the completion of the electric equipment now in progress, and with the advantages and economies resulting from the close connection with the Metropolitan Street Railway, the annual net earnings of the Third Avenue company will be at least $3,000,000, which, together with the surplus earnings of the Metropolitan company (after deducting its own fixed charges), on the basis of the results of the last fiscal year, would provide net earnings of nearly $6,500,000 to meet fixed charges amounting to about $2,000,000 in all, inclusive of the issue of the new 4 per cent bonds. The Metropolitan Street Railway guarantees unconditionally by indorsement the principal and interest of the Third Avenue Railroad 4 per cent bonds."

Worcester (Mass.) Consolidated Street Railway.—The Massachusetts railroad commission has been asked to rescind the orders issued October 25, 1901, and August 5, 1902, approving the sale of $445,000 and $350,000 stock, respectively, at $116 per share, and to substitute a new order for the issue of a like amount at such reduced market price as the directors may determine.

ELECTRIC RAILWAY EARNINGS.

Kansas City Railway & Light Company.

November—	1907.	1906.
Gross earnings	$518,423.98	$466,219.71
Operating expenses	276,029.80	230,387.96
Net earnings	242,394.18	235,831.75
Interest and taxes	151,098.72	145,529.41
Net income	91,295.46	90,302.34
June 1 to November 30—	1907.	1906.
Gross earnings	$3,166,071.51	$2,872,989.32
Operating expenses	1,620,217.65	1,414,619.95
Net earnings	1,545,853.86	1,458,369.37
Interest and taxes	924,564.83	869,723.83
Net income	621,289.03	588,645.54

Twin City Rapid Transit Company.

November—	1907.	1906.
Total earnings	$497,428.50	$458,637.13
Total operating expense	264,410.14	224,969.27
Net earnings	233,018,36	233,667.86
Total deductions	131,141.65	117,258.32
Net income	101,876.71	116,409.54
January 1 to November 30—	1907.	1906.
Total earnings	$5,552,879.02	$5,149,895.88
Total operating expense	2,700,433.90	2,402,454.66
Net earnings	2,852,445.12	2,747,441.22
Total deductions	1,300,525.01	1,236,169.45
Net income	1,551,920.11	1,511,271.77

Dividends Declared.

Aurora Elgin & Chicago, common, quarterly, three-fourths of 1 per cent; preferred quarterly, 1¼ per cent.

Bangor (Me.) Railway & Electric Company, quarterly, 1¼ per cent.

Boston & Worcester Electric Companies, preferred, $2.00.

Capital Traction Company, Washington, D. C., quarterly, 1½ per cent.

Citizens' Electric Street Railway, Newburyport, Mass., 2½ per cent.

City Railway, Dayton, O., common, quarterly, 1¾ per cent; preferred, quarterly, 1½ per cent.

Columbus Newark & Zanesville Electric Railway, Newark, O., preferred, quarterly, 1½ per cent.

Consolidated Traction Company, Newark, N. J., 2 per cent.

Forest City Railway, Cleveland, O., quarterly, 1½ per cent.

Holyoke (Mass.) Street Railway, 4 per cent.

Rochester (N. Y.) Railway, preferred, quarterly, 1¼ per cent.

Syracuse (N. Y.) Rapid Transit Company, preferred, quarterly, 1½ per cent.

United Railways, St. Louis, preferred, quarterly, 1¼ per cent.

Utica & Mohawk Valley Railway, Utica, N. Y., preferred, quarterly, 1¼ per cent.

Washington Alexandria & Mt. Vernon Railway, Washington, D. C., 1 per cent.

Manufactures and Supplies

ROLLING STOCK.

Indiana Union Traction Company, Anderson, Ind., is said to be considering the purchase of six new cars.

Little Rock & Pine Bluff Traction Company, Little Rock, Ark., has placed an order with the Jewett Car Company for six or eight interurban cars.

SHOPS AND BUILDINGS.

Belton & Temple Traction Company, Temple, Tex.—This company is doubling the capacity of its car house at Midway Park and is also building a shop and repair building.

Joplin & Pittsburg Railway, Joplin, Mo.—This company will erect a brick car house, 63 by 293 feet, according to plans prepared by A. C. Michaelis, Miners' Bank building, Joplin. Fred Deiter has been awarded the contract.

Louisville & Northern Railway & Lighting Company, New Albany, Ind.—The Vincennes street station is being torn down and a new one will be built by the company on Market street.

Mobile (Ala.) Light & Railroad Company will build a fireproof car house with a capacity for 75 cars.

TRADE NOTES.

Pressed Steel Car Company during 1907 received orders for 82 cars for elevated and subway service, 10 of which were for export.

J. G. White & Co., Incorporated, New York, has declared the regular quarterly dividend of 1½ per cent on the preferred stock, payable January 2.

Carnegie Steel Company's district office in the Candler building, Atlanta, Ga., on January 1, was removed to the Woodward building, Birmingham, Ala. F. A. Dilworth is manager of sales.

Bayly Manufacturing Company, Milwaukee, Wis., has received the order for the heating, ventilating and drying apparatus to be installed in the Grand Trunk's new shops at Battle Creek, Mich.

A. M. Hewlett, president of the Western Tube Company, Kewanee, Ill., suffered a stroke of paralysis on December 18 and died at his home in Kewanee on December 20. Mr. Hewlitt was about 55 years old and had been connected with the company for 20 years.

Electric Storage Battery Company, Philadelphia, Pa., has declared a dividend of 1¼ per cent on both the preferred and common stocks of the company payable on January 2 to stockholders of record December 28.

American Locomotive Company, New York, has declared the regular quarterly dividend of 1¾ per cent on the preferred stock, payable on Jannary 21, and 1¼ per cent on the common stock, payable on February 26.

New England Trolley Wheel Company, Chicopee, Mass., has been incorporated with a capital stock of $50,000. Louis J. Tetlow is president and Michael I. Shea treasurer and clerk, both of Chicopee Falls.

Peter Smith Heater Company, Detroit, Mich., announces that the Electric Service Supplies Company will not represent it after January 1, 1908. The sales department of the Smith company will be looked after in the future from the Detroit office.

General Fireproofing Company, Youngstown, O., reports the following as among the recent sales of Trussit: One for roofing the car houses of the Waterloo Cedar Falls & Northern Railway at Cedar Falls, Ia., and one for the entire plant of the Rio de Janeiro Tramway Light & Power Company of Rio de Janeiro, Brazil. The latter shipment will be erected by the Riter-Conley Manufacturing Company of Pittsburg.

Transportation Equipment Company, 1133 Broadway, New York City, has recently been incorporated with a capital stock of $25,000 for the purpose of manufacturing the Tec registering fare box which is especially adapted for use on the pay-as-you-enter type of car. The president of the company is H. W. Brown, controller of the New York City Railway; secretary and treasurer, Robert C. Adams. The shops of the company are on West Twenty-seventh street, New York City.

J. W. Ager, up to now electrical aide in the bureau of yards and docks, United States navy department, has resigned his government position to enter the employ of Muralt & Co., engineers, 111 Liberty street, New York, as manager of their southern office in the Title Guarantee building, Birmingham, Ala. Mr. Ager is a graduate of Columbia, where he took the degree of M. E. in 1903, and of the Massachusetts Institute of Technology, where he obtained the E. E. degree in 1904. He then was engineer with the Western Electric Company, New York, during 1905 and 1906, and has been in the service of the United States navy department from 1906 until now. He was last identified with the engineering and construction work being carried out in connection with the movement to consolidate the power plants in the various United States navy yards. Muralt & Co. have obtained several municipal and government contracts in the southern territory and Mr. Ager will undoubtedly prove a very valuable acquisition for them.

Power Specialty Company, 111 Broadway, New York, manufacturer of the Foster patented steam superheater, states that notwithstanding the business depression which has been experienced during the past few months, it has entered a large number of important contracts since the first of September, and that its business for 1907 shows a very gratifying increase in volume over any previous year. Present indications in the way of renewed inquiries and resumption of negotiations temporarily suspended, point to the closing of a large amount of business within the next few months. Among many contracts which have been secured since the date mentioned the following are given: Alabama White Marble Company, 600 horsepower in Wickes boilers; Babcock & Wilcox Company, for Pensacola navy yard, 1,600 horsepower in Babcock & Wilcox boilers; United Shoe Machinery Company, 1,032 horsepower in Babcock & Wilcox boilers; Clark Thread Company, Newark, N. J., 2,500 horsepower in Stirling boilers; American Railway Company, 838 horsepower in Stirling boilers; Louisville & Eastern Railroad, 600 horsepower in Heine boilers; Schlitz Brewing Company, 2,000 horsepower in Edge Moor boilers; Anheuser-Busch Brewing Company, 2,000 horsepower in Heine boilers; Tonawanda Board & Paper Company, 900 horsepower in return tubular boilers.

Westinghouse Machine Company has made public the following plan whereby the receivership may be dissolved, and the business of the company restored to the stockholders: The company shall issue 3-year 6 per cent notes for its existing indebtedness. These notes are to be secured by the company's bonds at 85 per cent of their face value as collateral, and are to be in denominations of $500 or multiples thereof. Claims of less than $1,000 are to be paid in cash. On claims exceeding $1,000 the creditor will receive 3-year 6 per cent notes to the amount of the nearest multiple of $500 that is not in excess of the claim, the balance being paid in cash. It is further agreed that the company shall not pay a dividend to its stockholders until provision has been made for the payment of all the notes outstanding. A copy of the plan and agreement is being sent to each creditor, with a letter from the creditors' committee and from the receivers urging its acceptance, and also a letter from George Westinghouse, president, signifying the Westinghouse Machine Company's concurrence and approval. There seems to be no doubt that the plan will be successful. Following are the members of the creditors' committee: Wilson A. Shaw, president Bank of Pittsburg; Robert Wardrop, president People's National Bank; H. C. Bughman, president Second National Bank; James C. Chaplin, vice-president Colonial Trust Company; B. B. Mellon, vice-president Mellon National Bank, all of Pittsburg; Horace E. Smith, Philadelphia; Frederick S. Moseley, Boston; Frederick D. Underwood and John F. Wallace, both of New York.

ADVERTISING LITERATURE.

Dayton Manufacturing Company, Dayton, O.—Catalogue No. 143 illustrates and describes Eckert water and dry car closets.

Fairbanks, Morse & Co., Chicago, Ill.—An attractive little booklet in colors descriptive of Sheffield motor cars and gasoline locomotives has just been issued.

Goheen Manufacturing Company, Canton, O.—Zevy's engineers' contract book, a very useful and complete publication, is distributed with this company's compliments.

McConway & Torley Company, Pittsburg, Pa.—A newly issued catalogue sets forth the advantages of the Janney M. C. B. coupler with radial movement for interurban and other electric cars.

American Carbon & Battery Company, East St. Louis, Ill.—A handsome wall calendar with embossed art subject calls attention to this company's line of carbon products and porcelain insulators.

A. Buch's Sons & Co., Elizabethtown, Pa.—Catalogue G-6 is descriptive of the Eagle steel park swings, manufactured by this company. These are now in use in many of the lead-

ing parks of electric railways. Steel swings of other types are also described and illustrated in the pamphlet. Catalogue B-6 illustrates and describes the Keystone land roller, which is particularly designed for leveling parks, golf grounds, lawns, etc.

The Arnold Company, Chicago, Ill.—One of a series of illustrated postcards shows the progress made to December in the construction of the Grand Trunk's locomotive repair shop at Battle Creek, Mich., which is under supervision of this company.

The J. G. Brill Company, Philadelphia, Pa.—The last number of Brill's Magazine has for its leading article an interesting description of the pay-as-you-enter cars for the New York City Railway Company. The article is illustrated by a number of halftones.

Niles Car & Manufacturing Company, Niles, Ohio.—A large and attractive catalogue of this company's most recent products has been issued by the sales agents, J. A. Hanna Company, 312 Electric Building, Cleveland, O. A number of fine illustrations are used effectively, and the book is enclosed in handsome embossed covers.

Technical Literature Company, 220 Broadway, New York, N. Y.—The monthly magazine of technical information heretofore known as Technical Literature has been changed to the Engineering Digest. The change was made owing to a somewhat general misunderstanding by technical readers as to the nature of the contents. The policy of the magazine will not be altered.

General Electric Company, Schenectady, N. Y.—Recent publications include Bulletin No. 4550, which describes a number of the company's well-known line of carbon break circuit-breakers. The bulletin also contains descriptions of auxiliary switches, automatic tripping devices, etc., to be used with the circuit-breakers, and gives complete data as to capacities, prices and dimensions of the devices shown. It contains 36 pages and is conveniently arranged for reference.—Bulletin No. 4531 illustrates and describes various types of Thompson horizontal edgewise instruments for switchboard service, including ammeters, voltmeters, single-phase wattmeters, polyphase wattmeters, frequency indicators and power factor indicators.

BUSINESS CONDITIONS.

President W. H. Whiteside of the Allis-Chalmers Company in a recent interview thus expressed his views of the present business conditions: "It is daily becoming more apparent that the general business of the country has not been so seriously injured by the recent sudden financial depression as the public has been inclined to believe. And I am firmly of the opinion that the thing now most necessary is to loosen the chains of conservatism and give courage an opportunity to assert itself and make advances consistent with the general prosperous conditions and well-distributed resources of the country. As the production and use of basic machinery, such as prime movers for the generation of power, is a very potent and a leading factor in our commercial activities, very naturally it is one of the first lines of business to be affected when the pendulum swings from optimism to pessimism, and likewise the first to feel the effect when the change in sentiment again manifests itself. The number and character of inquiries which our offices located in the principal commercial centers of the country have recently been receiving convincingly demonstrate a return of confidence, and bear evidence that not only a diversified, but a large volume of business will be offering ere the middle of the first quarter of 1908 has been passed.

"Until within a few months manufacturers everywhere in the United States found themselves urgently in need of increased facilities for carrying on their own business, and when they are again called upon to supply the normal demands of business, and to replenish stocks in the hands of jobbers and retailers, many of which are now nearing the point of depletion, they must, of necessity, again work their plants to the full of their present capacities, and add increased machinery equipment, the plans for which in numerous instances are already well matured.

"The railroads of the country, whose policy of retrenchment has continued for approximately a year, notwithstanding the largest offerings of traffic, with resultant increased earnings, in their entire history, must shortly be compelled to again enter the market and make large expenditures for renewals, including train equipment, steel rails and general supplies. This, coupled with the approaching need for the renewal of stocks of metal employed in all branches of industry, which, through shut downs of furnaces and smelters and the continued use of iron, steel and copper for current consumption, have now been lowered very near to the minimum, and giving due consideration to the large balance now in our favor in our commerce with foreign nations, and to the well-distributed revenues from our exceptionally large agricultural products, cannot fail to create an early demand for new machinery and auxiliary equipment.

"The outlook is therefore distinctly encouraging."

A MEANS FOR TRAFFIC DEVELOPMENT.

In connection with the interest aroused in the promotion of traffic by the recent discussions before the various associations of street and interurban railway men there is another subject which is closely related and which should receive careful attention. This is the subject of electric railway advertising.

Aside from the wide field of activity of the energetic traffic manager, a field with which every electric railway man is more or less familiar there is a still wider field which may aptly be termed the "field of individual traffic," which in a great majority of cases has remained untouched or at best has been little more than scratched. It includes a class of traffic that it is impossible for the traffic department to reach through personal work, but which will respond readily to properly directed advertising and which is highly desirable and profitable, since it can be handled very largely on regular cars and trains and at regular rates of fare.

The methods to be adopted to reach and interest this class of travel will, of course, vary in individual cases, it being necessary to study operating and other local conditions, as well as the character of the territory served before the extent and character of the advertising to be undertaken can be determined. The fact remains, however, that there are few roads, either interurban or city, that could not be benefited by a judicious use of printer's ink.

In the case of the interurban road a wide field for development is presented by the natural desire on the part of people living in the country to visit and take an ever-increasing part in the activities of the larger towns and cities, and the inclination of the city dweller to spend more of his time in the woods and open country away from his usual haunts. The growth of the vacation habit and the increasing favor of the electric car for long-distance travel also open up wide possibilities for many roads.

For the city system the problem and the method of treatment are necessarily somewhat different, but on every system there are some features of the service or attractions that will furnish a basis for profitable publicity, while in the larger cities, with their numerous lines and routes, there are opportunities for the development of profitable traffic in getting the regular passenger "off his beat" on trips and excursions, and by placing the conveniences of the system before strangers and transients in an attractive manner.

In this connection the announcement of E. C. Van Valkenburgh, 2117 West One Hundred and Second street, Chicago, who handles the advertising of electric railways exclusively, will be of interest.

The service offered takes the place in the organization of the electric railway of an advertising manager, but with the advantage that by maintaining a separate organization it is possible to view the road and its service more from the standpoint of the passenger, without the danger of having the point of view biased by a too intimate contact with the perplexities of operation and management which necessarily engage the attention of exclusive employes and officials of the company. Then, again, by being in touch with a number of roads and their varying problems a wider range of ideas and methods of procedure is developed.

Among the advantages this service affords may be mentioned: (1) It provides a definite plan of action which has been formulated, after a careful study of all contributing factors, with a view to the building up of weak points as well as the traffic in general. (2) It insures attractive and timely copy for printed matter, since a close relation is maintained with the traffic department and a close watch is kept for anything of a character to create or encourage travel. (3) Close attention to the matters of detail which are necessarily a part of the work, but which are always more or less of an annoyance to an official having other duties to attend to.

For the purpose of reassuring purchasers, Allis-Chalmers company has adopted the policy of testing every turbine and generator in its works to a speed 20 per cent in excess of the rated speed, thus subjecting the material to stresses 44 per cent above the normal. This overspeed test taxes the machine as it cannot be taxed in practice, for, even should the main governor fail to work, the safety governor will stop the turbine long before it reaches such a speed.

THE NEW RECORDING MILLI-VOLTMETER AND SHUNT AMMETER.

Electrical engineers have long felt the need for an accurate and sensitive recording milli-voltmeter which is adapted to practical every-day service as well as for laboratory tests. There has also been a demand for a recording ammeter of the shunt type which can be connected by leads to the main busbar. The shunt system is especially economical where heavy currents are to be indicated or recorded, as the instruments may be located at a considerable distance from the main current, thus saving great expense in carrying the main conductors to the point where the instrument is located. The recorders illustrated herewith have been designed to meet these practical demands.

The two most important fundamental features of these recorders are a sensitive electrical movement of special design, made by the Weston Electrical Instrument Company, and a new recording system using a patented smoked chart, so arranged that there is no friction between the recording arm and the chart.

These instruments are so sensitive that the recording arm will move over the whole scale for five milli-volts or less, making it possible to accurately record one ten-thousandth of one volt. The graduations on the chart are evenly proportioned over the entire range, the same as the Weston ammeter, so that even though there is only a small current flowing, the readings may be as readily taken as if the current was the maximum that the instrument would record. This feature will be greatly appreciated, as there are many places where it is important that the records be perfectly clear, even though the loads are very light when the outfit is first installed.

The records are made on a novel semi-transparent smoked chart, which is periodically brought into momentary contact with the end of the recording arm by means of a special vibrating device. In this way a series of white dots are made on the smoked surface. These form a continuous line and a record is thus made without causing any friction between the moving arm and the chart. The rate of vibration of the chart is timed to suit the frequency and range of the variation in the current to be recorded. The usual period of vibration of the chart is once in 10 seconds, but to obtain continuous lines where the fluctuations of the current are quite rapid, the vibrating attachment is made to operate twice every second. When the record is completed the chart is dipped in a simple fixitive solution which makes the record permanent for filing.

The recording milli-voltmeter is shown in Figure 1 and Figure 2 is a reduced photographic facsimile of a chart taken from one of these instruments in connection with electrolysis surveys of underground structures which are being conducted by the Electrical Testing Laboratories of New York City. The graduations of this chart are arbitrary. It was revolved once in 24 hours and was vibrated once every 10 seconds. The zero position of the recording arm was the middle of the scale, so that the record might be independent of the direction of the current, as in many cases the direction of the current changes from negative to positive during the day.

It is expected that by using a number of these instruments operating simultaneously at different points, stray currents in water and gas mains or in any underground structure may be recorded, making it possible to discover the causes of trouble and how they may be eliminated.

The recording ammeter is shown in Figure 3 connected to a standard Weston 10,000-ampere shunt, to which is also connected a Weston indicating station ammeter. This illustration shows that the recorder may be readily applied to any standard shunt which is already in service, without disturbing the indicating instrument at the switchboard. As illustrated here, leads of almost any desired length may be used to connect the indicating and recording instruments to the shunt on the main busbar. It is even possible to have the recording ammeter located in the superintendent's office at a great distance from the shunt and the indicating instrument located on the switchboard convenient for the observation of the operator. Such combination outfits could be furnished as units, with leads of the proper lengths to suit the individual cases.

The recording shunt ammeter has been successfully applied for taking continuous records of the current on a large trolley system, where the fluctuations are very rapid and varied as much as 4,000 amperes several times in a minute. The charts for such work as this are made to revolve once in one hour and the vibrator operates twice in one second. For

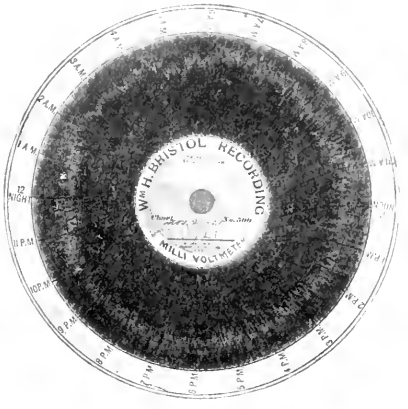


Figure 2—Facsimile of Chart from Milli-Voltmeter.

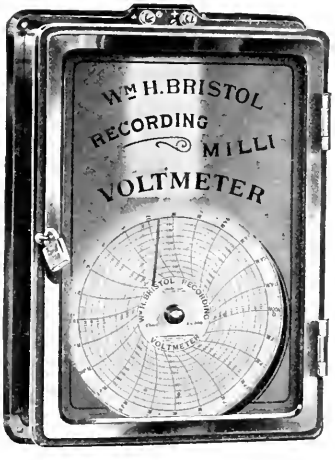

Figure 1—Recording Milli-Voltmeter.

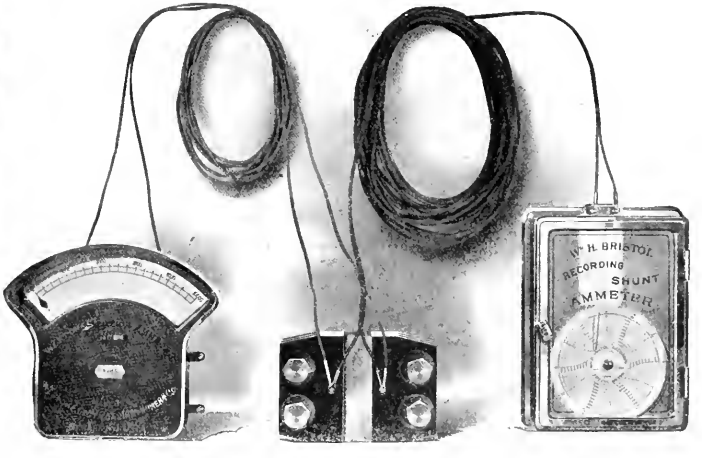

Figure 3—Recording Instruments with Connections.

preliminary tests, the recorders are provided with special fast vibrators for the smoked chart and with a clock movement to revolve the chart once in one hour, but for continuous daily records the standard 24-hour charts are recommended. These instruments are manufactured by William H. Bristol, 45 Vesey street, New York City.

THE TEC REGISTERING FARE BOX.

When the pay-as-you-enter type of cars are put into operation on the Madison avenue line of the New York City Railway they will be equipped with a new type of register known as the Tec registering fare box. This device was designed for and is peculiarly adapted to the collecting and registering of fares on the pay-as-you-enter car. It presents a number of very novel and practical features. The box registers fares automatically, being electrically operated by four dry cells of a special type. The chief object attained is that the conductor does not have access to the money until after the fare has been registered, but the box is so designed that immediately after its registration the money is available for use as change.

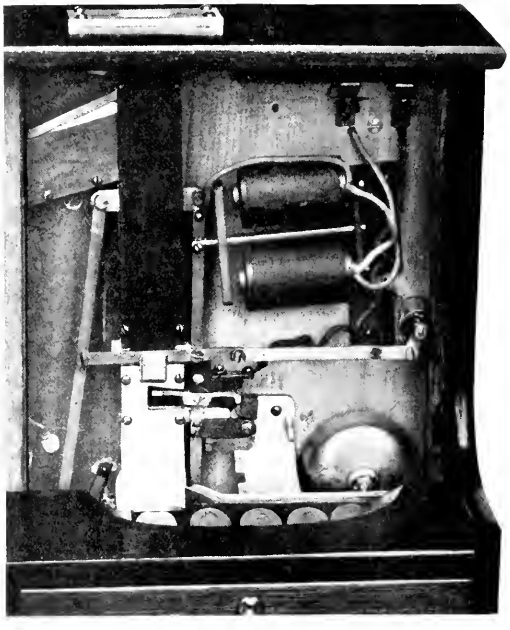
The Tec Fare Box—Exterior.

The height of the register is 18 inches. It is 6 inches wide at the bottom and 3 inches wide at the top. It will stand on a pedestal just inside the railing in front of the conductor.

From the accompanying illustrations showing the details of construction a comprehensive idea of its operation may be obtained. The fare is dropped in a slot at the top of the box and passing down the inclosure strikes a balanced lever, which, being forced downward at the end protruding into the fare channel by the weight of the coin, causes the other end to rise and make a contact, thus completing an electric circuit. At the moment the exterior end of the lever has risen to contact an L-shaped lever, by means of its pivotal connection, drops under the contact lever and holds it in that position until a complete registration has been made. The circuit is next broken by means of a lug, permitting both levers to assume their natural positions. It will be noticed that as the current is thrown into use the magnet drawing its helper into place manipulates the various attachments fastened to the helper, which include connections to the register and bell, the inserting of a thin guard into the fare channel to keep any coins from passing the contact lever while it is withdrawn to permit the preceding coin to drop, and the shoving to one side of the last fare registered preparatory to receiving the next coin.

After the fare has been dropped into the slot at the top of the box it is registered and exposed to the view of the conductor almost instantaneously. To enable the detection of bad coins the last three or four nickels registered always remain in view of the conductor, so that it is possible for him to detect a bad coin not only immediately upon its registration, but even after two or three more passengers have dropped nickels into the box. The coins thus exposed for inspection are pushed one at a time into a conductor's money drawer, to which the conductor has access for use in making change.

Probably the most important feature of this register is that it is so constructed that the conductor cannot stop the collection of nickels, even should the mechanism of the machine be fouled in any way. The fare register is so built that if the mechanism becomes inoperative from any cause the nickels, while dropped in the same slot, are caused automatically to fall through the inclosure at the left of the usual channel and into a locked receptacle to which the conductor has no access. This second receptable is accessible only to the inspector. Thus the registering mechanism may become damaged and yet there be no excuse for the conductor to take nickels direct from the passengers.



The Tec Fare Box—Interior.

To provide for another emergency it is within the power of the conductor to operate the register by hand by unlocking his change drawer, and pulling it out an inch or two so that it will release the hand pull bar shown on the right-hand side of the fare box.

In the view of the exterior of the registering fare box the three openings are shown on the front. These are accessible only by key. The upper receptacle contains the registering mechanism, the middle opening is the money drawer and the lower drawer holds the batteries. On the right is shown the face of the register and the pull bar, while on the left is a small opening for the use of the inspector.

The Tec registering fare box, which is built by the Transportation Equipment Company, 1133 Broadway, New York City, has been given severe tests equal to more than a year's service resulting in practically no appreciable wear on any of its parts and with no apparent decrease in the efficiency of the batteries.

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

A young man, 27 years of age, with ten years' experience, wants position as engineer or electrician; unmarried; habits strictly temperate; high-class references. Address "No. 710," care Electric Railway Review, Chicago.

Position wanted by a young man (23) of good habits; have been connected four years with the operating and purchasing departments of an electric street railway company; can give good references. Address "No. 528," care of Electric Railway Review, Chicago.

Position as chief electrician or superintendent; 16 years' experience lighting, power and traction work, alternating and direct current; graduate of well-known school; excellent testimonials; disengaged. Address "No. 529," Electric Railway Review, Chicago.

Auditor, experienced in electric railway and lighting and construction accounting, wants position with fair-sized company. Energetic and good systematizer. Best references. Address "No. 527," care of Electric Railway Review, Chicago.

Position by a single man, 29 years old, practical electrician and machinist, 10 years' experience, familiar with electric car and locomotive repairs, power and substation practices. Non-union man. Address "No. 630," care of Electric Railway Review, New York, N. Y.

POSITIONS WANTED.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

MISCELLANEOUS WANTS.

You can sell second-hand cars, machinery and material through advertising on this page. Ask about the special rates. Electric Railway Review, 160 Harrison Street, Chicago.

POSITIONS OPEN.

Superintendents, street railway, machine shop, car works, power house, engineers, electrical and mechanical, draftsmen, electrical and mechanical. Salaries, $800 to $5,000. Other positions open. Write, HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

BOOKS AND PUBLICATIONS.

Ask us about any book on electric railway and allied subjects. We publish some and sell all that are in print. The Wilson Company, 160 Harrison Street, Chicago.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 530," care of Electric Railway Review, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

BOOKS AND PUBLICATIONS.

If interested in any phase of steam transportation, you will find every development covered fully and accurately in The Railway Age. It is the leader and acknowledged authority in this field. Ask for free sample copies. The Railway Age, 160 Harrison Street, Chicago.

If you have copies of the Street Railway Review of February or June, 1906, or of the index for 1904, or of the Electric Railway Review of October, 1906, write us at once, stating condition and naming price for each copy. Address "No. 514," care Electric Railway Review, 160 Harrison street, Chicago.

National Legislation on Interstate Commerce to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts expunged from, and the parts added to, the interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

Foreign . . . $5
Canada . . . $3.50

Interurban roads connecting large cities with a number of smaller towns may receive a valuable suggestion of a means for promoting their traffic from the Spokane & Inland Empire Railroad of Spokane, Wash. This company, whose enterprising methods of advertising and excellent service have often been described, has for a year past been operating special Saturday night theater trains leaving Spokane at 11:20 p. m., for all points on the Coeur d'Alene division. It took nearly a year to develop the traffic to make such a train pay, but the results have recently proved so satisfactory that on January 1 a similar service was instituted on the Spokane & Inland division. The trains leave the Spokane terminal at 11:30 p. m., and stop at all points south on the Colfax and Palouse branches, whose terminals are each distant about 76 miles from Spokane. The new service was announced by large illustrated postal cards containing a programme of the principal attractions to be presented at the Spokane theaters during the season. Reservations for tickets to any theater in the city may be made through the station ticket agents. The luxurious parlor car equipment used in this service was illustrated in an article in the Electric Railway Review of December 28, 1907, page 977, by Charles E. Flagg, advertising agent of the company.

Theater Train Service.

Five or six years ago the third rail was heralded as the most satisfactory medium for distributing electric current to swiftly moving cars or trains. Now it has a healthy rival, the high-voltage overhead conductor. The growing sentiment for early electrification of steam trunk lines and their feeders continues the rivalry between the two methods of current distribution. Such discussions as occur between upholders of each of the two methods bring forth side lights on the art of railroading. The most recent discussion on "The Third-Rail Problem" is by A. D. Williams, Jr., in the Engineering Magazine for January. This article comprises the discussion of a list of disadvantages of the third rail and includes a terse summary of standardization conditions on steam roads. Our readers know how frequently these same standardization conditions apply to electric roads and how advisable it is to avoid them. In the article mentioned we read: "A peculiar fact in regard to many railroad standards (?) is the number of different standards, the same road having several standards for certain constructions, each in use on separate portions of the line and all out of harmony with one another. This is due to corporate consolidations which have not as yet coalesced throughout. In many cases these out-of-date standards are blindly followed in absolutely new construction, where unbiased consideration and the ability to view matters with a broad perspective would show the futility of clinging to the past and the advantages to be gained by throwing dead wood overboard. Unfortunately, there is sometimes a certain lack of co-operation between the various departments of railroads, each department and subdepartment striving for its own individual record without regard for others or for the ultimate result. When such departmental jealousies are rife the interests of the road suffer." As Mr. Williams points out, one of the most difficult problems a railroad about to electrify its track is called upon to solve is the adjustment of clearances.

Standardization, Clearance and Third Rails.

If tickets are used on a suburban or interurban line that also collects fares according to the zone system, the question of how to devise an adequate check on the tickets sold and collected without imposing too much detail work on the conductor and auditor becomes a problem requiring careful consideration. A new method for accounting for the number of tickets and amount of cash collected by the conductor on an interurban run is described on another page of this issue by S. S. Neff, general superintendent of the Atlantic City & Shore Railroad. On this road the fares are collected by the zone system, either by a cash fare in each zone or by a ticket extending through one or more zones which must be punched in each. The conductor is provided with punching slips, one for cash and another for tickets, on which spaces for each zone are outlined, and as he collects a cash fare or punches a ticket he also punches a number in the corresponding zone on the slip, at the same time recording a fare on the register. The slips must be kept correctly so that they will check with the number of fares registered in each zone, and there is scarcely time in a round trip for a conductor to falsify his records, because he would have to count his tickets and cash in each zone. The fare registers are changed at the end of each zone and the conductor reports at the end of each round trip.

The Use of Punching Slips.

The increase in fares just placed in effect on the Blue Hill Street Railway, near Boston, illustrates a tendency of the times which must soon be dealt with by many other companies operating in purely suburban or rural territory. Every electric railway officer who follows expenditures in any department knows that in the last few years expenses have mounted steadily higher. By the extension of transfer privileges and provision of improved rolling stock the service given to the public has been greatly enlarged and bettered and patrons of the companies receive far more for their money in comfortable and longer rides than they did five or six years ago. This has been brought about by the managements, often in the face of violent and ill-advised agitation. The politicians have very generally overlooked this phase of the situation, and have carefully refrained from telling the public that the costs of electric railway, lighting and power service have been among the very few items lowered in the general cost of living in the last decade. Recent experience on certain suburban and rural lines operating in sparsely settled territory shows that in the face of present costs of maintenance, labor and materials, fares must in some manner be adjusted to the new conditions if ultimate bankruptcy is to be avoided.

Increase in Railway Fares.

The exact method of fare increase must obviously depend almost entirely upon local conditions. Many roads may find it sufficient to omit six or seven tickets for a quarter, when such a tariff obtains. In other cases a shortening of the ride may be the best course, by the reduction of transfers or the actual cutting down of the 5-cent zone. Shortening the fare limit without raising the fare brings in more nickels per mile of track and avoids the annoyance of demanding an extra cent or two from the public. Where competition exists the problem is far more difficult and may require some sort of informal or formal joint agreement before an effective raise can be brought about. There is little doubt that in the past some companies have received unduly hostile criticism because they doubled their rates at a single stroke, instead of increasing them by a cent or two. The convenience of the nickel is indisputable, but in sections of the country where copper coin is still in pretty general circulation there is little doubt that the average passenger would prefer to receive three or four cents in change to paying 10 cents for a trip which formerly cost five. In some cases the sale of four tickets for a quarter will solve the difficulty. In the introduction of higher fares a clear statement of where each part of the nickel goes at present will be helpful in satisfying the public if printed in the cars and also if presented in the newspapers. The necessity of the increase can be shown on a 5-cent basis better than in large totals.

Methods of Increasing Fares.

UNDERHUNG HIGH-TENSION INSULATORS.

The transmission of electric currents over long distances and at high potentials is one phase of electrical engineering that recently has made most wonderful strides. It was but a few years ago when the installation of a 50-mile transmission line operating at 30,000 volts pressure was heralded as an important piece of engineering work. Lines having such characteristics are now common on nearly all interurban work, and current from nearly all the greater power undertakings is transmitted at pressures of 60,000 volts and higher.

While it is true that the necessity for higher voltages is greater than it was five or six years ago it is also true that at that time such high transmission pressures could not be utilized. This was not from a lack of desire but because the art of transmission line construction was then not far enough advanced. Generating, transforming and receiving apparatus were to be had, but line insulators were not available which could offer a large enough factor of safety to warrant the utilization of the high voltages now employed.

To those builders of transmission projects who would keep low the transmission losses, there was available suitable electrical machinery but not insulators designed and built with the same degree of scientific exactness. Today these limiting conditions do not hold.

As explained by Walter T. Goddard in a recent paper, "High Voltage Insulator Manufacture," read before the Canadian Society of Civil Engineers on December 19, 1907, it is safe to say that insulators for the heaviest mechanical strains and for the highest electrical stresses can be manufactured at moderate cost. Therefore the limitation of transmitting voltages must at the present time be looked for in other directions than in insulator design, porcelain insulator design in particular. This bold statement is only made possible by the development of the underhung type of the porcelain insulator so lately put into use.

By way of explanation the underhung insulator comprises a number of double-petticoated porcelain insulators provided with metal eyes so that they may be suspended in series, one under another.

The unit formation presents a positive advantage in the matter of breakage as well as insulation. After one shell of a pin type insulator becomes cracked or broken, the whole device is rendered worthless because it is utterly impossible to break apart the cement joint forming the bond between the nested shells of a built-up insulator. In contrast to this the breaking or cracking of one shell or one unit of a suspended type of insulator takes away the insulating value of but that one unit from the series. To illustrate: If one section of a 5-unit 100,000-volt insulator is broken the total strength of the insulator is reduced by 20 per cent, in contrast with a probably complete breakdown with the pin-supported type of insulator.

The most important reason for using the suspended type of insulator is the flexibility of the unit formation. Should it be desired to raise the line voltage, or if on account of severe local conditions, such as salt fog or smoke from railway trains or factories, it becomes desirable to increase the leakage surface, additional units can be hung from the other sections already connected with the crossarms with no additional investment except for the new sections. Were the pin-type insulator used the necessity of additional insulating qualities would require taking down the old insulators and replacing them with larger ones.

The utilization of the underhung insulator requires a special form of pole-top construction, including crossarms of sufficient length to give assurance that the line wires may not swing against the pole or steel tower to which the crossarms are fastened. This will require an extra length of crossarm, but, due to the absence of twisting strains upon the arms, its design can be enough lighter to offset the added cost for length. Another advantage which has not been mentioned is that with the insulator hanging from below the crossarms the tops of the towers act as lightiug rods and serve to relieve the line of much lightning stress.

For these several reasons it is seen that the underhung system of high-tension conductor insulation works out with pleasing directness and simplicity. Added to these desirable attributes is the comparative cheapness with which it can be installed for high voltages and varying insulation conditions. These favorable characteristics should argue well for its consideration wherever high-voltage transmission lines are to be built.

THE ABBREVIATED CLASSIFICATION OF OPERATING EXPENSES.

Statements from representatives of state railway commissions published elsewhere in this issue show a discrepancy in opinion as to the amount of gross earnings which should determine the use by electric railways of the abbreviated or the amplified classification of operating expense accounts proposed as part of the new uniform accounting system. As shown by the accounts of the progress on the system published in the Electric Railway Review, it is proposed to adopt two classifications of operating expense accounts. The tentative classification for larger roads, provided essential agreement with the steam railway classification is necessary, contains 116 primary accounts; but it is intended, with the approval of representatives of the interstate commerce commission and various state commissions, to abbreviate the classification into 21 primary accounts in order to meet also the requirements of small roads. There is no question as to the fairness and virtual necessity of an abbreviated classification if the amplified classification is to be adopted; the divergence of opinion is upon the amount of gross earnings which should mark the division line between those companies which use the small and those which use the large classification.

At the conferences attended in Washington by representatives of many of the principal street and interurban railways of the country and by representatives of several impor-

tant public commissions, amounts ranging from $50,000 to $500,000 were suggested as the line of division. William O. Seymour, member of the Connecticut railroad commission, in the statement published on another page, believes that roads with gross earnings of less than $200,000 a year should use the abbreviated classification. Thomas Yapp, assistant secretary of the Minnesota railroad commission, believes that roads with gross earnings of over $75,000 annually should use the amplified classification.

We believe that the public officials who are promoting the uniform accounting system should be liberal to the roads in this matter. It need not and should not impair the efficiency of accounts if a small road follows an abbreviated classification of operating expenses. A road with gross earnings of $75,000 annually cannot afford to conduct its accounting department with the detail which the management of a large road would deem essential; the road with small capital investment should not be compelled to bear the heavy expense which the amplified classification would entail. Where the auditing expense with the abbreviated classification might be say $2,400 a year for a road with gross earnings of $100,000, the additional yearly expense to such a road of maintaining the amplified classification is estimated at about $3,600, or an increase of 150 per cent, making a total of $6,000. The amplified classification on even a small road would require an additional clerk to represent the auditor in each of the following four departments: Maintenance of way, electric (line and power house), car house and storeroom; and two extra clerks would probably be needed in the office of the auditor to carry the large number of accounts through the books. It would be unreasonable to expect any road to spend 6 per cent of its gross revenue for accounting expenses; the expenditure of this percentage of the gross revenue would mean that about 9 per cent of the total operating expense would be absorbed by this department, which would be out of all proportion to the value of the labor to either the company or the public.

As small roads are of great benefit to the communities through which they operate, they should be encouraged in every way. Many of the short lines are built largely in the hope of the earnings which future development of the territory will assure, and if too serious a burden in accounting expense is laid upon these small roads a number of the companies will undoubtedly be unable to meet interest on the capital investment.

The problem of making small roads profitable is a serious one. In the annual report of the Massachusetts railroad commission, which has just been issued, the important fact was brought out that many of the roads in that state, especially those serving sparsely settled communities, have reached the period when considerable sums of money are required for repairs and renewals. As many of these roads have not been able to pay dividends and also meet their operating expense and fixed charges, the problem in operation "for these, as well as for some of the larger roads, will be not only that of paying dividends, but of making renewals of track and replacements of rolling stock without impairment of capital."

Proper accounting methods are desirable, but liberality in the decisions of public officials respecting the use of abbreviated classifications is highly desirable. It need not impair in the slightest degree the efficiency or accuracy of accounts.

An international exposition devoted to the various applications of electricity will be opened at Marseilles, France, on April 19, 1908, and will extend until October 31. The exposition will be held at Parc du Rond-Point du Prado and will be under the patronage of the municipality and the chamber of commerce of Marseilles.

The Peoria (Ill.) Railway has installed a set of manually operated block signals at four points on its city lines.

CARS FOR CITY SERVICE.

To the Editors:

The Pittsburg Railways Company has made a signal mistake in attempting to introduce the pay-as-you-enter system in that city, without first having made some kind of preparation for it. Under such conditions how could any other result be expected? I have no interest in the pay-as-you-enter car beyond that of an ordinary citizen wishing to see more comfortable service. This certainly can be done by the introduction, perhaps not of the Montreal or Chicago form of car, but of some form that will answer the same purpose—one that will neither make it necessary for the conductor to crowd himself among the people nor the people to jostle each other in boarding and alighting from cars.

The reasons why the pay-as-you-enter car is a success are: First, because the cars are provided with an extra large platform upon which some people may stand while others are passing into the car; second, the cars are arranged so that a passenger can pass out of the car without interfering with those coming in; and, third, the forethought shown in Chicago in instructing conductors in advance how to handle the people and the cars. In Chicago the patrons were also told how they could assist in making the use of these cars a success. It undoubtedly was because of a lack of such preparation that our Pittsburg friends have failed.

As early as 1898 I introduced on the Rochester (N. Y.) street railway the system of entering cars by the rear platform and alighting from the front. The desire was to expedite the movement of traffic. The plan was a success, but, before putting the system in force, even in that city, I notified all interested that it would be done, both by posters inside the cars and by circulars instructing conductors and people how to act, and requesting their assistance. Several railway managers came to see how the plan worked, most of whom thought that we would have more accidents by reason of passengers leaving by the front platform. We did not, however, but, on the contrary, our step accidents were reduced, and the cars made better time, more comfortably.

I am not sure, but, possibly, the Montreal people may have gotten their first idea from this practice in connection with the large platforms used at Detroit.

New York, January 2, 1908. T. J. NICHOLL.

[In explanation of the purpose of the Pittsburg Railways Company in carrying on its pay-as-you-enter experiments without specially constructed cars, we have received from John Murphy, general superintendent, a letter including the following information: "In reference to our experiments with the pay-as-you-enter idea I beg to state that in order to feel the pulse of the public as to how this plan would be received in this city, we experimented with it for two days on equipment which is not at all adapted to it; and we are convinced from this test that with the proper kind of car the pay-as-you-enter plan is perfectly practicable on some parts of our system; on others it is not."—Eds.]

The Boston Elevated Railway has distributed to its employes $60,000 in the shape of rewards of $15 each to those who during the past year have not been reported for delinquency or misconduct. It is said that this year 85 per cent of the men received the rewards. This is the fifth time the company has made New Year gifts of this kind.

President Theodore P. Shonts of the Interborough-Metropolitan Company, New York, has announced that negotiations are now in progress looking to the opening and operation of the Belmont tunnel under the East river at Forty-second street.

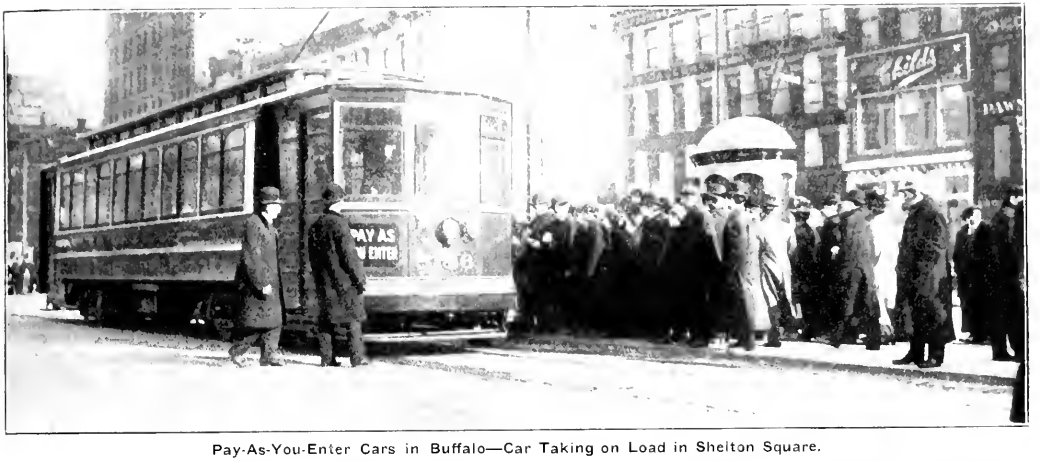
PAY-AS-YOU-ENTER CARS IN BUFFALO.

On Sunday, January 5, the International Railway Company of Buffalo, N. Y., placed in service on its Niagara-Grace and Niagara-O'Neill lines 35 pay-as-you-enter cars of the Stephenson semi-convertible type, built by the G. C. Kuhlman Car Company of Cleveland. The full equipment of the new



Pay-As-You-Enter Cars in Buffalo—Car Taking on Load in Shelton Square.

cars is 50, all of which have been received and were at the disposal of the company for use during rush hours on the following day. From an operating standpoint the cars were entirely successful from the start. The first day's use demonstrated that it would be possible to reduce the running time on the Niagara-O'Neill line, six miles long, by five minutes. On the following day, when the traffic was heavier than on Sunday, the facility of the system in handling rush-hour crowds was fully demonstrated.

T. E. Mitten, president of the Chicago City Railway, the first company in the United States to make use of pay-as-you-enter cars, who is also vice-president of the International Railway Company, was in Buffalo on Sunday and Monday to witness the first tests of the cars in that city. Mr. Mitten informs us that their operation was successful from every standpoint and was enthusiastically received by the press and the public. He is very much pleased with the pay-as-you-enter system, and after having operated the new cars since November 24 expresses surprise that the plan was not tried earlier.

Special Preparations for the Service.

Prior to the day set for opening the new service the International Railway Company had made careful preparations, similar to those made by the Chicago City Railway, for the purpose of insuring a favorable reception by the public. The motormen and conductors were carefully coached in their duties at the car houses before being allowed to take out

Pay-As-You-Enter Cars in Buffalo—Side View of Car While Loading and Unloading.

the new cars and were given a booklet of instructions very much like that prepared by the Chicago company, which was described in the Electric Railway Review of November 16, 1907, page 795. A small folder, illustrated by three photographs of the cars and briefly describing the points of advantage and the methods of operation of the new system, was also distributed to the public at Shelton square, the principal downtown starting point of traffic. A small booth, shown in one of the illustrations, was established at Shelton square, where change might be obtained, and an announcer was stationed at Main and Niagara streets to tell passengers to have their fares ready. Switchmen were placed at junction points and starters at grade crossings with steam railways.

Fare Box.

As shown in the photograph of the rear platform, a fare box is located just inside of the conductor's railing. In general appearance the fare box is similar to the ticket chopper's box used in the New York subway and on several elevated

Pay-As-You-Enter Cars in Buffalo—Change Booth in Shelton Square.

roads. The upper part, or receiver, is of glass, so that the conductor has an opportunity to examine the coin. After the coin has been deposited the conductor pulls a lever that drops it into the cash box below. Passengers are required to deposit the exact cash fare or a ticket into the box. Transfers are to be handed to the conductor. The conductors are provided with $25 in change, instead of $9.00 as formerly, and will make change if necessary, but the passenger is required to drop the fare. The large amount of change supplied to the conductor is made necessary by the fact that the fares collected are not available for use as change. Conductors are not required to furnish change for bills of over $2.00. The fare box was designed by officials of the International Railway Company and, though in an experimental state, is believed to be a success and particularly well adapted for use on cars of the pay-as-you-enter type.

The company was fortunate in the selection of a line having a downtown terminus at which probably 60 per cent of passengers bound for the residence section board the cars, and which is in the business center of Buffalo, where the methods of handling passengers could be seen by all passing through Shelton square. This enabled the general public to quickly become familiar with the cars and what was expected of them.

In general the arrangement of the cars and their design are similar to those for the Chicago City Railway, described in the Electric Railway Review of September 21, 1907, page 332, and, as in the Chicago cars, smoking is permitted on the front platform. A few of the principal dimensions and some of the special equipment are as follows:

Length .....48 ft. 3 in.	Width .....8 ft. 7 in.
Length of body ...32 ft. 5 in.	Height .....12 ft. 3 in.
Length of platforms, 7 ft. 9 in.

CENTRAL ELECTRIC RAILWAY ASSOCIATION.

President H. A. Nicholl announces that the second annual meeting and banquet of the Central Electric Railway Association will be held at the Phillips house, Dayton, O., on Thursday, January 23. The business meeting will take place at the morning session, convening at 10:30 a. m., and the election of officers will take place at the afternoon session.

The following programme is announced:

Morning Session.

President's annual address.

"Promotion of Traffic." Paper by Charles F. Price, general passenger agent Western Ohio Railway, Lima, O.

"Telegraph Signal System." Paper by Chauncey P. Button, general manager Telegraph Signal Company, Rochester, N. Y.

Afternoon Session.

"Can Electric Interurban Railways Profitably Carry Passengers at the Present Rate of Fare?" Paper by F. W. Coen, general manager Lake Shore Electric Railway, Norwalk, O.

Reports of Committees.

"Report of Standardization Committee on Fundamental Brake Rigging." By R. C. Taylor, chairman.

"Report of Committee on Traffic Organization." By F. D. Norviel, chairman.

Election of officers.

It is urgently requested that every member make a special effort to be present at this meeting, as it promises to be one of great importance to all operators of electric railways in the central territory.

Traffic and executive officials of interurban railways in Indiana, Illinois, Ohio and parts of Michigan and Kentucky will meet at Dayton at this time for the purpose of organizing a traffic association as a branch of the Central Electric Railway Association and will remain over to attend the convention. This meeting will be held on Wednesday, January 22, at the Phillips house. As this is one of the important moves of the Central Electric Association, it is very essential that all roads in the states named shall be represented at this meeting.

A cordial invitation is extended to all officers of interurban railway companies to bring their private cars to Dayton on this occasion. Arrangements have been made through a special committee to take care of all private equipment. Parties intending to bring their cars are requested to correspond with T. J. Ferneding, superintendent Dayton & Xenia Transit Company, who will take charge of all such equipment while in Dayton.

The after-dinner programme will be made a special feature of entertainment. Many gentlemen of prominence, not only in railway but in municipal and state affairs, have been invited. E. C. Spring, the first president of the association, will be toastmaster and under his efficient direction an interesting and delightful programme is expected.

The dinner will be served at 7:30 p. m. Every member of the association is at liberty to bring as many friends as he desires.

ANNUAL REPORT OF MASSACHUSETTS RAILROAD COMMISSION.

The thirty-ninth annual report of the Massachusetts railroad commission, containing returns of electric and steam railways, has been issued. An abstract of that part of the report which relates to street railways follows:

Returns for the year ended September 30, 1907, were received from 85 street railway companies. By reason of consolidations there were at the end of the year 82 existing companies. Of this number 62 operated their railways, 17 were operated under lease or contract by other companies, and 3 had organized and paid in a portion of their capital stock, but had not commenced the construction of their railways.

There have been added during the year to the mileage of the Massachusetts companies 25.062 miles of street railway line and 7.500 miles of second track, making 32.562 miles of additional main track. There have also been added 4.515 miles of sidetrack, making a total addition of 37.077 miles of track reckoned as single track. The Massachusetts companies now own 2,233.121 miles of street railway line, 427.624 miles of second main track and 157.130 miles of sidetrack, making a total length of track reckoned as single track owned, 2,817.875 miles. This does not include the Woonsocket road (merged with the Rhode Island Company), which was in last year's return, which has 21.961 miles of main line, of which 3.195 miles is in Massachusetts and 0.863 mile of sidetrack, of which 0.103 mile is in Massachusetts. All of the track owned is surface street railway track, with the exception of 8.660 miles of elevated line and 8.484 miles of elevated second track. Of the sidings all are surface track, with the exception of 3.592 miles of elevated track. All the elevated track is located in Boston. Altogether 34.193 miles of main and second track are operated outside of the state. The total miles of main track (including trackage rights) operated is 2,745.266, an increase of 31.175 miles over the previous year.

Assets, Capital Issues and Dividends.

The gross assets of the companies on September 30, 1907, were $161,297,914, an increase of $5,383,160 over the previous year. Of the total $79,993,550 represented construction and $28,738,946 equipment. The gross liabilities on the same date, including capital stock, but not including sinking and other funds, were $153,847,903, an increase of $4,789,209.

The aggregate capital stock of the 82 companies, on September 30, 1907, was $73,289,155, a net increase of the same companies of $2,363,230 over the preceding year.

The total amount of dividends declared in the year was $3,721,388.24, an increase of $167,315 over the preceding year. Thirty-six out of the 85 companies paid dividends ranging from 1 to 10 per cent, and 49 companies declared or paid no dividends. One company paid 10 per cent, six companies paid 8 per cent, one paid 8 per cent on preferred and 7 per cent on common, one paid 7.22 per cent, one paid 7.20 per cent, one paid 7 per cent, eight paid 6 per cent, one paid 5.5 per cent, seven paid 5 per cent, two paid 4 per cent, one paid 3.75 per cent, one paid 3 per cent, one paid 2.5 per cent, three paid 2 per cent, and one paid 1 per cent.

The aggregate funded debt of the companies on September 30, 1907, was $59,339,500, an increase of $1,323,500 over the preceding year.

The amount of real estate mortgages outstanding on September 30, 1907, was $84,800, an increase of $10,400 over the preceding year. The total unfunded debt, including the mortgages, was $21,228,249, an increase of $1,102,479.

The gross debt, funded and unfunded, was $80,567,749, an increase of $2,425,979.

The net debt (the gross debt less $5,855,412 of cash and current assets) was $74,712,337, an increase of $7,012,201. In computing the net debt the sum of $7,960,720 returned as "miscellaneous assets," covering materials and supplies on hand, etc., is not included with cash and current assets in the deduction from gross debt.

The total capital investment (capital stock and net debt) of the street railway companies of the state on September 30, 1907, was $147,992,492, an increase of $9,375,431.

The average cost of the street railways of the state, per mile of main track (including the cost but not the length of sidetrack), as returned by the companies September 30, 1907, was $30,064.34 for construction, $10,801.09 for equipment, and $14,563.32 for lands, buildings (including power plants) and other permanent property, making a total average cost of $55,428.75 per mile of main track.

Income, Expenditures and Traffic.

The total income of the companies from all sources for the year ending September 30, 1907, was $32,203,111.37, and the total expenditures (including dividends declared) were $31,799,314.56, making a net surplus of $403,796.81 to be added to the surplus of previous years.

The total number of passengers carried during the last year on the railways in operation of the 85 companies making returns to the board was 600,695,816, an increase of 22,307,041 passengers over the previous year.

The total number of miles run by street cars was 117,719,203, an increase of 4,123,981 miles over the previous year.

Operating expenses were 67.71 per cent of gross earnings, as compared with 67.49 per cent in the preceding year. In the last 10 years the average has been 67.92 per cent.

Gross earnings per mile of track owned were $11,485, as compared with $11,156. Expenses of operation were $7,776, as compared with $7,529. Net earnings were $3,709, as compared with $3,627.

The car-mile results for three years past have been as follows:

	Average per car-mile.		
	1905.	1906.	1907.
Gross earnings	24.75	25.86	25.96
Expenses of operation	16.72	17.46	17.58
Net earnings	8.03	8.40	8.38

Employes, Equipment and Accidents.

The number of employes was 18,181, as compared with 16,909 in the previous year. The number of motors was 15,626, the number of cars was 7,539 and the number of other cars and vehicles 2,900.

The whole number of persons injured in connection with street railway operation, as returned by the companies for the year ending September 30, 1907, was 6,853, of whom 99 received fatal injuries, and 6,754 injuries not fatal.

The number of passengers injured was 4,879, of whom 23 were injured fatally. The injuries to employes were 321 in all, 13 of which were fatal. The number of injuries to travelers and others on the street was 1,653, of which 63 were fatal.

These figures include a very large number of injuries of a trivial character that have been returned by the companies.

Twelve more passengers, 2 less employes, and 21 more travelers and other persons on the street received fatal injuries than in 1906. Of those receiving injuries not fatal there were returned 291 less passengers, 42 less employes and 230 more travelers and other persons on the street than in 1906.

Altogether there appear to have been injured, fatally and otherwise, 279 less passengers, 44 less employes and 251 more travelers and other persons, making 72 less accidents returned by the companies as having occurred during the last than the preceding year.

Electric Railroads.

After careful inquiry and extended debates the legislature of 1906 passed an act, Chapter 516, authorizing a new type of transportation—electric railroads. Under the provisions of that act five different companies in process of formation petitioned the board for the issue of certificates that public convenience and necessity required the construction of their lines. One of these petitions is now pending, one was held to await further study and development, two were dismissed for sufficient reasons and one certificate was issued.

In rendering its decision the board stated its views as follows: "The question to be decided under each petition is whether, upon the whole, the net results of the proposed undertaking promise public gain or public loss"; and, further, that "It surely cannot be said that public necessity and convenience require the building of an additional railroad if the effect upon existing railroads is so disastrous that the service as a whole is impaired rather than improved."

Heating and Ventilation of Cars.

The board has recently changed its requirement with reference to the point of outside temperature at and below which companies are called upon to heat street cars, making that point 40 instead of 50 degrees above zero, the temperature to be then maintained to have a range that shall not be lower than 40 nor higher than 60 degrees. In making this radical change and certain other changes, the board has had in view a rule that companies will find it possible to obey, and that the district police can enforce under the statute which makes them responsible for its enforcement.

Obviously an attempt to always satisfy every occupant of a street car with the atmospheric conditions must be futile. Even if passengers were of the same mind, it is impracticable to constantly maintain air of a given quality and the temperature at a specific point in a car that is one moment nearly empty and the next crowded to the limit; now stationary, then in motion; with doors continually opening and shutting, and with an outside temperature varying between zero and 40 degrees above.

The day of horse cars, with straw on the floor to keep the

feet warm, and with no ventilation except that afforded through the doors, is within easy recollection. While today the electric heater exemplifies radical progress in heating, the ventilator commonly in use is about as crude as any device could be. It is true that a number of experiments have been made, that a ventilator of improved type is now found in the semi-convertible cars upon the Boston & Northern and upon the Boston Elevated lines, and that another device, which promises as good if not better results, is found in cars of the elevated trains; but that there has been, however, a too general indifference on the subject of ventilation cannot admit of question.

After all is said, however, in support of theories and devices for heating and ventilating cars, present discomfort is due fully as much to the failure to properly use means at hand for keeping the air pure and warm as to imperfection in apparatus. There is no reason why, for example, a movable ventilating window should be kept entirely open or entirely shut, or in any one position throughout a long journey, in total disregard of the temperature outside and of the changing conditions inside the car.

Street Car Fenders and Wheel Guards.

The board deems it necessary to reiterate its views that no particular fender or wheel guard has yet been found the adoption of which can be recommended in preference to all others, and that the greatest safeguard in street railway operation comes from having the cars at all times under such control as to avoid striking a person, rather than depending upon any device to save him from harm after having been struck by a moving car.

The board will continue to investigate and thoroughly test all meritorious fenders and wheel guards, and will insist upon the more general use of any device found to possess sufficient merit to warrant its adoption.

To assist the board in determining the efficiency of these devices, it is expected that companies will keep a record of all tests through their use.

Repairs and Renewals.

The physical condition of street railways in Massachusetts shows a general improvement over the previous year, large sums having been expended for repairs and renewals, and some of the larger companies having bought many new cars and replaced with more commodious cars the equipment lost or worn out in service.

Among the smaller companies, especially those serving sparsely settled communities, the period has arrived when considerable sums of money must be spent for repairs and renewals of property. Many have been unable to earn a sufficient sum above their operating expenses and fixed charges to place them in the dividend-paying class of roads, and the problem in operation for these as well as for some of the larger roads will be not only that of paying dividends, but of making renewals of track and replacements of rolling stock without impairment of capital.

The public, now so generally dependent upon local interurban roads, should be ever mindful that, while it is essential that service should always be adequate, the ideal conditions can only be obtained through a fair return upon money invested.

Whatever the solution of these difficulties, one thing is evident, that the conduct of street railway companies should be no different from that of other transportation or business corporations in the adoption of a far-seeing policy in the management of properties, and an element always to be commended in such management is that of proper provision in the present for the inevitable needs of the future.

Report of Bridge Engineer.

The report contains a statement from George F. Swain, the bridge engineer, in which he says regarding street railway bridges:

"The condition of steel bridges over steam railroads requires careful and frequent examination, as some such bridges which have been recently uncovered have shown great reduction in strength, owing to the corrosive action of the smoke and steam from the locomotives. No paint is proof against this combination of chemical and mechanical action, and the only safe and permanent plan appears to be to encase the steel in a covering of concrete or plaster or some other material which will not corrode.

"During the past year the different street railway companies have done considerable work in altering, strengthening and rebuilding bridges. A good deal of a minor character has been done, together with a good deal of work of magnitude. The most extensive strengthening that has been carried out during the year has perhaps been the rebuilding and strengthening of the steel trestle on the Old Colony Street Railway at Raynham, 752 feet long. This work is an illustration of the short-sightedness with which some of our street railways have been constructed in the past. It was built only 10 years ago, but as the traffic increased and heavier cars were run it was soon found to be too light. Within 10 years from the time it was constructed it has been found necessary to largely rebuild it.

"The new bridges which are being constructed by street railways in the commonwealth are designed for heavy cars, and it is hoped and expected that they will prove to be more enduring."

AUTOMATIC INTERLOCK TO PREVENT ACCIDENTS FROM MISPLACED AIR COCKS.

On all large electric roads where heavy cars are in use, equipped with air brakes, and especially where trains of two or more cars have to be made up and moved about the yards and run into terminals, it very frequently happens that an employe will forget to cut-in the air cocks below the engineer's valve, the consequence being that when he attempts to apply the brakes they will not work and the train may run through a switch or crash into a train of cars standing on a siding or on the main track.

One of the worst accidents in electric railroading was caused by a switchman pulling out of a siding with a 5-car train and running into a 5-car train loaded with passengers standing at the foot of a slight grade. When the debris of this wreck was cleared away the cocks under the engineer's valve were found to be closed.

Where a road is operating a stub-end terminal a motorman changing ends occasionally forgets to close the cocks on the engineer's valve he has been operating, and, leaving the valve on release position, goes to the other end of the car or train and starts out with his brakes inoperative. Then when he attempts to stop he can only do so by reversing. Very frequently the reverser is stuck or the circuit-breaker blows, due to heavy rush of current, and then he is powerless to prevent an accident.

A very simple device has been perfected and patent applied for by E. T. Munger, A. H. Dans and H. A. Johnson of the Metropolitan West Side Elevated Railway Company of Chicago. The device is designed to positively prevent accidents caused by improper placing of the air cocks. The device is simple. It consists of a switch attached to the cut-out cock under the engineer's valve, to which is connected one of the control circuit wires. The protective apparatus can be applied to any control system.

Following are statements of how this device will operate with different numbers of cars in a train:

1. One car, cab in one end only; cut-out cocks under engineer's valve must be open before car can be moved.

2. One car, cab in each end; cut-out cocks in operating cab must be open, in other cab closed, before train can be started.

3. Two or more cars in train, one or more cabs in each car; cut-out cocks in operating cab must be open, and in all other cabs they must be closed, before power can be fed to motors.

With the device installed, if a passenger opens a cut-out cock in some cab of a train in motion, the power will immediately be shut off.

It is stated that the attachments necessary to afford these results can be installed on cars already operating for less than $5.00 per car for labor and material. The installation does not require any extra wires in the train line. On roads contemplating new equipment it can easily be installed at the time cars are wired.

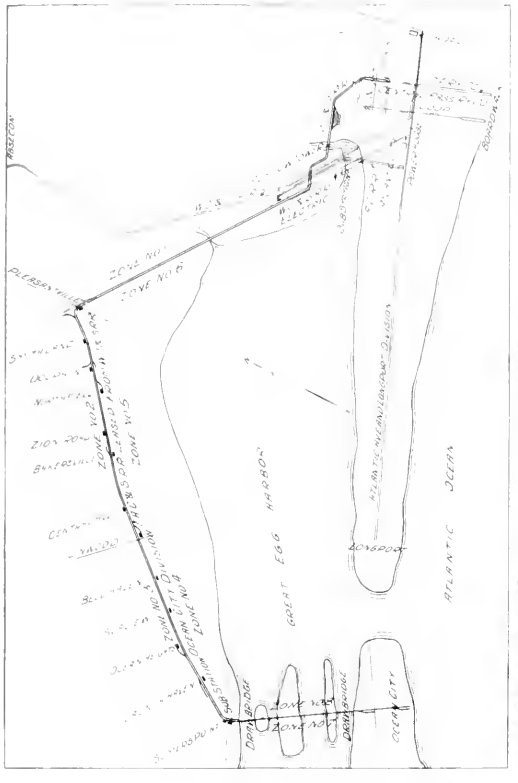
A number of cars on the Metropolitan West Side Elevated Railway are equipped with these devices, which are operating satisfactorily.

On the Saturday before Christmas, December 21, the lines of the Interborough Rapid Transit Company, New York City, carried 1,649,752 passengers. Of these 961,114 were carried on the elevated lines and 688,638 on the subway division.

TICKET METHODS OF THE ATLANTIC CITY & SHORE RAILROAD.

BY S. S. NEFF, GENERAL SUPERINTENDENT.

The Atlantic City & Shore Railroad, of Atlantic City, N. J., has recently instituted on its Ocean City division a number of new ticket methods, which may be of interest, and



Atlantic City & Shore Railroad—Map of System.

of which we should appreciate criticisms from any member of the street railway fraternity.

The Atlantic City & Shore Railroad at present consists of three divisions: First, the Central Passenger Railway, comprising a loop in Atlantic City, on Virginia, Adriatic, and South Carolina avenues, touching the Boardwalk on the first and last named avenues; second, the Atlantic Avenue & Longport division, between Inlet and Longport, with a boat line operating between Longport and Ocean City; third, the Ocean City division, a high-speed line between Atlantic City and Ocean City, which is operated in various parts by the third rail, catenary and ordinary overhead conductors.

On August 25, 1906, the last named division was opened for traffic between Atlantic City and Somers Point, and the following 5-cent fare zones were established:

SOUTHBOUND.

Atlantic City to Pleasantville	Zone No. 1
Pleasantville to Linwood	Zone No. 2
Linwood to Somers Point	Zone No. 3

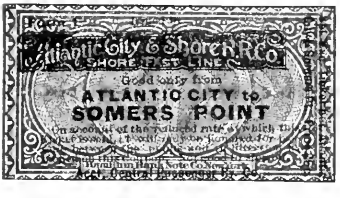
NORTHBOUND.

Somers Point to Linwood	Zone No. 4
Linwood to Pleasantville	Zone No. 5
Pleasantville to Atlantic City	Zone No. 6

On July 2, 1907, we opened for traffic an extension between Somers Point and Ocean City, making a continuous all-rail route between Atlantic City and Ocean City, and on account of the great cost of the bridge over the bay, the rate of fare in each direction between Somers Point and Ocean City was made 10 cents. Between these points the southbound zone is numbered "7," and the northbound numbered "8." In these zones in each direction the register is rung twice for each cash or ticket fare.

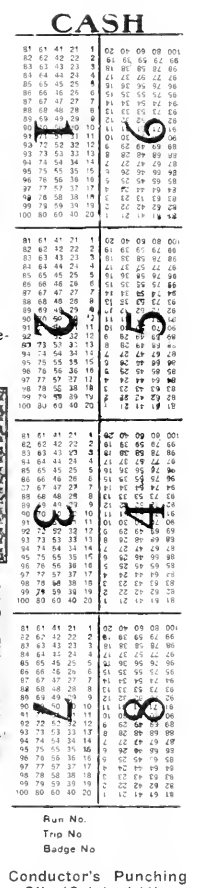
When the line was opened a ticket system was adopted, using a separate coupon for each zone, and tickets were placed on sale in the hands of the conductors. For several obvious reasons, chiefly on account of the inconvenience to passengers caused by requiring them to tear off a coupon in each zone, this system was discarded and the sale of tickets was taken out of the hands of conductors and given over to agents. At the same time a new style of ticket was adopted, of the form shown in the accompanying engravings. The new system consists of single and round trip tickets, printed separately for each station, good for a trip between terminals or between any two stations on the line. Northbound tickets are printed on a blue background and the southbound tickets on a yellow background. The price of each ticket is printed on one end.

Atlantic City & Shore Railroad—Single-Trip Ticket.



Round-Trip Ticket.

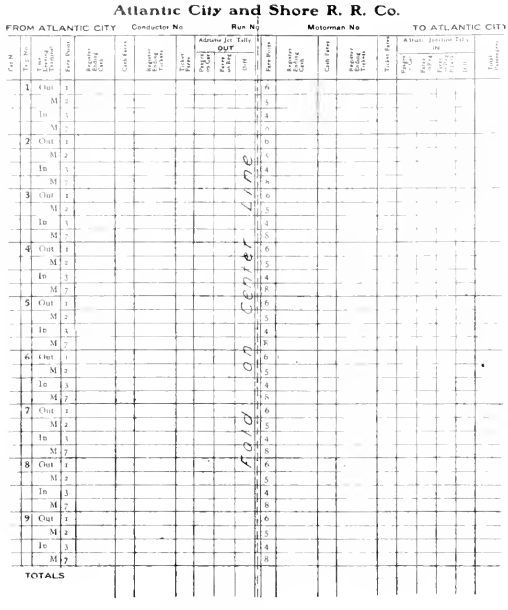
At the time the new style of tickets were placed in service, a question came up as to how to check the conductor, and at the same time give him a record which would allow him to correctly ring up in each zone the fares covered by through tickets or cash fares paid through any number of zones. This we have done very satisfactorily by the use of punching slips, one of which is reproduced herewith.



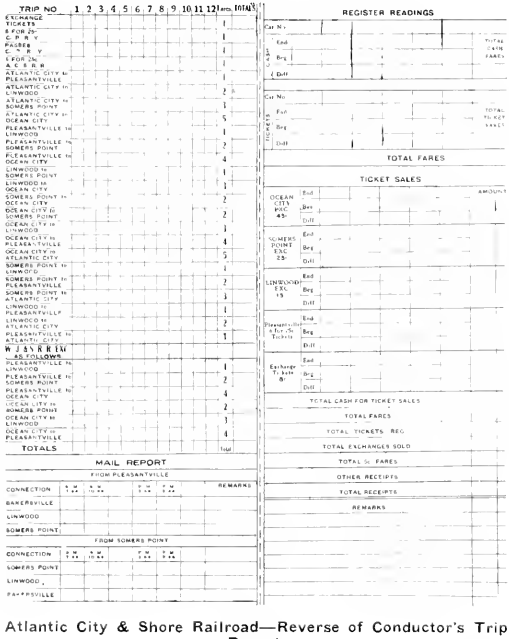
Conductor's Punching Slip (Original 11¼ by 2 Inches).

The punching slips are of two forms, one, printed on a

red card, for tickets and the other, on a yellow card, for cash. Each zone is represented by a rectangular space with its



Atlantic City & Shore Railroad—Obverse Conductor's Trip Report (Original 11¼ by 9¼).



Atlantic City & Shore Railroad—Reverse of Conductor's Trip Report.

corresponding zone number printed in large figures, and each space contains 100 numbers, from 1 to 100. One of each of these slips is given to the conductor at the beginning of each round trip, and on the completion of the trip the slips are handed to the receiver, who checks the register for the round trip. Double fare registers are used, recording both cash and tickets.

As the conductor collects a ticket or a cash fare he punches the corresponding slip in the zone which the fare or ticket covers, and at the same time records a fare on the register. The registers are changed at the end of each zone. The slips must be kept correctly so that they will check with the number of fares registered in each zone, and any discrepancy will be promptly detected by the receivers at the end of the round trip. If a conductor attempted to make false returns by punching the slips incorrectly, hoping to be able to cover up his tracks in a round trip, he would be obliged to count his tickets and cash in each zone and the time is so limited that his hands are practically tied.

A copy of our conductor's waybill, which we have prepared after a great deal of thought, is shown herewith.

IMPROVEMENTS OF THE DENVER CITY TRAMWAY COMPANY.

William G. Evans, president of the Denver City Tramway Company, in a letter to the Denver Republican under date of December 31, 1906, outlined the large amount of improvement work the company had carried on during the year and gave some figures showing the present extent of the company's system. The following figures, taken from Mr. Evans' letter, show the increase of business during 1907 over the previous year:

	1907.	1906.
Total passengers carried	72,383,101	65,883,657
Number passengers riding on free transfers	16,534,087	14,896,122
Average earnings of the company per passenger, revenue and transfer	3.79	3.78
Average distance of each 1-way car trip (in miles)	4.34	4.28
Total car-miles	10,428,210	9,882,385
Average car-miles per day	28,570	27,076
Average number passenger cars operated daily	200	180

Of the passengers carried during 1907, 4,000 per day traveled upon half-fare tickets.

On May 15, 1906, the company was granted a new franchise providing for a large amount of new extensions and much of the work was done in 1907. The following is a summary of the construction work done and important betterments made by the company, and amounts expended for same, since the adoption of the franchise of May 15, 1906:

Miles of new track constructed	15.63
Miles of cable track rebuilt	4.86
Eighty-six new cars added at cost of	$322,822.59
Power plant electrical generating machinery	165,041.31
Track construction	378,858.36
Total cost of improvements	866,722.26

The following figures show the money expended by the company in Denver from May 15, 1906, to December 31, 1907, for labor on account of construction work, and for labor and wages on account of maintenance and operation of the company's lines:

Total amount of money expended in labor, wages, salaries, etc., on construction work	$ 257,513.78
Total amount of money expended in labor, wages, salaries, etc., on operation	1,411,613.77

All tramway trainmen receive their pay for each day's service at the close of each day.

The company now operates 172 miles of track within the city limits and 26 miles of interurban lines, and owns 375 passenger cars.

In addition to the work completed in 1907 the company has an extensive programme of improvements planned for 1908, and, although funds which were expected to be available for the new work have been delayed by the financial situation, no long postponement of the plans is expected.

GOVERNMENT SUPERVISION OF RAILWAY ACCOUNTS.*

BY PROF. HENRY C. ADAMS, IN CHARGE OF STATISTICS AND ACCOUNTS, INTERSTATE COMMERCE COMMISSION.

The government has recently undertaken to do something quite different from that which it has ever undertaken to do before. It has undertaken to exercise a controlling influence upon the administration of railway properties, through the agency of their accounts. The interstate commerce law always had in it a phrase, giving to the interstate commerce commission the right, within its discretion, of prescribing a uniform system of accounts, but it was not until the act which went into force a year ago last August that the commission was clothed with any effective power to exercise that right. The difficulty did not lie in the intent of congress, but in the fact that the law failed to provide the commission with adequate means of enforcing its desires in this regard. I have been with the interstate commerce commission since 1887. We have had three law suits in that time with the railways touching accounts. One of them had to do with the request for certain information which the railways did not care to furnish in their annual reports, and we were defeated. It was the care of congress, at the session before last, that this defect should be remedied. It is upon this amended act that the new activity of the government, referred to, is based.

I assume that you will not take it amiss if I place some emphasis upon the political aspect of this new step which the government has seen fit to take—political not in its party sense, but in the broad sense of political science. What do these orders of the commission relative to accounts mean for our government? What do they mean as a form of control of aggregations of capital which, under present conditions, are a menace to the stability of this nation? And I further call attention in passing to the fact that the success of what the interstate commerce commission is undertaking in this regard, aiming, as I have remarked, at the control of railway administration through the supervision of railway accounts, will serve as a model, if it succeeds, for the control of all forms or agencies of consolidated capital, which endanger the perpetuation of the principles upon which our government rests.

Operating Accounts and Balance Sheet.

May I now ask your attention to the particular points held in mind in formulating the system of accounts which the commission has seen fit to promulgate? And of those, two are, I think, of paramount importance.

First—It is absolutely essential that a carrier should show, month by month, and year by year, the true net revenue; and,

Second—It is absolutely essential that the corporate assets and corporate liabilities shall be accurately, fully and clearly stated.

The first of these, the determination of the net revenue, is the kernel of operating accounts, as they are termed; the latter, the correct determination of the assets, is the significant feature of the balance sheet. Speaking broadly, accounts divide themselves into these two parts: operating accounts and capital accounts. The commission, during the first year of the enforcement of this act, has prescribed the operating accounts. It is these that went into effect beginning July 1.

The capital accounts, that is, the classification of assets and liabilities essential for the determination of the correct balance sheet, is the constructive work that yet lies before the commission during the coming year.

In what way do the operating accounts aim to secure a correct statement of the net revenue? This is done by the application of two principles, or rather by the application of a general principle in the operating accounts, and by setting up a separate classification of additions and betterments. The present system of accounting differs from the system of accounting that existed prior to July 1, speaking generally, in two important particulars. There was, in the old system of accounts, no formal depreciation account, nor was there any formal classification of additions and betterments. Now, it is by means of these two, the depreciation account, which is a primary account in operating expenses on the one hand, and a strict definition of what is an addition and what is a betterment on the other, that it is hoped to guarantee to the investing public that the net revenue that is stated from time to time shall be the true net revenue.

Depreciation.

You will appreciate the significance of the depreciation account if I call your attention to the ease with which an erroneous net revenue may be stated by a disregard of depreciation. Of course, the net revenue is the difference between the gross revenue and the operating expenses, the operating expenses being the technical name for what sometimes is called the cost of performing the service. Now, it is a well-established principle in manufacturing accounting, and, indeed, in sound accounting everywhere, that the wear and tear of the plant during the time that it is producing revenue shall be included in the cost before arriving at the full cost of producing that revenue. The depreciation account, therefore, aims by an orderly, regular method, and by a method which separates the depreciation charges from all the other charges included in operating expenses, and further by a method that permits of easy test as to whether the charge is too great or too light—I say that this depreciation account insists that there shall be put into operating expenses, month by month, and year by year, an amount equal to the wear of the property during that time. Suppose, for illustration, that in order to pay a dividend, or show a surplus, the management should refuse to set aside out of the earnings a fund to replace the cars which, during a month, had gone out of service, would that be correct accounting? The fact is that the value of all cars has disappeared up to the extent of the wear upon them, and to the extent of the wear, or to the extent of the value representing the wear, there should be carried into operating expenses a charge the purpose of which is to accumulate a fund with which to maintain the value of the original investment. To declare a revenue, without regard to that wear and tear, is for a company to state that it has a surplus, when, in fact, it may have none.

I know of a case which happened not long ago, of a manager who desired to make a good showing for a certain month. He found that the estimates of the earnings for the first week were below what he thought they should be, and if the month kept up in that way he was not going to be able to show as good a net earning as he expected. What did he do? He closed the shops and by what he saved in expense of maintaining his shops for a month he made a good showing. Of course, that is a wasteful method. But, what is worse, it is a dishonest method. The stockholders who receive dividends by methods of that sort simply had paid back to them a part of their capital. It was not a dividend at all. And the persons who bought that stock because of the payment of a dividend declared under such conditions bought the stock under false representations.

Now, there is another way in which the net revenue may be misstated. It may be that in especially prosperous times the manager of a railway desires to make certain improvements, and yet does not care to show that those improvements are made, nor does he care to borrow the money with which to make them. He issues an order that those improvements be made and called operating expenses chargeable to maintenance. Now, they are not maintenance charges. Now, in order to guard against the understatement of the net revenue, which is just as bad as the overstatement of the net revenue, there is being worked out a careful classification of additions and betterments, the design being to draw a clean-cut line between what is the cost to operate and maintain the property and what does, in reality, better the property. It is not suggested that that betterment must be capitalized. That is a matter which certainly lies within the right of the board of directors to determine. There are conditions under which it is certainly wise, from a public point of view, as well as from the point of view of the stockholders, that improvements should be paid for out of current earnings; but, if they are paid for out of current earnings, it must be not in a blind charge to operating expenses; the carrier should not be at liberty to call an improvement a cost, which is a misstatement, but it must be charged to the income account.

Supervisory Accounting.

Now, before I go on to the next point, I want to make a remark in connection with the scope and purpose of supervisory accounting. We have heard a great deal and read a great deal lately as to the embarrassment of railway corporations because they cannot borrow capital. It is true that the people seem temporarily to have lost confidence in the railway securities. The explanation of this loss of confidence by the railway management is that the state legislatures and congress are exercising too much supervision over the management, but it is also possible that such things as we have read of in connection with the Alton case, and other similar cases, is the explanation of this lack of confidence. Now, if this be true, nothing can restore that confidence and enable the railroads to secure the money that it is necessary for them to have in order to carry out the schemes of improvement that they desire to carry out, more quickly and effectually than such a scheme of accounting supervision as I am describing practically carried out. There is no reason in the

*Abstract of an address delivered before the Association of American Government Accountants, Washington, D. C., October 11, 1907.

nature of the case why the railway securities should not be made as stable as a government bond. They are like government bonds in that they have the industry of the entire country back of them, and I hope that we may live to see the time when congress will permit the comptroller of the currency to accept railway bonds as the basis for the issue of national bank notes; and the only practicable means of attaining this most desired end is, in my opinion, the perfection of this scheme of accounting supervision upon which during the last year the interstate commerce commission has entered.

Joint Facilities.

The American system of railways is a very complicated system in that no one railway owns all the facilities which it operates. The railway managers of this country endeavor to do things as economically as possible, and if one line between two points will serve the traffic, or if one interlocker at a point, or one bridge, will serve the purpose of two or more carriers, or if one terminal in a city will meet the requirements of several roads, they say, let there be but one of these facilities of which all carriers may have joint use. Now, the debit and credit entries which are thus rendered necessary in accounting are the most difficult of the technical problems in the whole realm of railway accounting, a statement which will be readily appreciated when I say that the solution of the problem requires that three somewhat divergent results must be attained through the agency of a single set of operating expense accounts.

It must, in the first place, be possible to combine the revenue and expense accounts of the several carriers without danger of duplication or omission. It must, in the second place, be possible to determine the cost of maintaining the property represented by the capital investment of a carrier, quite independently of the question of the revenue that accrues from the operation of the property. It must, in the third place, be possible to assign to the traffic revenue of each carrier the expenses incurred for earning that revenue. Any one of these requirements could easily be met, but it is a difficult accounting problem to make use of the operating expense account in such a manner as to realize all three of these results. The interstate commerce commission accounting system aims to do this by means of joint facilities, debit and credit accounts, the principle of which is to permit the owning company to charge all expenses in its primary accounts, and to bill foreign carriers for their proportion of such charges. Instead, however, of crediting its primary accounts with the amount thus billed, which, on the other side, would require the foreign company to debit the same accounts with corresponding items (a practice which would result in a misstatement, so far as maintenance is concerned, of the accounts of both carriers), both companies are required to carry their debits and credits in specially provided accounts, called "joint facilities—dr." and "joint facilities—cr." By this means we arrive at a correct statement of maintenance expenses assignable to capital, a correct statement of costs of transportation assignable to revenue, and a correct result when the reports of the several carriers are combined into a single statement.

Balance Sheet and Capital Account.

Permit me to add a word relative to the balance sheet and capital account, for the reason that they bear very directly upon a question which is likely to come before congress at the next session. It is as essential for the exercise of administrative supervision over the carriers by the state and federal railway commission as for the determination of just and reasonable rates under existing rules laid down by the courts to know what the true value of railway property is. The balance sheet ought, and would, if it were properly kept, to tell what the true value of the property is, or, at least, it ought to be the key for determining that value. The balance sheet is the final record. It is the statement in which the corporate assets are put on the one side and the corporate liabilities on the other. It is the statement which gives the investor, in a definite figure, the result of the working of the corporation from the time that it first originated down to the time that the balance sheet is struck. Its theory is simple and its figures ought to be significant. But the query is, do they, in reality, convey any definite meaning? Among the assets we find against "cost of road," or "cost of equipment," so and so many millions of dollars. Do these figures mean what they say? In the majority of cases they do not. I would not be understood as implying that railway balance sheets are dishonest statements; what I mean is that the method of keeping the balance sheets according to current American practice is such that you cannot learn from the figures set up in the balance sheet against these captions I have named anything like a true measure of the cost of roads or the cost of equipment. It may not even be the original cost. It may be that if you take an inventory of the locomotives and cars actually used in the operation of this road the value of the property will stand millions of dollars higher than the book entry upon the balance sheet, or it may be that it will stand millions of dollars below. In either case, you have an erroneous statement of profit and loss as a balance between assets and liabilities.

This question of the balance sheet, as also the analysis of the property accounts, and the rules by which the property accounts should be kept, are the questions which will claim the attention of the interstate commerce commission during the current year. They are essentially different in character from the accounts that pertain to operating expenses and operating revenue. They pertain to the financial side of railway accounting. Such things as occurred in the Alton deal—I speak of that case because it is known by common report—probably would not have occurred, or, at least, could not have occurred so easily, had there been for 10 years prior to the time of this transaction a correct statement of the balance sheet. And now, I do not mean to say that there was any conscious error or conscious misdemeanor on the part of those who made that balance sheet, but I do mean to say that a great deal remains to be done before the balance sheets of the American railways are brought into such shape that they are capable of presenting with accuracy and sufficient detail the financial standing of railway properties, or furnish a true statement of the value of the property.

Such a general statement as this will show the significance and importance of this part of the accounting scheme, and will, I am sure, emphasize what I said at the outset, that control over accounting does in fact permit the government to exercise a certain degree of supervision over the management of railway property. Of course, the accounts themselves would be of little use were it not for the fact that the law also provides for examiners whose duty it shall be to examine the accounts of the carriers and determine whether or not the prescribed rules of accounting are followed. Although the analogy is not quite accurate, the relation between the interstate commerce commission and the carrier is something like the relation that exists now between the treasury department and the national banks. The purpose in both cases is administrative supervision over the corporations concerned.

NEW HAVEN'S PLANS FOR NEW YORK-PORT CHESTER ELECTRIC LINE.

On January 2 President C. S. Mellen of the New York New Haven & Hartford Railroad, in a communication to the board of estimate of New York City, stated that the New Haven company owns the entire capital stock of the Millbrook Company, which in turn controls the New York Westchester & Boston Railway and the New York & Port Chester Railroad. The communication was in reply to a resolution of the board asking the New Haven road to furnish information as to its relation to the Westchester and Port Chester companies and to state whether it proposed to proceed with the construction of the roads under the franchises. It is stated that the board has considered revoking the franchises on the ground that the required amount of construction work has not been completed.

Mr. Mellen states that "it is the intention of the New York New Haven & Hartford Railroad Company to cause to be constructed a railroad from the Harlem river to Port Chester, consisting of two tracks from the Harlem river to One Hundred and Seventy-seventh street, four tracks from One Hundred and Seventy-seventh street to the city line and two tracks from the city line to Port Chester, such road to be a high-speed electric railroad, in compliance with the provisions of the franchises heretofore granted by the city of New York to the Port Chester company and the Westchester company." He says further that the company desires to build the road according to the best available route and that it has no preference as to which charter shall be used, the company's only desire being to build under a charter that shall be free from legal question.

The company has arranged for practically all of the right of way between One Hundred and Seventy-seventh street and Port Chester and considerable construction work has been done, but little further progress can be made until litigation now pending can be settled. The Port Chester company has

been enjoined from crossing streets in the Bronx and the validity of the Westchester company's charter is now being attacked in the courts. As soon as possible it is the intention of the New Haven company to apply to the board of estimate and to the public service commission for permission to consolidate the two companies.

DECISION OF WISCONSIN RAILROAD COMMISSION ON ISSUE OF CAPITAL OBLIGATIONS.

An abstract of the decision of the Wisconsin railroad commission approving the issue of $300,000 bonds by the Southern Wisconsin Railway of Madison, Wis., follows:

The original application in this matter was made on July 23, 1907. Various amendments which the commission considered necessary in order to comply with the terms of Chapter 576 were made by the company at different subsequent dates.

Application of the Company.

The chief statements of the amended application read as follows:

"The $30,000 bonds will be secured solely by the $450,000 bonds owned by the Madison & Interurban Traction Company. That company has for the purpose of assisting the Southern Wisconsin Railway, in effect, loaned these bonds to it and it will be provided, in the proposed trust agreement, that as the coupons on these bonds mature they shall be clipped and canceled by the trustee and returned to the company. During the period of the trust and until the $300,000 serial bonds are paid, both as to principal and interest, the Madison & Interurban Traction Company receives no income from its bonds so loaned to this company. The $300,000 serial bonds are not secured by mortgage and are no additional mortgage lien and never can be, on the property of the Southern Wisconsin Railway. The expectation is that the earnings of the company for the next eight years will take care of this $300,000 bond issue, both principal and interest."

"The bonds are issued for the following purposes: (a) Rebuilding the track and overhead system at certain points at an estimated cost of $159,000. (b) Extending the railway at an estimated cost of $38,000. (c) Extending the railway by building along a private right of way to the Dane county fair grounds, at an estimated cost of $18,000. (d) The purchase of 10 new cars, at $3,500 each. (e) The erection and equipment of a power-generating plant, at an estimated cost of $137,660. (f) The payment of the floating debt of the company. (g) The purchase of a road roller, a sprinkling car and a tower car, at a cost of $4,500 (the road roller has already been purchased, at a cost of $2,060)."

The itemized list of improvements to be paid for out of the proceeds of the sale of the proposed bond issue was subsequently cut down so as to bring it within the limits of $300,000.

History of Capital Issues.

The history of recent capital issues is set forth as follows, by the officials of the applicant company in a statement received by the commission on September 4, 1907:

"At the time the Madison & Interurban Traction Company purchased the property of the Madison Traction Company that company had outstanding $200,000 stock and an authorized bond issue of $300,000, of which $210,000 had been issued and were repurchased by the company at a premium of 10 per cent.

"The Madison & Interurban company issued $685,000 bonds and $50,000 stock, all of which was delivered to its predecessor company for property. The Madison Traction Company distributed the bonds thus received as part payment of its property to its stockholders. The stockholders sold the bonds to the Citizens' Savings & Trust Company of Cleveland, O. The Madison & Interurban company afterward expended upward of $200,000 in cash for which no additional bonds or stocks were issued, leaving the capitalization of the Madison & Interurban company, at the time of the sale of its property to the Southern Wisconsin Railway, with $685,000 par value of first mortgage bonds and $500,000 of stock outstanding, or a total of $1,185,000.

"The present company authorized an issue of $2,000,000 par value of general mortgage bonds and issued $1,185,000 of these bonds, as follows: Delivered to trustee, to be exchanged for outstanding bonds of the Madison & Interurban company, $685,000; delivered to the Madison & Interurban company, for property purchased subject to the $685,000 bonds, $450,000; delivered to Southern Wisconsin Traction & Light Company, for property purchased from it, $50,000.

"In addition the Southern Wisconsin company received all of the capital stock of the present company, $50,000.

"Inasmuch as this company has only issued $1,185,000 of its authorized issue of $2,000,000 bonds, there remains in the hands of the trustee, authorized but not issued, $815,000 par value in bonds which the management of the company deems it unwise to draw upon for any purpose in the present condition of the bond and money market. The company therefore proposes to issue its short-time bonds for $300,000, drawing a higher rate of interest and payable as to both principal and interest, out of earnings.

"Since the old line was bought in 1905 it has been largely rebuilt; the tracks, overhead work, equipment and many buildings were in worn-out condition and it was bought with the expectation of making the same a first-class line of railway. Since September, 1905, the work of reconstruction has been going on, new buildings have been erected and the line to South Madison has been built, in addition to which 10 new cars have been purchased and others rebuilt. All these and other improvements have been made at a time when labor and material were enormously high, and the whole work has been very expensive. All the moneys for which notes were given have been expended for the legitimate business of the company."

Value of the Property.

The tax commission and the railroad commission, jointly, have nearly completed a valuation of the Madison Street Railway property. When this valuation has been completed it will be possible to state definitely to what extent there is a misfit between the outstanding securities of the Southern Wisconsin Railway Company and the actual value of the property devoted to the public service of the company. Without waiting for the exact figures of this valuation, on the basis of other data in the possession of the railroad commission it may be stated that the $685,000 par value of bonds held in trust by the Citizens' Savings & Trust Company of Cleveland, O., more than represents the full value of the Madison street railway property; and that neither the $450,000 par value of bonds held by the Madison & Interurban company, nor the $50,000 par value of bonds held by the Southern Wisconsin Traction & Light Company, represent any actual and necessary investment in the present Madison Street Railway system, not to speak of the $815,000 of bonds, par value, authorized to be issued, but not yet issued by the Southern Wisconsin Railway Company. In other words, the authorized bond issue of the Southern Wisconsin Railway equals, approximately, five times the cost of reproduction new of the property upon which the bonds rest, while the outstanding stock may be regarded as a superbonus for the promoter. In round numbers, the bonded indebtedness at present outstanding amounts to $96,000 per mile; total bonds outstanding and authorized, $160,000 per mile; while the cost of reproduction new today is less than $31,000 per mile.

According to the statements filed with the commission by the Southern Wisconsin Railway Company the name of the company owning the Madison street railway system has been metamorphosed in the following order of succession since the year 1905: Madison Traction Company, Madison & Interurban Traction Company, Southern Wisconsin Traction & Light Company, Southern Wisconsin Railway Company. Each change of name was apparently accompanied by a fusion of some of the old and a dilution of the new securities representing the property.

The question of the reasonableness of the rates of fare charged by the Southern Wisconsin Railway is not before the commission at this time. Hence, the relation of the outstanding stocks and bonds to such rates of fare need not be discussed in this place.

Before a just and valid judgment can be expressed upon this question a different and much more comprehensive investigation must be undertaken.

Power of the Commission.

We do not hesitate to say that if this commission had the right under the law to exercise the alternative power of granting or refusing to grant any applications of this kind it would deny the present application, at least until after the Southern Wisconsin Railway had submitted to an adequate financial regenerative process. In our judgment the law confers no such power upon this commission.

As we construe the act the function of this commission, in case stocks or evidences of indebtedness are to be issued for money only, is limited to ascertaining the facts essential to determining the legality of the proposed issue and the financial status of the applicant. We may ascertain whether the proposed issue is authorized either as to amount or character, whether, if an issue of stock, the same would result in the fictitious increase of the capital stock of the corporation, and any other fact bearing on the legality or illegality of the proposed issue; also whether the purposes for which the corporation proposes the issue and the terms of the same are within

the statute or are authorized by law. For the purpose of advising the public and investors of the value and security of the proposed issue we may inquire into the financial condition and affairs of the corporation, both past and present. If the corporation complies with all the requirements of the commission by furnishing such statements and evidence as the commission "may deem pertinent to the inquiry," and the commission finds no illegality in the proposed issue of stocks, bonds or other evidences of indebtedness, it must issue to the corporation a certificate authorizing it to issue such stocks, bonds or other evidences of indebtedness to the amount, of the character, for the purposes and upon the terms proposed on the part of the corporation. Unless the proposed issue of stocks, bonds or other evidences of indebtedness are unauthorized or unlawful in any of the particulars above mentioned, the commission cannot deny the granting of the certificates. It may not impose limitations not authorized by the statute nor determine the purposes, terms or conditions upon which such stocks or evidences of indebtedness are to be issued.

The law reduces the functions of this commission with respect to issues of securities of public service corporations to that of an information bureau and an automatic registering machine. This commission has not even the power to make the issuance of the $300,000 of serial bonds conditional on the retirement of the $450,000 par value of bonds held by the Madison & Interurban Traction Company and the $50,000 par value of stock held by the Southern Wisconsin Traction & Light Company and the $815,000 par value of bonds which have been authorized and have not been issued by the Southern Wisconsin Railway Company.

The suggestion has been made that if this commission authorizes the present issue of $300,000 serial bonds it will thereby confirm all previous bond issues of the Southern Wisconsin Railway and its predecessors. This is true neither in fact nor in law. The legislature and not this commission authorizes the present issue. Inflation of the capital issues of the past, no matter how flagrant, is not recognized in the stock and bond law and cannot govern this commission in performing its duties under it. Although there is not a trace of authority for such an assumption in the law, in view of the fact that it has been contended that we would justify all previous bond issues on the part of the Southern Wisconsin Railway and its predecessors and place our official stamp of approval upon the same by issuing a certificate for the present issue, we desire expressly to state that such a construction of our present official act would do violence both to the fact and the law.

INSULATING VARNISHES AND COMPOUNDS.

H. S Cooper, manager Galveston Electric Company, relates some interesting and valuable experiences with insulating varnishes and compounds in the January issue of the Stone & Webster Public Service Journal. He says:

About 10 years ago I made quite a number of experiments with insulating varnishes and materials for armature and field use for railway motors. These involved nearly all the gums, mineral, vegetable and animal, that could be used as insulators, and the results were in favor of the one animal insulating gum "lac," which, in its commercial form of thin scales common called "shellac," is well known to all those having to do with armature and field work. The peculiar quality of shellac is that its insulation increases up to its melting point and decreases very slowly from there on until it comes to its carbonization point, at which, of course, it gives away entirely. This is true of no other gum used for insulation—all of them deteriorate very rapidly as the temperature increases, and nearly all of them have a much lower carbonization or "breaking down" point than shellac. The result of these experiments determined me to use shellac entirely, and I have, therefore, done this for over 10 years with the best of results. There is (as in all other materials) shellac and shellac, and after determining the question of shellac I had to determine the question of the kind and quality to use. After a good many trials I found that it was best, in order to obtain known results, to mix our own shellac, as under no circumstances could I obtain from any one a shellac that we could make standard. I have, therefore, since that time, bought shellac from the importers, buying next to the finest quality that is imported of fine orange shellac; and I dissolve five pounds of this to the gallon in from 95 to 98 per cent grain alcohol. I have tried all other solvents, including the wood and other alcohols, and find that grain alcohol is the one that will dissolve the most of the constituents of "lac," which, in its nature, is a gum of different constituents and has no one complete solvent that can be used to make a liquid for electrical work. This proportion of five pounds of shellac to the gallon of 95 to 98 per cent alcohol, gives a mixture thick enough for any purpose desired and which, at the same time, can be made as thin as is necessary for any purpose where a thin varnish is required, simply by the addition of more of the same alcohol.

At the above time, also, I was looking for a thick paste which could be used for the filling in of holes in commutators, burned out places in armature bodies and body insulation and for such general insulating uses. After an experiment with all sorts of compounds, such as whiting, powdered pumice stone and various other powders, I tried the sawdust from the cutting of the compound mica sheets, such as are made by the Mica Insulator Company. These sheets are made by the placing of very thin sheets of mica one upon the other, cementing with pure shellac as above, and these, when dried, are sawed into different shapes by small toothed saws, and the resulting fine "sawdust," when sifted, is a compound of very fine mica scales and shellac. By taking this dry powder and mixing it with the above shellac varnish to the consistency desired and thoroughly drying same in place, I found that I had something which adhered indefinitely to the substance to which it was attached, gave high insulation, and did not crumble, crack or disintegrate.

I have wound fields of the old type GE-16 street car motors in which the copper in the fields had fused, and the insulation around the fusing and between the fields and the shellac was so perfect that we simply had to replace the portion of wire melted. I have also used it in filling up large holes in commutators, in the bodies of armatures, etc., and at the present time am using it here absolutely, where our necessity for a good insulation is very great, and am having better results than I find are obtained elsewhere (under less exacting conditions and with other compounds). The only care that had to be taken in regard to the use of either the above shellac varnish or the mica dust paste is that the drying out must be very gradual. This is true of very nearly every kind of insulating compound, but it seems to be especially true in regard to any compounds which contain water in themselves or in their solvent. If the drying of the armature or field is too sudden at first, that is to say, if the temperature is raised too quickly, the varnish will dry on the outside and make a hard shell almost impenetrable to the moisture inside, and the result will be that either the moisture is retained in the interior or, in drying out, it is forced to the surface in the form of steam and will puncture a small hole leading from the outside to the center, through which moisture, or some conductor like copper dust or carbon dust, may find its way. Where the baking is gradually done and the temperature allowed to increase very slowly, so that the outside of the armature or field is not at any time many degrees hotter than the inside, the moisture is allowed to thoroughly escape while the varnish or compound is somewhat soft all over and, in consequence, the aperture left by it in escaping is self-closed.

My practice has been, in an ordinary street car armature, such for instance as either the GE-800 type or the 52, 54, 56 and others, to give at least two weeks' baking, not allowing the temperature for the first week to get over 150 to 200 degrees F. After this the temperature can be rapidly forced up to the point where the piece will give out a rather acrid smell, which is well known to those drying shellac varnish work, and which is the point at which the baking should be stopped. One advantage of the use of the shellac is that a slight overbaking, such as might easily happen, or a mistake in temperatures, or leaving it in the oven too long, cannot in any way injure it, unless it is carried very close to the carbonization point.

I have tried every other make and kind of insulating varnish, paint and compound for over 15 years, and subject to the above conditions of quality, solution and baking I have found no other one or two or many varnishes or compounds that will give as good all-round results. This is true only of a fine quality of pure shellac dissolved in pure 95 to 98 per cent grain alcohol and treated properly in "baking out" when used.

The Compania Electrica y Ferrocarriles de Chihuahua will this month take over all the properties of the local street car company, the Chihuahua Mineral Railroad, of Chihuahua, Mexico, and the electrical department of the Compania Industrial Mexicana. This will include all the lights and electrical power in the city, the present street railway system now being converted into a trolley line, the narrow-gauge steam railroad to Santa Eulalia, which now runs four regular mixed trains a day, and the aerial tramways connecting the railroad and town of Santa Eulalia with various mines. The new corporation will open offices in Chihuahua. For the present work will be confined to the city lines, but later the entire line of the Mineral railroad will be converted into a trolley system. The city lines are expected to carry freight and the company will probably build sidings to business houses and haul cars from the Central, Chihuahua & Pacific and Orient railroads direct to consignees. A. C. Nash will be general manager of the new corporation.

REPRESENTATIVES OF STATE COMMISSIONS EXPRESS VIEWS ON ACCOUNTING SYSTEM.

In response to requests from the Electric Railway Review the following representatives of state railway commissions have expressed themselves regarding the uniform accounting system for electric railways, which is in course of preparation:

William O. Seymour.

William O. Seymour, member Connecticut railroad commission: "I think a system of classification of operating expense accounts of electric railways, practically uniform with the system for steam railroads, can and will be devised, and so amplified as to be adaptable to both small and large roads, and the companies will soon become so familiar with its application as to use it with the same facility as the form heretofore used, the number of accounts to depend upon the extent and variety of the business of the company. Only certain essential accounts should be required of roads with gross earnings not exceeding $200,000 per annum, and the complete form should be applicable to all roads the earnings of which exceed that amount. The importance of practical uniformity in the system of accounting of steam and electric roads is emphasized by the fact that today many electric roads are doing precisely the same kind of business as the steam roads, and electrical operation is rapidly being extended over lines heretofore operated by steam. From the standpoint both of the public and the manager it should be made possible to intelligently compare the cost of the two methods of operation. This cannot be done without a uniform system of operating expense accounts."

Thomas Yapp.

Thomas Yapp, assistant secretary Minnesota railroad commission: "I consider that the tentative classification of operating expenses recommended by the committee, consisting of 116 main accounts, would be desirable for city or interurban electric railways—first, because it conforms closely to the classification for steam railroads; second, because the principles involved in the steam classification already adopted should apply to all transportation companies alike, uniformity being the desired end; third, in view of the rapid progress being made in electric and interurban lines in this country it is desirable to have as complete a system of accounting as possible. I do not think the adoption of the classification above referred to would work any hardship upon the electric railways, as it was stated at the conference held recently that some of the big electric systems had already operating accounts in excess of 116, being in the nature of subdivision accounts. It also developed at the conference that it would work a hardship on the electric lines doing a small business if they were compelled to keep 116 main accounts of operating expenses; and in view of this fact a second tentative classification was at once prepared which embodied 21 accounts instead of 116. The dividing line between the small and large systems in my opinion should be based upon gross earnings, as follows: Roads earning $75,000 or less per annum should use the smaller classification, and those earning in excess of the above figure should use the larger classification. No reforms were ever made without changing conditions, and I am free to state that it is the intention of the interstate commerce commission as well as all state commissions to be absolutely fair to all parties interested; and after the classifications have been promulgated and given a reasonable trial they could be somewhat modified on the showing that portions of them were unreasonable, but the principles involved must be followed out."

William J. Meyers.

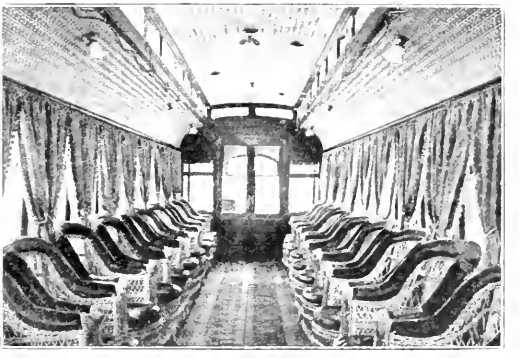
William J. Meyers, chief division of statistics and accounts, New York public service commission, second district: "This commission has not yet expressed itself more fully upon the point concerning which you inquire than to say that it considers it advisable that the classification of accounts for electric railways should conform as closely as practicable to that provided for steam railways. Under the circumstances you will recognize that I should not care to express any opinion upon a controverted point until after the commission itself has considered the matter. None of us is aware of any reason for thinking that such a system of accounting as is contemplated will work any hardship upon electric railways. Those who are actively engaged in the management of such properties must be relied upon to point out any objections of this character if such there are. With regard to the amount of gross earnings which should entitle an electric railway company to use the abbreviated classification of operating expense accounts agreed upon last month in Washington for submission for the purpose of getting the opinions of those concerned, it seems to me that the amount should be placed low. The cost of stationery for keeping the more detailed accounts is not excessive and with very little thought and study given to the matter the person in charge of the accounts can readily apportion the cost of operation among the accounts proposed in the more ample scheme."

A. F. Weber.

A. F. Weber, chief statistician New York public service commission, first district: "The commission for the first district has as yet taken no action in regard to the accounting of street railways, and, of course, no individual is in a position to say what its action will be. So long as the matter is under consideration it would be manifestly improper for me to discuss its policy, and I can only say that so far as my own recommendations are concerned they will be given in favor of such a classification of accounts (for the fiscal year beginning July 1 next) as will be best adapted to the street railway situation in New York City. I do not consider the original tentative classification of the interstate commerce commission as having properly met this requirement, as it was too closely patterned after the steam railroad classification."

"SEEING MEXICO" PARLOR CAR SERVICE.

For the accommodation of the large number of tourists who annually visit the City of Mexico and its surrounding points, the Mexico Electric Tramways Company, Limited, of Mexico City,



Interior of Special Cars for "Seeing Mexico" Service.

has established a special "Seeing Mexico" parlor car service. The cars used on these trips, one of which is illustrated herewith, were specially designed and constructed for the purpose, and in the elegance of their appointment and finish are said to be the handsomest street railway palace cars on the American continent.

The Mexico Electric Tramways system comprises upward of 200 miles of street railways, reaching every point within the jurisdiction of the federal district, and extending beyond the boundaries of the federal district ont into the state of Mexico. Under these conditions it is possible to obtain a better idea of the city and its environs in the cars and special "Seeing Mexico" trains than by any other means.

In these special trips each party will be accompanied by a competent guide, who, speaking both English and Spanish, will briefly give a descripiton of each interesting point passed by the car.

Two trips are made daily, one in the morning and the other in the afternoon, starting from the Plaza de la Constitucion, the central point of the city, the time required to make each trip being a trifle more than three hours. These trips have been especially established with the endeavor of acquainting visitors with all important points reached by the company's lines, and if taken advantage of will give an idea of the city, its varied industries, its people and architecture, impossible of attainment by any other means. Every foot of ground

covered in these trips is replete with a constantly changing panorama of historical interest, combined with pleasure and romance.

Special cars may be chartered for sight-seeing or excursion trips on all days except Sundays and important national holidays.

The service was started on January 2 and will continue during the tourist season, which usually lasts three or four months. Every effort possible has been made to make the trips attractive, interesting and instructive to visitors.

The company has issued a booklet, printed in both English and Spanish, describing the new service and the more important points of interest, which are illustrated by halftone engravings.

Mr. Harro Harrsen is general manager of the Mexico Electric Tramways.

DETROIT COUNCIL COMMITTEE RECOMMENDS T-RAIL.

The streets committee of the Detroit common council was recently appointed to visit a number of cities where T-rail is used by the street railway companies. This committee will advise the council in regard to the application of the Detroit United Railway for permission to reconstruct its tracks on Jefferson avenue, using T-rail in place of the grooved girder rail now required by ordinance. This committee after an inspection of the tracks in Grand Rapids, Milwaukee, St. Paul and Minneapolis, on December 27, submitted the following report, advising that the company be permitted to use the T-rail:

In Grand Rapids the company operating the street railway system uses a 91-pound T-rail, laid on a gravel foundation, using a special grooved granite block, which takes the place of the iron groove in the rail used by the local company. In this instance the granite block is not laid under the head of the rail, but a cement mortar is placed against the web of the rail to take up the space under the head or top of rail, and the granite grooved block is then laid next to the mortar, which is done for the purpose of not disturbing the pavement should there occur a depression of the track.

In Milwaukee the company operating the railway system uses a 97-pound T-rail, laid on a 6-inch concrete foundation. As to the pavement between the track the company uses an arched or circular section which gives a crown in the pavement nearly equal to the head or top of rail, which construction in the judgment of your committee is undesirable.

In St. Paul and Minneapolis the street railway systems are operated by one company, called the Twin City Rapid Transit Company. They use a 91-pound T-rail with a 6-inch base, 7 inches in depth, same as other cities visited. A gravel foundation is used throughout the entire systems, except in the central portions of each city, where a concrete foundation is used. Granite block is used almost entirely in both of said cities, but the same, while grooved, is laid against the web and under the head of rail instead of being laid away from rail as is done in Grand Rapids, using a flat section across tracks, so that the groove of the granite block takes the place of the steel groove of the rail used in our city.

The sum and substance of the conditions in all cities are these: The companies use a 60-foot 7-inch T-rail, weighing from 91 to 97 pounds per yard. In Grand Rapids, Milwaukee, St. Paul and Minneapolis the companies use the cast welded joint, while in Grand Rapids they also use what is called a continuous joint.

The cast welded joint is exceptionally well thought of in those cities, because of the smooth riding and continuity of the track, and also because the pavements have seldom, if ever, to be disturbed to bond the rails with copper wire for the conveyance of the electrical current and it is stated that less than 1 per cent of these joints require any further attention. The continuous joint is also held in high regard, but your committee is of the opinion that, while both of the methods employed have given good results, neither one or the other should be specified. Inasmuch as the company has taken the initiative in this matter, we believe that they will use whichever joint is best adapted to local conditions, and we therefore recommend that the commissioner of public works grant said company permission to reconstruct the tracks on Jefferson avenue, from Woodward to Beaufait avenues, on the express condition that the company use a 60-foot 7-inch T-rail, weighing from 91 to 97 pounds, using granite block between tracks and 18 inches outside.

No action has yet been taken by the council on the report. The company is favorably impressed with the T-rail and wishes to make an experiment with it, believing that it possesses the following advantages over the grooved rail:

1. It will reduce maintenance cost and require no attention in keeping clean.

2. It will reduce noise, the flanges having only one surface to grind against as opposed to two and in places three surfaces with the grooved rail.

3. It will require less attention to paving because, with the foundation material upon which the company has to build—a Canadian or blue clay of a plastic nature—it is hard to maintain the alignment even on the most solidly build subbed, and the slightest shifting causes cracks and seams or "bulges" in the paving material, requiring constant repairs.

4. It will be less damaging to rolling stock because there is no groove to become clogged, causing jars by an uneven surface.

DIRECTORY OF ELECTRIC RAILWAY ASSOCIATIONS.

American Street and Interurban Railway Association. Secretary, Bernard V. Swenson, 29 West Thirty-ninth street, New York.

American Street and Interurban Railway Accountants' Association. Secretary, Elmer M. White, 29 West Thirty-ninth street, New York.

American Street and Interurban Railway Claim Agents' Association. Secretary, B. B. Davis, claim adjuster Columbus Railway & Light Company, Columbus, O.

American Street and Interurban Railway Engineering Association. Secretary, J. W. Corning, electrical engineer Boston Elevated Railway, Boston, Mass.

American Street and Interurban Railway Manufacturers' Association. Secretary, George Keegan, 2321 Park Row building, New York, N. Y.

California Electric Railway Association. Secretary, L. E. W. Pioda, Oak and Broderick streets, San Francisco, Cal.

Canadian Street Railway Association. Secretary, Acton Burrows, 157 Bay street, Toronto, Ont.

Central Electric Railway Association. Secretary, W. F. Milholland, secretary and treasurer Indianapolis Traction & Terminal Company, Indianapolis, Ind. Next meeting, Dayton, O., January 23, 1908.

Colorado Electric Light Power and Railway Association. Secretary, John F. Dostal, Denver Gas & Electric Company, Denver, Colo.

Electric Railway Shop Foremen's Association. Secretary, J. R. Case, Public Service Corporation of New Jersey, Newark, N. J.

Iowa Street and Interurban Railway Association. Secretary, L. D. Mathes, general manager Union Electric Company, Dubuque, Ia.

Massachusetts Street Railway Association. Secretary, Charles S. Clark, 70 Kilby street, Boston, Mass. Meetings held in Boston on second Wednesday of each month, except July and August.

Michigan Electrical Association. Secretary, A. C. Marshall, Port Huron, Mich.

Missouri Electric Light Gas and Street Railway Association. Secretary, Charles Z. Pierson, St. Charles Electric Light & Power Company, St. Charles, Mo.

National Amusement Park Association. Secretary, C. H. Oberheide, Trenton, N. J. Annual meetings, third Tuesday of each November.

New England Street Railway Club. Secretary, John J. Lane, 12 Pearl street, Boston, Mass. Meetings held on fourth Thursday of every month.

Northwestern Electrical Association. Secretary, R. N. Kimball, Kenosha, Wis. Annual meeting, Milwaukee, Wis., January 15 and 16, 1908.

Oklahoma Electric Light, Railway and Gas Association. Secretary, Charles W. Ford, Oklahoma City, Okla.

Pennsylvania Street Railway Association. Secretary, Charles H. Smith, superintendent Lebanon Valley Street Railway, Lebanon, Pa.

Southwestern Electrical and Gas Association. Secretary, R. B. Stichter, Dallas Tex.

Street Railway Association of the State of New York. Secretary, J. H. Pardee, 611 West One Hundred and Thirty-seventh street, New York, N. Y.

Wisconsin Electric and Interurban Railway Association. Secretary, Clement C. Smith, president Columbia Construction Company, Milwaukee, Wis.

RECENT ELECTRIC RAILWAY LEGAL DECISIONS.

BY J. L. ROSENBERGER, LL. B., OF THE CHICAGO BAR.

Transfer Sufficiently Requested.

Sullivan v. Brooklyn Heights Railroad Company, 106 New York Supplement, 378.—The supreme court of New York, appellate division, second department, holds that a passenger adequately requested a transfer from the conductor at the time he paid his fare, where it appeared that he gave to the conductor a transfer he had, and held out his hand to receive another, when the conductor, muttering something, passed on.

No Reason to Stop When Way Seemed Clear.

Hess v. United Railways Company, 105 Southwestern Reporter, 277.—The St. Louis court of appeals holds that there was no apparent danger of a collision which ought to have induced a motorman to stop, where the testimony went to show that as the car started to go by a wagon the pathway was clear, with nothing in the situation to suggest danger of a collision, and that the accident occurred by a sudden movement of the horse while the car was passing.

Neighboring Property Benefits from Improving Street So That Street Railway Seeks Extension.

In re Harvard Avenue North, 92 Pacific Reporter, 410.—The supreme court of Washington says that it was urged that the improvement for which an assessment had been approved was of little, if any, benefit to the property included within the assessment district, and that it would be of no practical benefit to any one except to the street railway company. The improvement, it was true, might afford the railway company more convenient facilities for the extension and construction of its line; but such fact did not establish that benefit did not accrue to the property in the district. The mere fact that a street is so improved that a street railway seeks to extend its line thereon may well be considered as an element of special benefit to the neighboring property.

Liability for Assault of Conductor on Passenger Waiting for Transfer After Alighting.

Blomsness v. Puget Sound Electric Railway, 92 Pacific Reporter, 414.—The supreme court of Washington says that the testimony of the plaintiff was to the effect that at the time he paid his fare to the conductor he asked for a transfer and the conductor replied, saying: "I will give you that between Georgetown and Seattle;" that he did not see the conductor as he was issuing transfers; that he saw the conductor and asked him for a transfer just before the train stopped; that when it stopped the conductor told him to step to one side, and that another request for a transfer was followed with some words and the conductor struck him over the head with a lantern. The court thinks that, under all authority and in accordance with principles of right, the plaintiff should be deemed a passenger at the time of the assault and should be allowed to recover damages.

Duty of Pedestrians Walking on or Near Tracks Owing to Obstructions in Streets.

Mey v. Seattle Electric Company, 92 Pacific Reporter, 283.—The supreme court of Washington holds that where a street was more or less occupied by debris, but there was room for a pedestrian to step out of danger every few steps along such route, the motorman of a car going in the same direction might well be justified in concluding that he would step out of the way of the car, instead or remaining on the track, or so close to the track that he would be run down by it. It thinks that it was the plain duty of the pedestrian, while traveling in close proximity to the street railway track in a place where he knew that cars were passing at short intervals, to have exercised the ordinary caution of noticing, when he passed those points where there was not room enough for both man and car, whether there was any car which was liable to injure him. Not having exercised this ordinary caution, the court thinks that the plaintiff, such a pedestrian, was undoubtedly guilty of contributory negligence, and that a judgment was properly entered in favor of the defendant.

City Necessary Party for Settlement of Controversy Between Companies.

Tacoma Railway & Power Company v. Pacific Traction Company, 155 Federal Reporter, 259.—The United States circuit court, in Washington, holds that in a controversy between two rival street railway companies as to the right to occupy with railway tracks the center of a public street the court cannot determine that controversy where there is an unsettled controversy between the city government and the complainant concerning the matter and the city is not made a party to the suit.

Company's Possession of Tracks Presumed to be Exclusive.

Jennings v. Brooklyn Heights Railroad Company, 106 New York Supplement, 279.—The supreme court of New York, appellate division, second department says that the allegation of the complaint that the defendant had an electric railroad through Thirty-ninth street for the carrying of passengers having been admitted by the defendant's answer, the court could not presume that some other railroad company also ran its cars over the defendant's tracks. It was therefore not necessary for the plaintiff to show that the car that hurt him was the defendant's. That fact followed from the fact that the railroad tracks were the defendant's. If there was evidence of the cars of another company running over the defendant's tracks, the case might be different; but that fact was not to be presumed. The presumption was to the contrary, namely, that the defendant's possession was exclusive. No other company could be running cars over the defendant's tracks except by its consent. Its right and possession must at first have been exclusive, and the presumption was of continuance, not of change.

Inexperience of Motorman and Absence of Conductor May be Considered in Determining Whether Car was at Full Stop or Not.

Shepherd v. Lincoln Traction Company, 113 Northwestern Reporter, 627.—The supreme court commissioners of Nebraska say that it was natural, therefore probable, that an inexperienced motorman would be more likely to mismanage the car upon which the plaintiff was riding than one of much experience. His want of acquaintance with the route and the crossings where stops were to be made, especially on a dark night, would more likely lead to his confusion and inability to handle the car with the same degree of care as one of more experience. So, also, the presence of a conductor, whose business it was to direct the halting and starting of the car by signals given the motorman, would tend greatly to increase the probability of the car being handled in the careful manner that would not otherwise obtain. This being so, these were circumstances which the court might properly direct the jury they were at liberty to consider in determining whether the witnesses for the plaintiff or defendant were most likely to be correct upon the question of whether the car had been brought to a halt at the time the plaintiff attempted to alight therefrom, and had been suddenly started while she was in the act of getting off. The probability that an inexperienced motorman, having no assistance from a conductor in the management of his car, would be likely to mismanage the same to the injury of some of the passengers, was a circumstance which might properly be considered in support of those witnesses who testified to mismanagement, in opposition to those who testified that there was no mismanagement on the part of the motorman. There was a conflict which the jury had to determine. Any fact or circumstance which would aid them in that duty was relevant to the issue, and was for

their consideration. Any circumstance which rendered more probable the fact testified to by one set of witnesses, when opposed to that of another set, was a relevant fact proper to be considered.

Liability for Injury from Defective Gate as an Appliance.

Stappers v. Interurban Street Railway Company, 106 New York Supplement, 854.—The city court of New York, trial term, holds that if a gate upon a surface street car is within the definition of "defective machinery, imperfect cars and other conditions endangering the success of the undertaking," it is within the rule requiring "the highest degree of care which human prudence and foresight can suggest." A gate on the side of an electric surface car is an appliance. It is a part of the car attached to it by hinges, and, when shut, fixed at the other end by a hook. It is part of the machinery "availed of for the operation of the railroad." When the car is crowded a defective gate may lead to most serious injury, and its improper maintenance cause "loss of life or limb to the traveling public." The condition of travel shown required the utmost care in the maintenance of the gates on the street cars of this city. A secure gate is "essential to safety of operation." Whether the company met this obligation was properly submitted to the jury.

A passenger is not called upon to provide against a defective appliance, unless such defect is shown to have been known, or under the circumstances should have been observed, by him. The only precaution which could be taken against a concealed defect in an appliance would be to refrain from riding on the car. Lack of proof, therefore, that the plaintiff took precaution against negligent operation does not require that the complaint be dismissed, or that a verdict be directed for the defendant, where the cause of action is based upon the defendant's negligence in maintaining an appliance. The question for the jury was, as charged, whether the defendant exercised the skill, care and foresight in the maintenance of this appliance for the protection of its passengers required by law, and, if not, whether the plaintiff's injuries were caused solely by such careless maintenance.

Liability for Injuries from Motorman Leaving Controller and Passenger Turning on Power.

Mooney v. Seattle, Renton & Southern Railway, 92 Pacific Reporter, 408.—The supreme court of Washington says that the defendant's car line between the city of Seattle and the town of Renton descends from Jackson street to Dearborn street, a distance of four blocks, at a grade of 11 per cent. At Dearborn street a switch turns the south-bound cars to the right-hand track as you go south, and from that point a double track is maintained. The plaintiff became a passenger on an outgoing car. The seats were all filled, and passengers were standing in the aisle and on the front and back platforms. The plaintiff occupied a standing position on the back platform near the car door. As the car passed Jackson street, the motorman set the brakes, turned off the power, and left his post at the controller to close a gate at the side of the car. While thus engaged, one of the passengers stepped up to the controller, released the brakes, and turned on the power. As he did so, the car shot ahead and soon attained a speed of from 25 to 30 miles per hour, and as it rounded the curve onto the switch at Dearborn street, the plaintiff was hurled from the car.

At the time of the trial, some nine months after the accident, the plaintiff was seriously crippled and unable to perform labor or follow his usual occupation, that of barbering. He recovered a judgment for $5,000 damages, from which the trial court required a remission of $1,500. The judgment for $3,500 is here affirmed.

In the supreme court's opinion, a motorman in charge of a car loaded with passengers, who sets his brakes, turns off his power, permits his car to descend an 11 per cent grade without a guiding hand, leaves his controller surrounded by passengers, any one of whom may release the brakes or turn on the power at will, and goes so far from his post of duty that he cannot return thereto until the car has sped a distance of four or five blocks, without some controlling necessity for such action on his part, is guilty of gross and inexcusable neglect; and the defendant could not be prejudiced by any charge the court might give on the question of its negligence.

Duty of Motorman Observing a Horse or Team Manifesting Fright.

Metropolitan Street Railway Company v. Fawcett, 92 Pacific Reporter, 543.—The supreme court of Kansas holds that in an action brought by the driver of a carriage against a street car company for personal injuries resulting from a collision between the carriage and a car, evidence is pertinent of the management of the car and of the conduct of the driver from the time the horse manifested such fear of the approaching car as should have attracted the attention of the motorman to the time of the collision. It says that it may be asserted as a general proposition of law that whenever a motorman in charge of a swiftly running car observes, and he must constantly watch, a horse or team which is being driven in close proximity to the car track and which manifests fright, it is his duty to reduce his speed preparatory to a sudden stop, if it becomes necessary. His precaution should be proportionate to the apparent danger. If it be generally true that a single driving horse, frightened by an object approaching from the front, is more difficult to control than a double team, and more likely to wheel so suddenly around as to upset the carriage and its occupants, the motorman must recognize this fact and act accordingly.

Enforcement of Ordinance Requiring Stops Will Not be Enjoined.

Georgia Railway & Electric Company v. Town of Oakland City, 59 Southeastern Reporter, 296.—The supreme court of Georgia says that the municipal authorities passed an ordinance requiring street cars traversing a street named to be stopped at the points already in use (except one) and also at three additional points to receive passengers who might there seek to board such cars, and signal or give notice of their intention to do so. The company filed an equitable petition, seeking to enjoin the enforcement of the ordinance by frequent arrests and trials of its employes for violating it. The petition alleged that the ordinance was void on the grounds that it was unconstitutional, that the defendant had no power under its charter to enact the ordinance, and that such ordinance was unreasonable. It was claimed that to allow such arrests and prosecutions would cause a multiplicity of cases, would interfere with the running of its cars and schedules, and disarrange the schedules established by the company. The evidence was conflicting as to the necessity or convenience of making the stops at the fixed places.

Without determining whether the ordinance complained of was valid or not or whether it was in whole or in part unreasonable, the court says that the facts of this case were not such as to require the reversal of a judgment refusing an injunction. The general rule is that a court of equity has no jurisdiction to enjoin criminal prosecutions; and this rule is applicable to proceedings to punish for violations of municipal ordinances, which are quasi criminal in their nature. The cases in which proceedings to enforce such ordinances will be enjoined are exceptional in character. There was no effort to take away property or property rights, or to destroy or substantially impair a franchise. The ordinance was a police regulation of travel in the street of a municipality. It was not shown that any irreparable injury would result; but, at most, a small interference with the schedules which the company desired to maintain, while the cases made against its employes proceeded to trial when the validity of the ordinance could be tested.

News of the Week

Brooklyn Tunnel Opened.

The extension of the Interborough Rapid Transit subway under the East river from the Battery to the Borough hall in Brooklyn was opened for regular passenger traffic shortly after midnight on Thursday of this week. Trains had been run through the tunnel for several days to familiarize the trainmen with the situation and to allow the company's officials and prominent engineers to inspect the tunnel. The operation of the tunnel has been looked forward to by the residents of Brooklyn for several years and was received with great joy, as it is expected to relieve to a considerable extent the great congestion of traffic at the Brooklyn bridge. Plans have been made for a formal celebration of the event. General Manager Frank Hedley of the Interborough Rapid Transit Company has announced that all Lenox avenue and West Farms express trains will run through to Borough hall, while the Broadway expresses will turn at the Battery as formerly. But after the express trains are discontinued at night the Lenox avenue and West Farms locals will run to Brooklyn and the Broadway locals to the Battery only. When the express trains are in operation all local trains will turn at the City hall loop.

Improvements at the Brooklyn Bridge Terminal.

Elevated trains on the Brooklyn bridge came 100 feet farther over Park row at the Manhattan end of the bridge on January 4 than ever before. The extension of the island platform was opened for the first time and the slips now extend across Park row. Work has been begun on new loop tracks at the Brooklyn end of the bridge and within a few days a new system of running trains and trolley cars across the bridge will be installed.

The east end of the island platform at the Manhattan end is being cut off to make room for additional switches between the island, incoming and outgoing platforms, and when the entire length of the extension across Park row is completed there will be room in the slip for an additional car and 6-car trains will be run over the bridge instead of 5-car trains.

As soon as the new trolley tracks are laid at the Brooklyn end of the bridge a trolley service similar to that on the Williamsburg bridge will be installed. There will be bridge trolleys running at about 1-minute intervals, which will go only from one end of the bridge to the other and back. These will carry all local bridge passengers for a 2½-cent fare.

When the local trolleys are started there will be no more local elevated trains. All local passengers will be carried on the trolleys and all elevated trains will be through trains during the rush hours as at other hours of the day.

New York City Railway Receivers Protest Against Order of Commission.

Adrian H. Joline and Douglas Robinson, receivers for the New York City Railway, have sent a communication to the public service commission replying to the order of the commission that all of the company's cars shall be sent to the repair shops and completely overhauled at the rate of 10 a day. The letter states:

"We do not concede the correctness of the recital of fact contained in your order to the effect that the equipment, appliances and devices in question are unsafe or improper, or that the repairs directed by said order ought reasonably to be made to promote the security of the public, or that the time given within which to make such repairs is reasonable.

"As stated in our letter to you of December 20, we have been engaged since our appointment in pushing as vigorously as possible, with all available means at our command, the work of repair and maintenance of the rolling stock operated by us. Although laboring under great disadvantages, we have made notable progress so that by the early part of December the number of cars disabled on the road had been reduced to less than half the number disabled under similar conditions immediately prior to the receivership. While admitting that for causes entirely beyond our control the rolling stock is in many respects inadequate, we take issue with the statement that it has been at any time during the receivership, or is now, unsafe either for the public or our employes. Our entire effort has been directed (and we think successfully) toward giving the best possible service to the public consistent with the physical facilities and money which we have had at our disposal. The equipment has been rehabilitated as rapidly as was possible under the circumstances, having due consideration to the necessities and conveniences of the traveling public. We cannot promise or undertake, with the facilities and resources at our command, a full and literal compliance with the provisions of your order."

The receivers are also ordered to notify the commission daily of the number of cars repaired and the number of cars run into the shops for repairs.

Philadelphia Strike Averted.

The differences between the Philadelphia Rapid Transit Company and its employes, who have recently organized a branch of the carmen's union and have for several weeks been threatening a strike, were settled on Tuesday by the intervention of Mayor Reyburn. It is now stated that all possibility of a strike has been averted. The mayor, at the instance of the Central Labor Union, addressed a letter to J. B. Parsons, president of the company, asking for the reinstatement of 65 men, said to have been discharged for joining the union. He also stated what the men considered their grievances and asked that the company arrange for a settlement of the difficulties in the interests of the public. Mr. Parsons immediately replied to the mayor, agreeing to reinstate 18 of the 65 men, who, he said, had been discharged for "neglecting the interests of the company for others which they deemed more important." The other 47 men were discharged for other causes and will not be reinstated. With regard to the other grievances of the men Mr. Parsons' letter was as follows:

"We never, in a proper sense, have refused to hear an appeal from our employes, and any suggestions which they make as to schedule will receive our careful consideration. In order that this matter may be taken up regularly the company will fix one day a month, when any discharged employe or any employe with a grievance may appear before the general manager, either alone or accompanied by a committee of, say, three of his coemployes, to present any appeal or suggestions touching their relations with the company. With regard, however, to an increase in wages, I have already explained to you that the present financial conditions of the company make it impossible."

Strike on Local Lines of the Indiana Union Traction Company.

The strike of the motormen and conductors employed on the local lines of the Indiana Union Traction Company, which was declared on January 1, as reported in last week's issue of the Electric Railway Review, has developed into such a serious situation as to require the use of the militia and practically suspend business in Muncie. The most serious trouble has occurred at Muncie, but Anderson and Marion have also been affected by the strike. As previously stated, the difficulty has been caused by the company's signing a wage contract with the Brotherhood of Interurban Trainmen, of which the majority of its employes are members, instead of with the Amalgamated Association of Street and Electric Railway Employes, to which the local trainmen belong. The company's position is that it can recognize but one association and has consequently chosen the most representative.

The developments of the first three days of the strike were reported in last week's issue. The places of the strikers in Anderson and Muncie were taken by professional strike-breakers from Chicago, whose presence so inflamed the mob of unemployed men at Muncie, where they are especially numerous, that the company found it impossible to run its cars. In the riots on Wednesday and Thursday of last week several cars were damaged and several persons were shot by the strike-breakers. It is noteworthy that the striking employes have been little in evidence and that nearly all of the violence has been at the hands of irresponsible labor enthusiasts and sympathizers.

Late Friday afternoon, when the company attempted to run cars, a mob of nearly 3,000 collected and in spite of the efforts of the local police authorities, the rioting became so serious that several companies of the Indiana National Guard, who had been stationed at Indianapolis in readiness, were required to restore order. At noon on Saturday Governor Hanly proclaimed martial law in Muncie and vicinity and the mayor ordered the saloons closed. Five hundred business men were sworn in as special deputies. With their assistance the police and the soldiers were able to prevent any serious outbreaks and the company resumed the operation of its cars. On Sunday the imported strike-breakers were returned to Chicago and regular uniformed men were placed on the cars, some of them being local men and others out-of-town men, who are said to have been permanently employed. On Monday cars were operated until 10:30 at night. This week obstructions have frequently been placed on the tracks, but nothing more serious has happened.

On Saturday 27 members of the union at Marion declared a strike, but their places were readily filled and the service was only slightly disturbed. At Anderson there has been no violence, the strike taking the form of a boycott. At the request of the citizens the strike-breakers were sent away last

week. On Monday a citizens' committee, appointed for the purpose of urging the company to arbitrate, called upon President A. W. Brady of the company. Mr. Brady informed the committee that it would be impossible to arbitrate because of the contract with the brotherhood.

The company's interurban service has not been affected by the strike. This week the authorities at Muncie have attempted to effect some sort of a settlement, as business has been partially suspended and the expense of enforcing order has been very great. On Monday A. L. Behner and Frederick Fay, officers of the Amalgamated association, were ordered to leave the city by the local authorities, who declared that the men stood in the way of a settlement and were interfering with the peace of the community. On Tuesday Governor Hanly arrived in Muncie to investigate the situation personally and the question of withdrawing a part of the soldiers was discussed.

W. D. Mahon, president of the Amalgamated association, arrived in Muncie on Tuesday to take charge of the strike. The state labor commissioners tried to arrange a compromise whereby the company should sign a contract for the local men with the Amalgamated association and apply the contract with the brotherhood to the interurban service. Mr. Mahon declined to consider a compromise.

Design of High-Voltage Power Stations.—On Monday, January 13, David P. Rushmore, Schenectady, N. Y., will present a paper on "The Design of High-Voltage Power Stations" before the Philadelphia section of the American Institute of Electrical Engineers.

New Depot Route Established in Chicago.—The Chicago Union Traction Company has obtained permission from the board of supervising engineers to operate its North State street cars as far south as the Polk street station of the Chicago & Western Indiana Railroad. The cars will run south on State street to Washington, west to Dearborn and south to Polk. Heretofore the cars have stopped at State and Lake streets.

New Haven Road Adopts Single-Phase Equipment for Branch Line.—The New York New Haven & Hartford Railroad has decided to change the equipment of its New Canaan branch, running from Stamford to New Canaan, Conn., $7\frac{1}{2}$ miles, from 600-volt direct current to 11,000-volt single-phase. Two trains, each consisting of a 60-ton motor car equipped with four 125-horsepower motors and a 30-ton trail car, will be operated.

British Association Considers Brakes.—A committee of the Tramways and Light Railways Association of Great Britain, which has for nearly a year been considering the subject of brakes for electric cars, is reported to have completed its investigations and a final report may be expected in a short time. The committee has been co-operating with the board of trade in the matter and has inspected a large number of new types of brakes.

International Electrical Exposition.—An international exposition devoted to the various applications of electricity will be opened at Marseilles, France, on April 19, 1908, and will extend until October 31. The exposition will be held at Parc du Rond-Point du Prado and will be under the patronage of the municipality and the chamber of commerce of Marseilles, of the men received the rewards. This is the fifth year the company has made a distribution of this kind.

Amarillo (Tex.) Electric Line Opened.—A party composed of officials, Amarillo business men and newspaper representatives, made a trip over the line on January 2, in the first car to be operated since the road was completed. Eleven miles of track has been laid, all of which was found to be in excellent condition and, with the exception of one section which will use a crossing not yet completed under the Santa Fe tracks, was pronounced ready for the formal opening. This will take place duriug the Panhandle jubilee which will be held in that city on January 9, 10 and 11.

Inspection of Interlocking Devices Required.—The Indiana railroad commission has adopted a new set of rules which require that all companies having charge of the maintenance and operation of interlocking devices shall inspect these plants monthly, and shall report to the commission not later than the first day of the succeeding month. The rules also provide that all steam and interurban companies interested in the operation of such interlocking devices, but not charged with their maintenance and operation, shall inspect the plants once every 60 days and report the result to the commission.

Omaha Line May Have Owl Car Service.—The advisability of starting owl car service on several of the street railway lines of the Omaha & Council Bluffs Street Railway will be discussed at the annual meeting of stockholders to be held on January 13, next. If this practice is decided upon hourly service following the discontinuance of frequent traffic at 1 o'clock probably will be maintained until regular day service is resumed at 5:30. The operation of owl cars is made possible by the recent installation of power storage equipment at the new Lake street substation, which will permit closing down the main power house until the day traffic is resumed.

American Institute of Electrical Engineers, Toledo Section.—The regular monthly meeting of the Toledo section of the American Institute of Electrical Engineers was held Friday evening, January 3, 1908, in the Builders' Exchange. Reports were submitted by H. B. Dorman for the membership committee and by George E. Kirk as to the meetings. Officers of the section for the year were elected as follows: Chairman, C. R. McKay, electrical engineer Toledo Railways & Light Company; vice-chairman of the section and chairman of the programme committee, M. W. Hanson; secretary, George E. Kirk; chairman of the membership committee, H. B. Dorman; treasurer, Emil Grah.

Chicago Federation of Labor Advocates Regulating Ordinances.—The Chicago Federation of Labor at its meeting on January 5 adopted resolutions advocating two ordinances which are to be recommended to the local transportation committee of the Chicago city council. The first proposed ordinance would limit the number of passengers to be carried by a street car to the number of seats provided in the car and prohibit the admission of more than 100 persons at a time to the station platforms of the elevated roads. The second provides that all lines operating under city franchises be compelled to furnish "delay checks" to passengers entitling them to transportation on another line in the event of any unforeseen delay.

Park Improvements at Grand Rapids.—The Grand Rapids Railway is planning a large number of improvements to be made before summer at Ramona park, located near Grand Rapids, Mich. Several new concessions will be let and it is planned to erect a "shoot the chutes." The principal improvements, however, will be made at Manhattan beach, across the lake from Ramona park, the terminal of the railway line. At this point a large pavilion will be erected which will contain a dance hall and other summer resort amusement features. Eighty new bathhouses will be erected for the use of men and 40 for women. The line of beach will be extended and new steamboat docks will be built. The company is also planning for improvements at North park, about three miles north of the city on Grand river.

Recent Accidents.—A head-on collision occurred between a passenger and a freight car of the Evansville & Mt. Vernon Electric Railway at Ford's station, 10 miles east of Evansville, Ind., on January 4. One passenger was killed and several injured. The accident occurred on a single track at a point near where the cars had been ordered to meet. A heavy fog is said to have caused the accident.—Twenty-two persons were injured at Savannah, Ga., on January 4, in a rear-end collision on the West Savannah line of the Savannah Electric Company. The accident was caused by the slipping of a trolley wheel on the forward car, which put out the lights and rendered it invisible to a small car crowded with passengers that was rapidly following. The front end of this car was badly damaged. None of the passengers was seriously injured.

Discussion on New York Subway Plans.—Comptroller Metz of New York City has announced his opposition to the plans of the public service commission for the Broadway-Lexington avenue subway route, which was described in last week's issue of the Electric Railway Review. Mr. Metz says the city has no money to build any more subways at present and that new plans should not be considered until the Brooklyn Fourth avenue route, for which plans have been approved and money appropriated, has been built. Chairman Willcox of the commission states that the new route will in no way interfere with the Brooklyn subway; that the plans for the latter are being revised and bids will be asked for and contracts let as soon as the changes have been made. He says that as soon as the plans for the Broadway-Lexington route are prepared they will be submitted to the board of estimate for such action as it may see fit to take.

Ordinance to Regulate San Francisco Service.—M. I. Sullivan of the San Francisco board of supervisors has submitted to the board a draft of an ordinance to regulate the operation of street cars in the city. The proposed ordinance provides: That the company shall build a power house of sufficient capacity to insure power for the operation of sufficient cars to carry all passengers with speed and comfort; that no car shall

carry more standing than sitting passengers; that each car shall carry a destination sign at night which may be read at a distance of 300 feet and he equipped with fenders two inches above the tracks; that air brakes shall be inspected daily. Further provisions limit the speed of cars, fix a schedule showing the number of cars to be operated and provide for universal transfer rules and complete monthly reports to the board, etc.

Officials of Central Illinois Traction Company Reindicted for Charleston Wreck.—The grand jury at Mattoon, Ill., that last October indicted the directors and two employes of the Central Illinois Traction Company on account of the disastrous accident of August 30, met again on January 6 and reindicted those who were originally indicted. The indictments against the officials and directors were made more comprehensive than before by making them read for manslaughter and criminal negligence instead of for manslaughter alone. Those indicted are: Judge Peter S. Grosscup, Marshall E. Sampsell, A. W. Underwood, F. M. Peabody and E. A. Potter of Chicago, and Fred Moore of Charleston. The two motormen were also indicted for manslaughter. The action of the grand jury has occasioned some surprise, as the various claims against the company were all settled last Saturday for $41,000. It is stated that physicians who attended the wreck victims will sue the company for claims aggregating $3,000.

American Institute of Electrical Engineers.—A meeting of the American Institute of Electrical Engineers was held in the auditorium of the Engineering Societies building, 33 West Thirty-ninth street, New York City, on Friday, January 10. The programme as announced included the following papers: "The New Haven System of Single-Phase Distribution, with Special Reference to Sectionalization," by W. S. Murray, electrical engineer New York New Haven & Hartford Railroad; "A Single-Phase Railway Motor," by E. F. Alexanderson, electrical engineer General Electric Company, Schenectady, N. Y. A special meeting of the institute will be held in the auditorium of the Engineering Societies building, on Friday, January 24. At this meeting the following papers will be presented for discussion: "Electrical Engineering Education," by Charles P. Steinmetz, chief electrician General Electric Company, Schenectady, N. Y.; "The Best Engineering Education," by Charles F. Scott, consulting engineer Westinghouse Electric & Manufacturing Company, Pittsburg, Pa.

Consider Chicago Loop Problem.—A meeting of the local transportation committee of the Chicago city council was held on Thursday of this week to consider steps to be taken to relieve the congestion on the Union elevated loop. It was decided to take action as soon as possible and to hold another meeting on February 1 to consider the plans of the railroad officials. President M. B. Starring of the Northwestern Elevated Railroad, President H. G. Hetzler of the Metropolitan West Side Elevated Railway and President Charles V. Weston of the South Side Elevated Railroad were present at the meeting. Mr. Starring explained that his office is working on a plan for the extension of the station platforms as one step toward solving the problem. The other officials said that their offices also were considering plans and that they would prefer to have several conferences before presenting a composite proposition to the aldermen. "Enabling legislation by the council is now all that is necessary to permit the station platforms to be extended around the loop," said Chairman Milton J. Foreman of the committee. "It is certain that the committee will not consent to any so-called solution of the loop problem which will necessitate the erection of other elevated structures in the downtown district."

Burning Coal Smokelessly.—Bulletin No. 15 of the Engineering Experiment Station, University of Illinois, "How to Burn Illinois Coal Without Smoke," by L. P. Breckenridge, director, has just been issued. A few pages are devoted to the principles of combustion and the losses due to smoking chimneys, but the larger part of the bulletin relates to the constructive features of those boiler settings and furnaces that have been found practically smokeless in operation at the power plant and in the experiment station at the University of Illinois. The leading dimensions of the settings and furnaces are given and sectioned cuts show the general character of the settings. With each cut is given a statement as to the range of capacity of each setting for smokeless operation. Especial emphasis is given to the importance of knowing the rate at which the coal is to be burned on each square foot of grate surface, together with the per cent of volatile combustible which the coal contains, and for which a suitable combustion space or chamber must be provided. While this bulletin discusses the smokeless burning of Illinois coals, the principles and methods explained apply equally well to the burning of all kinds of soft coal. Copies of this bulletin may be obtained gratis upon application.

Traffic and Transportation

Chicago Elevated Road Traffic.

The total number of passengers carried in December on the South Side Elevated Railroad, Chicago, was 3,713,115 as compared with 2,951,590 in December, 1906.

The Metropolitan West Side Elevated Railway carried 4,579,406 passengers in December as compared with 4,829,475 in December, 1906.

The Northwestern Elevated Railroad carried 3,284,711 passengers in December as compared with 2,942,028 in December, 1906.

Fares Raised on Massachusetts Road.

Stone & Webster, general managers of the Blue Hill Street Railway of Canton, Mass., have announced that in order to preserve the road from bankruptcy, it is necessary to increase the fares from 5 to 6 cents. The increase has therefore been ordered. "The step of raising the fares is the only one left open to us at this time," said A. H. Warren of Stone & Webster. "The road is at present running at a loss. And I may say, many roads in this state are in the same position. A few are showing a surplus, some break about even and more still show a yearly deficit. There is not enough business."

The Blue Hill company operates an electric railway from Mattapan, where it connects with the Boston Elevated Railway, through Canton to Stoughton, where connection is made with the Bristol & Norfolk Street Railway and the Old Colony Street Railway.

Round-Trip Tickets Sold at Stations by Illinois Traction System.

B. R. Stephens, general traffic manager Illinois Traction System, has sent us the following in explanation of the change in the method of selling tickets:

"Since the opening of our lines west of Champaign in August, 1904, we have followed the policy of selling tickets at the terminal stations and also at some of the larger stations on our line, the latter particularly the county seats, while for the intermediate stations and country stops round-trip tickets were sold by the conductors on the cars. Our business has gradually increased until it has reached such volume that we found it impossible for the conductors to collect all of the fares and still handle these round-trip tickets, consequently we have placed the tickets on sale at all of our stations, generally on a commission basis, and for the benefit of our rural patrons we sell a $5.00 fare book at $3.75 net, which gives the same rate of fare as the round-trip tickets. These books are issued only to individuals and are limited to six months. We also sell a $10 fare book for $7.50 net, which is unlimited as to time of use and is good for an entire family."

New York City Railway Receivers Reply to Order for Increased Service.

A. H. Joline and Douglas Robinson, receivers for the New York City Railway, have sent a letter to the New York public service commission, first district, in reply to the order for an increase in the number of cars on the Eighth avenue line. The letter states:

"Your attention is called, for example, to the fact that the specification numbered 3, provided for running on Sundays south from One Hundred and Forty-ninth street to Thirteenth street not less than 600 cars, increases the service to an extent far in excess of the actual requirements. It is a well-known fact to all familiar with street railway management that the volume of traffic varies extremely on Sundays. The difference between rainy and pleasant Sundays as regards the number of passengers carried is often as great as 75 per cent. Under these circumstances to order a fixed number of car-miles to be operated on that day is, in our judgment, wholly unjustifiable. The proper operation of the road demands a reasonable flexibility in the service, so that the number of cars can be varied to meet its changing requirements.

"You will observe by reference to three blue prints submitted to you at your request, and showing the comparison between the seating capacity and the number of passengers riding on the Eighth avenue cars on Sunday, December 15 (which was a stormy day), that these records show that sufficient seating capacity was afforded substantially all day. Notwithstanding this fact the specification of your order above referred to would require that approximately 3,600 car-miles per day should be operated in excess of the car mileage operated on the Sunday in question. On the basis of 18 cents per car-mile this would mean an expenditure of approximately $34,000 a year. Considering the average number of stormy

Sundays it is evident that a substantial sum of money will be practically wasted. In view of the present financial conditions and the difficulties which we are having in an endeavor to properly accommodate the public with the means at our disposal, it seems to us that such a requirement as the one in question is neither just, reasonable nor proper."

Explains New Transfer System in Galveston, Tex.

H. S. Cooper, manager of the Galveston (Tex.) Electric Company, had a signed statement in the Galveston News on January 1, in explanation of the new system of transfers which went into effect on that date. The statement says:

"The term 'universal transfer' does not mean that a passenger can get on a car and obtain a transfer to any and every other line at any place of intersection. The object of the transfer is to allow a passenger to ride from one portion of the city to another portion of the city—'in one general direction only'—for one fare. Anything further than this would not be equitable to the company, as it would allow passengers to get on a car near their residences or places of business, ask for a transfer on some other line that ran close to their residence or place of business, get off at the transfer point nearest that to which they wanted to go, transact business there and return to their residence or place of business on the transfer—having virtually obtained two complete rides in different 'general directions' for one fare, a manifest injustice to the company and a right not due the public.

"Neither is the transfer intended to give a patron the privilege of getting on a car close to his residence or place of business, obtaining a transfer to a line only a block or two away and riding from 5 to 20 blocks unnecessarily before he gets the line that will take him to his destination. No street railway system on earth will permit everybody to get on a car in front of their doors and be carried to the front door of the place to which they desire to go; this can only be done by private conveyance—and generally costs more than 5 cents! The street railway, being limited by tracks and fixed routes, can only carry its passengers on those fixed routes, and anyone who does not live directly on its lines is compelled to walk to and from them.

"The 'time limit' of the transfer has been made particularly liberal. On every line the limit of time in which the transfer must be used has been made such that the passenger will be certain to catch a car on the connecting line within the time limit of the transfer just issued to him. The time limit is also arranged to take care of any slight, ordinary delay in the schedule of the first car, and where the first car is delayed so long as to cause the time limit on a transfer, already issued to a passenger, to run out, the conductor will, upon request, issue a new transfer with proper time limit.

"Some few persons may live in such locations and desire to travel to such points that the new system may benefit them but little, but it is the belief of the company that that part of the public will be very small. The company has tried to arrange this system for the convenience and saving of money of the many and not of the few. It has not tried to specially please or accommodate any particular section or sections, but to do the best it could for the most people. It has not tried to please everybody—that would be an impossibility, and to try it would please no one.

"The company would ask of its patrons a little forbearance and patience in the matter until they and its employes are familiar with the matter. The conductors are as new to this transfer—in actual practice—as is the public, and, being human, will be liable to make errors. A very little time and some patience on the part of the public will get the system into smooth running order, and the company thinks that its patrons will fully appreciate the time and labor and expense that have been given by the company in preparing this new year gift for its patrons, a gift which is an appreciation of the patronage bestowed on it and carries with it the wish for a 'happy and prosperous New Year' for all its patrons."

May Abolish Transfers Between Third Avenue and New York City Roads.—As a result of the appointment of an independent receiver for the Third Avenue Railroad of New York transfers between that road and other lines in the New York City Railway system may be abolished.

Meeting of Traffic Officials.—In view of the proposed formation of a traffic association at Dayton, O., on January 22, the programme for the annual meeting of the Central Electric Railway Association at the same place on January 23 includes several matters of especial interest to traffic officials. The programme is published in another part of this issue.

Large Increase in Service Ordered.—The New York public service commission, first district, has issued orders to the Richmond Light & Railroad Company and the Staten Island Midland Railroad to increase the service to the extent of about 25 per cent, and particularly providing that not less than two cars should leave St. George within five minutes after the arrival of the ferry boats from Manhattan. It was also ordered that all cars designated to run to St. George should be actually run over the elevated structure to the entrance of the ferry and not stopped at Jay street.

Will Appeal for Rehearing of Interstate Commerce Commission Case.—The Chicago & Milwaukee Electric Railroad will make application to the interstate commerce commission for a rehearing on the petition filed by that company to compel the Illinois Central Railroad to make through routes and joint rates on cabbage from points on the electric line to points on the steam road in the south.

Springfield (Mass.) Street Railway Reduces Service.—On account of a noticeable decrease in travel on all lines, the Springfield (Mass.) Street Railway Company has decided to make several changes in schedule. Patrons of the Chicopee-Longmeadow line, by way of Glenwood, and the Feeding Hills line will be principally affected by the changes. While the morning, noon and early evening travel is heavy, traffic during the day and late evening is considerably lighter.

Loss on Owl Cars.—A. G. Maish, general manager of the Des Moines (Ia.) City Railway, is quoted as saying that the operation of the owl cars costs the company about $25 per day above the income from them. He says that the nightly average number of patrons on the owl cars is about 200. The largest number is carried on the 1 o'clock cars. On the Highland Park line, as few as six people have been carried in a night, Mr. Maish says.

Theater Train Service on the Spokane & Inland.—The Spokane & Inland Empire Railroad has issued an illustrated post card announcing the establishment of a new Saturday night theater train service for the accommodation of patrons on the Spokane & Inland division. The theater train will leave the Spokane terminal every Saturday night at 11:30, stopping at all points south to Palouse and Colfax. The card contains a programme of the principal attractions to be presented at the Spokane theaters during the present season. Reservations at any Spokane theater may be made through the station ticket agents.

Reduced Fares for Uniformed Employes to be Discontinued.—T. K. Glenn, vice-president of the Georgia Railway & Electric Company of Atlanta, Ga., complying with the anti-pass rule of the Georgia railroad commission, has notified the postmaster of Atlanta and the Atlanta Gas Light Company that existing contracts for reduced fares for uniformed employes will not be renewed at expiration. Mail carriers and uniformed employes of the gas company have been permitted to ride upon the payment by the government and the gas company of $3.00 per month per man to the electric company. The contract with the gas company expires on February 1, 1908. The contract with the government expires on September 1, 1908. In future there will be no reduction in rates unless the contract is approved by the railroad commission.

Improved Service Demanded in Louisville, Ky.—Mayor Grinstead and members of the general council of Louisville, Ky., have demanded that the Louisville Railway make improvements in its schedule and establish a universal transfer system. The city authorities demand sufficient cars to provide all passengers with seats, and that there be no greater interval between cars during the day than 10 minutes. The company was also urged to issue transfers to permit passengers, if tracks do not intersect, but are within two blocks of each other, to leave one line and ride on cars on the other without the payment of additional fare. T. J. Minary, president of the company, announced that the preparation of a new schedule will be begun at once, but told the city officials that the directors would have to be consulted before any promises concerning a universal transfer system could be made.

In accordance with an ordinance recently passed by the city council of Youngstown, O., the Mahoning & Shenango Railway & Light Company is equipping its city cars with fenders. The company has requested permission to use pilots on its interurban cars on account of their greater stability.

A new artesian well of water with medicinal qualities has been discovered on the Ft. Des Moines line of the Des Moines City Railway. The company has announced that a depot and buildings will be erected at that point and if the demand warrants it a sanitarium will be established.

The Illinois Traction System on January 1 instituted through service from Danville to Springfield, Ill., via Decatur. The cars, which are called the "Capital City Limiteds," are handsome chair cars and make the run in 4 hours and 45 minutes.

Construction News

FRANCHISES.

Berkeley, Cal.—The San Francisco Oakland & San Jose Railway Company has filed application for a 50-year franchise to build an electric line along Sacramento street from the Oakland line to the north end of Berkeley, serving that section to the north which has been donated for the proposed capitol site. Work is to be started within six months and completed within two years from the date of the franchise. The extension will cost approximately $2,000,000, including equipment, and will form part of an extensive system of lines serving the region from the Berkeley hills to the bay and reaching to Richmond and the Contra Costa towns. J. Q. Brown, assistant general manager and purchasing agent, Oakland, Cal.

Chicago, Ill.—An ordinance has been presented to the city council granting to the Chicago City Railway Company the right to lay tracks in Western avenue, from Thirty-eighth street and Archer avenue to Twenty-sixth street. If built the line will form a connection with the lines of the Union Traction Company.

Dallas, Tex.—L. Fulton, Dallas, Tex., and associates, have applied for a franchise to construct an electric railway in Dallas from Jefferson street south on Madison street and from Jefferson street south by way of Adams or Jackson street. It is stated that the line will be about 2½ or 3 miles long, in a section of the city at present without street railway facilities, and if built will develop a large tract of land for residence purposes. Power for operating the line will be purchased.

Phoenix, Ariz.—Application for a franchise to build an electric railway between Phoenix and Mesa, Ariz., by way of Tempe, has been made by Redmond Toohey and Harry J. Bennett, the line to be completed within three years. One per cent of the gross income after five years of operation is offered to the county.

Racine, Wis.—A conditional franchise has been granted to the Milwaukee Electric Railway & Light Company to build a track on Second street, from Main street to Lake avenue. The company asked permission to lay track on two more blocks in order that it might haul coke from the gas plant which it owns in Racine to Milwaukee. This petition was refused.

RECENT INCORPORATIONS.

Ft. Smith Checotah & Shawnee Interurban Railway, Checotah, Okla.—Incorporated in Oklahoma to construct and operate an interurban railway from Ft. Smith, Ark., to Shawnee, Okla. The line when completed will be 160 miles long and will cost in the neighborhood of $1,280,000. Capital stock, $500,000. Incorporators: R. B. Hutchinson, R. G. Smith, L. F. Cain, R. D. Martin and W. M. Duffy, all of Checotah.

Southern Colorado Power & Railway Company.—Incorporated in Colorado to construct a series of power houses in Huerfano and Las Animas counties in the southern part of Colorado. Central plants will be erected in Walsenburg and Trinidad and it is stated that the Trinidad Electric Railroad will become a part of the new company's holdings. Eastern capitalists are interested in the project. Capital stock, $1,500,000. Incorporators: W. F. Schuyler, K. C. Schuyler and C. Speiss, of Denver.

TRACK AND ROADWAY.

Accomac Traction & Power Company, Onancock, Va.—It is stated that this company has awarded the contract for building its proposed electric line from Onancock, by way of Tasley and Accomac Courthonse, to Battle Point, to James D. Lalor & Co. Five per cent bonds to the amount of $175,000 will be sold, the proceeds of which are to be used for constructing the road. S. F. Rogers, president; T. W. Taylor, secretary.

Albia Interurban Railway, Albia, Ia.—C. B. Judd, Des Moines, Ia., chief engineer of this company, writes that 3½ miles of track from Albia to Hocking have been laid during the past year, and that surveys have been completed from Hiteman to Buxton, 16¼ miles. The cross-span type of overhead construction with No. 000 trolley is used within the city limits while on the 2½ miles of 60-foot private right of way the bracket type is used. Power for operating the line will be obtained from the Albia Light & Power Company. Grading from Hiteman to Buxton will be resumed in the spring. Sixty-pound rails with soldered bonds are used. There is a maximum grade of 3 per cent and a maximum curvature of 8 degrees. The road was designed principally for passenger traffic, although with the opening of a new coal shaft about a mile from Albia, it will deliver about 100 tons of coal per month to the Albia Light & Power Company and whatever other coal traffic may develop for local use, will be handled by the company. J. C. Reese, Albia, Ia., is president; C. B. Judd, chief engineer; Calvin Manning, secretary and treasurer. (Mentioned December 21, 1907.)

Asheville & Hendersonville Railroad, Asheville, N. C.—The contract for the construction of this road from Asheville to Hendersonville, N. C., 22 miles, has been let to the Carolina Construction Company of Asheville. It is stated that a new survey will be made and that rails and other material will be ordered at once. The company will build its own power house and proposes to handle freight and passenger traffic. C. F. White of Skyland, N. C., is interested. C. E. Van Bibber, 60 Wall street, New York, is chief engineer. (Mentioned on November 2, 1907.)

Boston Elevated Railway.—The need for strengthening a bridge over the Boston & Maine Railroad tracks will delay the opening of the Boston Elevated Railway Company's newly constructed line for surface cars between the Sullivan square terminal and the Middlesex Falls reservation until the present year is far advanced. The bridge is the only thing that intervenes between the elevated's present surface tracks in Main street, Charlestown, and the beginning of the new tracks recently laid in Mystic avenue, Somerville. The structure is too weak to carry the new heavy semi-convertible cars now used by the Boston Elevated for suburban lines, and the company will not, it is understood, care to incur the expense of rebuilding that part of the bridge that would be required for its tracks until money conditions are easier.

Cincinnati Northern Traction Company, Hamilton, O.—Work on the reconstruction of the roadbed of this company's line between Hamilton and Cincinnati, O., the greater part of which has been done on recently acquired right of way, has been practically completed, and when a few gaps remaining have been closed up the roadbed and track covering the entire distance between these cities will have been entirely rebuilt. (Mentioned September 14, 1907.)

City & Suburban Electric Railway, Brunswick, Ga.—Orders are said to have been placed for rails, poles etc., for the construction of this company's electric line in Brunswick. According to the terms of the franchise work must have been started by January 1, 1908, and four miles be completed within the year. (Mentioned September 7, 1907.)

Delaware Marion Mt. Gilead Mt. Vernon Newark & Southern Coal Tramway Company.—Col. Albert E. Boone is promoting this new interurban project in Ohio, six divisions for which are stated to have been mapped out as follows: From Delaware to Centerburg; from Marion and Centerburg by way of Mt. Gilead; from Newark to Centerburg by way of Locks and Appleton; from Newark to Lexington by way of Mt. Perry and Sago; from Newark to Sago by way of Hanover, Gilbert and Adamsville; from Centerburg to Mt. Vernon.

Eldorado Springs Tiffin Monegaw Springs & Lowry City Railroad, Tiffin, Mo.—Part of the right of way for this proposed 30-mile electric line, which will connect the towns named in the title, has been secured and the contract for the surveys will be let in the near future. Dr. C. A. Edgar, president, Eldorado Springs. J. S. Harrison, secretary. (Mentioned December 14, 1907.)

French Point Street Railway, Pittsburg, Pa.—Announcement is made that this company will extend its present line from Merchant and Wagner streets, Ambridge, Pa., to a point on the right of way of the Economy Belt Line Railway. The company recently increased its capital stock from $6,000 to $31,200 for this purpose. James D. Callery, Pittsburg, president. (Mentioned November 9, 1907.)

Fresno (Cal.) Traction Company.—This company is now engaged in laying about 4½ miles of new track.

Grand Valley Railway, Brantford, Ont.—This company proposes to rebuild its line from Brantford to Galt, Ont., 26 miles, laying new 80-pound steel, and likewise to rebuild the Brantford Street Railway, which it controls, laying seven miles of additional track and to rehabilitate the Woodstock Thames Valley & Ingersoll Electric Railway. Extensions as follows are projected: From Brantford-Galt line, six miles to St. George; from Brantford, through the villages of Mt. Pleasant, Boston, Waterford, Bloomsburg and Simcoe to Port Dover on Lake Erie, 34.5 miles; from Brantford west through Mt. Vernon, Burford, Cathcart and Eastwood to Woodstock, 25 miles, connecting at Woodstock with the Woodstock Thames Valley & Ingersoll, from Woodstock through Embro and Beachville to Ingersoll, 12 miles; from Ingersoll through Dorchester to London, 18 miles. New mileage is 90.5 and the mileage to be rebuilt 42, making a total of 132.5 miles. The

contract for grading, masonry and timber work has been awarded to Joseph Gianini, Pittsburg, Pa. Contracts for rails and electrical equipment, including cars and locomotives, it is stated, will be awarded in the spring, when the electrical system is determined upon and the result of the vote now being polled in lower Ontario on a by-law authorizing the government to construct electric transmission lines from Niagara Falls and sell power for lighting and other purposes to municipalities and corporations. The single-phase system is under favorable consideration and the Westinghouse Electric & Manufacturing Company and the Canadian General Electric Company have been asked to prepare recommendations and estimates on the power and other electrical equipment. The cars for interurban use, it is stated, will be about 52 feet long and the city cars about 23 feet long. A steel trestle about 1,200 feet long will be required on the Port Dover extension. William P. Kellett, chief engineer, Brantford, Ont. Murry A. Verner, president.

Indianapolis & Louisville Traction Company, Louisville, Ky.—John E. Greeley, vice-president of this company is quoted as saying that plans are being considered for the construction of an east and west line, one of which is proposed from Scottsburg to Madison, Ind., and on to Cincinnati, O. The Louisville & Northern Railway & Lighting Company also is said to be considering the construction of an extension from Charlestown to Madison, which will connect with the Indianapolis & Louisville line at the last named point.

Joliet & Southern Traction Company, Joliet, Ill.—The new line from Joliet to New Lenox, Ill., is now nearly completed and is expected to be opened for traffic within a few weeks.

Kansas City Springfield & Southern Railway, Nevada, Mo.—This company has completed surveys for its proposed interurban railway between Nevada and Springfield, Mo., with a branch line to Carthage. The length of the line, including sidings, will be about 140 miles, and will be operated by current from its power station to be located at Arcola, Mo. The company also will operate an amusement park near the Sac river. The capital stock is $3,750,000, later to be increased to $4,500,000. The officers are as follows: W. B. Forsyth, president; S. A. Wight, secretary; J. W. Creekman, treasurer; C. C. McFann, general manager. All communications should be addressed to the general manager at Nevada, Mo.

Kansas Southern Electric Railway.—F. V. Crouch, Pittsburg, Kan., president of this proposed interurban electric road, is said to have announced that final arrangements for a loan of $5,000,000 have been concluded with French capitalists and that construction work will be started in the spring. The road will start from Pittsburg, Kan., and pass through Girard, St. Paul, Erie, Chanute and Iola, Kan. Most of the right of way has been secured and several franchises for crossing the county roads have been obtained.

Lake Shore Electric Railway, Fremont, O.—This company is endeavoring to secure renewals of the options it holds on private right of way for its proposed line between Fremont and Genoa, O., parallel to the Lake Shore steam road. The new line when built will shorten the distance between Fremont and Toledo, O., about 13 miles, and will form part of the project to double-track the entire line between Cleveland and Toledo.

Los Angeles Railway.—Regular service over the Boyle Heights and West Seventh street lines, covering two miles of city streets, was started on January 3. The cars now branch off at Fourth street continuing west to Western avenue and thence north to Melrose.

Milwaukee Electric Railway & Light Company, Milwaukee, Wis.—It is stated that this company is planning an extension of its interurban line from Watertown through Johnson Creek, Jefferson, Ft. Atkinson, Whitewater and Palmyra to East Troy, Wis., where it will connect with the company's existing line at that point. Surveys for the route are now in progress.

Missoula-Bitter Root Traction Company.—Surveys for this company's proposed route between Missoula, Stevensville, Corvallis and Hamilton, Mont., 42 miles, have been completed. More than 28 miles of right of way are said to have been donated and construction work will be started next year. Capital stock, $55,000, of which $40,000 is authorized and $15,000 issued. F. O. Lewis, Stevensville, Mont., secretary and treasurer. (Mentioned April 27, 1907.)

Mt. McKay & Kakabeka Falls Railway, Ft. William, Ont.—This company will apply at the next session of the Ontario legislature for an extension of time to April 30, 1912, in which to complete its proposed line from Ft. William to Kakabeka Falls, about 30 miles. The company also will apply for an act defining the location of its route; giving it the right to build its line on either or both sides of the Kaministiquia river; authorizing it to use steam motive power during construction; confirming the Ft. William franchise for the operation of its cars in the streets of that city, and approving the by-law guaranteeing the company's bonds to the extent of $10,000 a mile for every mile constructed in the municipality of Neebring within five years from the date of its passage. W. F. Hogarth, Ft. William, Ont., is president.

Mt. Mansfield Electric Railroad, Stowe, Vt.—It is reported that A. H. Soden of Boston, Mass., who recently purchased this property at a foreclosure sale, plans to extend the road from Stowe to Morrisville, a distance of eight miles. The line now connects Stowe and Waterbury, Vt., a distance of 10½ miles.

Nashville Interurban Railroad, Nashville, Tenn.—H. H. Mayberry, president of this company, which is building from Nashville to Franklin, Tenn., has announced that a contract has been made with the Nashville Railway & Light Company, whereby that company will furnish the power for operating the road. The company proposes to build from Nashville to Mt. Pleasant, Tenn., 67 miles; the first section, to Franklin, now under construction, is 20 miles long. Mr. Mayberry states that when the line is completed to Mt. Pleasant it will build its own power house. It is expected to complete the first section during the coming spring. A trackage arrangement has also been made with the Nashville Railway & Light Company whereby the interurban cars will enter the city of Nashville over the street railway tracks and use the central transfer station of the latter company as a terminal. An hourly schedule will be maintained. Specifications are now being prepared for the rolling stock. Twelve miles of the line have been graded and tracklaying will begin the latter part of January.

Nipissing Central Electric Railway, Ottawa, Can.—F. R. Latchford, a director of this company, writes that contracts are to be let in May or June, 1908, for the proposed line from Cobalt to New Liskeard, Ont., 12 miles, via Argentite, North Cobalt and Haileyburg. A line from Latchford to Cobalt is also contemplated, but surveys have been completed only from Cobalt to New Liskeard. The right of way and municipal franchises are now being negotiated for. John Fitzpatrick, Ottawa, is president. (Mentioned December 28, 1907.)

Omaha & Council Bluffs Street Railway, Omaha, Neb.—This company on January 8 commenced active construction work on an extension of the South Tenth street car line from Bancroft street to Riverview park. The company expects to complete the greater part of the work by next spring and to have the entire line ready for traffic before the park season opens.

Omaha & Nebraska Central Railway, Hastings, Neb.—Contracts for grading and track material will be awarded by this company in the spring and active construction work started as soon as possible. The line will be 159 miles long and will extend from Omaha to Hastings. The officers are: H. C. Long, president, 617 Fremont building, Boston, Mass.; A. Texter, vice-president, David City, Neb.; J. H. Rogers, secretary, Hastings; E. R. Long, treasurer, David City; J. C. Baker, general manager, Hastings, Neb. (Mentioned October 12, 1907.)

Oakland (Cal.) Traction Company.—This company expects to place contracts for the construction of 10 miles of new track during the present year. J. Q. Brown, assistant general manager and purchasing agent.

Oshkosh, Wis.—It is stated that preliminary steps have been taken toward the construction of an interurban line from Oshkosh, by way of Buttes des Nortes, to Winneconne, Wis., 11 miles. It is planned to operate the road with an engine using either gasoline or crude oil. The cost is estimated at about $15,000 per mile. It is stated that Oshkosh capitalists are prepared to finance and build the road during the present year.

Pacific Coast Railway, San Luis Obispo, Cal.—James Anderson, chief engineer, writes that this company has built during 1907 an extension 2.1 miles long, from Betabel to Bonetti, Cal.

Priest Rapids Railway, Priest Rapids, Wash.—Construction work on this proposed internrban line from the Waterville district along the Columbia river to Kennewick, will be started in the spring. The road has been projected principally as a feeder for the transcontinental steam lines and will be equipped to handle standard freight cars. The most important right of way has been secured and the remainder is being arranged for. The line will connect with the Northern Pacific, the Great Northern, the Chicago Milwaukee & St. Paul, the North Coast and the Portland & Seattle Railway, and, when completed, will be 136 miles long. The route as

surveyed lies up the Columbia river valley from Kennewick to the new town of Hanford, where the Hanford Irrigation & Power Company's new plant is being constructed to furnish power for the operation of the line as well as for other commercial purposes. From Hanford it will cross the river at Priest Rapids and extend to the Waterville district, serving the wheat lands of Douglas county. W. R. Rust, president; M. B. Haynes, vice-president; E. H. Guie, secretary; H. K Owens, chief engineer.

Paducah Southern Electric Railroad, Paducah, Ky.—Surveys for this line from Paducah to Mayfield and Hickman, Ky., have been completed and maps and estimates are now being prepared. Two routes were surveyed, one of which parallels the Illinois Central Railway. It is stated that arrangements have been concluded for disposing of the bonds and that work will be started in the near future with the intention of having a portion of the line in operation this year. H. H. Loving of Paducah is interested. (Mentioned September 21, 1907.)

Sistersville, W. Va.—It is stated that the Pittsburg Construction Company has offered to build an electric railway from Sistersville to Middlebourne 12½ miles, provided local interests agree to take part of the bonds. E. L. Benton, Sistersville, is engineer. (New road.)

South Bethlehem & Saucon Street Railway, South Bethlehem, Pa.—Official advice from this company states that tracklaying has been completed from South Bethlehem to Colesville, Pa., 3½ miles, and that grading will be started toward Centre Valley, the proposed terminus, about March 1, 1908. The overhead work, which is of the single-pole bracket type, with No. 00 trolley wire, has been completed to Colesville. Power for the operation of the line is purchased. One mile of track in South Bethlehem is laid with 85-pound T-rails, the remaining 2½ miles with 70-pound rails. The company now operates two Brill semi-convertible double-truck passenger cars and one single-truck freight car. C. P. Hoffman, South Bethlehem, president; P. F. Cannon, secretary; Hugh E. Crilly, general manager and chief engineer, South Bethlehem.

Springfield (Mass.) Street Railway.—It is reported that this company has decided to postpone all improvement work not absolutely necessary. However new 9-inch girder rails are to be laid on Main and State streets and some new special work will be installed.

Terre Haute & Merom Traction Company, Terre Haute, Ind.—It is stated that the promóters of this line from Terre Haute to Merom, Ind., have decided to build the road by issuing scrip to pay the construction forces. A contract has been let to the United States Construction Company of Terre Haute, which has just been organized. Five townships through which the road is located have refused to vote subsidies in favor of the road, but it is stated that the merchants have promised to accept the scrip, which will be secured by a deposit of bonds. L. Brown, president; J. Caswell, chief engineer. (Mentioned on July 6, 1907.)

Texas Traction Company, Dallas, Tex.—This company, which is building a 65-mile line from Sherman to Dallas, Tex., has completed tracklaying from McKinney to the east fork of the Trinity river, about four miles, and it is expected that the work will proceed at the rate of a mile a day until the road is completed. A construction train of 1 locomotive and 15 cars is in use. Sufficient ties and rails are on the ground to keep the construction force busy for several weeks and as the contract calls for the delivery of the rest of the material within the next 60 days, it is believed that tracklaying for the entire distance will be completed by next April. Theodore Stebbins, general manager.

United Railways, Portland, Ore.—This company has now completed seven miles of its line in Portland, and since December 31 has been in operation, delivering freight from the North Pacific Terminal Company and other roads entering the terminal grounds. Passenger service will not be started until several extensions are completed. The line also serves as an entrance to the city for the Portland-Salem line of the Oregon Electric Railway. Rails and other material for the interurban line from Portland to Hillsboro have been delivered and construction is to be started as soon as the weather permits. W. L. Benham, president; L. B. Wickersham, chief engineer.

United Traction Company, Reading, Pa.—It is reported that a contract has been let to A. W. Sykes of Sykesville, Pa., for building a 7-mile extension from Sykesville to Big Run. E. W. Hess of Du Bois, Pa., is chief engineer.

Visalia Electric Railroad, Exeter, Cal.—James H. Cronett, Exeter, Cal., chief engineer of this company, writes that 13 miles of track have been laid since January 1, 1907, from Exeter to Lemon Cove, Cal. The entire length of the line from Lemon Cove to Lemoore is 51 miles. From Lemon Cove to Lemoore cars will be operated over a leased track of the Southern Pacific Railroad. The following intermediate stations are served: Lemon Cove, Merryman, Exeter, Farmersville, Visalia, Goshen Junction, Hanford and Armona. There is a maximum grade of 1 per cent and no curve greater than 10 degrees. Fifty and 75 pound steel rails are used. The overhead work, which is of the catenary single-pole bracket type, has been completed from Visalia to Lemon Cove, 24 miles. Single-phase current at 3,300 volts potential will be used in the trolley. A main substation of the Westinghouse type has been completed at Exeter and two line transformer stations are under construction. The line will be for passenger and freight service. The initial equipment will consist of six electric motor cars from the American Car Company and one electric locomotive from the Baldwin Locomotive Works. William Hammond, president; B. M. Maddox, vice-president, Visalia, Cal.

Wabash Valley Railroad.—This company has been organized and soon will be incorporated to build an interurban electric line from Danville, Ill., to Terre Haute, Ind. As planned the line will follow the west bank of the Wabash river, passing through Clinton, Ind., and a number of small towns in Illinois and Indiana. D. C. Johnson, president, Clinton, Ind. (New road.)

Washington Arlington & Falls Church Railway, Rosslyn, Va.—Park Agnew and Charles Hine, receivers of the Washington Arlington & Falls Church Railway Company, have secured deeds of right of way which will enable them to extend the line from Vienna, Md., to Herndon, Pa. It is understood that the right of way from Herndon to Chantilly has been assured, and that work on the extension of the line to this point will soon be commenced.

Washington Baltimore & Annapolis Railway, Baltimore, Md.—This company completed on January 1, with the exception of a few details, the construction of its line in Annapolis, Md., and it is said that cars will be running between Washington and Annapolis on or about January 15. Work on the local line in Annapolis was started on October 28, 1907, and has been pushed to completion as rapidly as possible in order to comply with the terms of the $5,000 bond filed with the city, by which work was to be finished on January 1, 1908. The track as completed makes a loop in Annapolis 1⅝ miles long. Connection from Annapolis to Baltimore will not be afforded for some time, considerable work yet remaining to be done on the Baltimore branch.

Washington Westminster & Gettysburg Railroad.—This company proposes to build an electric railroad connecting Washington, D. C., and Gettysburg, Pa., via Sandy Springs, Laytonsville and Westminster, Md., about 80 miles. Surveys have been made for most of the distance and it is stated that capitalists in New York, Philadelphia and Pittsburg are interested in the project. The officers are: President, J. B. Colgrove, Washington; first vice-president, E. P. Thomas of Sandy Springs, Md.; second vice-president, A. A. Chapin, Washington; treasurer, Robert N. Harper, Washington; chief engineer, Walter Atlee of Baltimore. (Mentioned on August 10, 1907.)

West Penn Railways, Pittsburg, Pa.—This company is said to be planning an extension between Hunkers, Scott Haven and West Newton, connecting at Scott Haven with the McKeesport-Scott Haven line and entering Hunkers over a bridge across the Youghiogheny river.

POWER HOUSES AND SUBSTATIONS.

Cincinnati Northern Traction Company, Hamilton, O.—This company has recently equipped a new central power station at Lindenwald, near Hamilton, O., from which power will be furnished for the operation of its line between Hamilton and Dayton. Substations will be located at College Hill, Trenton, Franklin and Dwyer, each of which will be equipped with two 300-kilowatt rotary converters with six 100-kilowatt 33,000-volt transformers.

Gulfport & Mississippi Coast Traction Company, Gulfport, Miss.—This company has recently purchased the following apparatus: One 1,500-kilowatt Westinghouse turbo-generator, one 450-horsepower Babcock & Wilcox boiler and two 500-kilowatt Westinghouse rotaries. J. A. Jones, general manager.

Lima & Honeoye Electric Light & Railroad, Lima, N. Y.—A power station to be located in the natural gas fields about four miles south of Lima, will be erected by this company during the present year. E. D. Watkins, general manager.

Oakland (Cal.) Traction Company.—It is reported that this company proposes to erect a power house of 10,000 kilowatts capacity and new substations.

Personal Mention

Mr. A. I. Breckenridge has been appointed purchasing agent of the Waterloo Cedar Falls & Northern Railway, with headquarters at Waterloo, Ia.; effective on January 1.

Mr. Charles F. Turner, chief engineer of the Columbus Delaware & Marion Railway, Delaware, O., has been appointed superintendent of motive power, effective on January 1.

Mr. James McCredie, secretary and treasurer of the United Traction Company, Albany, N. Y., has been elected to a similar office with the Hudson Valley Railway Company.

Mr. E. S. Dimmick, general superintendent of the Northern Electric Railway, Chico, Cal., has resigned and the duties of that office will be assumed by Mr. A. D. Schindler, general manager.

Mr. Louis H. Cushing has resigned as superintendent of the Taunton & Pawtucket Street Railway at Attleboro, Mass., to become associated with the Dexter Machine Company of that city.

Mr. M. W. Kirkwood, electrician and master mechanic of the Galt Preston & Hespeler Street Railway, has been appointed superintendent of the company, succeeding Mr. P. Clemens, resigned.

Mr. F. W. Whitridge, who has been appointed receiver for the Third Avenue Railroad, has appointed Mr. Edward A. Maher, president of the Union Railway Company, as manager of the Third Avenue System.

Mr. L. E. Fischer, general manager of the Illinois Traction System, with headquarters at Danville, Ill., was presented with a gold watch and chain on Christmas day by the superintendents and heads of departments.

Mr. George K. Mosser, of Noxen, Pa., has been elected president of the Slate Belt Electric Railway, of Bethlehem, Pa., succeeding Mr. G. A. Schneebeli. Mr. Dennis G. Gerberich has been elected general manager succeeding Mr. George H. Wolfe.

Mr. Jack Abbott, electrical engineer of the Jackson (Miss.) Railway & Light Company, has been appointed general manager. The duties of this office heretofore have been under the jurisdiction of Mr. S. S. Bush, vice-president of the company at Louisville, Ky.

Mr. M. McCauley, heretofore assistant superintendent of the Detroit Monroe & Toledo Short Line Railway, has been appointed superintendent, effective at once, succeeding Mr. E. B. Taylor, resigned. Mr. McCauley's headquarters will be at Monroe as in the past.

Mr. J. E. North, heretofore in charge of the electrical engineering department of the Ohio Electric Railway, central division, with headquarters at Springfield, O. has resigned. He will be succeeded by Mr. H. W. Pagan, electrical engineer of the eastern division of the company.

Mr. L. W. Harrington, heretofore passenger and freight solicitor of the Columbus Delaware & Marion Railway, has resigned, effective on January 1. Henceforth he will devote his attention to the adjustment of claims, having had considerable experience along this line in the claim department of the Columbus Delaware & Marion Railway. With the resignation of Mr. Harrington the position of passenger and freight solicitor will be abolished and the matter of soliciting business will be looked after by the various agents of the company, each of whom will cover the business in his territory.

Mr. Paul H. Evans, for the past year chief engineer of the Mexico Electric Tramways, Limited, has resigned, and after traveling abroad for a few months will return to Mexico City to devote his time to private interests in that city. Mr. Evans has been connected with the Mexico Tramways Company for some time and for two years was purchasing agent as well as chief engineer. Previously to his connection with this company he was chief engineer of the Mexican General Electric Company, with which he was connected for seven years. He also at one time was identified with the Atlanta, Ga., street railway lines.

With the resignation of Mr. Arthur L. Smith, heretofore superintendent of transporation of the Central Kentucky Traction Company, Frankfort, Ky., this office will be abolished together with that of chief engineer of construction, and Mr. George Macleod, who heretofore has held the latter position, will have the title of superintendent of railways. Other appointments in the operating force are as follows: J. R. Pope, chief electrical and mechanical engineer; G. W. Brown, master mechanic; J. P. McKeever, superintendent of Lexington power station; C. K. Morrill, superintendent light and gas departments; J. D. Sallee, superintendent of local lines, Frankfort; Henry Bushel, superintendent of local lines, Lexington; J. H. Kearney, roadmaster. O. R. Bilbro has been appointed auditor and A. F. Woehnker, claim agent.

Mr. C. F. Crane, whose portrait we present herewith, has been appointed general passenger agent of the Eastern Pennsylvania Railways, under the operating management of J. G. White & Co., with headquarters at Pottsville, Pa., as noted in the Electric Railway Review of January 4. Mr. Crane has been engaged in the electric railway business for the past eight years, having been associated with the Geneva Waterloo Seneca Falls & Cayuga Lake Traction Company at Seneca Falls, N. Y., the Rochester & Eastern Rapid Railway and more recently with the Rochester Railway Company at Rochester, N. Y. Mr. Crane's new duties will consist particularly in the improvement of the summer resorts on the Eastern Pennsylvania Railway's system in Schuylkill county and the building up of the excursion business of the company.

C. F. Crane.

Mr. James W. Morgan has been appointed chief engineer of the Galesburg Railway & Light Company at Galesburg, Ill., with charge of the extensive lighting and heating system which the company operates in connection with its electric lines. Mr. Morgan formerly was engineer of power station for the Springfield & Northeastern Traction Company at Riverton, Ill.

Mr. Charles V. Weston was elected president and general manager of the South Side Elevated Railroad, Chicago, at a meeting of the board of directors held on January 3, 1908. He succeeds Marcellus Hopkins, who died on December 7, 1907. Mr. Weston has served on the board of supervising engineers in charge of the rehabilitation of the traction properties of Chicago since last May, when he was appointed by Mayor Busse as the third member to represent the city of Chicago. He is about 50 years old and has been a civil engineer throughout his business career. His early experience was obtained on the various railroads in Texas and Kansas and on the Chicago & Northwestern Railroad in the north. Many of the important engineering undertakings of Chicago have been successfully completed under the supervision of Mr. Weston, among them being the building of the Lake View intake crib and water tunnel, the completion of the Van Buren street tunnel for the West Chicago Street Railroad in 1894 and the construction of the Northwestern and Lake Street elevated roads and the Union Loop. Since 1903 and until last May, when he was appointed on the board of supervising engineers, he was chief engineer of the South Side Elevated road, in which capacity he planned the various feeders and reconstructed the main line for the installation of elevated express service on the south side. Mr. Weston is a member of the American Society of Civil Engineers, the Western Society of Engineers and the American Railway Engineering and Maintenance of Way Association.

Charles V. Weston.

Financial News

Boston Elevated Railway.—The pamphlet report for the year ended September 30, 1907, has been issued. The principal figures of the report were published in the Electric Railway Review of November 9, 1907, page 759. In his statement to shareholders William A. Bancroft, the president, says "Besides its ordinary taxes the company's contribution to the public during the last fiscal year amounted to at least $489,547.94. Since the last report the company has increased its power supply by building additions to three of its power stations, to wit, to the Lincoln station on Battery street in Boston, to the Charlestown station, and to the Harvard station in Cambridge. The 45 'easy access' elevated cars, spoken of in the last report, have been received and are in service. Only a portion of the last 100 of the 150 'easy access' semi-convertible surface cars have been received, owing to the failure of the contracting builder to deliver as agreed. About 60 bodies are here, and 30 have been equipped and are in service. The company has maintained the excellent character of its surface tracks, $562,757.85 having been spent thereon during the year in renewals and repairs. The total length of surface tracks controlled by the company is now 445.897 miles. This, with the elevated mileage of 16.015 miles, makes a total mileage of 461.912. The company has continued its liberal policy toward its employes in respect to their wages, as well as in other matters. Compensation for learners during the year amounted to $27,670.18. There was paid during the year $42,821.77 as a guaranteed minimum wage for new or extra men. There was also paid as increased compensation to long-service men $66,630.36. There was paid in pensions $11,325.50. There was also paid in 'satisfactory service' money, in sums of $15 to each of the employes deemed worthy thereof, $55,320. The aggregate sum of increased payments to employes, under the provisions adopted four years ago, amounted during the year to $203,767.81. The provisions of last year raising the rate of wages increase this amount by $97,726.35, making a total of $301,494.16. The company has designed extensions of its elevated station platforms for the future operation of 8-car trains in place of 5-car trains, the longest trains which it can now use. These extensions have been approved by the public authorities, and their construction is about to be undertaken. In connection with the Washington street tunnel, the station platforms of which are also designed for the ultimate operation of 8-car trains, these extensions will admit of a very great increase in the carrying capacity of the elevated division."

Chicago & Milwaukee Electric Railroad.—The agreement between the various interests, as a result of which the receivership was annulled, provides, it is stated, as follows: A claim for $50,000 on a note held by one of the creditors will be paid at once by interests allied with the company. Trustees will be appointed to conserve the funds involved in other claims aggregating $200,000, and the validity of the claims will be arbitrated out of court. Representatives of the Canadian bondholders advanced $250,000, with which the interest on the bonds was paid on January 3. The Canadian bondholders further pledged the raising of $500,000 to be used toward the completion of the railway from Racine to Milwaukee. The control of the company will remain as at present.

Holyoke (Mass.) Street Railway.—The Massachusetts railroad commission has authorized the issue of $93,600 additional capital stock at $125 per share to provide for payment of outstanding bonds of the Amherst & Sunderland Street Railway which were assumed.

Interstate Railways, Philadelphia.—Shareholders of record on December 5 have been given the privilege of subscribing at par pro rata for $500,000 new stock. The proceeds will be used for new cars, power house equipment and track.

Metropolitan West Side Elevated Railway, Chicago.—To reimburse the treasury on account of the purchase of additional cars and equipment, this company has made an issue of $100,000 of 6 per cent collateral trust bonds of which $50,000 bonds are offered at par by the Chicago Savings Bank. The total issue is secured by deposit of $200,000 Metropolitan Elevated extension 4 per cent bonds. The $50,000 bonds which are offered for sale, will mature in 10 semi-annual instalments of $5,000 each from June 1, 1908, to December 1, 1912.

New York City Railway.—The quarterly rentals due on January 2 on the leased lines of the Metropolitan Street Railway system were not met at maturity. A few days later the receivers, having obtained sufficient funds, paid the quarterly dividends due as rental on the stocks of the Broadway & Seventh Avenue Railroad, the Sixth Avenue Railroad, the Eighth Avenue Railroad and the Ninth Avenue Railroad. The January 1 coupons on the Third Avenue Railroad 4 per cent bonds are being paid by the Central Trust Company of New York on orders from Kuhn, Loeb & Co., and the January 1 coupons on the Third Avenue 5 per cent bonds are being paid by William A. Read & Co. In the case of the 4 per cent bonds it is necessary for the holders, in order to get their January 1 interest, to deposit their bonds under a form of agreement with the protective committee, of which J. N. Wallace, president of the Central Trust Company, is chairman. No such stipulation is required by William A. Read & Co. in their payment of the coupons on the 5 per cent bonds.

Springfield (Mass.) Street Railway.—Charles W. Bosworth has been elected a director to succeed William Skinner of Holyoke, Mass.

Third Avenue Railroad, New York.—Judge Lacombe of the United States circuit court, New York, appointed Frederick W. Whitbridge, a lawyer, receiver for this company on January 6, upon application of the Central Trust Company of New York and of the committee representing the majority of the Third Avenue consolidated bonds. This action is the result of the failure of the receivers of the New York City Railway and the Metropolitan Street Railway to pay the interest on the Third Avenue bonds, due on January 1. Its effect is to take the Third Avenue road out of the Metropolitan system during the pendency of the receivership. The present receivership is temporary, and theoretically is subject to the decision of a special master, whom Judge Lacombe has decided to appoint to investigate the question whether the Metropolitan receivers are able to pay the defaulted interest in the 60 days of grace which the mortgage allows. A permanent receivership, however, was forecast by Judge Lacombe in his decision appointing the receiver, in which he said: "The bondholders under this large Third Avenue mortgage are entiled to the appointment of a temporary receiver, to be made permanent when the time comes to declare the principal due and proceed with the foreclosure."

Toledo & Indiana Railway, Toledo, O.—An official is quoted as follows regarding the interest due on January 1 on the $1,500,000 of 5 per cent bonds, payment of which has been deferred: "We have not the money earned on hand for the payment. We have had serious and costly accidents during the past year, which have taken our money, and we do not feel, because of that and the present financial condition, that we should borrow money."

ELECTRIC RAILWAY EARNINGS.

Ft. Wayne & Wabash Valley Traction Company, Ft. Wayne, Ind.

November—	1907.	1906.
Gross earnings	$115,089.50	$93,142.64
Operating expenses	62,619.68	54,155.77
Net earnings	52,469.82	38,986.87
January 1 to November 30—	1907.	1906.
Gross earnings	$1,167,594.55	$991,427.03
Operating expenses	683,503.41	602,562.60
Net earnings	484,091.14	388,864.43

Lexington & Interurban Railways Company, Lexington, Ky.

November—	1907.	1906.
Gross earnings	$43,034.01	$40,148.18
Operating expenses	27,702.64	24,633.05
Net earnings	15,331.37	15,515.13
January 1 to November 30—	1907.	1906.
Gross earnings	$516,355.02	$481,579.83
Operating expenses	325,468.51	313,009.85
Net earnings	190,886.51	168,569.98

Dividends Declared.

Athens (Ga.) Electric Railway, common, 2½ per cent; preferred, 3 per cent.

Birmingham (Ala.) Railway Light & Power Company, preferred, 3 per cent.

Brooklyn City Railroad, quarterly, 2½ per cent.

Cincinnati Newport & Covington Light & Traction Company, Covington, Ky., common, quarterly ¾ of 1 per cent; preferred, quarterly, 1⅛ per cent.

Duluth-Superior Traction Company, Duluth, Minn., preferred, quarterly, 1 per cent.

Jacksonville (Fla.) Electric Company, common and preferred, 3 per cent.

New Orleans (La.) City Railway, common, 1 per cent; preferred, 2½ per cent.

Northampton (Mass.) Street Railway, 3 per cent.

Omaha & Council Bluffs Street Railway, Omaha, Neb., common, 2 per cent; preferred, quarterly, 1¼ per cent.

St. Charles Street Railroad, New Orleans, La., 3 per cent.

Manufactures and Supplies

ROLLING STOCK.

Yazoo City Light Water & Sewerage Plant, Yazoo City, Miss., which is owned by the city, it is reported will purchase four new cars in the near future.

Denver & Interurban Railway, Denver, Colo., is in the market for 12 interurban cars. In the Electric Railway Review of March 9 it was reported that this company was preparing the preliminary specifications for a number of high-speed cars.

Grand Valley Railway, Brantford, Ont., will probably place orders for several 23-foot city cars and a number of 52-foot cars for use on projected extensions aggregating 90.5 miles. Several electric locomotives may also be ordered. The road has recently changed hands. Murry A. Verner, Brantford, Ont., is president.

Gary & Interurban Railway, Gary, Ind., has placed an order with the Danville Car Company for two double-truck closed cars for city service. Delivery is to be made before March 1. The cars will have a seating capacity of 44 passengers. The wheel base will be 4 feet 6 inches, the length over buffers 42 feet, and width, over all, 8 feet 4 inches. The height is to be 9 feet 1¼ inches. The body and underframe are to be of wood and metal. The cars will be equipped with Peacock hand brakes, Brill trucks and two GE-80 motors.

TRADE NOTES.

H. F. Sanville has resigned bis connection with Dodge & Day, engineers, Philadelphia, to join the staff of Frank R. Gilbreth, general contractor, New York.

Habirshaw Wire Company, 253 Broadway, New York, is the new name of the Indian Rubber & Gutta Percha Insulating Company. The company's works are at Yonkers, N. Y.

Safety Car Coupler Company, Chattanooga, Tenn., has been incorporated with a capital stock of $100,000 to manufacture a patented safety car coupler. The incorporators include A. W. Boyd, M. A. Brown and John Shamotulski.

Dossert & Co., New York, have received an order from the American Car & Foundry Company, Berwick, Pa., for 720 two-way solderless connectors for use on the electrically-lighted steel cars now being constructed for the Pennsylvania Railroad.

St. Louis Surfacer & Paint Company, St. Louis, Mo., announces the appointment of H. N. Turner as manager of sales in the railroad department. Mr. Turner was formerly a representative of the Acme White Lead & Color Works, Detroit, Mich.

Central Inspection Bureau, 17 State street, New York City, has received an order from the Philadelphia Rapid Transit Company for the inspection of 35,000 ties which will be furnished by the American Tie & Timber Company of 11 Broadway, New York City.

S. Butler Keys, who has been connected with the Consolidated Car-Heating Company, 42 Broadway, New York, for the past six years, three years as manager of the eastern territory, has been appointed to a position in the railroad department of the H. W. Johns-Manville Company of New York.

Danville Car Company of Danville, Ill., has just completed the first of a lot of 12 semi-steel, semi-convertible cars for the Danville Street Railway Company, purchase of which was noted in a previous issue of the Electric Railway Review. The cars are 22 feet long and the outsides are covered with steel instead of the usual wood sheathing.

Thomas Farmer, Jr., has been appointed eastern representative of the Consolidated Car-Heating Company, 42 Broadway, New York City, succeeding S. Butler Keys, whose resignation is announced in this issue of the Electric Railway Review. Mr. Farmer was formerly connected with the Consolidated Car-Heating Company at Albany, N. Y.

Myron H. Lewis and **Clifford B. Moore,** editors of Waterproofing, have opened offices in the St. James building, 1133 Broadway, New York, where they will conduct a general consulting engineering business in waterproofing, foundations, hydraulics and reinforced concrete. Special attention will be given to making investigations, reports and tests and to the preparation of plans, estimates and specifications for waterproofing and dampproofing work of every description. Samples of commercial waterproofing and dampproofing products and literature and information concerning every modern process will be kept on hand for the convenience of architects, engineers and builders.

American Equipment Company has opened an office in the West End Trust building, Philadelphia, Pa., to deal in new and second-hand contractors' machinery and railway equipment. The company will make a specialty of renting road rollers, concrete mixers, crushing plants, hoisting engines, steam shovels, etc. It will also purchase and dismantle plants, buying machinery of every description.

Star Brass Works, Kalamazoo, Mich., manufacturer of Kalamazoo trolley wheels and harps, reports that it has completed more of its special machinery, increasing the capacity of its plant by half. The company now expects to be able to handle orders more promptly than has been the case during the past six months. The demand for the Kalamazoo product for the last year was larger than ever before and the prospects for this year are satisfactory.

American Locomotive Company, 111 Broadway, New York, announces the following changes, effective on January 1: F. J. Cole, formerly mechanical engineer, has been appointed consulting engineer with headquarters at Schenectady. The office of mechanical engineer has been abolished and the duties heretofore performed by this officer will be included in the jurisdiction of William Dalton, chief engineer, with headquarters at Schenectady. Carl J. Mellin, formerly designing engineer, has been appointed consulting engineer with headquarters at Schenectady.

A. M. Hewlett, president of the Western Tube Company, Kewanee, Ill., whose death from paralysis on December 20 was reported in the Electric Railway Review of January 4, was 57 years old, and had lived in Kewanee 33 years. Mr. Hewlett had been president of the Western Tube Company since 1904, having worked his way up from the position of bookkeeper. As the executive head of the company he was more than successful. He not only wisely directed the business policy, but gave much attention to the welfare of his employes. Mr. Hewlett suffered his first paralytic stroke on Wednesday, December 18, but the fatal illness dated back many months. He leaves a widow and one son.

Robert W. Hunt & Co., Chicago, inspecting and consulting engineers, have decided to establish a branch office and chemical laboratory at St. Louis, Mo. This representation will be under the charge of Charles W. Gennett, Jr., as noted in the Electric Railway Review of December 21. Mr. Gennett graduated with the degree of mechanical engineer from Cornell University in 1898, following which he was employed in the drafting room of the Baldwin Locomotive Works, and later in the inspecting and testing department of the Southern Railway. During the latter part of his connection with that organization he was in charge of their inspection work in Pittsburg and the west. Since then, and up to the time of entering the service of Robert W. Hunt & Co., he has been the western sales agent of the Atha Steel Casting Company, with headquarters in Chicago.

Preston Car & Coach Company, Preston, Ont., has completed its temporary plant for the manufacture of passenger equipment for steam and electric lines and is rebuilding a number of passenger cars for the Temiskaming & Northern Ontario. The company has 8 1-3 acres of land with spur tracks to the Grand Trunk and Canadian Pacific railways and has laid foundation for a 3-story L-shaped building with a frontage of 200 feet and a depth of 140 feet, the three floors to be used respectively as a blacksmith and machine shop, mill and cabinet shop and by the upholstering and finishing departments. A car construction shop to be built in two sections each 37 by 200 feet will also be erected. The permanent power house of reinforced concrete to conform to construction of the other permanent buildings is 40 by 60 feet and has been completed. The machinery thus far installed is new and of modern design. The temporary building now occupied is 80 by 260 feet and will be utilized for lumber sheds or other purposes when the plant is completed. In addition to the repair work now in hand for the Temiskaming & Northern Ontario the company has contracts for a number of new cars for passenger equipment for the same road and for several cars for electric lines. The directors of the company include Martin N. Todd, president and general manager of the Galt Preston & Hespeler Street Railway, who is also president of the company, Frederick Clair, vice-president of the company and mayor of Preston; George Cliar, M. P.; George Pattinson, M. P.; C. Kloepfer, ex-M. P., and C. R. Hanning, who is secretary and treasurer of the company. The active management is in the hands of Donald M. Campbell, who is general manager, and Charles S. Wright, general sales manager.

ADVERTISING LITERATURE.

Whitmore Manufacturing Company, Cleveland, O.—A lesson in gear protection and economy is shown in a recently issued folder. Illustrations demonstrate the difference in wear on gears used with and without Whitmore's gear protective compound.

Joseph Dixon Crucible Company, Jersey City, N. J.—A neat booklet recently issued has for its subject air brake lubrication. It contains a description of the properties, uses and special advantages of Dixon's Ticonderoga graphite air brake and triple valve grease and Dixon's special graphite No. 635.

Locke Insulator Manufacturing Company, Victor, N. Y.—A calendar bearing a most excellent reproduction of the famous painting "Nathalie," by Alfred Schwartz, is being distributed. Attached to the calendar is a brief description of the work of the artist who painted the original from which the reproduction was made.

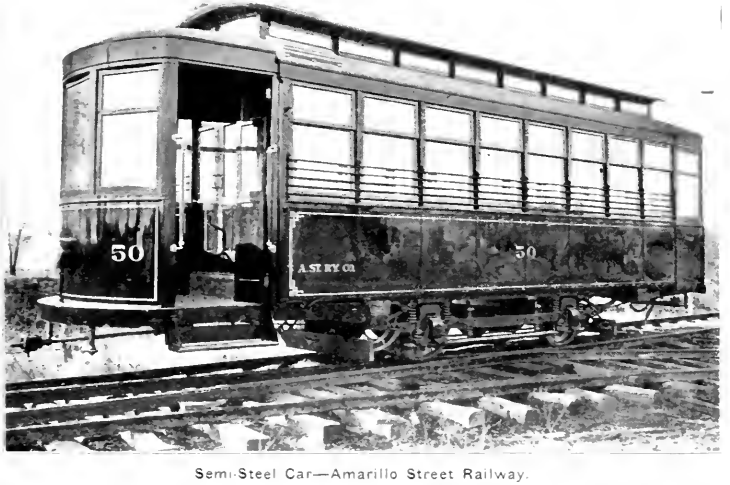
Novelty News, Chicago, Ill.—A monthly publication, containing about 70 pages in 3-column makeup. It is full of novelty advertising suggestions, premium ideas and new plans to increase sales for manufacturer, jobber, merchant, salesman and agent. All the novelties of the month are shown, many of them illustrated.

Cortright Metal Roofing Company, Philadelphia, Pa.—The January issue of the Cortright Metal Shingle Advocate is out in a new and attractive cover. The contents are interesting and well worth reading. They give practical suggestions that create new thoughts about roofing which are apt to be overlooked by those who are not giving their whole time to building.

Niles-Bement-Pond Company, New York, N. Y.—An illustrated description of what is probably the largest and heaviest metal planer ever built is contained in a recently issued publication. The huge machine weighs 845,000 pounds, or 422½ tons, and requires motors with a total of 207½ horsepower for driving table, slotter bars, lift, etc. In general this machine is of the usual planer type, but it possesses a number of unusual features.

SEMI-STEEL CARS FOR THE AMARILLO STREET RAILWAY.

The Danville Car Company has recently built for the Amarillo Street Railway Company, Amarillo, Tex., four of its new semi-steel, semi-convertible cars. They have 22-foot car bodies, 32 feet 7 inches over all, the width of car body is 8 feet 2 inches over all.



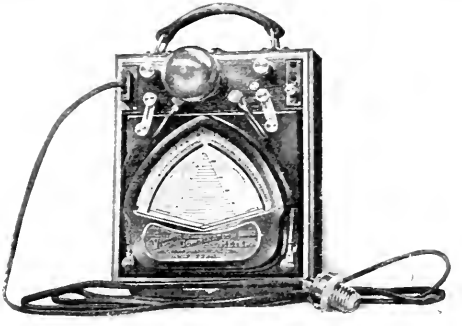
Semi-Steel Car—Amarillo Street Railway.

Both side sills are of yellow pine, reinforced with steel plate between them. The subsidiary sills on each side for the truck are reinforced with steel angles. Body framing is made of ash. The sides of the car are covered longitudinally with ¾-inch tongued and grooved yellow pine from the arm rail down are covered with No. [illegible] sheet steel in panels. The interior sides of the car are made of No. 16 sheet steel riveted together in one length, forming an interior finish. Each car is full vestibuled with folding doors.

The interior finish is of cherry, except the steel panels below the arm rail. All cars are equipped with Hale & Kilburn walkover seats and Pantasote curtains, and are lighted by 15 incandescent lamps. The cars are equipped with the Danville Car Company side vestibule sign, the Kirby-Neal headlight and are mounted on Brill No. 21-E trucks.

VICTOR PORTABLE TESTING METER.

By ordinary methods it requires considerable effort and more than one instrument to accurately measure the voltage, amperage and wattage of a lamp circuit. For this reason it



Victor Portable Testing Meter.

is interesting to learn that a new type of direct-current meter which will simultaneously exhibit all three quantities has just been placed on the market. To test a lamp it is only necessary to connect the attachment plug and cord of the portable meter to any lamp circuit, insert the lamp and read volts, amperes and watts without computation.

The movements are built on the familiar d'Arsonval pattern, and so placed with reference to each other and the scale as to render the energy consumption directly readable at the intersection of the volt and ampere indicator needles; the special feature being the design, which enables the operator to read at one glance the pressure, current and wattage on any lamp which may be inserted in a socket immediately above the meter.

The instrument is equipped with three self-contained shunts, one of 150 amperes capacity, having conveniently arranged binding posts, and a 1.5 and 0.75 ampere shunt, which is so connected within the base of the meter as to be readily thrown in circuit at will.

The different shunts may easily be placed in circuit by the adjustment of a small screw-plug at the top and right of the instrument. The two smaller shunts have universal connections.

The voltmeter may have either a 150 or a 300 volt scale or both. The most valuable feature of this instrument is the fact that accurate wattage measurement may be taken on a fluctuating load, as it is required to observe but a single point for such readings.

The instrument is entirely self-contained and weighs less than 15 pounds complete. It is being sold by the H. W. Johns-Manville Company, 100 William street, New York.

IMPROVED FORMS OF TICKETS.

Many electric railway companies are now turning their attention to the more general use of some form of ticket system instead of cash fares. While the electric railways were principally extensions of city street car lines and the conductor simply had to collect an additional 5-cent fare upon reaching the city limits the cash fare system was sufficient. However, this practice has in many cases been allowed to continue with the expansion of the road into a large number of zones until the burden on the conductor and the inconvenience to the passenger are unduly increased unless some form of ticket is used. When the roads expand still further and come into the class of railroads, basing their charges on mileage, a ticket system is absolutely necessary. Many city lines also are now using tickets to a large extent, especially where fares are sold for a reduced rate if purchased in quantities.

The use of tickets is not only a convenience to the conductor and to the passengers but provides a check on the number of fares collected. However, to be an effective check, the ticket system must be of such a form as to prevent manipulation and be easily handled in the auditor's office.

We present herewith illustrations of a number of improved forms of tickets and transfers which have been brought out by the Globe Ticket Company of Philadelphia. With its improved designs of machinery for the manufacture of tickets this company is able to furnish ticket forms which will commend themselves at once as possessing unusual advantages.

One of the latest ticket forms put on the market by the company is a mileage book which is suited to the requirements of both steam and interurban roads. This book may be furnished in units of miles or amounts of fares paid, with

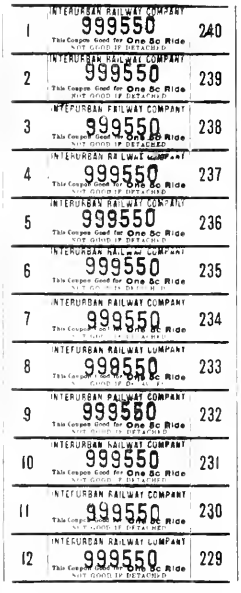
Globe Ticket Forms—Package Ticket.

Globe Ticket Forms—Strip from Mileage Book.

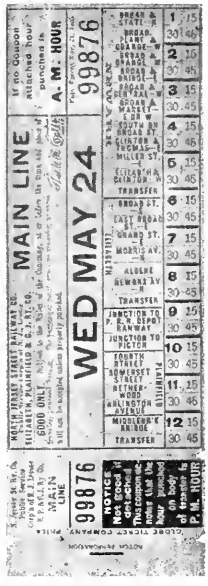
500, 1,000, 1,500 or 2,000 miles to a book. An especial feature is that the mileage is in one continuous strip, with no paste except for fastening to the cover. The accompanying illustrations show the appearance of both the mileage strip and the 5-cent zone strip, with the method of numbering. They are printed in four colors with non-counterfeitable tints. The book is strongly bound, with tough cardboard covers. On the inside of the front cover is a strip of celluloid which forms a straightedge for detaching mileage. The books are standard size and the printing and appearance are of a high grade.

The new package ticket shown herewith also presents a number of valuable features. It is furnished in strips containing any number of tickets from 6 to 24. Each ticket in the strip bears the same number instead of a number running consecutively through a sheet of tickets, a point that is of great value to the auditing department. These tickets are for both city and interurban use and have non-counterfeitable plate backs and tint faces. The tint face and the numbering may be of any color desired, the lettering being black.

The day and night transfer, samples of which are illustrated, is of an especially simple and convenient form and should commend itself at once to all managers. It gives the road an entirely different transfer for a. m. and p. m. use with no extra trouble to the conductors. As the transfers are issued for a. m. use without the coupon and for p. m. use with the coupon there is provided not only a different appearing transfer for the two parts of the day but also a



Globe Ticket Forms—Strip of 5-Cent Zone Checks.



Globe Ticket Forms—Day and Night Transfer Slip.

different length transfer, thus enabling the receiving conductor to tell at a glance if the right transfer is presented. The convenience in the auditing department is also apparent. By the system of duplicate numbering an indisputable record is kept.

This form of transfer has been on the market but a short time, but it has already been adopted by about 60 roads, including the Interborough Rapid Transit Company, the Coney Island & Brooklyn Railroad and the Public Service Corporation of New Jersey, and in the cities of Birmingham, Ala., Richmond, Va., Minneapolis, Minn., Los Angeles, Cal., Spokane, Wash., Tacoma, Wash., and South Chicago, Ill.

Burns & Co., Chicago, consulting corporation specialists, announce the perfecting of their organization with offices in the Isabella building. The company offers the services of associated experts in consultation and personal examination in all matters pertaining to the promotion and preliminary work of public service and industrial projects, steam and electric railways, and all engineering undertakings. The company is fitted to give advice concerning any particular feature of the project from its organization to financing and final flotation, and during construction will give consultation service either with or without engineering advice. The staff of Burns & Co. has been brought together by J. J. Burns, manager, well known in the promotion and construction of steam and electric railroads; and affiliated financial, engineering and contracting connections will give clients every advantage consistent with a strictly consulting service.

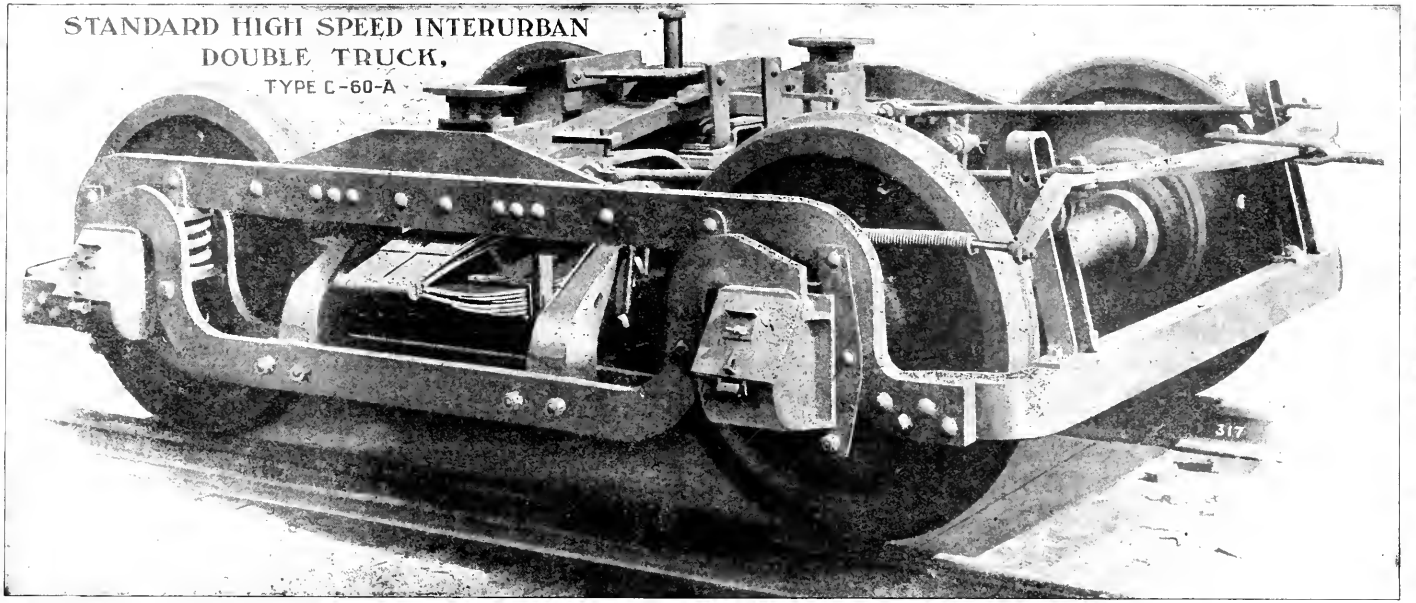
Standard "High Speed Interurban" Double Truck

Types C-60 and C-60-A, "Solid Forged" Without Welds



Our new plant is equipped with the most modern truck building machinery and the very best quality of material and workmanship is used in the manufacture of these trucks. M. C. B. standard principles are followed. Frames are made from rolled open hearth steel without welds. We are prepared to build trucks in accordance with purchaser's designs and specifications.

New York Office: 170 Broadway **Works: New Castle, Pa.** **Chicago Office: Fisher Bldg.**

Making Impressions That Lead To Sales

VERY few of your customers, actual or prospective, will probably ever see you or your plant. They will never have that intimate personal knowledge that will enable them to judge you and your product at your actual worth to them.

There are, however, a great many things they will see and hear that will influence them for or against you and your goods. You need not fear the possible "knocks" of envious competitors, because the motive is so apparent that they fall of their own weight.

But it is imperative that what you say and do be said and done in a manner calculated to impress the customer with the idea that doing business with your house will be more advantageous to him in one way or another or in many ways than patronizing one of your competitors. (Now, that's a pretty long sentence, so read it again and let it sink in).

The effort you make to sell your goods is what the customer sees and hears most of; hence this effort is what requires a careful attention it oftentimes does not get. The way your salesmen talk and act, the way your correspondence is carried on, the manner in which your printed advertising matter is prepared and handled—all these are of prime importance, but perhaps most important of all is your *advertising*.

In advertising you have the opportunity, if you will seize it, of making *any kind of an impression you desire*. Your plant may be small, yet you can so advertise as to give customers an impression of capacity equal to that of your big competitors. Don't misunderstand—it is not the idea that you should deceive or misrepresent, but you can advertise in a manner that will impress the customer with the idea that you are capable of handling his order as satisfactorily as your biggest competitor, whom he probably knows far better than he knows you. No harm is done by impressive advertising of this sort, provided you deliver the goods.

Your advertising can be made to impress the possible buyer with the idea of *quality*. You can make him believe, if you go about it in the right way, that your goods really are better than those of your competitors—but don't try this unless you can prove your claims.

In fact, your advertising can be made to make many impressions and to do many things that will help sell your goods just as surely as you are reading these lines. And advertising (*real*, of course) will accomplish these results at far less cost than any other method.

If you are sufficiently interested to drop us a line, we are enough interested to have a representative confer with you.

Electric Railway Review

160 Harrison Street, CHICAGO, U. S. A.

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

A young man, 27 years of age, with ten years' experience, wants position as engineer or electrician; unmarried; habits strictly temperate; high-class references. Address "No. 710," care Electric Railway Review, Chicago.

Position wanted by a young man (23) of good habits; have been connected four years with the operating and purchasing departments of an electric street railway company; can give good references. Address "No. 528," care of Electric Railway Review, Chicago.

Position as chief electrician or superintendent; 16 years' experience lighting, power and traction work, alternating and direct current; graduate of well-known school; excellent testimonials; disengaged. Address "No. 529," Electric Railway Review, Chicago.

Auditor, experienced in electric railway and lighting and construction accounting, wants position with fair-sized company. Energetic and good systematizer. Best references. Address "No. 527," care of Electric Railway Review, Chicago.

Position by a single man, 29 years old, practical electrician and machinist, 10 years' experience, familiar with electric car and locomotive repairs, power and substation practices. Non-union man. Address "No. 630," care of Electric Railway Review, New York, N. Y.

Position of chief motorman or instructor by a first-class competent man who has had 12 years' experience in that line. Thoroughly understands economy in regard to use of power and care of rolling stock; familiar with quadruple equipments and air brakes; highest references. Address "Chief Motorman," care of Electric Railway Review, Chicago.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

Position wanted by unmarried man (23) with a city or interurban electric railway or with electric light and power company. Would prefer position in engineering, erection or operating department. Technical electrical graduate. Two years' experience with firm of contracting engineers in drafting room, shop work and erection work. Familiar with the design and erection of complete steam and electric plants. Am at present employed as erecting engineer by a small concern, but wish to make a change. Permanent position and good chances for advancement are of more importance than the question of salary. Best references furnished as to character and ability. Location anywhere. Address "No. 531," care of Electric Railway Review, Chicago.

POSITIONS WANTED.

Position wanted by first-class engineer and machinist with 16 years' practical experience with compound Corliss engines, Allis-Chalmers and Westinghouse steam turbines, surface condensers, A. C. and D. C. electrical apparatus. Age 35. A1 references. Address "No. 532," care of Electric Railway Review, Chicago.

POSITIONS OPEN.

Salesmen with technical knowledge, machinery and electrical installation, also auditors and accountants. Salaries $1,200 to $6,000. Ambitious men write us. TAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

MISCELLANEOUS WANTS.

You can sell second-hand cars, machinery and material through advertising on this page. Ask about the special rates. Electric Railway Review, 160 Harrison Street, Chicago.

BOOKS AND PUBLICATIONS.

If interested in any phase of steam transportation, you will find every development covered fully and accurately in The Railway Age. It is the leader and acknowledged authority in this field. Ask for free sample copies. The Railway Age, 160 Harrison Street, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

BUSINESS OPPORTUNITIES.

WANTED—RAILWAY SPECIALTIES. WE HAVE OUR OWN MANUFACTURING AND SELLING ORGANIZATIONS, WITH FACILITIES FOR SELLING THE RAILWAY TRADE. WE DESIRE TO SECURE FOR MANUFACTURE AND SALE SOME GOOD RAILWAY SPECIALTIES. ADDRESS "H. M." CARE OF ELECTRIC RAILWAY REVIEW, CHICAGO.

BOOKS AND PUBLICATIONS.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 536," care of Electric Railway Review, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

National Legislation on Interstate Commerce to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts expunged from, and the parts added to, the interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

Electric Roads Under Federal Jurisdiction.

In a letter to the Electric Railway Review, which is published in this issue, Commissioner James S. Harlan of the interstate commerce commission makes plain the attitude of that body with respect to electric railways. The Hepburn act makes no distinction between roads which rely upon electricity for their motive power and steam roads; and the commission has adopted this attitude in its informal correspondence concerning electric railways. Mr. Harlan gives further expression to the statement in the annual report of the commission, which has just been made to congress, that "according to the test of location of the physical property, not more than 20 per cent" of the electric urban and interurban lines comes within the jurisdiction of the commission. This statement is not clear, but Mr. Harlan explains that 20 per cent of the entire mileage is regarded as under the commission's jurisdiction. As this is a rough estimate, the figures are open to question. As the position of the commission will undoubtedly be that the Hepburn act applies in all its phases to electric railways engaged in interstate commerce, it is apparent that if the present designs of the commission are carried out the same strict supervision over accounting methods and rates that is exercised with steam railways will in time be extended also to electric railways. Mr. Harlan's communication is one of the foremost authoritative expressions which has been issued concerning the attitude of this most important of public commissions toward electric railways.

Transportation Association to be Formed.

In accordance with a resolution passed at the Atlantic City convention of the American Street and Interurban Railway Association, the committee on organization has issued a call for a meeting to arrange for a fourth affiliated association to be devoted to the operating and traffic departments of street and interurban railway properties. This action is probably the most important step taken by the association since the reorganization of the Street Railway Association in 1905. As previously stated in these columns, the object is to bring together the managers, superintendents, traffic managers and advertising managers for the consideration of purely operating and traffic questions, and to turn over to the new association all of the general convention and committee work heretofore handled by the American association, which should go to such an affiliated association. This will relieve the presidents, general managers and other executive officials, who it is desirable should be most active in the work of the parent association, of the consideration of details with which they are not especially familiar, leaving them free to take up general questions relating to national, state and municipal legislation, and questions of broad general policy, such as public relations, municipal ownership and depreciation. The natural result will be that most of the convention work of the American association in the future will be done in executive session, while the consideration of details properly relating to the operating department will be placed in the hands of those whose daily experience is with those details. And it may be expected that the discussions at future conventions on many operating subjects which have been too much neglected heretofore will be fuller and freer.

Valves and Governors Under Seats.

The Metropolitan West Side Elevated Railway Company of Chicago has just equipped for operation some new motor cars for elevated service. The wiring details of these cars are especially well carried out with a view to the prevention of electrical troubles and the localizing of any faults that might develop. One of the special features of the electrical equipment arrangement is that of utilizing the space under the seats for several of the controlling valves and governors. Each of these cars has in its floor construction a ¼-inch steel plate completely covering the under side of the car. Above this plate is an insulating filler of asbestos wool and above this is the wooden floor. To provide for ready access the air compressor governor, motor cut-out, triple valve, feed valve and auxiliary storage battery charging switch are each one placed under a seat cushion. On the deck rail above these seats are lettered in gold initials which will show a motorman the proper location of each of these pieces of apparatus, thus relieving him from the necessity of removing the cushions of the various seats until he finds the particular switch for which he may be looking. There is another desirable feature in connection with utilizing the under-the-seat space for these valves and switches. It is that an electric heater may be confined within the same space under the seat and thereby serve in a large measure to prevent any possibility of the sluggish action of the device on account of cold weather affecting either oil or condensation that may be in the moving parts.

Use of T-Rail in Detroit.

An unusual condition exists in Detroit which is unlike that in any other large city in the country and which makes the adoption of the T-rail for street railway use of more than ordinary importance. The soil is of an unstable character, which makes it impossible to construct at reasonable cost a rigid subgrade such as is necessary to the satisfactory employment of the grooved girder rail where the paving material is laid flush with the head of the rail. The soil, a blue clay of a plastic nature, will not hold even a carefully constructed concrete bed in place through several years of heavy traffic and alternate freezing and thawing, so that where the grooved girder rail is used the paving after short use usually requires frequent repairs because of the slight lateral motion of the rail, which it is impossible to correct. With a view to lessening this difficulty the Detroit United Railway Company has determined upon the adoption of the T-rail on one of its principal lines. The change in the type of rail promises to reduce the maintenance cost for the railway company and also to remove what has been considered a nuisance by the public, an unnecessary amount of noise from the cars. The grooved girder rail has always given an unusual amount of trouble by collecting and holding dirt, sweepings, snow and ice, which results in an

uneven rail surface, but which it is believed will not be present at all with the T-rail. The defect has been noted in many places where the girder rail is used, but so far little general attention has been attracted to it and the generally accepted and traditionary advantages of the girder rail have many times weighed heavily against the more logical practice of using the T-rail.

Indiana Union Traction Shops.

The Indiana Union Traction Company and those of its officials and employes who have to do with the construction, maintenance and repair of rolling stock are to be congratulated. This company has in excellent working condition a purely interurban repair shop of the highest type. We offer our congratulations because we believe that no other interurban railway system has yet been favored with such complete repair facilities. The new shops are well located at Anderson, Ind., the junction point of several of the Indiana Union Traction Company's important lines. This location was also thought desirable because the shop buildings could be built within a stone's throw of the large central generating station for the Union Traction Company's power transmission network. We feel certain that the benefits from this centralization will be realized in both shop and power station costs; the shops will have available a most economical supply of heat and power; the generating station will have handy a fully equipped repair shop which can handle any and all of its emergency repair work. The general offices of the Indiana Union Traction Company are also in Anderson, so that it may safely be said that this town is the heart of the great interurban system which has been such a magnificent example and model for interurban construction the world over.

A RESULT FROM NON-STANDARD BUMPER HEIGHTS.

An appellate division of the supreme court of New York recently rendered a decision with regard to the height of car bumpers, which should be of particular interest to roads operating both local and interurban cars over the same tracks. The court was called upon to decide whether or not a railroad company was furnishing suitable cars when its equipments were so constructed that in case of collision the bumper of one car would not strike that of another and would break or demolish the vestibule of one of the cars.

The court held that it was a fair question for the jury whether the defendant was not negligent in furnishing its employes cars so constructed. The conclusion of the jury was that the railroad company was negligent in furnishing cars having such a variation in the height of bumpers and that such negligence had been the cause of the death of the motorman, on account of which the electric railroad had been sued for damages.

The accident occurred at a siding where a local car was supposed to await the passage of a large interurban car. The interurban car, however, arrived at the switch before the local car and stood partly covering the point of the switch, so that it obstructed the passage of the local car onto the sidetrack. The result was a head-on collision of the cars, causing the death of the motorman on the local car. The court did not hold the company liable for negligence in its servants placing the interurban car so that the local car would not clear it—this was the act of a fellow servant. But the question submitted to the jury tended to show negligence of the railroad company in the manner in which the bumpers of the two colliding cars were placed with reference to each other.

The bumper of the interurban car was built around the ends of the car sills and was constructed of oak timber, 6 by 8 inches in section, bound in heavy iron. The bumper of the local car was not so strongly built and did not stand so high above the rails. In case the cars were pushed against each other the bumpers would not meet; but that of the interurban car, on account of its greater height, would lap over the bumper of the local car and strike against the vestibule. This was the existing condition at the time of the collision and the bumper of the interurban car passed entirely over that of the local car. It broke through and crushed the vestibule and the controller at which the motorman was stationed. The interurban car was not damaged.

A lesson in this regrettable case is that particular attention should, in the future, be given the standardizing of bumper and coupler heights, as well as to other parts of rolling stock equipments which must be renewed on account of wear.

DENIAL OF TRAFFIC ARRANGEMENT WITH STEAM ROADS.

The denial by the interstate commerce commission of the petition of the Chicago & Milwaukee Electric Railroad for through routes and joint rates with the Illinois Central Railroad and its subsidiary does not settle the question of the right of electric roads to secure joint arrangements with steam railways. The decision, however, is unfortunate because, unless the position of the commission shall be amended in this case or a more favorable position indicated in a decision affecting another electric road, the ruling will discourage electric railways in their efforts to make traffic arrangements with steam roads. An abstract of the decision of the commission was published in the issue of the Electric Railway Review for January 4, page 24.

It will be understood that the Chicago & Milwaukee Electric Railroad runs within a short distance of and parallel to the Chicago & Northwestern Railway and the Chicago Milwaukee & St. Paul Railway. The evidence makes it plain that these two steam railways influenced the Illinois Central road to withdraw traffic arrangements with the Chicago & Milwaukee Electric Railroad for the hauling of cabbages in carlots. The Chicago & Northwestern Railway, in intervening in the hearing before the commission, took the position that the territory was adequately served by the existing steam roads. Concerning the adequacy of the steam railway service there was marked disagreement in the evidence. Officials of the Chicago & Milwaukee Electric Railroad claimed that the service afforded by the steam railroads was not adequate; officials of both of the steam railways testified that they furnished all the facilities which were required. Outside of this evidence the only testimony which was given on this point appears to have been that of William J. Hansche and August J. Piper, large shippers of cabbages, who were introduced as witnesses by the Chicago & Milwaukee Electric road. These shippers complained of the steam railway service and charged that the roads did not provide the proper equipment when requested and did not route the cars as asked. Mr. Hansche, who testified more at length than Mr. Piper, said that if he desired to ship to points in Texas he was often compelled by the Chicago & Northwestern road to ship via Omaha instead of by way of Chicago. He also declared that when he had cabbages loaded, for instance, in Illinois Central refrigerator cars and wanted to ship them to Omaha, the Chicago & Northwestern line would not permit him to do so for the reason that Omaha is a competing point.

The decision of the interstate commerce commission appears to have been based largely on that clause of Section 15 of the Hepburn act which provides that the commission may establish through routes and joint rates, "provided no reasonable or satisfactory through route exists." The contention of counsel for the electric road was that this clause meant that the commission might establish such routes and rates, provided no reasonable or satisfactory through route exists for the carrier which files a complaint; but the

commission interprets this clause as assuming that the proviso applies to the existence of reasonable or satisfactory through routes so far as the neighborhood for which the through routes and rates are desired is concerned. If the neighborhood already had satisfactory through routes and rates, the commission, in accordance with its ruling, would afford no relief to an existing or a new carrier which desired to offer the same facilities as its competitors.

Application for a rehearing will be made by the Chicago & Milwaukee Electric road, and it is desirable that complete evidence be introduced on the subject of the adequacy of the service afforded by the two steam roads. The question of joint arrangements between an electric road and a steam railway where the issue of the adequacy of steam railway service cannot be raised, is before the commission on the petition of the Cedar Rapids & Iowa City Railway of Cedar Rapids, Ia., for through routes and joint rates with the Chicago & Northwestern Railway. This electric road extends through a territory which is not served by any steam railway.

TWO-CENT STEAM RAILWAY FARES.

Elsewhere in this issue we publish letters from officials of a number of interurban electric railways concerning the effect of 2-cents-per-mile passenger fare laws upon their traffic. In states from which expressions of opinion and information on this subject were requested by us the reduced passenger fare laws imposed upon steam railways have gone into effect.

These letters show that in many instances reductions in steam railway fares have not caused perceptible declines in traffic and earnings of electric railways; but in numerous other cases the effect of cheaper rates and resultant changes in schedules on steam roads has been felt more or less sharply. One interurban road which parallels a steam railway charges 2 cents a mile for single-trip tickets, 1¾ cents per mile for round-trip tickets and 1½ cents per mile for mileage books; but even with these rates this road feels the competition of the steam railway. That the existence of this competition is realized by the electric road is due to the fact that while the steam railway, prior to the adoption of 2-cent fares, did not stop its trains at points between the two terminals of the competing electric road, it now stops all trains at the intervening stations.

It seems assured that steam railways will not find it permanently profitable to make all the stops required to furnish a local service approaching the desirable service of competing electric railways. Many interurban roads withstood for years the severest competition which steam railways brought to bear. The construction of electric roads which offered fares of two cents per mile or less was frequently met at the outset by corresponding or lower rates by steam roads; still the electric railways secured and held the business because of advantages which the steam railways could not offer—frequency of service, freedom from smoke, dust and cinders, and accessibility of terminals. With these factors interurban electric railways have permanent claims upon public patronage.

Electric railways which have experienced losses on account of the narrower margin between their rates and those of competing steam lines may find that litigation started by the steam railways will result in decisions by the courts that 2-cent fare laws are unconstitutional. While the question is being tested in the courts electric roads which parallel steam roads should lay more stress than ever before on the possession of advantages which it is impossible for the steam roads to afford.

It seems inevitable that the obliteration of the margin between the fares of the two classes of roads will work some hardship. If electric railways lose in density of traffic, the natural result will be curtailment of service. The proper tendency of fares should be upward rather than to a lower level and it will be unfortunate if electric railways, already offering reduced rates, should experience now a decline in density of passenger traffic.

MEETING CALLED TO FORM TRANSPORTATION ASSOCIATION.

The committee on organization of the American Street and Interurban Railway Association, acting in accordance with a resolution passed at the Atlantic City convention, on January 14 issued a circular letter to general managers announcing a meeting of representatives of member companies to be held in New York on January 30, to organize a fourth affiliated association, for the operating and transporation departments. The letter reads as follows:

At the Friday (October 18, 1907) session of the Atlantic City convention, the American Street and Interurban Railway Association unanimously adopted the following resolution:

"Whereas, Experience has demonstrated the desirability and usefulness of our existing affiliated organizations, and

"Whereas, It has appeared from discussion that another organization of similar character should be created, to which should be committed lines of work pertaining to transportation, traffic and general operation. Now, therefore, be it

"Resolved, That the executive committee be and hereby is requested to take such steps as it may deem desirable to encourage the formation of such an organization."

The executive committee of the American Association at its meeting held in the city of New York, Saturday, October 19, 1907, voted to proceed with the organization of a fourth affiliated association in accordance with the above resolution, and the undersigned committee on organization was appointed.

The committee has given careful consideration to this entire matter and is of the opinion that the new association should bring together general managers, managers, passenger agents, advertising managers, superintendents and other operating officials, for the consideration of problems of interest to those engaged in the actual operation of street and interurban railway properties. The exact name of the new association will be determined at the organization meeting.

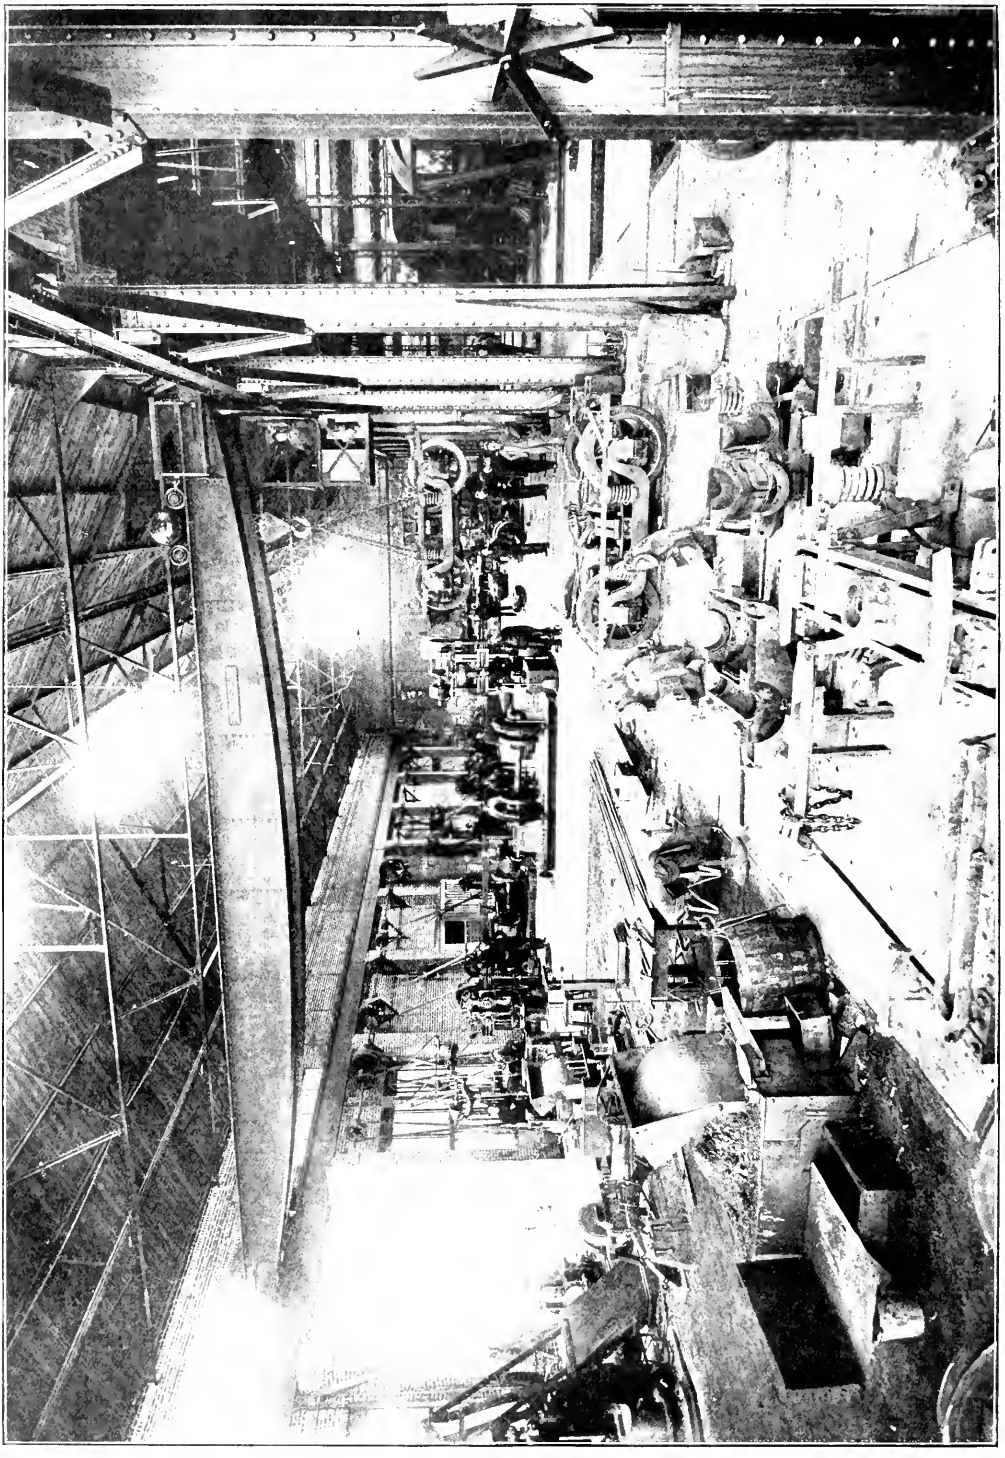
The annual meeting of the executive committee of the American association will be held on Friday, January 31, and it is the desire of the undersigned to have the organization of the new association completed, so that the action thus taken may be ratified at that meeting; including the adoption of the constitution and by-laws, the election of officers, the appointment of committees, and the general outline of the program for the 1908 convention.

We, therefore, give notice that a meeting for the purpose of organizing a fourth association to be affiliated with the American Street and Interurban Railway Association will be held at the office of the association, 29 West Thirty-ninth street, Engineering Societies building, New York City, on Thursday, January 30, 1908, at 10 o'clock in the forenoon. You are respectfully urged to have one or more representatives of your company present at this meeting, fully authorized to participate in the organization of such a fourth affiliated association.

This is a very important meeting and a full attendance of representatives of member companies of the American association is earnestly requested.

CALVIN G. GOODRICH (Chairman).
W. CARYL ELY,
JAMES F. SHAW,
Committee on Organization.

Secretary Swenson's office has just issued the annual report of the Engineering association meetings held at Atlantic City on October 14, 15 and 16, 1907. This issue of the American Street and Interurban Railway Engineering Association annual exceeds its predecessors in the value of its contents and in the manner in which the vast amount of valuable matter has been compiled in book form. An excellent portrait of President H. H. Adams, superintendent of shops United Railways & Electric Company, Baltimore, Md., appears as the frontispiece. Included in the reports of the "Standardization" committee are double-page inserts on firm paper bearing the accepted standards for electric railway equipment. A useful addition to this year's Engineering association annual is a summary index of previous reports detailing the references to important events and papers of earlier conventions.



Anderson Shops Indiana Union Traction Company—Blacksmith, Machine and Armature Shops, Looking West.

ANDERSON SHOPS OF THE INDIANA UNION TRACTION COMPANY.

BY R. C. TAYLOR, SUPERINTENDENT OF MOTIVE POWER.

In a former issue of the Electric Railway Review plans were shown of the new shops of the Indiana Union Traction Company. These shops have just been completed and it is now possible to present some interesting features of their construction.

Anderson Shops Indiana Union Traction Company—North and West Elevation.

The lines of the Indiana Union Traction Company comprise a group of divisions in Indiana:

Indianapolis via Marion to Wabash, Ind.
Indianapolis via Anderson to Muncie, Ind.
Indianapolis via Kokomo to Peru, Ind.
Indianapolis via Peru to Ft. Wayne, Ind.
Muncie via Hartford City to Bluffton, Ind.
Muncie via Winchester to Union City, Ind.
Anderson to Middletown.
Connecting lines from Alexandria via Elwood to Tipton, Ind.

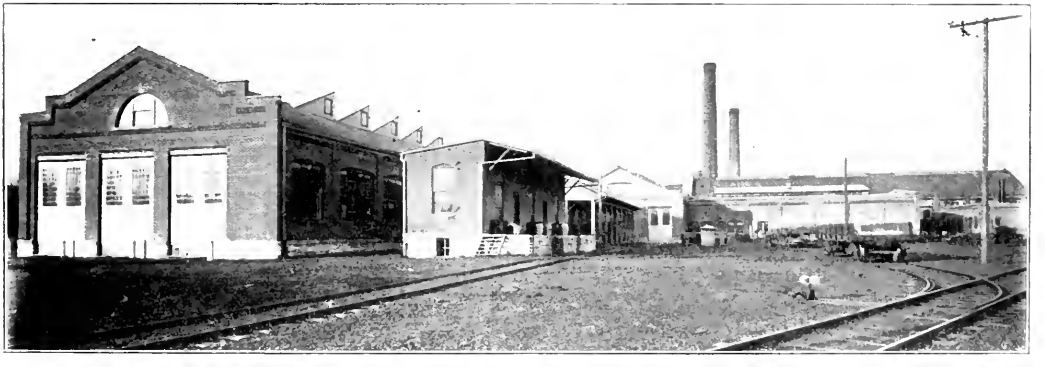
This company also operates the city lines of Anderson, Muncie, Marion, Elwood, Alexandria and Indianapolis to Broad Ripple. This gronp of divisions includes a system of 314 miles of interurban track and 47 miles of city track, making a total mileage of 361. The total number of cars owned is 351.

The main power house of the company is located at North Anderson. This is very nearly the geographical center of the system and as the company owned the property adjacent to the power house it was decided to locate the shops at this point.

The site selected was of triangular shape, of ample size for the shops, storage yards and tracks necessary to serve the shop requirements, with ample provisions for future extensions. It will be observed from the accompanying plan that the general outline includes a building practically under one roof, but subdivided into various departments so as to form a series of adjoining buildings designed for various purposes. The buildings cover an area of 76,920 square feet.

Track Arrangement.

It will be noted on the plan that the track arrangement provides a combination of stub and through tracks in the various departments of the shop, each shop department being provided with one or more through tracks. At the north end of the shop is a ladder track with necessary switches for the 18 tracks entering the building. Thirteen of the tracks are stub tracks and five are through tracks. On the west side of the building is the main line double track of the Anderson and Wabash division. The north end ladder track is connected to this by two curves and a crossover, making it possible for a car to enter or leave the yard on either track headed in either direction.



Anderson Shops Indiana Union Traction Company—South End, Exterior.

The north end ladder track being located 102 feet from the building allows the longest interurban cars to be entirely

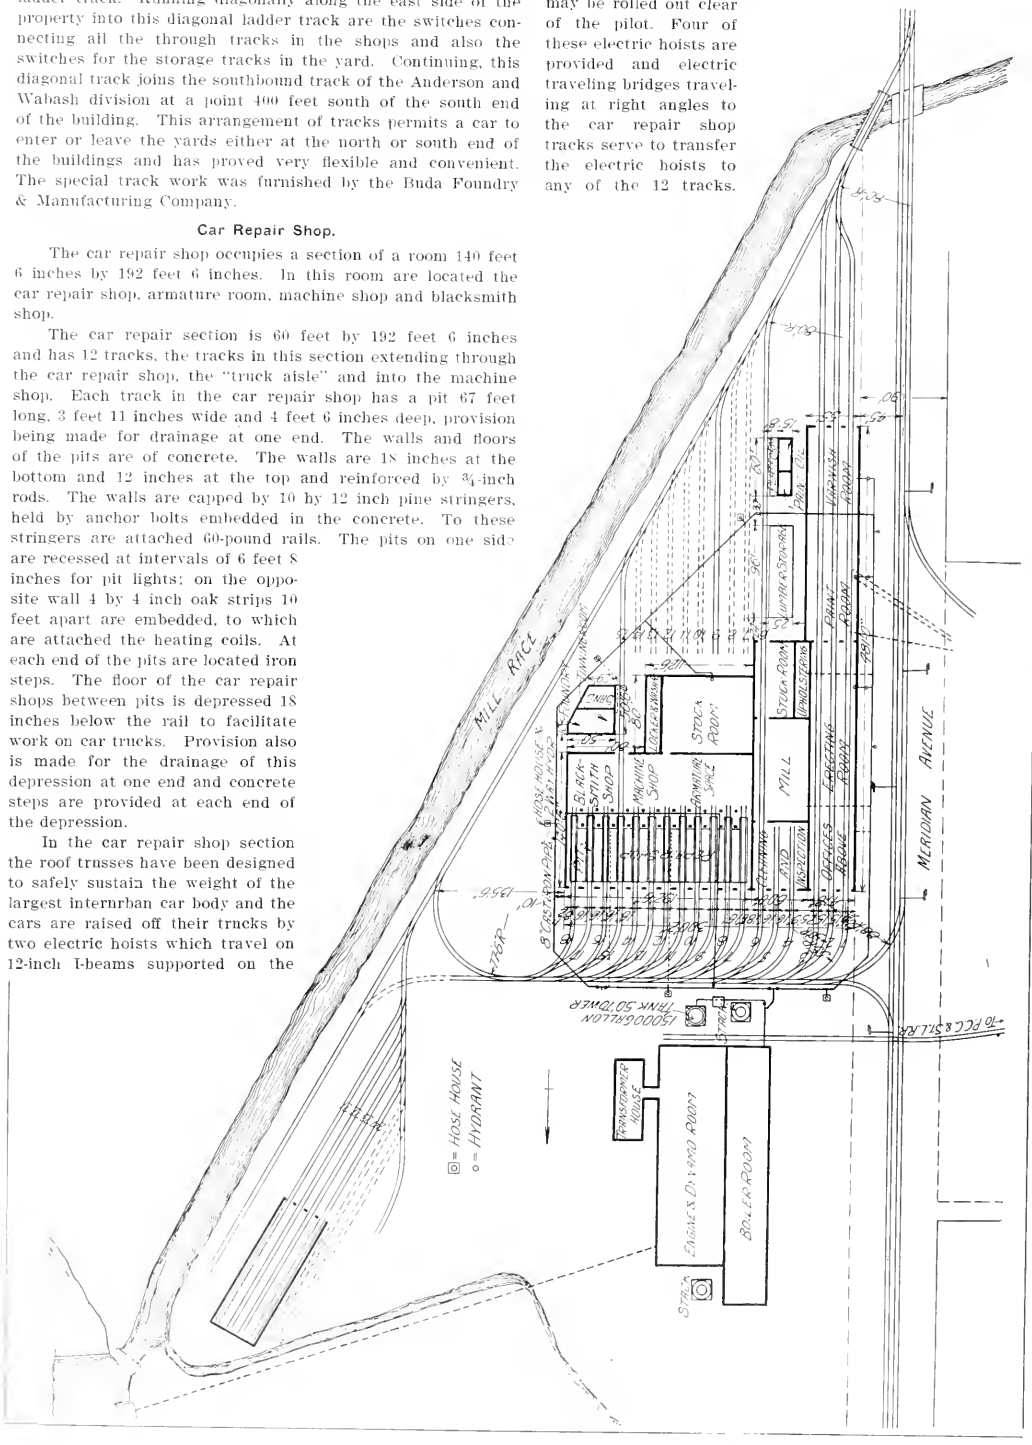
squared around, entering the buildings parallel with the track. The north end ladder track at the east end curves into a ladder track. Running diagonally along the east side of the property into this diagonal ladder track are the switches connecting all the through tracks in the shops and also the switches for the storage tracks in the yard. Continuing, this diagonal track joins the southbound track of the Anderson and Wabash division at a point 400 feet south of the south end of the building. This arrangement of tracks permits a car to enter or leave the yards either at the north or south end of the buildings and has proved very flexible and convenient. The special track work was furnished by the Buda Foundry & Manufacturing Company.

Car Repair Shop.

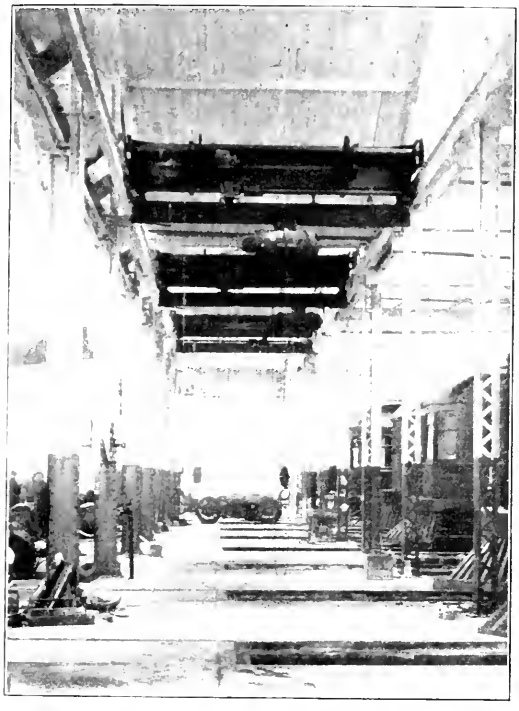
The car repair shop occupies a section of a room 140 feet 6 inches by 192 feet 6 inches. In this room are located the car repair shop, armature room, machine shop and blacksmith shop.

The car repair section is 60 feet by 192 feet 6 inches and has 12 tracks, the tracks in this section extending through the car repair shop, the "truck aisle" and into the machine shop. Each track in the car repair shop has a pit 67 feet long, 3 feet 11 inches wide and 4 feet 6 inches deep, provision being made for drainage at one end. The walls and floors of the pits are of concrete. The walls are 18 inches at the bottom and 12 inches at the top and reinforced by ¾-inch rods. The walls are capped by 10 by 12 inch pine stringers, held by anchor bolts embedded in the concrete. To these stringers are attached 60-pound rails. The pits on one side are recessed at intervals of 6 feet 8 inches for pit lights; on the opposite wall 4 by 4 inch oak strips 10 feet apart are embedded, to which are attached the heating coils. At each end of the pits are located iron steps. The floor of the car repair shops between pits is depressed 18 inches below the rail to facilitate work on car trucks. Provision also is made for the drainage of this depression at one end and concrete steps are provided at each end of the depression.

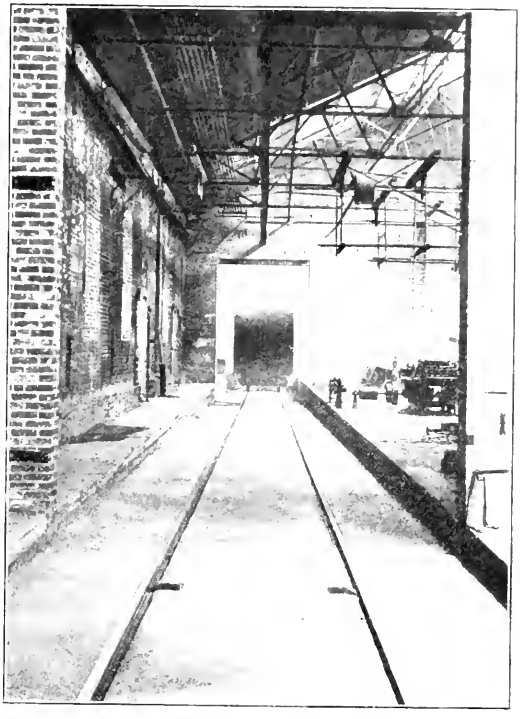
In the car repair shop section the roof trusses have been designed to safely sustain the weight of the largest interurban car body and the cars are raised off their trucks by two electric hoists which travel on 12-inch I-beams supported on the lower chord of the roof trusses. One of the photographs shows an interurban car raised high enough so that the trucks may be rolled out clear of the pilot. Four of these electric hoists are provided and electric traveling bridges traveling at right angles to the car repair shop tracks serve to transfer the electric hoists to any of the 12 tracks.



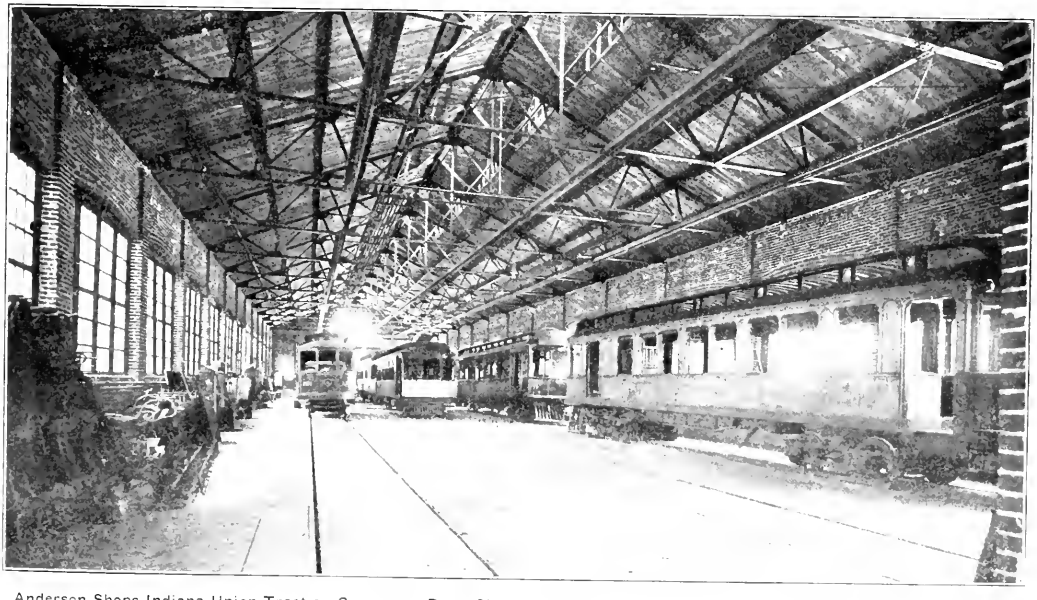
Anderson Shops Indiana Union Traction Company—Ground Plan of Shops and Yards.



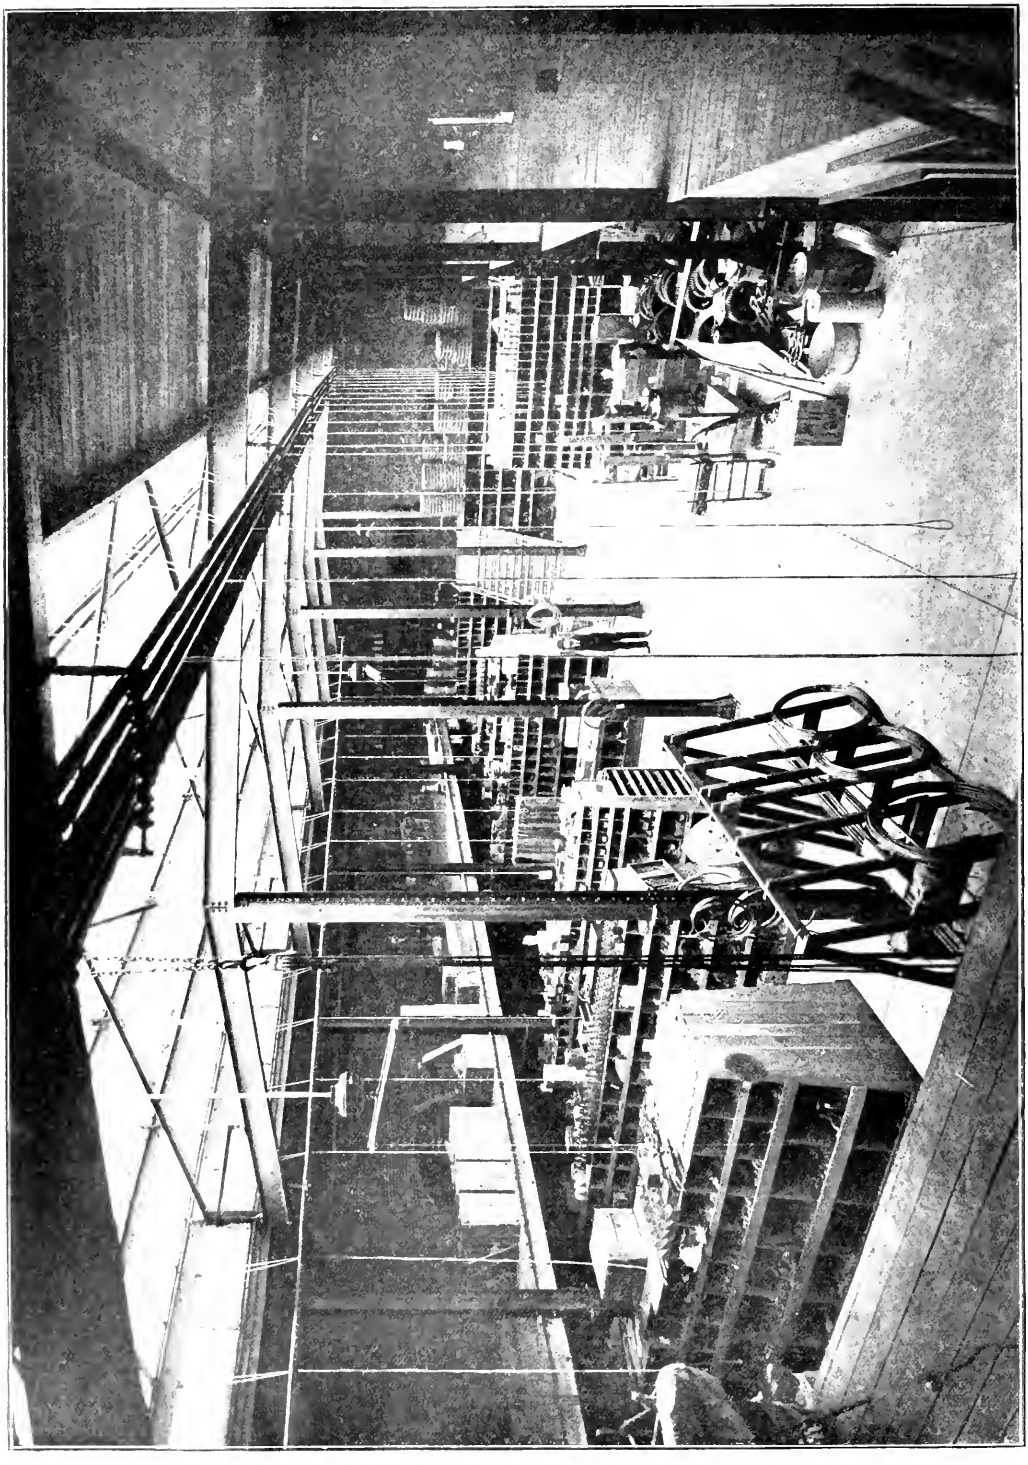
Anderson Shops Indiana Union Traction Company—Truck Aisle with Traveling Cranes.



Anderson Shops Indiana Union Traction Company—Depressed Track Through Storeroom.

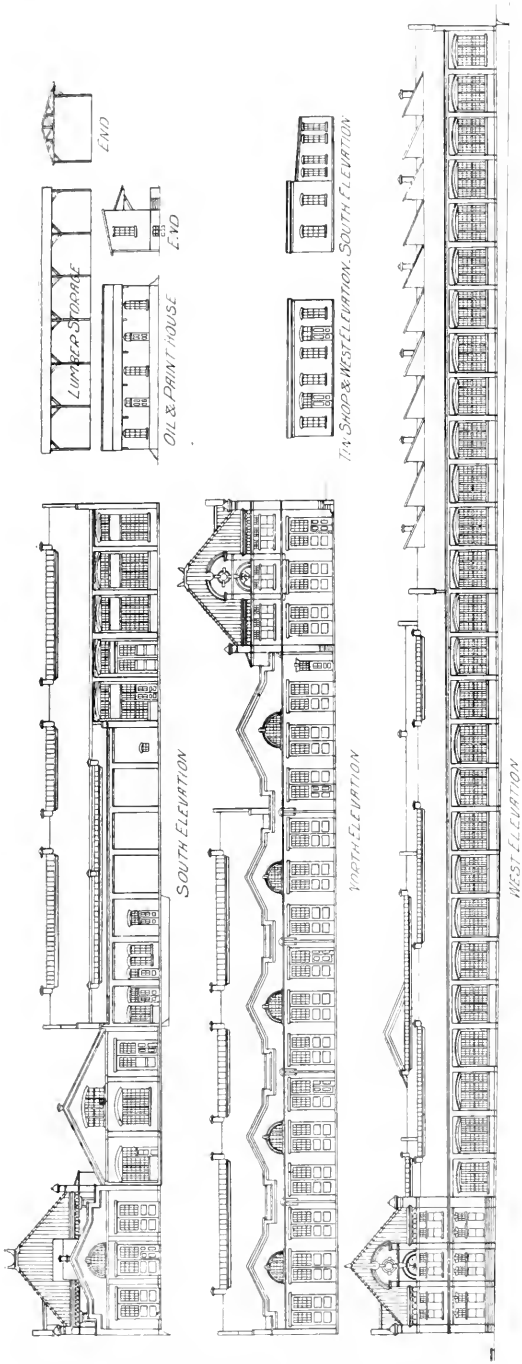


Anderson Shops Indiana Union Traction Company—Paint Shop with Three Through Tracks, a Concrete Floor and a Generous Window Illumination.



Anderson Shops Indiana Union Traction Company—General Storeroom.

These electric hoists in connection with the bridges are also used as traveling cranes to do any work in the "truck aisle" after the trucks have been removed from the cars. This design provides a very convenient and flexible arrangement, permitting the use of the hoists on any of the 12 tracks or anywhere in the truck aisle with a range of movement of 2,016 lineal feet.



Anderson Shops Indiana Union Traction Company—Elevations of Structures.

Truck Repair Aisle.

The truck repair aisle, 16 feet by 192 feet 6 inches, as already indicated, is adjacent to and at right angles with the repair shop section. When trucks are removed from cars they may be repaired in this aisle, which is served by three 5-ton 16-foot span traveling cranes, or they may be rolled out in the shop still further and come under the 15-ton traveling crane which covers the machine shop, armature room and blacksmith shop.

Machine Shop.

The section occupied by the machine shop, blacksmith shop and armature room is 60 feet by 192 feet 6 inches. In this section there are three separate sections of motor-driven line shafts arranged along two walls just under the traveling crane girder. As many of the tools as may be arranged are driven from these line shafts and the balance of the machine tools by individual motors.

The machine tool equipment consists of:

One 32 by 32 by 120 inch heavy Cincinnati planer, 12-horsepower motor.
One 36-inch by 10-foot Bradford lathe, belted.
One 24-inch by 8-foot Bradford lathe, belted.
One 14 by 6 inch Lodge & Shipley lathe, belted.
One 24-inch Cincinnati shaper, belted.
One 42-inch Niles wheel lathe, 12-horsepower, motor-driven.
One 200 Niles wheel press, belted.
One 36-inch Niles boring mill, belted.
One 24-inch Cincinnati drill, belted.
One 20-inch Cincinnati drill, belted.
One Barr sensitive drill, belted.
One Barnes sensitive drill, belted.
One 2½-inch Acme bolt cutter, belted.
One power metal saw, belted.
One power hack saw, belted.
One coil taping machine, belted.
One field taping machine, belted.
One banding machine, belted.
One Beaudry power hammer, belted.
One exhaust fan, belted.
One blower, belted.
Four Buffalo down draft forges, belted.
One 15-ton traveling crane.
Three 5-ton traveling cranes which were furnished by the General Pneumatic Tool Company, Montour Falls, N. Y.

The arrangement of several departments in one room under the range of traveling cranes has proved very satisfactory, as any part of an equipment may be readily transferred to any department or to any of the tools of any department at the minimum cost.

In a separate room, 16 by 80 feet, is provided a convenience room for the employes of the main shop. This includes toilet facilities, washstands, shower baths and steel lockers.

Cleaning and Inspection Room.

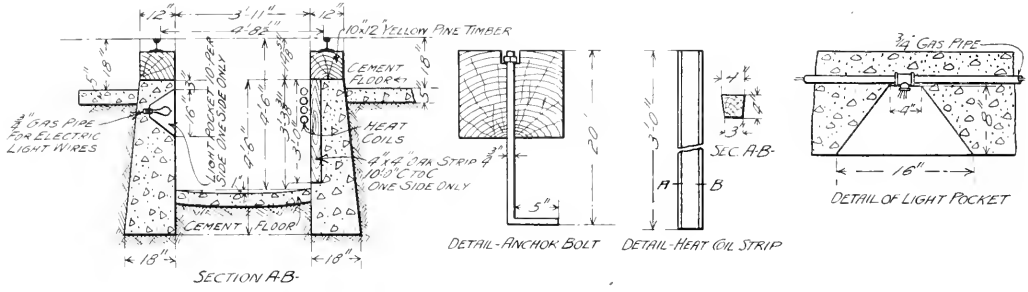
This room is 60 by 70 feet in floor area and has three tracks. Two of the tracks have pits 60 feet long, of the same general dimensions and description as the pits in the car repair shop, with the exception that the rails in this room are laid directly on the concrete walls of the pits. This room was especially arranged for the cleaning and sterilizing of interurban cars and the care of the Anderson city cars. There is an installation of a combined air pressure and vacuum cleaning device for cleaning the interior of cars, seats and cushions and for washing the exterior of cars. This installation was supplied by the General Compressed Air & Vacuum Machinery Company, St. Louis, Mo.

Woodworking or Mill Room.

The wood mill is 60 feet by 103 feet 6 inches and has a through track on one side from which lumber may be handled directly from the company's own cars or from steam railroad cars. The arrangement of woodworking tools has been care-

fully laid out so that timbers of the longest dimensions may be handled on any of the machines without interference. In this room the following machines have been installed:

One 8 by 24 inch 4-cylinder surfacer.
One 4 by 8 inch molding machine.
One 2-spindle shaper
One 4-head tenoner.
One combined mortising and boring machine.
One combined jig saw and single-spindle shaper.
One brand saw.



Anderson Shops Indiana Union Traction Company—Details of Repair Pits.

One cross-cut saw.
One rip saw.
One universal woodworker.
One wood lathe.
One automatic knife grinder.

These machines are driven by Westinghouse induction motor.

Storeroom.

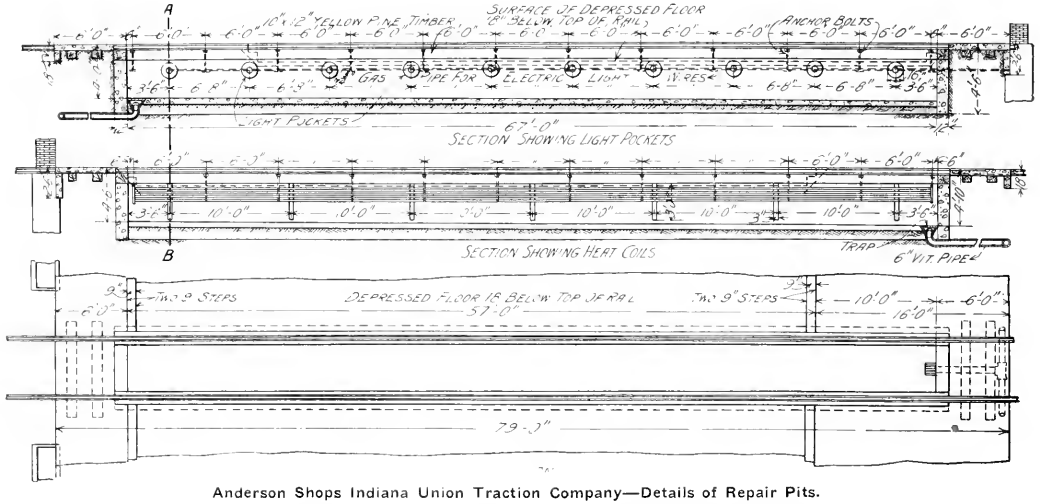
The storeroom is divided into two rooms. One room, 80 feet by 96 feet 6 inches, where general supplies are stored, has a mezzanine gallery around its four sides for the storage of lighter material. This room is located adjacent to the car repair room and supplies are issued through one door on requisition only. The other storeroom, 81 feet 6 inches by 60 feet, is adjacent to the main storeroom and is intended for the storage of heavy material, such as track and line material. A through track, depressed so that the floors of loaded cars are level with the storeroom floors, passes through this building and supplies may be handled from this track to either storeroom. A loading platform also is arranged to facilitate the delivery of material to the storeroom by team.

Car Construction Shop.

This shop is 54 by 260 feet and has three through tracks, which pass directly from this shop to the paint shop in the same bay. This shop is arranged to accommodate 12 of the largest interurban cars.

The paint shop is 221 by 54 feet and has three tracks. It is separated from the car construction shop by a brick fire wall, the openings being fitted with three self-closing Kinnear rolling doors. Special attention has been given to the lighting of the paint shop, light being admitted from both sides and by saw-tooth monitors to the middle track. The interiors of all shops have been painted white, giving the benefit of the reflective effect of whited walls.

A separate brick building, 15 by 60 feet, has been provided for the storage of inflammable fluids, the oil and paint storage rooms being separated by a solid fire wall. It is planned to transfer journal and motor oil from the oil house to the car repair shop by air pressure, so that oil may be tapped from faucets located in the car repair shops.

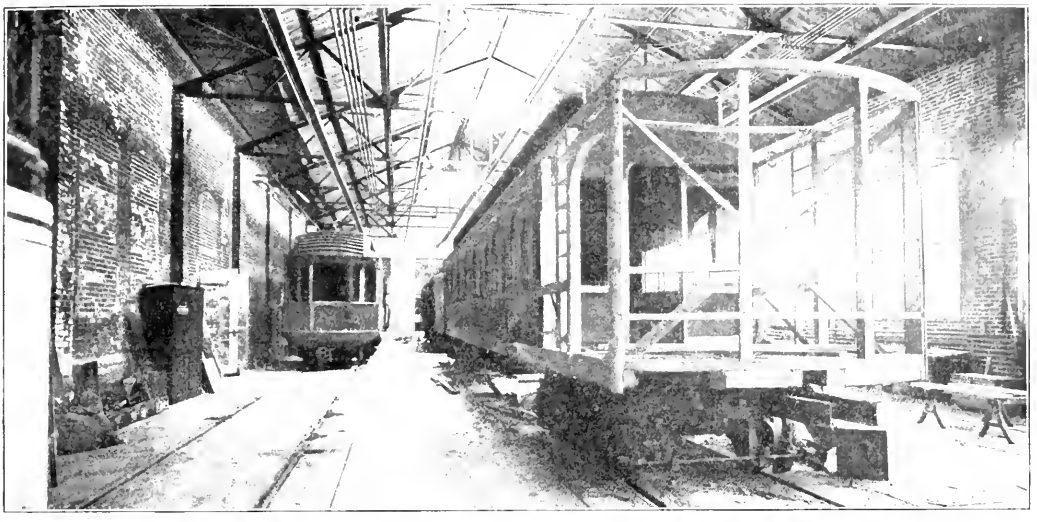


Anderson Shops Indiana Union Traction Company—Details of Repair Pits.

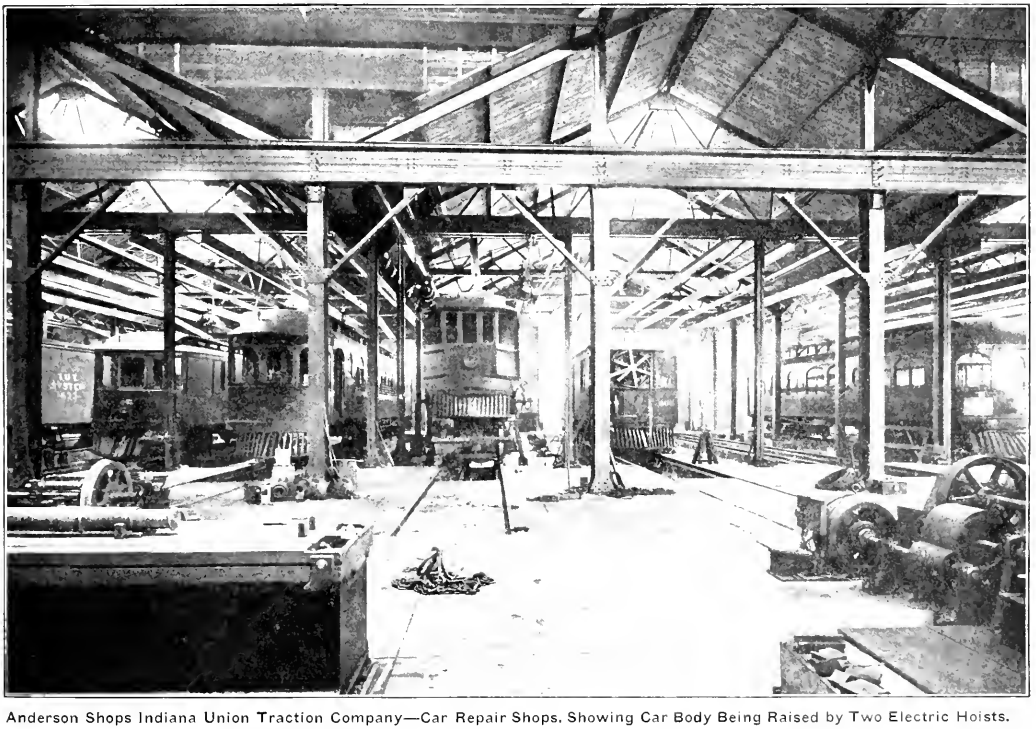
Brass Foundry and Sandhouse.

In a building separate from the main building is located the brass foundry and babbitt room, tinsmith shop and sandhouse. The brass foundry has two furnaces and a full equip-

ment of brass foundry tools. The sandhouse is located with one through track on the west side and one stub track on the east side, so that the wet sand may be handled from freight or work cars and dry sand furnished to the cars conveniently. The scheme of drying sand is very simple and inexpensive. A 20-inch cast-iron pipe is arranged as a rubbish furnace for the purpose of burning up all refuse, chips and rubbish which necessarily accumulate around a shop. Over this cast iron pipe is placed a sand hopper which holds 25 yards of wet sand. The refuse is fired in the inside of the cast-iron pipe and the sand is dried by the heat thus generated.



Anderson Shops Indiana Union Traction Company—Car Construction Shop.



Anderson Shops Indiana Union Traction Company—Car Repair Shops. Showing Car Body Being Raised by Two Electric Hoists.

At the northwest corner of the buildings a second story, 54 by 64 feet, provides accommodation for six office rooms and an instruction room. The roof of this second story is of orna-

mental tile, which adds to the architectural appearance of the buildings. The offices are occupied by the superintendent of power, division electrician, superintendent of motive power and master mechanic. The instruction room will be fitted with samples of the equipment used on the system, necessary charts, drawings, etc., for the proper instruction of trainmen regarding the important parts of an equipment handled by them in service.

Heating System.

The shops are heated by the Evans-Almirall system of hot-water heating. This system employs a forced circulation of hot water. The apparatus consists of a 20-horsepower induction motor directly connected to a centrifugal pump, a live steam heater and the pipe coils in the various buildings. The suction of the pump is connected to the return side of the system and the discharge of the pump to the pressure side. The reheater is connected on the circuit on the pressure side of the system. The pump and reheater are located in the power house, the water of condensation from the reheater being returned to the hot-water heater. It has been found that the pressure required to circulate the water in the system is 20 pounds and that the hot water loses but 20 degrees during the circuit in the coldest weather.

Lighting.

All departments of the shop with one exception are lighted with Cooper-Hewitt mercury-vapor lamps. These lamps are placed above the roof trusses in all rooms and give a soft, well-diffused light with very little shadow. They are arranged to burn six in series, on a 600-volt railway circuit, and thus arranged have given splendid service. Should any lamp in the circuit fail, the others may burn without loss of efficiency. On account of the rays in this light distorting colors the paint shop was lighted with incandescent arc lamps.

Although the shops have been built almost entirely of fireproof materials it was considered advisable to install an independent system of fire protection. The shops have been surrounded by a 6-inch water main with two and three way hydrants located at convenient points outside the building and a sufficient number of hose connections located in the various departments of the shops. Hydrants and hose connections are each furnished with a line of fire hose. Pressure is supplied by an underwriters' fire pump located in the power house.

The design and construction of the shops were under the general supervision of H. A. Nicholl, general manager of the Indiana Union Traction Company, and carried out in detail by W. C. Sparks, superintendent of roadway and buildings, and R. C. Taylor, superintendent of motive power.

CLEARANCE CHART FOR INTERURBAN CARS.

A clearance table and explanatory diagram from which the accompanying illustration was prepared were used during the construction of the Ocean Shore Railway. This interesting double-track railway from San Francisco to Vera Cruz, Cal., was described in the Electric Railway Review on page 124 of the issue of August 3, 1907. The chart and table become especially useful to construction engineers when the track work is complicated and close to permanent obstructions. It will be noted that this chart shows two cars on a double-track curve with a 90-foot center radius and 14-foot 6-inch track centers. The cars are placed in such a position that the clearance is at a minimum. The table includes the various assumed and desired dimensions of cars—50, 60 and 70 feet long, and 9 feet and 9 feet 8 inches wide.

Table and Sketch Showing Clearances and Overhangings of Two Cars on 90-Foot Center Radius Curve.

Frank L. Dye, a conductor on the Springfield-East St. Louis line of the Illinois Traction System, is reported to have invented a new form of sleet cutter which was recently given a trial with good results. The device consists of an extra trolley wheel placed in front of the ordinary wheel and having a corrugated groove which engages the ice on the wire.

EFFECT OF 2-CENT PASSENGER FARE LAWS ON INTERURBAN ELECTRIC TRAFFIC.

The Electric Railway Review has received replies to letters addressed to officials of electric interurban railways inquiring about the effect upon their traffic of the introduction of 2-cents-per-mile passenger fares on steam roads. These replies follow:

Ft. Wayne & Wabash Valley Traction Company.

C. D. Emmons, general manager Ft. Wayne & Wabash Valley Traction Company, Ft. Wayne, Ind.: "We do not think that the 2-cents-per-mile passenger fare law will have any effect upon our traffic, as our competing roads have already made a rate of practically $1\frac{1}{2}$ cents per mile in their competition with us, by placing on sale what is known as a twin ticket, which is good for two persons going in the same direction, good for a round trip or for two single trips in the same direction. This ticket is purchased almost exclusively by those using the steam roads, so that their fare is constantly nominally $1\frac{1}{2}$ cents per mile where they compete with us. The more frequent service of the trolley, which passes through the business districts of the various towns and is dependable as to closeness of schedule, will keep the traffic with us."

Kokomo Marion & Western Traction Company.

Thomas C. McReynolds, secretary and treasurer Kokomo Marion & Western Traction Company, Kokomo, Ind.: "The effect the 2-cent passenger fare laws will have upon the passenger traffic of the electric railways very much depends upon the distance the steam and electric roads are in competition and the facilities afforded by such roads in the handling of passengers. We operate between Kokomo and Marion alongside the Toledo St. Louis & Western Railroad Company. The steam road has made a material reduction in the fares charged between these points. It may be possible that we lose a very few passengers who are convenient to the railroad station and ready to go when the train goes, but outside of this I do not believe that we have felt the effects of the reduction in fares by steam roads. If the distances were greater between our two terminals and the service on the steam road superior to ours, we might feel the effect more. It is going to be difficult for the steam roads to attract much traffic from the interurbans so long as people can go and come at such frequent intervals as the service of the electric roads now permits."

Indianapolis Crawfordsville & Western Traction Company.

George E. Morine, general superintendent Indianapolis Crawfordsville & Western Traction Company, Crawfordsville, Ind.: "The 2-cent fares on steam roads had been in operation some little time when we started to operate our road, consequently it would be nothing but guesswork on my part to try and say what effect the 2-cent rate had on our traffic. We are competing from Crawfordsville to Indianapolis with both the Cleveland Cincinnati Chicago & St. Louis Railway and the Northwestern branch of the Terre Haute Indianapolis & Eastern Traction Company, but in the face of this competition we are building up a very fine business. I do not think the decrease in steam railroad fares to two cents will cause any reduction in fares on interurban electric roads, as most roads are now selling round-trip tickets for less than two cents per mile."

Indianapolis Columbus & Southern Traction Company.

A. A. Anderson, general manager Indianapolis Columbus & Southern Traction Company, Seymour, Ind.: "In my judgment the adoption of the 2-cents-per-mile fares by steam railways will affect the traffic of interurban roads on long hauls where the interurban rates are close to 2 cents per mile, but when rates of competing interurban roads average $1\frac{1}{2}$ cents per mile or less the local hauls will not be materially affected. I am quite sure the decrease in steam railroad fares to 2 cents per mile will not cause any reduction in the average fares of interurban electric roads."

De Kalb-Sycamore & Interurban Traction Company.

D. Thomson, general manager De Kalb-Sycamore & Interurban Traction Company, De Kalb, Ill.: "I do not think the 2-cent fare law will have any detrimental effect on our traffic whatever; we think it will help us because the increased traffic on the steam roads will bring in more people who can use our line to advantage. The writer is of the opinion that the 2-cent fare law will benefit interurban roads wherever it is adopted: (1) for the reasons mentioned above; (2) cheaper fares mean more passengers or that the same passengers will ride oftener, and the better the people become educated to ride (by steam or electric) the more benefit will the traction companies derive therefrom. With fares even between electric roads and steam roads, the advantage to the passenger is decidedly in favor of electric roads, not only on account of the frequent service and the ability to take the car at nearly every street corner, but principally on account of the lack of smoke, soot and cinders and because of the general cleanliness of the journey as compared with a trip on steam roads. Of course, this applies only to the electric roads that maintain good and frequent service and good speed. It is the writer's opinion that it is only a matter of time (and that time is very close at hand) when steam roads will be used for long-haul passengers entirely, the local business all passing to the electric roads wherever they are in successful operation."

Illinois Traction System.

L. E. Fischer, vice-president and general manager Illinois Traction System, Springfield, Ill.: "There is no doubt that the reduction of fare from three cents to two cents by competing steam railroad lines tends to decrease the earnings of interurban lines—how much we cannot now tell, because our properties have been generally increasing and therefore no comparison is possible. The effect is probably at a maximum now, as the development of interurban traffic will lead to the establishing of service equal in all respects to steam railway service."

Evansville Suburban & Newburg Railway.

Gus. Mulhausen, manager Evansville Suburban & Newburg Railway, Evansville, Ind.: "As to the effect of the 2-cent rate law governing steam roads I am in a position to speak from experience, as we already have the 2-cent fare law for steam railways in effect in this state. On July 3, 1906, this company began operating an electric line on an hourly schedule between Evansville and Boonville, 18 miles. The rate of fare was based, as on our other lines, at two cents per mile, and rather than use pennies the 1-way fare was put at 35 cents and the round-trip fare at 70 cents. A steam line operating three trains in each direction per day between Evansville and Boonville was at that time charging three cents per mile on a mileage of 17 miles, the 1-way fare being 51 cents. Of course, we secured practically all of the business between Evansville and Boonville. The steam line operates two local freight trains per day on its line and our road operates two electric express cars in each direction per day. The rates on freight are identical on both lines, still we are handling 85 per cent of the less than car lot freight business between these points. When the new 2-cent rate law became effective the steam line, in order to conform with the same, changed its rate to 34 cents. We have never changed our rate and are still charging 35 cents, or one cent more than the steam line, and still continue to do practically all of the business between Evansville and Boonville. I do not believe that the 2-cent law will greatly injure electric lines because of the fact of their frequent operation, cleanliness and the advantage of their usual downtown terminals. I believe, with courteous treatment and the proper energy on the part of the electric railways, together with the advantage they have over steam lines in the way of accommodation, that their receipts will not be greatly decreased on account of a 2-cent rate law. I assume, of course, that the electric lines will not charge more than two cents per mile."

Cleveland Southwestern & Columbus Railway.

C. N. Wilcoxon, general manager Cleveland Southwestern & Columbus Railway, Cleveland, O.: "We do not find that the 2-cents-per-mile fare on steam roads has affected our earnings to any appreciable extent. We have made no changes in our rates of fare on account of the reduction in rates on the steam roads."

Cambridge (O.) Power Light & Traction Company.

D. W. Cameron, manager Cambridge (O.) Power Light & Traction Company: "The 2-cent fare law has not affected our passenger traffic. We changed our rate to the 2-cent rate when the law went into effect. Our line is about one and one-half miles longer to the point we reach than the steam line is, but we take care of practically all the traffic with hourly service."

Winnebago Traction Company.

J. P. Pulliam, superintendent Winnebago Traction Company, Oshkosh, Wis.: "The effect of the application of the 2-cents-per-mile rate by the steam lines on interurban traffic, in my opinion, will be determined largely by the frequency of the service given by the steam lines. The success of interurban lines has been due to the frequency of the service, together, of course, with the reduced rates as against the steam lines. The big factor, however, is the fact that interurban

cars run usually every hour, and in a great many cases oftener, whereas the steam line service will consist of two to four trains per day. With us one of our interurban roads has hard opposition from two steam roads which provide practically a 2-hour service as against one hour on our part. The steam line, of course, covers the distance more quickly, and, as under the new law the rate is the same, we have noticed a small decrease in our business as a result thereof. A factor that favors interurban roads, however, is the opportunity that passengers have to board the cars on the main streets and the fact that with most lines passengers can transfer to city roads without additional expense. I do not believe our loss will be permanent; on the contrary, the reduced fare will tend to increase the general traffic and we will secure our portion. We are considering a slight reduction in our interurban fares, but not entirely as a result of the change with steam lines, as we have thought for some time that a reduction would be advisable. With the constantly improving conditions surrounding the interurban service, the interurban road is the natural channel for local traffic, even if there is no difference in the rate."

Cleveland Painesville & Eastern Railroad.

J. Jordan, general manager Cleveland Painesville & Eastern Railroad, Willoughby, O.: "We have not noticed that 2-cents-per-mile fares on steam roads have taken any of our business, as our increase in traffic has been as great since the 2-cent law went into effect as it has been in years previous. The decrease in steam railway fares has not made any change in the fares on our road. We parallel the New York Chicago & St. Louis Railroad and the Lake Shore & Michigan Southern Railway from Cleveland to Ashtabula, and have very strong competition; if the 2-cents-per-mile rate on steam roads affected the interurban roads it would certainly show very plainly on our traffic."

Saginaw Valley Traction Company.

S. E. Wolff, vice-president and general manager Saginaw Valley Traction Company, Saginaw, Mich.: "We do not anticipate any adverse effect from the 2-cent passenger fare laws recently enforced against steam roads."

Detroit United Railway.

F. W. Brooks, general manager Detroit (Mich.) United Railway: "I do not believe the effect of 2-cent passenger fare laws upon our traffic will be to our disadvantage, because we have been and are now charging lower fares, the average being about 1¼ cents per mile. The frequency of the electric service is a convenience to the public, and if the reduction of the rates of steam railroads to two cents per mile stimulates travel for them, it is likely also to stimulate travel for the electric railways. The wisdom of establishing such low rates for both steam and electric railways may be seriously questioned in the years to come, because it may unnecessarily result in an impairment of the service."

Cedar Rapids & Iowa City Railway.

William G. Dows, president and general manager Cedar Rapids & Iowa City Railway, Cedar Rapids, Ia.: "I do not believe the 2-cent passenger fare law will affect our road in any other than a beneficial way. Under the statutes of Iowa electric interurban railroads are under exactly the same laws as the steam railroads. They report to the board of railroad commissioners, are assessed by the executive council, have the right of eminent domain and have the right to secure perpetual franchises in all cities and towns. The roads are classified in this state according to their earnings per mile per year; those earning $4,000 and over are obliged to charge two cents per mile. By reason of the fact that our railroad serves a territory not served by any other railroad, we will not be affected by any competition. The distance from Iowa City to Cedar Rapids via the Chicago Rock Island & Pacific Railway by either route is eight miles farther than the distance by our line and passengers are obliged to change cars, so that on a 2-cent basis we would still have the lowest fare. I do not believe that the decrease of steam railway fares to two cents per mile will cause any reduction in the earnings of electric railways. It is the frequency of service and the stopping to take on and off passengers almost anywhere that counts. The steam railroads would not be able to meet this condition, and consequently will not affect to an appreciable extent the traffic of electric railways."

Toledo & Indiana Railway.

H. C. Warren, general manager Toledo & Indiana Railway, Toledo, O.: "I can see no particular decrease in our earnings since the 2-cent fare law became effective. We parallel the air line division of the Lake Shore & Michigan Southern Railway the entire distance from Toledo to Bryan. I think that this law is a serious handicap to steam railroads, but on account of our hourly service and country stops we do not consider that the law is any particular detriment to us."

Toledo Urban & Interurban Railway.

Charles F. Smith, general manager Toledo Urban & Interurban Railway, Findlay, O.: "While 2-cents-per-mile fares have had some effect upon our through traffic, the effect is very slight for the reason that the service we give, namely, limited service every two hours and local service every hour, and the fact that people can go to and from Toledo considerably later in the night by electric roads than by steam roads, lead the travel to the electric lines."

Alton Granite & St. Louis Traction Company.

L. C. Haynes, president Alton Granite & St. Louis Traction Company, East St. Louis, Ill.: "I am not in a position to answer the question as to the possible effect of 2-cent fare laws for steam railways on interurban electric railway business from the point of view of actual experience, because our system will not be affected particularly one way or the other by the 2-cent steam rate. Only lines which are strictly interurban and operate for considerable distances will be affected, it seems to me, by this narrowing of margin between rates formerly charged by steam and electric lines. The accepted basis of local rates on interurban lines is, I think, very generally two cents a mile, and it goes without saying that if the steam roads carry passengers at the same rate the advantages of electric service will not include a lower rate of fare. The frequent service of electric lines, affording in almost all cases not more than hourly intervals between trains, and the superior conveniences offered by electric cars, which traverse in all cases the central business and residence portion of cities and villages through which they pass, will, I think, continue to give the bulk of local traffic, at least for distances inside of 50 miles, to the electric interurban lines, regardless of the fact that steam transportation may be had at the same price."

Indiana Union Traction Company.

H. A. Nicholl, general manager Indiana Union Traction Company, Anderson, Ind.: "We do not believe that the adoption of 2-cents-per-mile fares by steam railways will affect to any appreciable extent the traffic on electric railways. Electric railways will not reduce their fares on account of the 2-cent law; but, on the contrary, I believe that those charging under two cents per mile at the present time will increase their fares to as near two cents per mile as they consistently can."

Galesburg & Kewanee Electric Railway.

R. H. Hayward, general manager Galesburg & Kewanee Electric Railway, Kewanee, Ill.: "Prior to July 1, 1907, we had charged 20 cents one way and 30 cents for the round trip on our 9-mile interurban road between Kewanee and Galva, paralleling the main line of the Chicago Burlington & Quincy Railroad. On July 1, when the Burlington put into effect the reduced 2-cents-per-mile rate, which made its fare between Kewanee and Galva 16 cents, instead of 25 cents, we reduced our 1-way rate from 20 to 18 cents and discontinued the 30-cent round-trip rate. Since July 1 we have therefore been charging 2 cents more than the steam railroad, whereas before that time we had charged 5 cents less. Our earnings since July 1 have shown a normal increase and we believe that in our case, at least, the reduction in the steam railroad rate has had no appreciable effect on our earnings. We make 15 round trips daily between Kewanee and Galva, whereas the Burlington has but three trains one way and two the other between these two points. Whatever inclination the public might have to patronize the steam road on account of a lower rate is overcome by the superior service which we offer. In cases where the steam road offers service more nearly equal to that of the electric line the result might be different."

Grand Rapids Grand Haven & Muskegon Railway.

W. K. Morley, vice-president and general manager Grand Rapids Grand Haven & Muskegon Railway, Grand Rapids, Mich.: "I do not think the adoption of the 2-cents-per-mile rate by steam roads will affect to any appreciable extent the volume of traffic of electric railways; the frequent and convenient service of the electric roads will enable them to hold the business."

Dayton & Troy Electric Railway.

C. M. Paxton, general manager Dayton & Troy Electric Railway, Tippecanoe City, O.: "In answering your questions I can give you the experience of our line only and am not prepared to say what the effect has been on electric railways

generally. Our line is paralleled for its entire length by the Cincinnati Hamilton & Dayton Railway, which operates six or seven passenger trains each way daily and caters particularly to local travel, nearly all of its trains making local stops. Our rates of fare were met by this railway a long time prior to the passage of the 2-cent law and we did not feel the effect of the law when it was passed as a line might feel it which had been competing with a steam railway having a 3-cent rate in effect. I understand that a number of electric railways have found it necessary to readjust fares on account of the cheaper rates by steam, but in our case our loss, if any, was due to the fact that the law had the effect of advertising, in a most effectual manner, the equalization of steam and electric rates, whereas in the past the electric railways have enjoyed the benefit of the assumption on the part of nearly all travelers that electric railway rates were universally less than the rates in effect on steam lines."

Chicago & Joliet Electric Railway.

J. R. Blackhall, general manager Chicago & Joliet Electric Railway, Joliet, Ill.: "I do not know what effect the 2-cent passenger fare law will have upon the traffic of interurban electric railways in other parts of the state. So far as our road is concerned, the new law has had no effect on our traffic, as the fare on our interurban line between Joliet and Chicago was so much lower than the railroad fare that reducing the latter fare to two cents per mile still leaves the steam rate between Joliet and Chicago more than double our rate. Joliet is within the Chicago commutation zone, and the railroads have not changed the commutation rate since the new law went into effect, so we still have the same competition that we had in the past."

NORTHWESTERN ELECTRICAL ASSOCIATION.

The sixteenth annual convention of the Northwestern Electrical Association was held at the Hotel Pfister, Milwaukee, Wis., on January 15 and 16. There were about 75 members and guests in attendance. A meeting of the Wisconsin Electric and Interurban Railway Association was called at the same time and place for the purpose of appointing a committee to meet the railroad commissioners of the state of Wisconsin for a consideration of the subjects of a standard form of accounting and rate regulation. At this meeting a committee of two was also appointed to consider a revision of the constitution of the Wisconsin Interurban Railway Association so that it might be united in its work with the Northwestern Electric Association.

During the Wednesday afternoon session of the Electrical association the president appointed a committee of three to work with a similar committee of the Interurban association and the Wisconsin Gas Association in discussing with the state railroad commission the questions of uniform accounting and rate regulation. The other business of the association was of a formal nature.

The following papers and addresses were presented on Wednesday afternoon and Thursday: "Depreciation," by C. N. Duffy, comptroller Milwaukee Electric Railway & Light Company, Milwaukee, Wis.; "Central Station Load That Pays," by E. L. Callahan, electrical engineer, Chicago; "The Public's Debt to the Public Service Corporation," by W. R. Putnam, manager Red Wing Gas Light & Power Company, Red Wing, Minn.; "The Wisconsin Utility Law," by Neil Brown, member of the Wisconsin legislature; "Steam Notes on Small Turbine Plants," by J. L. Hetch, mechanical engineer North Shore Electric Company, Evanston, Ill.; "Electrical Notes on Small Turbine Plants," by C. W. Pen Dell, electrical engineer North Shore Electric Company, Evanston, Ill.; "Electric Lighting in Cities and Villages of 3,000 and Under," by Irving P. Lord, general manager Waupaca Electric Light & Railway Company, Waupaca, Wis.; "Single-Phase Alternating-Current Motors," by F. L. Kaufman.

Those of the papers of particular interest to the electric railway field are presented elsewhere in this issue. At the close of the Thursday afternoon session the members adjourned to visit the electrical show which is now being held at the Coliseum in Chicago.

Communications

JURISDICTION OF THE INTERSTATE COMMERCE COMMISSION OVER ELECTRIC RAILWAYS.

To the Editors:

I beg to acknowledge the receipt of your letter, in which you make some inquiries touching the jurisdiction of the interstate commerce commission over the electric railway interurban mileage of the country and also as to the application of the act to such carriers.

The act to regulate commerce as amended makes no distinction between roads operated by electricity and those operated by steam power. Nor has this commission at any time sought to make any such distinction. Section 1 of the act in express terms brings within its provisions all common carriers engaged in the interstate carriage of passengers or property by rail. And it has been uniformly the view of the commission that the act applies to electric roads as clearly and as fully as to those operated by steam when they are engaged in such interstate transportation. This question, in fact, came before the commission more than 10 years ago. In Willson v. Rock Creek Railway Company, decided on March 12, 1897, and reported in 8 I. C. Rep., 83, you will find the question fully discussed. In that case the defendant railroad company was operated by electricity. Its line ran partly in the District of Columbia and partly in the state of Maryland. The record showed that it was essentially a street surface road for the conveyance of urban and suburban passengers. The commission held, Commissioners Yeomans and Prouty dissenting, that it was subject to the provisions of the act to regulate commerce. So far as I now recall the commission has never departed from the principles there announced. Since the act was amended on June 29, 1906, the question has come before us informally on the correspondence of the commission and the same view has again been expressed. I do not understand that under the amended act there is any difference of opinion in the commission as to our jurisdiction over such companies when they are engaged in the interstate transportation either of passengers or of property.

The statement of your correspondent that the commission has jurisdiction over only about 20 per cent of the electric mileage of the country is probably based upon a misunderstanding by him of what is said on page 142 of the annual report of the commission just made to the congress. [An abstract of that part of the report which relates to electric railways is published elsewhere in this issue.—Eds.] An examination of our records had been made in the division of statistics and accounts in order to arrive at a rough estimate of the mileage of electric railways, the lines of which lie in more than one state. It was thought that about 20 per cent of the entire mileage belonged to such companies. You will observe, however, that the report at the point in question expressly states that the location of the physical property is not the final test of the jurisdiction of this commission. The test to be applied to electric railways in order to ascertain whether they are subject to the provisions of the act to regulate commerce differs in no respect from the test commonly applied to steam railroads in order to ascertain whether this commission has jurisdiction over them. Regardless of the physical location of either electric or steam railroads and whether their lines begin and end in the same state or not, if either is engaged in the transportation of property from a point in one state to a point in another wholly by rail or in connection with a water carrier under some arrangement for a continuous movement, the act applies in all its phases. That has been my view of the matter and I am quite confident that the same view is entertained by my colleagues.

Many interesting and important questions have arisen touching the question of the jurisdiction of the commission

over electric lines, all of which are having careful consideration. But the fact that the motive power is electricity has no relation to or any bearing upon the proper solution of these problems. Their solution will depend, as would be the case were the roads in question operated by steam, upon the manner in which the transportation is actually conducted and whether it is in fact interstate transportation within the meaning of the act.

You make inquiries about the purpose of the commission with respect to prescribing a system of accounts for electric lines. The law contemplates that the commission will establish accounting systems for all the agencies of interstate transportation. And it is the purpose of the commission to promulgate systems of accounts for electric railways, similar, so far as may be, to the system prescribed for the steam railways. A comparison of the reports of steam railways, electric railways, water carriers, express companies and other agencies for transporting the commerce of the country, so far as the commercial and special physical conditions surrounding each form of transportation will permit such comparison, cannot fail to be of value. The basis of such comparison would not be complete if electric lines were omitted from the general accounting scheme which the commission has in mind. This becomes more important in the case of electric railways because their tendency is more and more to serve and become branch lines or feeders of the trunk line railways. Two cases are now on the docket of the commission in which electric lines seek the aid of the commission to compel steam roads to join with them in establishing through routes and joint rates. Lines heretofore operated by steam are now being electrified. Many electric roads are carrying freight not only in carloads but in trainloads, and are otherwise conducting exactly the same kind of transportation that is done by steam railroads. Obviously an accounting system that affords a basis of comparison between lines operated by steam and lines operated by electricity ought to be available, and this cannot be done without a uniform system of expense accounts for the electric lines.

JAMES S. HARLAN,
Commissioner Interstate Commerce Commission.

Washington, D. C., January 9, 1908.

Suggests Running Railroad Trains in New York Subways.

In applying to the board of estimate for permission to increase the dimensions in the original plans for the Brooklyn Fourth avenue and the bridge loop subways, the New York public service commission suggests that the subways be built so as to accommodate the trains of the New York Central and New York New Haven & Hartford railroads, in case it should be found desirable to run such trains through the subways at any time in the future. It is proposed to increase the headroom from 13 feet 6 inches to 14 feet and also to do away with several grades which exist in the original plans. It is thus evident that the commission has in mind the possibility of the railroads becoming bidders for subway routes in competition with the Belmont interests, who are now the only logical bidders. The new subway route on the east side which the commission proposes to build could easily be made to connect with the New Haven road at Mott Haven, so that the latter's electric trains could be run over to Brooklyn or through the bridge loop to the Brooklyn bridge.

On January 1 the Cape Fear Power Company began the distribution of electric power to Fayetteville, N. C., from its water power electrical plant at Buckhorn Falls, on the Cape Fear river, 35 miles distant. This plant represents an expenditure of about $500,000, and is prepared to furnish abont 4,000 horsepower, 3,000 of this being guaranteed for 24 hours every day of the year. It is stated that surveys of the river three miles below the present plant indicate a possible development of 18,000 horsepower.

A SINGLE-PHASE RAILWAY MOTOR.*

BY E. F. ALEXANDERSON, ELECTRICAL ENGINEER GENERAL ELECTRIC COMPANY.

The various siugle-phase railway motors which have been developed dnring the past few years have been styled in general as either repulsion or as series motors.

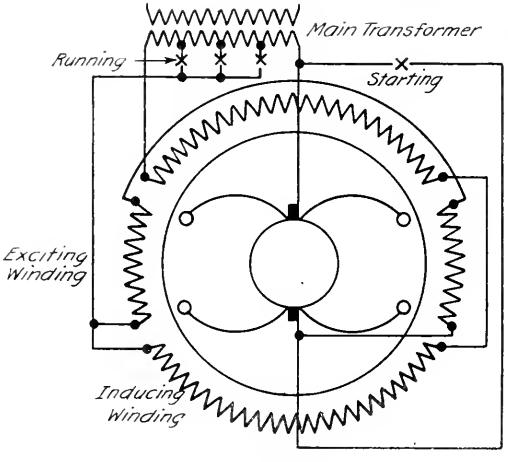
The most prominent types of single-phase railway motors which have found commercial application are:

1. The compensated repulsion motor (Latour-Winter-Eichberg). This motor has a short-circuited armature and an extra set of brushes for prodncing compensation, with a view to obtaining a higher power factor.

2. The compensated series motor (Eickmeyer-Stanley-Lamme).

3. The compensated series motor with shunt excited commutating poles (Milch-Richter). In this motor a commutating field is produced locally by coils in the stator.

The motor to be discussed in this paper is neither a series nor a repulsion motor in the generally accepted sense, but embodies the best features of both. For lack of a better name it may be called a "series-repulsion" motor. The windings resemble those of a series motor and the armature and stator are permanently connected in series. A general diagram of the motor is shown in Figure 1. The terminal voltage of the series-repulsion motor can be selected with greater liberty



The Series-Repulsion Motor—Figure 1.

than in a series motor, but not so arbitrarily as in the case of a repulsion motor.

Its advantages over the straight compensated series motor are very marked. The commutation is so radically improved that resistance leads are unnecessary and it is feasible to build the motors in larger capacities.

In its performance it resembles the series motors with commutating poles, but offers several distinct advantages over the same. Instead of producing a commutating flux locally by coils on the stator, the conductors in the armature are located in places where the desired flux will natnrally exist. This arrangement simplifies the stator winding considerably. The compensating winding of the series motor is replaced by an inducing winding with twice as many turns, and the energy is introduced either in the stator alone or in the stator and rotor together. By this arrangement the starting torque is doubled for the same commutation and the same supply of current.

In the compensated repulsion motor the commutating field becomes too strong as soon as the speed appreciably exceeds synchronism, unless special arrangements are made to suppress this field locally. The motor under consideration is not limited by the synchronous speed, as the repulsion motor feature is reduced at the high speeds, and its action follows more closely the performance of a series motor; the number of poles can therefore be selected with the same liberty as in a series motor. This is of great importance for the motor characteristics, particularly in regard to weight and starting

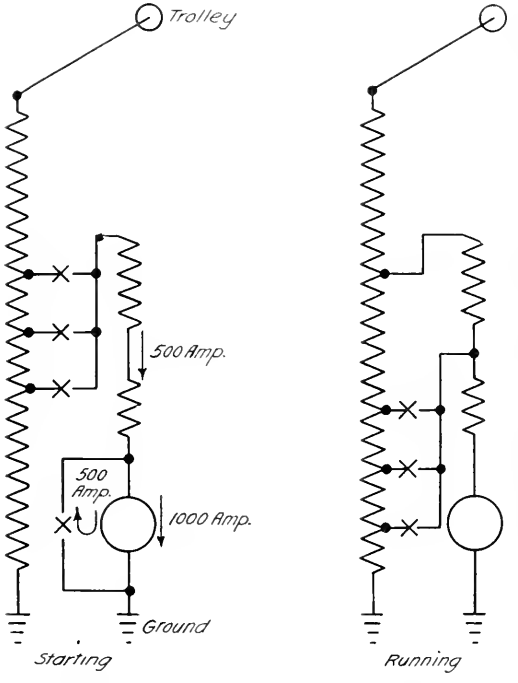
*Abstract of paper presented before the American Institute of Electrical Engineers, New York, January 10, 1908.

torque. Furthermore, no extra set of brushes, nor any series transformer, is required, which makes the motor equally well adapted for direct and alternating current.

Starting.

The starting of a single-phase motor is materially handicapped by the fact that the alternating nature of the main field sets up currents in the armature coils which are short-circuited by the brushes. This same difficulty is experienced in all known types of single-phase commutator motors. Although the principle involved is the same in the motor under consideration, the practical result gained by the arrangement employed is a starting torque twice as high as would be possible in a corresponding series motor for the same commutation and the same supply of current.

This double starting torque is obtained by winding the stator with twice as many turns as the armature. The motor starts as a repulsion motor with the armature short-circuited, as shown in Figure 2. The current as it enters the stator has only half the strength of that in the rotor, owing to the ratio of stator to rotor turns. The short-circuiting switch of the rotor



The Series-Repulsion Motor—Figures 1 and 2.

carries only half as much current as the rotor itself, because the current in the short-circuited connection is only the difference between the stator and the rotor current. The inducing winding, the field and the armature are connected permanently in series; but with the connections shown the field is in series with the stator circuit at starting and with the rotor circuit when running. In starting the rotor carries twice as much current as when running, in order to give the same field strength—in this manner doubling the starting torque.

Features of Operation.

In regard to the practical application of the system it may be mentioned that several 4-motor equipments for alternating and direct current have been in operation for some time. The alternating-current control equipment has a total of seven contactors and a reversing switch. This gives four points on the controller, which seems quite satisfactory for motor car operation, though any number of steps can be added to take care of locomotive operating conditions.

The preferred method of control is the one shown in Figures 2 and 3. In starting the armature is short-circuited and the full secondary voltage of the transformer is impressed upon the inducing and exciting windings. The current flowing through the stator continues through the armature, but due to the ratio of turns of inducing winding and armature winding, an additional current of equal strength to the stator current flows through the local circuit of the armature and the short-circuited connection. In the running connection part of the power is introduced in the stator and part in the rotor, and the field winding carries the same current as the armature; that is, twice the stator current, thus giving a relatively greater field strength than in the starting condition, just as it would be produced by a series-multiple connection of the field winding.

Although the total potential impressed upon the stator and rotor is the same for starting and running, the result of changing the connection so as to transfer the energy input from the stator to the rotor has the effect of increasing the resulting voltage of the motor. This is due to the ratio of transformation between stator and rotor. In this manner a higher speed is obtained by impressing a higher resulting voltage, and the same change of connections makes the motor adapted for a higher speed by changing the ratio of series and repulsion motor action.

The only motor that has an inherent claim on unity power factor is the direct-current motor. In every alternating-current motor a certain amount of wattless volt-amperes is consumed in magnetizing the field, and in leakage, so that the maximum torque is limited to a lower value than it is with the direct-current motors. An alternating-current motor with inherently good power factor is one with high overload capacity, and this must be due to a comparatively small proportion of volt-amperes being consumed for magnetization. There are, however, artificial methods of bringing the power factor of the alternating-current motor up to unity.

Resistance Leads.

The use of resistance leads, which has been so much discussed, has been found to be unnecessary in motors of the type described. Certain motors which have been operated for a considerable time as series motors, and then rewound so as to embody the features described in this paper, have shown an increased life of brushes and commutator up to the standard of good direct-current practice. The improvement in commutation was so great that it was possible at the same time to increase the thickness of the brush and the output of the motor.

Selection of Frequency.

In regard to choice of frequency the series-repulsion motor again gives greater liberty. Whereas the starting torque can be doubled on either 15 or 25 cycles, it may be mentioned that a series motor which was almost inoperative at a certain load at 25 cycles, after rewinding, as described, was tested as a series-repulsion motor and found to give excellent commutation at 40 cycles at the same load. It can therefore be said in general that 25 cycles is entirely satisfactory for all geared motor work; it is preferable in that the combination of motor and transformer weighs less at 25 than at 15 cycles.

Economy of Material.

The motor described can be built in larger capacities than the series motor. The principal reason for this is the inherently good commutation and increased starting torque which make resistance leads unnecessary, thereby eliminating the heat generated by the resistance leads, and also gaining space in the slots, which can be used for copper. Furthermore, it is possible to increase the flux per pole without impairing the commutation.

The fractional pitch winding which is used primarily for the sake of commutation is also advantageous from the point of view of economy of material. The fact that the number of poles in the series-repulsion motor can be selected without regard to the synchronous speed is an important consideration.

In summing up the preceding the particular advantages of the motor described may be claimed to be:

1. Good commutation at all speeds without the use of resistance leads.
2. Larger capacities possible than with the series motor.
3. High tractive effort possible, due to the liberty of selecting the number of poles.
4. Increased starting torque, possible because of the inherent ratio of winding turns, without supplying an increased current from the main transformer.
5. Simplicity of construction. The stator is the same as in the series motor, in fact easier to construct due to the greater liberty of placing the field winding in slots. The armature is constructed according to standard direct-current practice with the conductors soldered into the commutator bars.
6. Equally applicable to direct and alternating current.

THE NEW HAVEN SYSTEM OF SINGLE-PHASE DISTRIBUTION WITH SPECIAL REFERENCE TO SECTIONALIZATION.*

BY W. S. MURRAY, ELECTRICAL ENGINEER NEW YORK NEW HAVEN & HARTFORD RAILWAY.

The method and distance chosen for sectionalizing the high-tension wires supplying power for alternating-current traction is worthy of careful consideration.

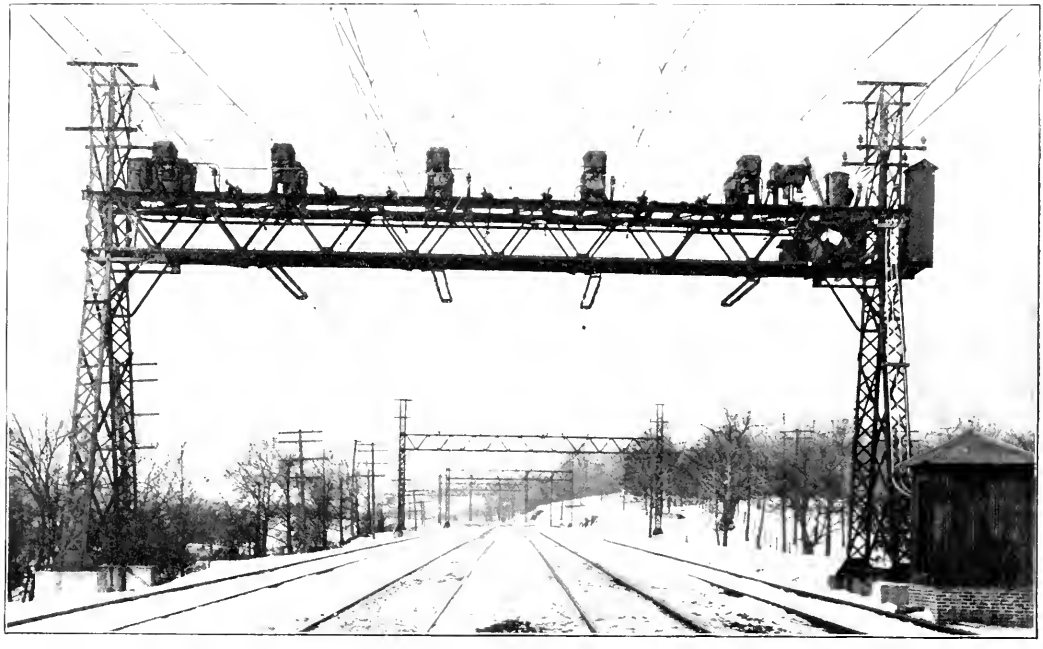
There is shown diagrammatically the actual scheme of single-phase distribution which was adopted and is now in service on the New York New Haven & Hartford Railroad. It comprises 11,000-volt three-phase generation transmission along the right of way at this voltage, only one phase being applied to all sectionalized trolley wires throughout the zone of electrification. The three phases are also carried throughout the electrification zone, and are at all points available for polyphase motors, such as would be used in railway machine shops and for the operation of motor-driven generators in local direct-current railway plants owned by the railroad company.

A modification of this arrangement which was considered may be mentioned; namely, 11,000-volt three-phase generation, single-phase distribution for traction with step-down transformers distributed along the line, their secondaries furnishing 3,300 or 6,600 volts to the sectionalized trolleys. For the reason that the life hazard in using 11,000 volts was not considered to be greatly increased over that of 3,300 or 6,600 volts, and in view of the higher efficiency, lesser currents to be collected by locomotive shoe contacts, greater reliability and the lower operating costs (no transformer substations), the advantages of the 11,000-volt direct transmission to the sectionalized trolleys was immediately apparent, and the problem became simply one of insulation.

As concerns the choice of three-phase generators in connection with single-phase distribution for traction purposes, again local conditions were the real factors that framed this conclusion. Single-phase or balanced polyphase voltages are undeniably more desirable than unbalanced ones; at the same time when proper allowance and arrangement are made for the unbalanced voltages, and there is a decided market for polyphase power, it is difficult to escape the conclusion that it is a desirable and necessary adjunct to the system. In connection with its application to the New Haven electrification, it may be said that synchronous motors will be shortly substituted for steam engines in one of our lighting plants. Such arrangements will bring about the centralization of power generation, and by proper field adjustment of the synchronous motors the general power factor of the single-phase system will be raised.

Sectionalization.

An examination of the electrical connections made in and on the power house, line and locomotives would bring out the strong similarity of the New Haven system to the well standardized, direct-current (not alternating-current-direct-current) system. In either case the path is from one busbar of the station to the feeder and trolley, thence to the locomotive and from there to the rail and return to the other station busbar.



New York New Haven & Hartford Single-Phase System—Anchor Bridge and Catenary Construction.

Single-phase distribution offers an excellent opportunity for sectionalizing. As may be seen in the diagram the system consists simply of the track trolleys, two auxiliary wires immediately adjacent, and the necessary switching complement. Although these auxiliary wires have been called feeder wires, and while, as a matter of fact, they do serve to increase the capacity of the overhead system, this is not their principal function, as the amount of copper included in the trolleys would suffice to be within the economic figures of copper loss. The auxiliary wires are installed to serve as by-passes, in the event of it being desired to cut dead any or all of the trolley wires in any section. Thus by this system of auxiliary by-passes any degree of sectionalizing can be used, and any or all trolley voltages in sections can be removed without interrupting the continuity of the voltages throughout the zone.

The lengths of sections are governed entirely by local conditions. No two sections of the 14 that exist in the 21 miles of New Haven electrification are the same. It is seen, however, from these figures that the average length of sections is 1.68 miles, that none of these is over 2.19 miles or less than 1.07 miles.

The best reason that can be assigned for the use of sections is in order that line troubles may be localized. There are many others, and some of a most important character. Indeed, it may be said that were the line absolutely immune from trouble, such as grounding, mechanical failures, etc., there would still be many good reasons for sectionalizing it, and these will develop as the subject is further studied.

*Abstract of a paper presented before the American Institute of Electrical Engineers, New York, January 10, 1908.

It will be noted that of the 14 electrical sections between Woodlawn and Stamford nine of these are co-terminous with the signal towers. In each of these towers there is installed a small panel containing the pilot switches controlling the trolley (and by-pass) circuit-breakers installed on the anchor bridges. Aside from the economical features of this scheme of control, as no operators other than our present signal operators are required, the value of placing the distribution in the hands of this class of men is most important, their constant attention to matters pertaining to the operation of trains brings about the attention which should be accorded to the distribution of current; their thorough understanding of the conditions of traffic on the various tracks permitting the most intelligent handling of electrified and de-electrified trolleys, assuring at once prompt and reliable service in the matter of handling a situation when crossovers have to be made on electrified tracks, and while repairs are being made on others from which the voltage has been removed. The value of placing the distribution system in the hands of the signal operators may be again illustrated by saying that should an electric train run past a stop signal set by the operator, or should the operator desire to stop a train in his block he has only to trip the pilot switch controlling the trolley circuit-breaker, from which the train is drawing its power, and signal the operator in the adjacent tower to do likewise. The individual value of this protective perquisite is an illustration of the use of sectionalizing outside of the question of line troubles.

As before stated, it is impossible to elect some standard distance for sectionalizing the line and then apply it to a steam road undergoing electrification. It is possible to conceive of an entirely new electric line subjected to this hypothetical course of procedure, but even in this extreme case it is difficult to escape the exceptions that could be taken to it; for example, what a strange coincidence it would be to find 50 towns just two miles apart along a railroad's right of way. On the other hand, how important each town would be whereat to locate a signal tower with its complement of electrical equipment.

In the discussion of sectionalization it would seem proper, therefore, instead of specifying the length of sections, to specify the number to be used over a given total distance, their individual length varying in accordance with the local conditions peculiarly related to them. Upon this basis it will be interesting to enumerate the following advantages and disadvantages peculiar to a choice of a "small number" and a "large number" of sections over a given distance. In this table it should be remembered that usually the items of advantage for the "small number" of sections will be items of disadvantage for the "larger number," and vice versa. Also it is assumed that the signal towers along the right of way average about $1\frac{1}{2}$ miles apart and that electrical sections of this length, or longer, will be classed as a "small number" and sections shorter than this will be classed as a "large number."

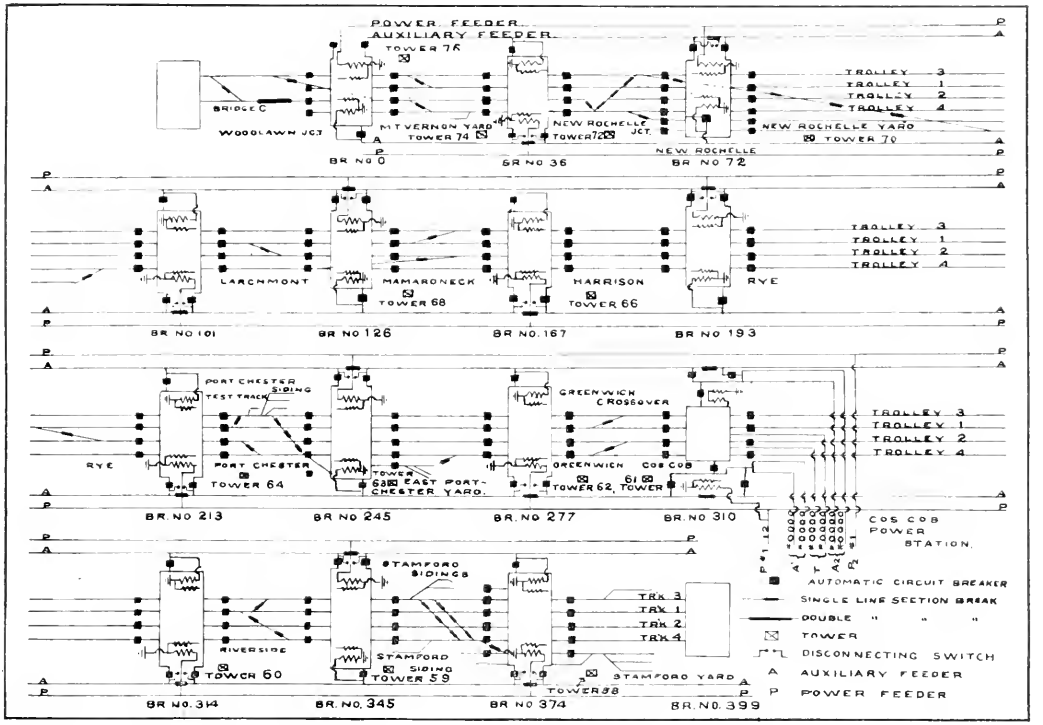
A tabulation of the advantages and disadvantages of the use of a "small number" as against a "large number" of sections is as follows:

Advantages.	Disadvantages.
1. Co-terminous tower scheme more easily arranged.	1. Difficulty of locating grounds increased.
2. Less switches to maintain.	2. Greater section of track cut dead in case of ground or other trouble. Disadvantage, however, related to crossovers.
3. More reliable, due to less frequent grounding of line.	3. Larger section breakers required.
4 Less cost.	

In advance of a discussion of the items in the above table it is fair to assume that convenience of construction of the apparatus required for either the long or short sections may be equated. That is to say, the work train service, in either case, would be about the same, and the structures to be put up of a character which would require much the same general superintendence and engineering.

In the case of the long sections it would, of course, be necessary to splice the messenger cables, as they could hardly be manufactured on single reels greater than two miles in length, but the splicing process would not be a matter of great inconvenience, and would not detract from the value of the cables.

On the other hand, in the case of the shorter sections a



New York New Haven & Hartford Single-Phase System—Diagram of Distribution System, Woodlawn Junction to Stamford.

greater number of anchor bridges would be required for the supply of sectionalizing switches, but this form of structure would not increase, to any extent, the difficulties of erection, or would the placing of apparatus upon them interfere with regular traffic.

Taking up the discussion of the above tabulation of advantages and disadvantages for the small number of sections versus the larger number, or, stated in another way, sections of greater length versus sections of shorter length, we note that under "advantages."

It would be a strange state of affairs if it were impossible to improve upon any principle or form of construction adopted. In regard to principles which have governed in the electrification and sectionalization as adopted by the New Haven road, I have found by careful inquiry into the opinion of those who are responsible for the operation of our electric trains and the distribution of currents to them, that if any change were to be made, possibly some advantages would accrue in the use of a longer section.

In regard to form of construction. It is fair to say that there are many changes that can be and are being made, which will greatly increase the efficacy of distribution. It is my observation that the New Haven electrification has been looked upon as a radical departure from engineering practice. There is no question about the justice of such a remark when viewing the matter as a whole. If, however, we segregate each link in the chain which forms the whole I believe it will be found that no one link is a particular departure from a practice that has existed many years. It has simply been the putting together of old principles into a new form. One exception can be made to this statement. The alternating-current railway motor is new, and yet an exposition of its characteristics, such as in its speed and torque curves, shows that within it the old underlying principles prevail. Its complements, the power house and line, involve no new principles that have not been tried out under various forms and conditions. A high-tension moving contact has nothing new or of a disturbing nature about it.

The last six months of operation have offered the opportunity for a collection of valuable data, and the following observations and recommendations are offered in the hope that they may be of some value to other engineers interested in the electrification of steam roads:

1. In one, two, three or four track railroads the single-phase distribution should include, besides the trolley wires, bypasses or feeders.

2. Electrical sections should not average less than 1.5 miles in length; greater averages are entirely acceptable and individual lengths should be governed by local conditions.

3. Twenty-two feet is a safe general working distance of trolley from rail.

4. The de-insulating effect of steam locomotive stack discharges is a most important consideration to be kept in mind in the matter of properly insulating high-tension wires from ground.

5. High-insulation factors should be used where high-tension construction due to low bridges is brought nearer the rails than the normal height of 22 feet. Strong mechanical shields should be used to deflect locomotive blasts from messenger insulators at low bridges. Care should be exercised in the installation of these shields so that high-tension conductors and ground are at safe working distance. Wherever possible insulators should be installed away from the direct line of the locomotive blast.

6. Auxiliary wires in connection with the electrification, if they cannot be carried over highway bridges as aerial conductors, should not be carried under, unless they are inclosed in lead-covered cables, with end bells properly inclosed in suitable housings at points where the conductors change from aerial to lead-covered cables.

7. All circuit-breakers connecting feed wires (or bypasses) to the trolley busbars should be equipped with time relays, so that any short-circuit will immediately open the trolley breakers, thus locating the trolley section grounded. Equipping the feeder breakers with time relays insures continuity of voltage on wires not affected by the short-circuit. Each trolley breaker pilot switch should be provided with a light to indicate when it opens, and an announcer bell should ring in the signal tower at the same time so that the operator is promptly notified.

8. On account of deleterious influences of weather and locomotive stack discharges, together with general inconvenience of getting at busbars and switches when installed on anchor bridges, all section oil switches should be installed in switch houses erected at the side of the tracks, with lead-covered cable connections between trolley and switches.

9. Signaling should be arranged so that the operator can prevent the engineer from spanning two sections by his locomotive shoes in the event of the advance section being grounded.

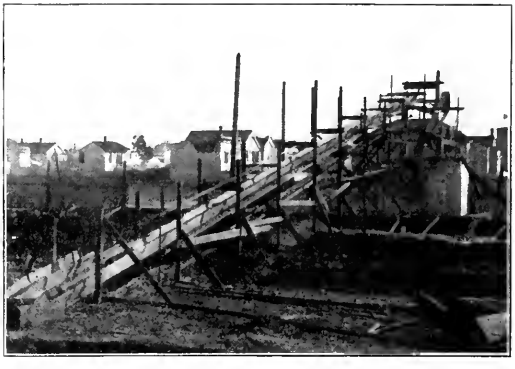
10. All signal towers should be interconnected with a reliable telephone service. Immunity from electromagnetic and electrostatic disturbance in the telephone system can be secured by using twisted wire pairs inclosed in lead-covered sheath, the sheath being grounded frequently. This suggestion is more particularly applicable to the interrupted or tower-to-tower telephone system. In this case the distance of exposures of the telephone wires is not great, and thus the summated effect of electromagnetic induction is negligible. In the case of the through telephone line where the circuit is uninterrupted throughout the zone of electrification, again the lead sheath and twisted pair are respectively effective in removing all static charges, and electromagnetically balancing the circuit; but on account of the cumulative action of the electromagnetic induction, either compensating transformers or a system of impedance coils installed across the telephone circuits at intervals of two miles (this distance may be less, depending on the electromagnetic density) with their central points grounded should be used. Either method will satisfactorily remove the impressed voltage due to electromagnetic induction. The importance of reliable telephone service between operating towers cannot be too greatly emphasized.

The above-mentioned are some of the fundamental requisites which design and practice have brought out in connection with the New Haven electrification. Design and practice are many times good friends, but if a difference of opinion arises practice will, in nine times out of ten, have the better of the argument. Experience, the great teacher, has brought out either the efficacy of the original design or the proper modification of it.

The observations and recommendations above cited are those that have been impressed upon the writer during the period of operation so far attained. Except for certain minor and easily remedied details, experience to date with the New Haven arrangement of single-phase distribution would indicate that the fundamental principles involved have been correctly applied.

A SIMPLE DIRT CONVEYOR.

About a year ago the San Francisco Oakland & San Jose Railway at Oakland, Cal., added a 1,000-horsepower unit to its Yerba Buena power station. To accommodate the new unit it



Key Route Power Station—A Simple Conveyor for Removing Dirt.

was necessary to make a considerable excavation in order that the engine room might be extended and a basement provided. In making this excavation a considerable economy was effected by the use of the simple dirt conveyor shown in the accompanying illustration. This conveyor comprised a V-shaped trough of wood in which operated an endless chain carrying scrapers. The chain was moved by a gear wheel driven through a belt connection with a railway motor installed in a sheet steel house under the high end of the conveyor. As the dirt was excavated it was dumped into the lower end of the home-made conveyor and carried by means of the chain scrapers in the trough to a waste pile 150 feet distant and entirely clear of the power station work.

DEPRECIATION.*

BY C. N. DUFFY, COMPTROLLER MILWAUKEE ELECTRIC RAILWAY & LIGHT COMPANY.

The public utility law of Wisconsin provides: "Every public utility shall carry a proper and adequate depreciation account whenever the commission, after investigation, shall determine that such depreciation account can be reasonably required. The commission shall ascertain and determine what are the proper and adequate rates of depreciation of the several classes of property of each public utility. The rates shall be such as will provide the amounts required, over and above the expense of maintenance, to keep such property in a state of efficiency corresponding to the progress of the industry. Each public utility shall conform its depreciation accounts to such rates so ascertained and determined by the commission. The commission may make changes in such rates of depreciation from time to time as it may find to be necessary."

What is "depreciation"? Webster's dictionary defines depreciation as: (1) The act of lessening, or seeking to lessen, price, value or reputation. (2) The falling of value; reduction of worth. (3) The state of being depreciated.

For the purposes of this paper depreciation will be defined as a "lessening of value," and the treatment of the subject confined to broad general questions, briefly touched upon, as applicable to the electric lighting business.

This "lessening of value" may be brought about, in so far as the physical property is concerned, from the following causes: (1) Deterioration due to the ravages of time and the effects of the elements. (2) Wear and tear incident to use. (3) Displacement by reason of obsolescence or supersession, resulting from the development of the art or the evolution of the business.

Deterioration.

Unquestionably the ravages of time and the effects of the elements will eventually cause physical property to deteriorate or disintegrate to such an extent as to render it valueless and unfit for use. From this there is no escape; it is as certain to come as the rising and setting of the sun, therefore it must be reckoned with in considering "lessening of value."

Wear and Tear.

"Wear and tear" of physical property resulting from use, sooner or later, in spite of "maintenance," unless maintenance is understood to include replacements and renewals, as well as repairs, will be followed by the "state of being depreciated," that imperceptible deterioration constantly going on, in addition to wear and tear incident to use. This will ultimately necessitate "replacements and renewals," the throwing away of the old and the installation of new, as a condition will be reached when "repairs" are no longer possible. In its relation to depreciation the whole question of maintenance, whether understood to cover "replacements and renewals," large or small, or restricted only to "repairs," is a most important factor for consideration. The measure and extent of depreciation of physical property are dependent, in so far as "wear and tear incident to use" is concerned, on the amount of "maintenance" expended in the physical upkeep of the property. This must be taken into account in providing for "lessening of value."

Displacement.

The "displacement" of physical property rendered obsolete because of the development of the art or the evolution of the business is a contingency that must be recognized and provided for.

Let us look backward, for a few years only, if you please, and consider the marvelous changes that have taken place in the types of generating station apparatus. The high-speed direct-belted units adopted as standards in early days in central station installations, notably New York Edison Company and Philadelphia Edison Company, were superseded by slow-speed multipolar generators, direct belted to Corliss engines. These in turn were superseded by generators direct connected to either horizontal or vertical engines, generating low potential direct current. The introduction of steam turbines developed high-speed alternating generators direct connected to turbines, supplanting all other types of generating apparatus and recognized as the standard of today. This standard of today may be superseded by the gas engine, as engineers recognize the possibilities of that prime mover supplanting all that have preceded it. Nor has the development of the art been confined to changes in types of generating station apparatus. For instance, open arc lamps have been superseded by inclosed arc lamps and various other changes and improvements have been introduced and developed.

The evolution of the business, with respect not only to the extent but to the varying character of the demands made for service, and likely to be made in the future, in this rapid age, is a feature that adds to the complications of the question, a feature most difficult indeed to forecast or provide for, and a most important element to consider in dealing with "displacement."

Mr. Gibbs, an eminent engineer who needs no introduction to this audience, in the case of "The People of the State of New York ex rel. the Third Avenue Railroad Company against State Board of Tax Commissioners," testifying as to radical changes that may be expected in the type of property requisite to the successful operation of electric railways of the future, said: "I never yet did a piece of work that extended over any considerable time but that when I got it done it was rather antiquated and had to be done over again; it is a new science."

Is anyone so bold as to say that the possibilities of the development, of the art or the evolution of the business, as applicable to an electric lighting system, have been reached? This must be dealt with in covering "lessening of value."

Determination of the Measure of Depreciation to be Provided For.

It is a difficult matter to lay down a fixed rule that will determine the measure of depreciation to be provided for and cover in a practical and satisfactory manner differences in conditions and the various factors to be considered.

The different types of apparatus installed and the methods of construction and installation followed, as well as the varying conditions surrounding the operation of different systems, make the problem an exceedingly hard one to solve, even if confined only to providing for depreciation resulting from the effects of "deterioration" and "wear and tear," independent of "obsolescence" or "supersession."

The determination of the measure of depreciation necessary to provide, by reason of "deterioration" and "wear and tear," can possibly, with some degree of accuracy and satisfaction, be arrived at; the effects of obsolescence and supersession, practically unknown quantities, judging by the history of the past, present a most complex question of the greatest importance and most far-reaching in its consequences.

The most correct and sound method to pursue would be to arrive at the estimated average life of the different kinds of physical property dealt with, determining this life on the basis of type, methods of construction and installation, as well as the character and extent of its use and the conditions under which it is used; climatic conditions, the character of the soil, as well as other similar factors, should be taken into consideration in arriving at this determination of average life. For example, the conditions of soil and climate would materially affect the life of pole lines, whether the poles were iron or wood, and likewise buildings, especially if of frame construction. Temperature and weather conditions have a direct bearing on the life of feeders, if exposed to the elements. The kind of water used for the generation of steam is an important element to be considered in determining the life of boiler tubes, and the same is true with reference to boiler furnaces, as to the effects of different kinds of coal burned. Conditions of operation with respect to the generation of electric current are reflected to a very considerable extent by the fluctuating load on the station, as well as the average load factor.

These varying conditions, as pointed out, should be taken into account, in addition to the consideration of the question of types of apparatus, methods of construction and installation, etc., previously referred to.

The different kinds of physical property of an electric lighting system to be dealt with, in considering "depreciation," may be broadly classified as follows: (1) Buildings and fixtures. (2) Generating station equipment. (3) Transmission system. (4) Substation equipment. (5) Distribution system. (6) Transformer installation. (7) Meter installation. (8) Lamp installation. (9) Tools and appliances. (10) Miscellaneous equipment.

Application of the Measure of Depreciation to be Provided for, as Finally Determined.

The measure of "depreciation" to be provided for, as finally determined on the basis previously outlined and suggested, reduced to or expressed in dollars and cents, worked out in detail for each class of physical property, on the kilowatt-hour unit, should be taken up in the accounts monthly. This may be done, as a matter of detail, by one of the following methods:

(1) "Operating expenses," in the appropriate accounts, should be debited and "depreciation reserve" credited, with

*Abstract of an address before the convention of the Northwestern Electrical Association, Milwaukee, Wis., January 15 and 16, 1908.

the monthly proportion of the total annual depreciation charge, based on the kilowatt-hour unit cost.

(2) The monthly proportion of the total annual depreciation charge, based on the kilowatt-hour unit cost, could be treated as a deduction from "net earnings from operation," and the amount so deducted credited to "depreciation reserve."

(3) The monthly proportion of the total annual depreciation charge, regardless of what the charge may be, based on the kilowatt-hour unit cost, could be treated as a deduction from "net earnings from operation," based on the percentage said charge is of the estimated gross earnings for the year, and the amount so deducted credited to "depreciation reserve."

If the "depreciation reserve," so created, is to be something more than a mere "bookkeeping" reserve, and the amounts thus set aside actually invested in interest-bearing securities, the interest earned on such securities should be credited to "depreciation reserve."

It should be understood, of course, that when replacements and renewals of physical property are made, the cost should be charged against "depreciation reserve."

If the first method suggested is followed, the depreciation charge should be specifically stated and shown in the appropriate operating expense accounts. If this is not done there will be no way of showing ordinary maintenance charges separate and distinct from depreciation charges, and operating expenses will not clearly show actual results. Unquestionably the first method proposed is more scientific than the second or third, but the two latter will be found easier to work out and apply. Either of the three suggested will accomplish the same results, ascertaining what the "net income" is, applicable to "return on investment." The "measure of depreciation to be provided for" is the vital question; the method of its application, if sound and correct, is of secondary importance.

The Milwaukee Electric Railway & Light Company has, since January 1, 1898, down to the present date, followed the third method suggested. John I. Beggs, president and general manager of our company, is a pioneer in recognizing and providing for "depreciation." He not only had the wisdom and foresight 10 years ago to recognize "depreciation," but the courage of his convictions, in the administration of our property, to carry out the policy of providing for it in our accounts and finances.

Amortization.

In addition to providing for "depreciation," as previously defined and treated, provision should be made for a shrinkage in the value of the physical property, if, through necessity, it is disposed of as junk or scrap, at the expiration of limited term franchises. The amortization of capital liabilities, for which there may be no tangible assets, should also be provided for, or sufficient "return on investment" be assured, to justify capital assuming the risks attendant on the business.

"Depreciation" and "amortization" must be reckoned with in determining the cost of furnishing electric current, together with interest on investment, as well as the cost of generation and regeneration, the cost of distribution, the general expenses incident to the conduct of the business and taxes. Indeed, to this cost should be added adequate charges to cover reserves for unliquidated damage claims and provision for contingencies before the true cost of electric current, delivered to the consumer, can be fully and absolutely determined.

The subtraction of ordinary or current "operating expenses" and "taxes" from "gross earnings" does not represent "net earnings," available either for interest on bonds or dividends on stock.

It is high time that the electric lighting interests of the country awakened to the full realization of this fact.

The report of the twenty-sixth annual convention of the American Street and Interurban Railway Association is ready for distribution from the office of Secretary Swenson. This report comprises 408 pages, 6 by 9 inches, printed on heavy paper. Its style follows that of former reports. An excellent portrait engraving of President John I. Beggs appears as the frontispiece. Included in the report are lists of present and past officers of the association, registration at the Atlantic City convention, addresses, annual reports and papers presented at the last meeting and also a list of the member companies and associate members of the American association. An important part of the annual volume is the summary index of previous reports, which includes a carefully made compilation of the papers read and discussed before earlier meetings, exhibiting for each the year and the number of the page on which the article appeared in the earlier volume.

MEETING OF THE INSTITUTE OF ELECTRICAL ENGINEERS—CATENARY SECTIONALIZATION AND SINGLE-PHASE RAILWAY MOTOR.

The two hundred and twenty-fourth meeting of the American Institute of Electrical Engineers was held at the Engineering building, New York City, on January 10.

W. S. Murray, electrical engineer of the New York New Haven & Hartford, read a paper on "The New Haven System of Single-Phase Distribution with Special Reference to Sectionalization." This paper will be found elsewhere. Preceding the reading of the printed paper Mr. Murray stated that it was his intention to deal with experience rather than with theory. Referring to the electrical and mechanical specifications, he said that several snow, ice and wind storms and combinations of these had demonstrated that the iron structures, messenger, trolley and feeder wires had been designed with adequate factors of safety for weather conditions.

Mr. Murray stated that a discussion of double or single catenary construction on main line electrification had been intentionally omitted from his paper. A choice of one or the other must be a compromise of a great many considerations, the principal ones being the number of tracks to be electrified and local conditions, but there had been conclusively demonstrated to him the fact that either the trolley wire or the trolley shoe must be flexible whether the construction be for main or branch lines. In the single catenary construction a flexible contact conductor is provided, whereas in the triangular construction the contact conductor is rigid, requiring a flexible shoe which is in a degree secured by the spring pantagraph arrangement. Experience had shown the speaker that the pantagraph collector must be supplemented by a light but strong mechanism, which would insure flexible contact between the shoe and trolley wire.

Single-Phase Railway Motor.

E. F. Alexanderson read a paper entitled "A Single-Phase Railway Motor," an abstract of which appears elsewhere.

L. B. Stillwell, consulting engineer, opened the general discussion calling attention to the importance of the announcement of a new motor and in particular a single-phase alternating-current motor, possessing apparently the feature of marked originality and practical value in the elimination of the idle resistance in the armature winding.

The Choice of Frequency.

Mr. Stillwell then reviewed briefly the discussion at the two hundred and thirteenth meeting of the institute in connection with the paper presented by H. S. Putnam and himself on "The Substitution of the Electric Motor for the Steam Locomotive" (Electric Railway Review, February 2, 1907, pages 150 to 160) relative to the matter of frequency and to his written conclusions at that time that the increase in cost of power house equipment consequent upon a reduction in frequency to 15 cycles is more than offset by the reduction in the cost of electrical equipment of rolling stock. In this connection he called attention to the fact that little was said in Mr. Alexanderson's paper relative to the performance of the new motor at frequencies lower than 25 cycles per second beyond the statement that it "is equally well applicable to 15 or 25 cycles," and that "it can, therefore, be stated in general that 25 cycles is entirely satisfactory for all geared motor work; it is preferable in that the combination of motor and transformer weighs less at 25 than at 15 cycles."

He said that it was obvious that commutation would be improved at 15 cycles and that there was no reason to believe why this improvement expressed in percentage should not be as great in the case of this motor as in that of the series-compensated motor. He thought one of the principal advantages of the lower frequency had been entirely ignored. The relative aggregate weight of motor and transformer un-

questionably was important and particularly so in multiple-unit work, but much more important, at least in the field of heavy electric traction, was the power of the motor that could be placed in a given space on a truck. The factor of cost, Mr. Stillwell said, was also against the 25-cycle motor, and as far as he was able to judge from the facts given the new motor would gain as much in the ratio of output to weight at a given speed by the reduction of frequency from 25 to 15 cycles, as would the series-compensated motor. He found nothing in the paper to indicate that the motor was an exception to the general rule that alternating-current motors will gain approximately 30 per cent in torque and will also gain materialy in sustained power by reduction of frequency from 25 to 15 cycles per second.

Discussion by B. G. Lamme.

A discussion of Mr. Alexanderson's paper by B. G. Lamme (Westinghouse Electric & Manufacturing Company) was read by F. H. Shepard. The following is an abstract of Mr. Lamme's discussion:

It is intimated that this motor accomplishes what the series-compensated motor cannot do, and it appears to be that successful commutation of alternating current has at last been obtained.

I am free to state that I do not see that this motor does or can accomplish more than has already been accomplished successfully by a properly designed series-compensated motor.

Considering first the starting conditions and characteristics, the general scheme of starting is based on the use of a relatively weak field at start, the field induction being increased, for the same torque, after sufficient speed has been obtained to make the commutating poles effective. The object of this relatively weaker field at start is to lower the voltage in the coils short-circuited by the brushes.

Referring to the commutating motor in general the author admits that it is either necessary to keep below a critical voltage or to use resistance leads. This is the parting of the ways. Apparently the author does not believe that preventive leads, or resistance leads as he calls them, permit sufficient increase in the short-circuit voltage to represent any great gain in the operation.

To take up the question of the currents flowing in the armature windings of single-phase commutator motors, two currents should be considered: First, the working current which is fed into the brush and which passes in through the commutator bars through the connections or leads into the main armature winding. Second, a local or short-circuit current which passes from the short-circuited coil out through the lead, or connection to one commutator bar, then through the brush to the adjacent bar and back through the lead to the coil. This local current is dependent upon the voltage generated in the short-circuited coil and upon the resistance in the closed circuit. If the local current could be limited to values approximately the same as the working current in the coils, then it could be taken care of very readily by the ordinary resistance of the brush, brush contact, etc., but, unfortunately, a short-circuit voltage low enough to give this condition would give absurd proportions in the motor.

In order to obtain a reasonable capacity from these single-phase motors it is necessary to work at an induction giving a short-circuit voltage so high that this local current would usually be many times greater than the normal working current in the coils. It is for this purpose of reducing this short-circuit current to a more moderate value that preventive leads are added. It has been assumed that the addition of these leads means an increase in loss. However, as the purpose of the leads is to actually reduce the excessive local current, the result is a very considerable decrease in loss by the use of the leads.

With the high normal induction per pole on the New Haven motors, our tests have shown that it was utterly impracticable to start with normal induction in the field without preventive leads in the armature, for the short-circuit or local current was excessive and caused vicious and destructive sparking.

The total current to be handled by the brushes and commutator in the compensated-series motor would be approximately one-third that which would be required if the scheme described in the paper were used. It is evident that in order to accommodate the starting conditions the normal induction must be sacrificed somewhat, and with the highest permissible field at start the normal induction would be considerably lower than if preventive leads were used.

There is also indicated clearly the disadvantage of trying to improve the condition by the use of high resistance brushes. Necessarily the life of such brushes would be considerably shortened by the excessive currents.

This method of considering the current flowing in the armature shows very clearly why 15 cycles is decidedly more advantageous than 25 cycles in the alternating-current commutating motor. As the short-circuit voltage is a direct function of the frequency, as well as of the induction, it is evident that with the same limiting short-circuit voltage the induction could be increased in the ratio of 25 to 15, or 66 per cent. It is evident, therefore, that the limit of induction at start is thus raised enormously. In practice, however, unless the motor is worked at extremely low saturation we cannot get the full gain of 66 per cent either at start or at speed, for in order to obtain the greatest economy in weight and in dimensions we could naturally work the material at as high saturation as permissible and in practice we could get only about 30 per cent gain. As we could work 66 per cent higher with the same short-circuit voltage this increase of only 30 per cent means that our short-circuit voltage is thus less than 80 per cent of that of the 25-cycle motor of corresponding design.

It is intimated in this paper that even if the losses were excessive in the armature winding at start yet the quick starting and acceleration would greatly reduce the danger from this source. This may be true of small equipments where light torques are required and where quick acceleration is always possible. However, for heavy work there are occasions where it is necessary to start very slowly and run at a slow speed for a considerable time.

Tests of Heavy Locomotive.

I will cite some of the tests which were made with the locomotive equipped with two 500-horsepower motors which were exhibited at Atlantic City at the street railway convention last October. This machine was given some very severe tests last summer at East Pittsburg in the presence of prominent railroad engineers. For example, in some of these tests the locomotive was operated for five minutes at speeds of two to three miles per hour and this while exerting more than double torque. This represents less than one-tenth the normal or rated speed of the motor. This motor was also held at standstill for a considerable period, developing excessive torques in attempting to start trains with brakes set. Under this condition a motor without preventive leads would unquestionably have been ruined. This condition of the motors at standstill with a heavy current flowing is particularly liable to be met with in freight service, especially if two or more locomotives are working independently with a very heavy train.

Under the selection of frequency it is stated broadly, but without argument, that there is little or no field for the 15-cycle motor. The only basis for this statement apparent is that good commutation is now possible at 25 cycles. In the discussion of the paper by Messrs. Stillwell and Putnam last January it was not a question of commutation which was advanced as the reason for the adoption of 15 cycles, for it was stated plainly that 25-cycle motors could be made to commutate well. But it was the greatly increased output in a given space which was given as the principal reason for the adoption of the lower frequency. I see absolutely nothing in this paper to change that conclusion.

If the commutation at speed were the only limit in the 25-cycle motor then it would be correct to say that with this limit raised sufficiently there would be no necessity for the lower frequency, but as the present limits in design of large 25-cycle motors lie in the excitation permissible with good power factor and in the short-circuit voltage at start it does not seem to me that the problem is solved by simply applying a different method of obtaining commutation when running. The real limits which affect capacity still remain and I do not see wherein the motor described this evening changes the broad problem in any way.

Remarks of W. B. Potter.

Speaking of Mr. Murray's paper, W. B. Potter (General Electric Company) said in part:

The ordinary 600-volt trolley has been little criterion for the 11,000-volt catenary under steam railroad conditions. Considered as an example of good construction work, I have never seen the equal of the catenary line to which he has referred. As to the relative reliability of such an overhead high-voltage trolley as compared to a third rail under conditions necessitating joint operation with steam, I believe this to be a debatable question. The experience thus far appears to me rather in favor of the third rail.

As to the points noted by Mr. Murray:

First—I agree with him as to the desirability of a through feeder in parallel with the different sections. I do not see

the need, however, of two such feeders on the same phase as the trolley wires.

Second—As to the length of the main line sections, I should favor three to five miles rather than less. This is a question affecting reliability of operation and it would seem that a reduction in the number of switching appliances would be favorable in this regard. Five-mile sections have proved satisfactory in third-rail operation and there would seem to be no reason for shorter sections with the high-voltage trolley unless by reason of greater liability to breakdown. It would seem desirable, however, that at track crossovers there should be a short section controlling the main line and crossover tracks, to better insure crossover movements in the event of interruption on the main line sections.

Third—Twenty-two feet seems to be a generally recognized standard height for the trolley wire. It is unfortunate that this height cannot be maintained throughout, as it would then be possible to use a much lighter form of pantagraph.

Fourth—Depreciation of the catenary insulation, due to smoke from the steam locomotive, would naturally be expected. The measure of trouble from this cause would seem to have a bearing on the permissible trolley voltage. Conditions might well arise where copper or efficiency would have to be sacrificed for reliability.

Sixth—So far as it can be avoided, I do not think that overhead wires subject to lightning should be run through lead cables.

Seventh and Eighth—The suggestion with regard to time relays and switch indication are in line with well-established practice. As to the method of operating the circuit-breakers, I understand they are at present controlled from the main power circuit. Should not some means be provided for operating these switches in the event of failure of power? Lever connection would provide certainty of operation and would not interfere with the automatic tripping.

Ninth—While there is no question as to the desirability of guarding against spanning two sections in the event of one of them being grounded if two pantagraphs or trolley poles are far enough apart to span the section insulator it is as sure to happen as that grounds will occur. The only safeguard seems to be a fuse between the two collectors.

Single-Phase Motor for Locomotives.

The single-phase motor described by Mr. Alexanderson possesses a number of novel features, but the essence of the improvement is the better inherent commutation. By reason of this it is possible to modify other features affecting the performance of the motors which have heretofore been subordinate to commutation, with the natural result of greater reliability, decreased maintenance and greater capacity output for a given amount of active material.

It is very desirable that the motor equipment of a motor car should be able to develop sufficient torque to slip the driving wheels, and for an electric locomotive this is particularly true.

An electric locomotive is essentially a draft horse and its value as such should be proportional to the weight on the drivers. In whatever degree the drawbar pull is limited by the motors to that extent is the useful cost of the locomotive increased. In the handling of any service sufficient drawbar pull to start a train is absolutely essential, the horsepower rating for maintaining the schedule being subordinate and depending upon the degree of continuous service. On this point as affecting reliability the motors are liable to injury from overload unless the limitation is slipping the wheels rather than commutation or current capacity.

With any probable design of motor car or locomotive the geared series-repulsion motor will be able to slip the wheels even if geared for maximum speeds as high as 75 miles an hour. In the light of our present knowledge the problem is rather more difficult with the gearless series-repulsion motor.

Single-Phase Motor.

In discussing Mr. Alexanderson's paper, W. I. Slichter said in part:

In explaining the motor it is necessary to consider the conditions of starting and running separately, as certain features are introduced simply to assist in starting and other features are employed only to function when running.

In the motor under discussion the compensating or inducing winding and its inductive relation to the armature turns are made to act as a series transformer. Under running conditions we find in this motor three very important new features contributing to good operation:

First—The proper field strength at all speeds, as just mentioned.

Second—By means of the fractional pitch in the armature the coil undergoing commutation is placed in a position under the pole piece where it is very strongly influenced by any magneto-motive force in the compensating winding so that the latter winding is able to act as a commutating pole in the true sense of the word as well as a compensating winding.

Third—The compensating winding is made to carry two components of current, a series and a shunt (or repulsion motor) current, and it may be likened to a commutating pole having two coils—the one a series coil serving very effectively, due to the favorable position of the coil undergoing commutation (brought about by the fractional pitch) to produce the good effects on commutation that a commutating pole does in a direct-current motor. In other words, to correct for the harmful electromotive forces of self-induction and armature reaction.

One of the immediate results of the development of this motor is the fact that it makes the need of 15 cycles for a single-phase railway work a great deal less important than with either the plain repulsion or the plain series motor.

Sectionalizing for Single Tracks.

In speaking of Mr. Murray's paper, O. S. Lyford, Jr., thought that the standpoint of single-track operation had been overlooked. Referring to sectionalization he said there were three objects: First, to minimize the interference with the operation of the road in case of line trouble; second, to locate the fault quickly; and, third, to reach the fault with the work train. He thought that in order to reach a fault the work train should be operated by an independent unit, either a steam locomotive or a gasoline car, preferably the latter, because it was more easily put into service.

Dr. C. P. Steinmetz called attention to the fact that in the discussion of Mr. Alexanderson's work the investigation of the distribution of the magnetic field had not been considered.

Before replying to the comments upon his paper, W. S. Murray made a few remarks regarding the paper presented by Mr. Alexanderson. There was a question whether heavy induction with resistance leads was better than light induction without resistance leads. Any opinion should be held in reservation until practical results had demonstrated which of the theories was correct. He called attention to the changes in high-power electric locomotives of gearless construction, also to the high ratio in this construction of weight on drivers to tractive effort developed. In consequence of this unfortunate relation of the entire electric locomotive weight being on drivers, it was impossible to design the motor equipment of sufficient capacity to slip the wheels of the locomotive, and as the transference action was a maximum at starting unless the locomotive engineer shut off power promptly upon finding the locomotive incapable of moving its trailing load the resistance leads would burn out.

The feature of producing double torque by short-circuiting the armature and without increasing the line current was a characteristic that lent itself in much value to traction necessities. He thought it would be of interest to know what change of relation took place between time and temperature of the motor when developing double torque. Another feature of interest would be knowledge as to the weight per axle horsepower (1-hour rating) with direct-current motors of the same size.

Speaking of the points brought up in connection with his own paper, Mr. Murray said he thought that on long-distance traction work the question of operating expenses would be the paramount feature and hold the overhead construction and alternating-current transmission to the motor a necessity. He believed Mr. Potter's suggestion that the sections be longer a wise one, and that from three to five miles would become the standard. He agreed with Mr. Lyford's remarks about single-track feeder arrangement, but would qualify them for longer distances. In its application to long distances he believed a feeder arrangement for single track would be quite necessary.

CO-OPERATION BETWEEN INTERSTATE COMMERCE COMMISSION AND STATE COMMISSIONS ON UNIFORM ACCOUNTS.

The interstate commerce commission gives, in its report for 1907, a synopsis of replies of state railway commissions to its letter of November 13, 1907, asking for an expression of opinion as to the desirability of accounts for electric railways being in substantial agreement with those already prescribed by the interstate commerce commission for steam roads. In introducing these replies the commission says:

The desire to provide a uniform system of accounts for all transportation agencies, coupled with the fact of divided jurisdiction, has forced the question of co-operation between federal and state commissions into the foreground as a question of practical administration. As an extreme illustration, mention may be made of the manner in which an accounting system for electric urban and interurban lines is being worked out. According to the test of location of the physical property (which, of course, is not the final test), not more than 20 per cent of this class of railways comes within the jurisdiction of the federal commission, an amount not sufficient to warrant this commission in prescribing a system of accounts in conformity with that prescribed for other transportation agencies, except upon the approval and co-operation of the various states whose laws give to their respective commissions jurisdiction over the operation of electric lines. Such approval and co-operation have been readily granted. A conference was recently held for the consideration of this entire subject, and so significant is the attitude of the states, as expressed in letters in response to a request for an expression of opinion as to the feasibility of co-operation, that a condensed statement of the replies is here submitted.

Replies of State Commissions.

Alabama.—Will co-operate with interstate commerce commission to the fullest extent practicable.

Arizona.—Has no railroad commission.

Arkansas.—Uniformity between electric and steam railway accounts very desirable. Will co-operate with interstate commerce commission to any reasonable limit.

California.—No reply to letter.

Colorado.—Uniformity between electric and steam accounts desirable. Will assist interstate commerce commission as far as possible.

Connecticut.—Uniformity between electric and steam accounts necessary. Will co-operate with interstate commerce commission to that end.

Delaware.—Has no railroad commission.

Florida.—Action of interstate commerce commission will be satisfactory.

Georgia.—Approves idea for uniform classification of accounts between steam and electric roads.

Idaho.—Has no railroad commission.

Illinois.—Will co-operate with interstate commerce commission as far as possible. Electric and steam accounts should be in substantial agreement.

Indiana.—Entirely willing to abide by result of conference, and will co-operate with interstate commerce commission.

Iowa.—No objection to classification submitted by interstate commerce commission.

Kansas.—Classification submitted by interstate commerce commission thoroughly applicable to Kansas conditions.

Kentucky.—Will heartily co-operate with interstate commerce commission. (Verbal statement of chairman of commission.)

Louisiana.—No jurisdiction; but, should occasion require, will accept recommendations of interstate commerce commission.

Maine.—Classification proposed by interstate commerce commission great improvement over present system.

Maryland.—Has no railroad commission.

Massachusetts.—Waiting action of interstate commerce commission on system of accounts. Will act in accord with interstate commerce commission as far as possible.

Michigan.—Have perfect confidence in judgment of interstate commerce commission and will heartily co-operate.

Mississippi.—No reply to letter. Probably has no jurisdiction.

Missouri.—Will adopt system of accounting recommended by interstate commerce commission.

Montana.—Will be pleased to co-operate with interstate commerce commission and use forms prescribed by the commission.

Minnesota.—Will cordially indorse system approved by interstate commerce commission.

Nebraska.—In hearty sympathy with interstate commerce commission. Steam and electric accounts should be uniform.

Nevada.—No reply to letter.

New Hampshire.—Will adopt system of accounts used by adjoining states and interstate commerce commission.

New Jersey.—Approves system of uniform accounts recommended by conference. Has no jurisdiction over trolley lines.

New Mexico.—Has no railroad commission.

New York, first.—Was represented at conference and will probably co-operate with interstate commerce commission.

New York, second.—Will adopt system of accounts prescribed by interstate commerce commission, as far as possible.

North Carolina.—Approves classification prepared by interstate commerce commission, and will adopt same for North Carolina.

North Dakota.—Will be pleased to co-operate with interstate commerce commission.

Ohio.—Will co-operate with interstate commerce commission as far as possible.

Oklahoma.—Railroad commission not appointed at date of letter.

Oregon.—Steam and electric roads should have same system of accounts. Will co-operate with interstate commerce commission.

Pennsylvania.—Railroad commission to be appointed January 1, 1908.

Rhode Island.—Did not receive letter; probably misdirected.

South Carolina.—No jurisdiction over electric railways.

South Dakota.—No jurisdiction over electric railways.

Tennessee.—No jurisdiction over electric railways.

Texas.—No jurisdiction over electric railways.

Utah.—Has no railroad commission.

Vermont.—Will probably adopt form of accounts prescribed by interstate commerce commission.

Virginia.—Steam and electric accounts should be uniform. Will adopt system recommended by conference.

Washington.—Classification proposed by interstate commerce commission meets all requirements of the state.

West Virginia.—Has no railroad commission.

Wisconsin.—Will co-operate with interstate commerce commission. Steam and electric accounts should be uniform.

Wyoming.—Has no railroad commission.

It is evident from the above that the states are not only willing, but anxious, that the federal commission should assume the responsibility of prescribing a uniform system of accounts for electric lines, and offer not only co-operation for the attainment of this result, but agree, so far as practicable in view of local requirements, to accept whatever rules and classifications may be promulgated.

The proposed accounting system for electric railways will be issued to take effect on July 1, 1908. Concerning the system prescribed for steam railways, the commission says:

For the completion of a general system of accounts, authoritative rules relative to the financial accounts must be issued. This involves a classification of the debit and credit items that appear on the income account, and a classification of the assets and liabilities that appear on the balance sheet. The analysis of these accounts is well under way, and when completed appropriate rules will be promulgated under order of the commission, to take effect July 1, 1908. The commission interprets the twentieth section of the act to regulate commerce as imposing upon it the duty of protecting the integrity of the net revenue statements published by the carriers, and it believes that formal depreciation charges, conservatively administered, are essential for the attainment of this end. If this can be done through supervision over the operating accounts, and if, through the medium of a standard balance sheet, the commission is able to protect also the integrity of statements rendered by the carriers relative to their accumulated surplus, the most important single purpose of congress in conferring upon this commission authority to prescribe and supervise a uniform system of railway accounts will have been accomplished.

Every warrant covering revenue, every voucher covering expenses, every entry of an asset or a liability, must be carried into the accounts according to prescribed rules, and it is certainly a step in advance, because it is a means of localizing responsibility, that the commission should select from among the officials of each of the carriers one whose duty it is to certify to the legality of the acts which the accounts record.

Attitude of Pennsylvania Association.

Charles H. Smith of Lebanon, Pa., secretary of the newly organized Pennsylvania Street Railway Association, refers to the uniform accounting system in a circular letter issued on

January 10 urging companies in Pennsylvania to join the organization. Mr. Smith refers to the fundamental principles laid down by the interstate commerce commission as follows:

That the form of accounts to be used by electric carriers must conform as closely as possible to the form prescribed for the steam carriers, and must be fully analyzed; that compensation or rentals for joint facilities must be accounted for in detail; that compensation for power purchased or sold must be accounted for in detail; that depreciation must be recognized and accounted for.

"These, if enforced," Mr. Smith adds, "would impose grave burdens on the companies, and we should all unite to present our side of the case to the commission; this can be better done by an association speaking for the whole industry working on broad lines rather than by each company voicing its own views. The working of the commission, unless it is properly advised by the companies, will undoubtedly result in the imposing of burdens which will reduce earnings in many cases to the vanishing point."

THE PUBLIC'S DEBT TO THE PUBLIC SERVICE CORPORATION.*

BY W. R PUTNAM, MANAGER RED WING GAS LIGHT & POWER COMPANY, RED WING, MINN.

The American people are often characterized as an overgrown child and from this point of view it is interesting to observe the present changes in the economic ideas and conditions of our country. Our business has grown and developed so rapidly that the men actually engaged in its management have with difficulty invented and applied new methods and larger schemes for the handling of its now immense and constantly growing volume and much less have our legislative bodies been able to devise proper means for the control of the corporations, large and small, which have been the outgrowth of the new condition.

In the past few years the people's representatives in their various legislative bodies have attacked this problem with a determination to solve it; but, unfortunately for the general business world as well as for the private investor in many of the corporate securities, their aim has been to secure action; to pass legislation of only a few weeks or months consideration, whose object is to regulate systems of transacting business which have taken years to develop. What has proved more disturbing to security values has been the oftentime apparent object to pass one-sided legislation; that is, legislation which will please and appease the body politic without taking into consideration the interests of the capital involved.

The public service corporation has been given its amount of attention in the legislative attempts at corporation regulation; its obligations to the public have all been prominently brought to the notice of the people, without, however, in most instances, any attention being called to obligations that might be due the corporation. It would seem proper, at this time, to point out in what ways these corporations have benefited the people and what the people owe them in return.

Some of our public utilities have been serving the people less than a quarter of a century. The public, through its official representatives, has granted to organizations of capital permission to occupy portions of the streets of the municipality for the purpose of furnishing it and its inhabitants light, heat, power, water, the quick methods of communication and transportation. For the most part these franchises, when first given, were so granted because the people were as eager or more so to have the service as capital was willing to supply it. Such being the condition the larger portion of the franchises did not contain provisions which properly safeguarded the rights of either party interested; with the result that there has been almost constant wrangling between both parties involved over some or all of the questions of service, rates, taxes, and various rights covered by the franchise.

Meanwhile the communities supplied have been rapidly growing in population and oftentimes in area and the people's desire for all of these conveniences and necessities has even more rapidly grown; for the most part the franchise owner has kept pace with this growth, by the investment of immense sums of money in both the manufacturing and distributing departments of his plant. At the same time he has been obliged to keep up with the rapid improvement of appliances by the replacing, oftentimes again and again, of obsolete machinery. This has been done, it is true, with the purpose of enhancing the value of the property and of securing a fair return on the investment; at the same time it has been done in response to the people's demand.

Unfortunately and possibly because of the apparent ease with which funds have been secured for the immense development of our plants, the public have become firmly convinced that, of necessity, there must be immense profits in our business; they have not studied the question thoroughly or they would have soon learned that, for every dollar we receive in gross earnings each year, we have from three to ten dollars invested in our business; in other words from 20 to 50, or in some cases 60, per cent of our total receipts, the amount depending upon the nature and condition of the particular kind of service, must be used to pay interest on our investment; that the majority of our investment is represented by bonds earning five or six per cent; that the United States census returns show that the net earnings of all gas and electric plants in this country, before providing a depreciation fund and before paying interest charges, are only 8 per cent on the capital invested; while the similar earnings of the street railway companies are only 5 per cent.

The public has taken it for granted that it has been unfairly and in some cases dishonestly dealt with by the owners of franchises and, now that it has wakened to the possibilities of regulation, it not only insists on a regulation which will give the public immensely cheaper service but which will at the same time penalize the franchise owner for his unfair and dishonset acts of the past; wherever this unfairness and dishonesty have existed has not the public been as much to blame as the franchise owner, in that it has elected men to office who have been the means of this unfairness and dishonesty? The public service manager is human and if he ascertains that the only way he can secure legislation or even a permit, necessary for the carrying on of his business, is by dealing dishonestly with a dishonest representative of the people, too often, in the past, has he followed the line of least resistance. Should not the people's fairness accede to eliminating entirely, from the subject of regulation, the question of penalty?

Again the public must awaken to the fact that the business management of the public service corporation is today more alive and more progressive than that of almost any other line of business.

The two largest associations of public utility corporations in this country have both gone on record as strongly in favor of reasonable regulation by the people. If the people will come to a realization of the immense good they derive from our service; will give us credit for new attempts to conduct our business honestly; will drop all ideas of penalty; will concede that our efforts to develop our business are entitled to a fair return; will drop the tendency to regulate rates by competition; and will approach the subject in a fair, conservative way; then, and only then, will regulation be secured which will establish, with the investor, the feeling of security necessary for the further enlargement of our business.

*Abstract of paper read before the Northwestern Electrical Association, Milwaukee, Wis., January 15, 1907.

Improvements at Mobile During 1907.

The Mobile Light & Railroad Company, Mobile, Ala., has made a number of substantial improvements to its property and equipment during the past year, the most important of which is a new power house which is now nearing completion. New boiler equipment has been added and a 1,200-kilowatt General Electric Railway generator and an 1,800-horsepower Allis-Chalmers engine have been installed. A telpher system for handling coal from the cars to the overhead bunkers has also been erected. Eight miles of track have been laid with 70, 80 and 90 pound rails and 12 new cars have been purchased. Six of these are 40-foot double-truck cars and six are single-truck cars of the semi-convertible type. Several new features were added during the year at Monroe Park and more are contemplated for the coming season.

The New York public service commission of the second district has approved plans for a hydro-electric power plant on the Sacandaga river, including a storage dam, power dam and power plant, and in addition electric transmission lines to Saratoga, Ballston, Mechanicville, Troy, Albany, Watervliet, Schenectady and Amsterdam, to be built by the Hudson River Electric Power Company. The approval is conditioned on the state having authority to buy the proposed storage dam near Conklingville, N. Y., within 3½ years at the actual cost to the company, and also on the company filing with the commission statements as to the manner and proceeds of the sale of the $3,000,000 of bonds authorized by the commission, and also detailed half-yearly statements of the expenditure of the proceeds of the sale of the bonds.

RECENT ELECTRIC RAILWAY LEGAL DECISIONS.

BY J. L. ROSENBERGER, LL. B., OF THE CHICAGO BAR.

Risk from Use of Derrick to Remove Motors Assumed.

Raven v. Seattle Electric Company, 92 Pacific Reporter, 451.—The supreme court of Washington says that the plaintiff was employed by the defendant in its car barns, a portion of his work consisting in removing to and from the trucks of its cars electric motors used thereon. This was done with the aid of a derrick by the side of the car track. After he had been working at this kind of work for about two months, while engaged with two other men in handling one of the largest motors used by the company, he was struck by the handle of the crank of the derrick. While working there another workman had been injured in the same manner as he. He also admitted that about two weeks before he had talked with the foreman with regard to this appliance being a dangerous one, and admitted that he had heard the foreman caution another workman about the dangers thereof. He obtained a judgment for damages, but that is reversed and the cause remanded, with instructions to dismiss the action, it being held that under the circumstance he assumed the risk.

Ejection by Conductor of Trailer of Passenger Paying Fare on Motor Car—Reasonableness of Rule.

Birmingham Railway Light & Power Company v. McDonough, 44 Southern Reporter, 960.—The supreme court of Alabama says that this was a suit by a passenger to recover damages for an alleged unlawful ejection from a car by the conductor. The defendant company filed a plea the defense attempted to be made by which was that at the time the wrongs and injuries complained of occurred the defendant was running or operating two cars, the front one a motor car, and the rear one a "trailer," which was attached to the motor; that the defendant had a separate conductor in charge of each of said cars; that the plaintiff first took passage on the motor car, and, while thereon, paid his fare to the conductor of that car; that thereafter the plaintiff got off the motor car, and boarded and took passage on the trailer car; that the conductor on the trailer demanded fare of the plaintiff, and that the plaintiff refused and failed to pay the conductor a fare entitling him to be carried as a passenger, whereupon the conductor, on account of the plaintiff's refusal to pay the fare, ejected him, using no more force than was necessary. In the plea it was further averred that at the time the defendant had in force a rule which required the conductor in charge of the motor car to collect a fare from each passenger on that car, and the conductor of the trailer to collect a fare from each passenger on that car, and that said rule or regulation did not permit a passenger who had already paid fare on one of the cars to ride on the other without also paying his fare on that car. The plea averred, further, that the rule was a reasonable one, and that the plaintiff was advised of its existence before he was ejected; that the plaintiff, without the payment of an additional fare, could have resumed his journey by again getting on board the motor car, but that he refused to do this. It is held that the rule pleaded was a reasonable one, in the proper conduct of the business of the defendant, and necessary to protect it against imposition, and that it was error to sustain a demurrer to this plea.

In support of this the court states that it may be said to be common knowledge that street cars in the city of Birmingham are usually crowded—at least they are frequently so. Therefore the conductor is not presumed to know all of his passengers. He must necessarily be a stranger to a large portion of them, and not acquainted with their character for truthfulness. If passengers are allowed the privilege of boarding one car and moving from that to another car—the two being coupled together, as the plea in this instance showed the cars were joined—it would be a very easy matter for a passenger to board one car and move to the other, and claim, when called upon for his fare, that he had paid on the other car, when in truth he had not; and the different conductor could have no means of knowing that the moving passenger had paid fare. The court recognizes the fact that this attributes to men an evil design; but at the same time observation and common knowledge will bear out the truthfulness of the statement that such characters are not too few. And the rule, in one phase, is for the protection of the carrier against such as would impose on it in this way; and as it would be impracticable to limit such a rule, in its terms, to such persons as would intentionally practice a fraud, it must cover all—good and bad—alike. Again, as was suggested in brief of the appellant's counsel, it is common knowledge that conductors are required to "register up" each fare collected in their proper cars, and are required to collect from and register each passenger on each car. This check on the conductors would be rendered valueless if passengers were allowed to change from one car to another—each car having a separate conductor—without paying fare.

In view of the averment that the plaintiff was advised of the rule before he was ejected and that he might return to the motor car, it was not necessary that he should have had knowledge of the rule before he boarded the car.

The contention that the plea should have shown that reasonable accommodations were furnished the plaintiff was not tenable. Construing the plea in connection with the complaint, this was manifestly matter for a replication, if it was available to the plaintiff.

But, notwithstanding that the rule was a reasonable one, the defendant, as a matter of course, would be responsible for an unjust application of it, or for enforcing it with undue severity.

Going from Platform to Step of Moving Car Preparatory to Alighting.

Bendekovick v. Omaha & Council Bluffs Street Railway Company, 113 Northwestern Reporter, 988.—The supreme court commissioners of Nebraska say that this was not a case of intentionally and voluntarily standing upon a car step or running board for the purpose of continuous riding, which several courts have held to be negligence per se (by itself), but it was an instance of going down upon the step or board in anticipation of almost immediately leaving the same by alighting upon the ground when the car should have stopped or nearly so. Now, this is an act that men of all grades of intelligence, experience and prudence are frequently and constantly committing. The commissioners suppose it is done thousands of times every day in all the considerable cities of the United States, so that its frequency must be regarded as a matter of common knowledge of which the courts take judicial notice, and to hold that such an act is at all times and in all circumstances negligence per se, or in law, would be to say that the universal custom of intelligent and prudent men is such, which, as it seems to the commissioners, would be to utter an absurdity. But an act which is prudent in some or in most circumstances may be negligence or criminal in others; and the question calling for decision is: Who shall discriminate the circumstances, the court or the jury? Applying the inquiry concretely to the facts of this case, considering the speed of the car and the character of the locality, and the fact that the passenger had repeatedly notified the conductor of the place at which he desired to get off, and the known duty of the latter to give a signal to stop, and the knowledge of the passenger, if he had knowledge of the subject, whether the signal had been given, was not the question of negligence one of fact for the jury, rather than one of law for the court? In the commissioners' opinion it was, and the supreme court so holds.

News of the Week

Indiana Commission Investigates Operating Conditions.

The Indiana railroad commission has instituted an inquiry into operating conditions on interurban roads in the state and has issued a letter to the electric railways calling a meeting for February 10 to discuss the subject and for the purpose of formulating a uniform code of rules. The letter reads in part as follows:

"It being the duty of the railroad commission to keep informed as to the conditions of railroads and railways, and the manner in which they are operated with reference to the security and accommodation of the public, an inquiry and investigation is hereby instituted as to the rules of operating and dispatching cars, and as to the qualifications of motormen and conductors on the traction lines of this state.

"The managers, superintendents and dispatchers of such railroads are, therefore, requested and directed to appear before this commission at its public hearing room on Monday, February 10, 1908, for conference and information on these subjects, and for the purpose of formulating and adopting uniform operating rules and practices and for providing for the instruction of conductors and motormen in their rules, and to take such other steps for safe operation and the prevention of accidents as may be agreed on or ordered."

Public Service Commission for Chicago Proposed.

At a meeting of the Chicago city council on January 13, Alderman Race presented a resolution asking that the corporation council prepare a bill, to be submitted to the state legislature, providing for the creation of a public service commission for Chicago similar to the New York public service commission. The resolution was referred to the committee on legislation. It reads as follows:

That the corporation counsel be and he is hereby directed to prepare and submit to this council a bill to be submitted to the legislature establishing a commission in the city of Chicago to be known as "the public service commission." Said bill to be drafted along the lines of the bill now in force in New York City, and giving the commission the following powers and duties:

1. The regulation and control of all common carriers, gas and electric companies and express companies doing business in Chicago.

2. Fixing of rates for transportation of freight and passengers, and for gas and electricity.

3. The safeguarding of life, limb and the protection of public interests in the operation of all public service corporations.

4. The prevention of unlawful mergers of corporations at the expense of the people.

5. The supervision of traffic and the laying out of new transit facilities in Chicago.

6. The investigation and regulation of corporations doing public work.

Negotiations for Purchase of Belmont Tunnel.

Preliminary negotiations have been in progress for some time past for the purchase of the Belmont tunnel under the East river at Forty-second street, by the city of New York. The negotiations were started by President Theodore P. Shonts of the Interborough-Metropolitan Company and several conferences have been held by the Belmont interests and Nelson P. Lewis, chief engineer of the board of estimate, Corporation Counsel Pendleton and William Barclay Parsons, chief engineer. The tunnel is completed, the rolling stock is on hand and operation could be started at once, but the company's franchise is in litigation and the company does not yet know its status. The city claims that the old Steinway franchise, which was purchased by August Belmont, has expired and that the charter of the New York & Long Island Tunnel Company required the completion of the tunnel by December 31, 1906. When the work was not completed by that time, the city tried to enjoin further construction, but the company went ahead with the work and completed it during the summer. The city further contends that the company cannot operate without a franchise and yearly payments to the city and during the doubt as to the status of the charter the Belmont interests have declined to apply to the public service commission for a franchise. In order to put an end to the difficulty, Mr. Belmont offered recently to sell the tunnel to the city and to make a contract to operate it for a term of years. E. P. Bryan, president of the Interborough Rapid Transit Company, which owns the tunnel, stated before the public service commission that it was proposed to operate the tunnel with 3-cent fares and it is understood that the negotiations now in progress hinge chiefly on the question of the rate of fare. The city officials contend that the tunnel should be operated in connection with the trolley lines in the borough of Queens without an additional fare.

Legislation Affecting Electric Railways.

New York.—Senator Travis of Brooklyn has introduced a bill into the legislature at the instance of the Republican League of Brooklyn, which increases from 20 to 50 years the period for which subways may be leased to railroad corporations for operation.

Ohio.—Representative Metzger has introduced into the legislature a bill which was originally introduced at the instance of Tom L. Johnson, mayor of Cleveland, two years ago, and which bears directly on the Cleveland franchise controversy. It abolishes the necessity of securing property owners' consents for the construction of a street railway and provides that all franchise grants must be submitted to a vote of the people in the municipality affected. To make "straw bids" impossible the bill eliminates the necessity of bids and prior applications to city councils. The routing and all the terms of the franchise are to be included in the granting ordinance without any preliminary procedure.—A bill introduced by Representative Stockwell gives cities the power to own and operate street railways, to grant and control security franchises and to purchase and operate any public utility as a going concern. A companion bill, introduced by Mr. Stockwell, gives cities the right to own street railway tracks, but not to operate cars, and is intended to enable the city of Cleveland to control the loops in and around the public square and on bridges and viaducts.—A bill introduced by Senator Schmidt provides that when a grant is made by the council of a municipal corporation for the construction of a street railway, either as a new route or as an extension of an existing route over and along any street or part thereof, upon which a street railway has been previously operated, and the grant for which has expired, or is about to expire, it shall not be necessary to produce to such council any written consents from the owners of the lands abutting such streets.—Representative Lehman has introduced a bill providing that street railway companies shall pave 12 feet of the width of the streets where they have single tracks and 23 feet where they have double tracks.

The Cleveland Situation.

The principal efforts of the representatives of the city and of the Cleveland Electric Railway, who are endeavoring to fix a valuation of the Cleveland Electric property as the basis of a lease to a holding company, have been directed toward determining the value of the franchises. No agreement has yet been reached on many of the items comprising the physical property but the appraisers are still at work trying to bring their estimates into harmony with each other. Newton D. Baker, city solicitor, and S. H. Tolles, representing the Cleveland Electric Railway, reported at the council meeting on Monday, January 13, that they had been unable to agree on the dates of expiration of many of the principal franchises, on which the valuation of course depends, although they had agreed on some of them. The two men differed widely on the principles to be applied in determining the dates and upon the effect of various court decisions on the life of franchises.

Consequently F. H. Goff, the mediator for the Cleveland Electric Railway, and Mayor Johnson for the city decided to settle the question of franchise values themselves, with the assistance of A. B. du Pont and H. J. Davies. The principal disagreement was on the outlying franchises and their effect on the value of the city franchises. Most of the sessions on Monday was devoted to hearing reports and arguments of the two lawyers in regard to the different franchises.

At the meeting on Tuesday the franchise negotiations were resumed. One of the cases discussed at length was the Euclid avenue grant. Mr. Goff and Mr. Tolles claimed that a franchise for the outlying Euclid Heights line, running until 1914, extended all of the Euclid avenue grants until 1914 because it required the company to carry passengers from Euclid Heights to the public square for a 5-cent fare. Mr. Goff and Mr. Johnson reached an agreement on several points of law affecting the grants and it was stated that substantial progress had been made.

Horace E. Andrews and A. B. du Pont have reported an estimate on the value of the Cleveland Electric's stores of $305,882, which is $29,278 less than Mr. du Pont's estimate of last spring.

Proposed Subway Improvement at Ninety-sixth Street.

In view of the approval by the public service commission of New York City of measures looking to the relief of interference between Broadway and Lenox avenue subway trains at the point of junction just north of Ninety-sixth street, plans

have been prepared by the Rapid Transit Subway Construction Company which, if fully carried out, will entirely remove the present difficulty and greatly improve the service. The benefit will be felt chiefly by express trains from above Ninety-sixth street. It is understood that as the plans have been approved the only question remaining to be settled is the one of finances. The cost is estimated at about $850,000.

The present conflict of trains is between Ninety-sixth and One Hundred and Fourth streets, the two lines diverging near the latter point. Lenox avenue locals are constantly, during the rush hours, in the way of Broadway trains running as expresses from points above Ninety-sixth street, and the enforced wait seriously impairs the efficiency of the service. It is proposed to construct two new tracks on each side of the existing tracks, those on the west being one each for Lenox and Broadway southbound locals and those on the east one each for northbound trains of the two lines. The grades will be adjusted so that at One Hundredth street the Lenox avenue tracks may be carried directly under those of the Broadway line, coming again to a common grade at Ninety-sixth street. The present Lenox avenue lines are nearly on a level.

An important feature of the new arrangement is involved in the location of the Broadway northbound local track. The local trains of both the Lenox and Broadway lines will use the same track from Ninety-sixth street station to a point just beyond Ninety-eighth street, where the Lenox line diverges to the west to enter upon the lower level. The Broadway line continues on a tangent to One Hundred and Second street, where the separation of grades has reached such a difference that the Broadway local can pass over the Lenox tracks, thus avoiding interference, and enabling the service of the One Hundred and Third street station by those trains.

In order to make room for the two new tracks in each direction it will be necessary to build new retaining walls on each side. These will be located just inside the curb line, the width of Broadway at this point being 60 feet within the building lines, and 40 feet from curb to curb. Naturally, also, a complete change of signal arrangement for the distance covered by the improvement will be involved.

Pleasing the Public in Baltimore.

The Baltimore News of January 8 publishes an interview with William A. House, president of the United Railways & Electric Company of that city. The article states that the reporter was prompted to ask Mr. House what led to the change in the policy of the company "because of the many expressions of approval heard during the past year" on the new policy. An abstract of the article follows:

"Mr. House answered the question briefly and to the point: 'The United company is a public service corporation, and we realize that the most valuable asset a public service corporation can have is the good will of the public. This is what we have been striving for, and if we succeed the directors, as well as the operating officials, will be happy. We have tried to be frank with the public and frank with the city in all our dealings. I have always felt that we have nothing to conceal, and therefore should deal openly with the public.

"'When we get complaints we make a thorough investigation, and if we are at fault the cause is rectified at once. We let the complainant know what we have done in his or her case, and in nearly every case make friends. When we get suggestions we look into them; if they are practicable they are adopted. I feel that a man who takes the trouble to write us or call us up over the telephone to make a suggestion is interested in our welfare.

"'Where there is a wide difference between men representing two interests the best way to settle such difference is for those interested to get together, sit down and talk over the question involved. Each side should be given credit for an honest difference of opinion, and if there is any disposition on the part of both to reach a settlement it seldom fails that this is done.'

"In addition to the removal of tracks from Charles street in response to a public request, the United company took up two of the four tracks on North avenue at Madison avenue when some of the residents of that section of the city suggested their removal, though the removal involved considerable expense and necessitated the extension of a line which formerly had its terminus at the intersection of the two streets.

"Mr. House has several times made the statement that the United company is not in politics, and in this connection a case might be cited. Last spring two employes of the company who had been in the city council for some time were re-elected. Naturally, many supposed that the company was interested in keeping them there. Before election—several months previous, in fact—the directors adopted a resolution to the effect that its employes were not to hold outside positions, but exempted the two councilmen for the terms they were then serving. They went into the next election with a full knowledge of the company's rules, and, while each had to his credit an enviable record, the management decided that no exceptions could be made, and their resignations were accepted."

To Consider Proposed Changes in New York Rapid Transit Law.

The New York public service commission of the first district has called a public meeting to be held on Friday of this week, to discuss proposed changes in the rapid transit law which will make contracts for the construction and operation of subways more attractive to private capital. The necessity for making some changes in the law is explained by Chairman Willcox as follows:

"The difficulties of the situation are well known. The present law contemplates that the city shall build its own subways and lease them for operation without alienating the franchise or to equip and operate them itself. Under the terms of this law, the so-called Elsberg statute, any lease to an operating company is limited to 20 years, with the privilege of renewal for a like period. It has not proved effective in bringing private capital into the field. The rapid transit commission failed to get a single bid for construction or operation of the Seventh and Eighth avenues, Lexington avenue and Jerome avenue routes when those contracts were advertised last year.

"Owing to the fact that the city of New York is so close to its constitutional debt limit, there has been very little margin of the city's credit to draw upon to enable the city itself to undertake construction. The board of estimate has appropriated the amount needed to build the Fourth avenue subway in Brooklyn, but if that is furnished there is very little prospect, so I am told by the city officials, of any further appropriation of any size for another subway.

"The only way to achieve the desired result, in the opinion of many who have studied the problem, is by a constitutional amendment which will place outside the calculation of the debt limit bond issues for subway construction. Such an amendment must be passed by two sessions of the legislature and then adopted by the people at a general election—a process that will take at least two years and a half. What we want is a law which will enable us to begin work at once. We have received all sorts of suggestions as to the amendment of the Elsberg rapid transit law, mainly in regard to the length of the term for which the city may lease its subways. The consensus of opinion among those favoring the change is that a longer term would make attractive to private capital contracts which now go abegging. On this subject, as well as upon the desirability of a constitutional amendment, together with any other changes in the law which may be deemed advisable, the commission desires to hear from the people of New York and has invited them to the hearing next Friday to ascertain their views."

Mr. Willcox urged the necessity of constructing additional interborough roads and insisted that the traffic demands of the city made it urgent that such a development of the city's subway system should be begun as speedily as possible. He said that the contract for building the Fourth avenue (Brooklyn) subway would shortly be advertised and that with that matter out of hand there would then come up the question of building an east side subway and other lines in Manhattan and The Bronx.

American Institute of Electrical Engineers.—The next meeting of the Minnesota section of the American Institute of Electrical Engineers will be held on Monday, January 20, at Minneapolis. Samuel B. Green, professor of forestry at the University of Minnesota, will speak on "The Effect of Forest Destruction on Water Power."

Des Moines Franchise Cases Postponed.—Attorneys for the Des Moines City Railway and for the Des Moines Civic League have agreed to a postponement of the hearing in district court to test the franchises of the company until after the United States supreme court has passed upon the decision rendered last spring by Judge McPherson in which the company's claim to a perpetual franchise was upheld.

Interurban Rules of the New York Association.—Secretary J. H. Pardee of the Street Railway Association of the State of New York has issued in pamphlet form, pocket size, the interurban rules which were approved at the meeting of the association at Kingston, N. Y., on September 19. The pamphlet shows forms of blanks and diagrams of hand, flag and lamp signals, together with diagrams of train signals and special rules.

Pensacola Carmen Ask Wage Increase.—The employes of the Pensacola Electric Company, Pensacola, Fla., have presented a demand to the company for a new wage contract for

1908 at an increase of two cents per hour. The increase was refused and the men offered to sign a contract at the present rate if the company would promise a 2-cent increase when conditions became more settled. This offer was also rejected. The old contract expired on January 14.

To Connect Brooklyn Subway with Elevated Lines.—The Brooklyn Union Elevated Railroad has applied to the New York public service commission for permission to abandon the Court street and Boerum place stations on the Fulton street line and to erect a new station midway between those points in order to facilitate the transfer of passengers between the elevated line and the new Brooklyn tunnel station at Borough Hall. The company promises that the new station will have a platform space equal to that of the two stations replaced, and will be adequate to the traffic.

Chicago Traction Adviser to Inspect Eastern Roads.—M. B. Herely, superintendent of local transportation for the city of Chicago, will begin next week a trip to New York, Boston, Philadelphia and Washington for the purpose of investigating the city transportation systems for Chicago's benefit. The especial purpose of the trip is to examine the subways in New York and Boston for the purpose of advising the Chicago city council when it takes up the question of a subway for Chicago in the near future, and to study the operation of the elevated roads with reference to Chicago's loop problem.

American Institute of Electrical Engineers, Purdue Branch.—At a meeting held on January 8, Prof. J. Walter Esterline, Purdue University, spoke on the subject, "Specifications and Contracts for Electrical Work." The speaker discussed the various features that make contracts valid or invalid. . According to law the parties must be competent, corporations are only liable as far as their charters extend, the subject matter must be lawful and a consideration must be provided for. Particular stress was laid upon the fact that a contract was a means of bringing contractor and client to mutual agreements.

Philadelphia Strike Vote Rescinded.—The union motormen and conductors of the Philadelphia Rapid Transit Company, at a meeting on January 8, rescinded the strike vote taken several weeks ago and indorsed the action of Mayor Reyburn in inducing the company to make certain concessions to the men. As reported in last week's issue, John B. Parsons, president of the Philadelphia Rapid Transit Company, agreed to set apart one day a month on which individuals or committees of three might confer with the general manager in regard to grievances and also agreed to receive suggestions from the men in regard to the improvement of working conditions. He said it would be absolutely impossible to consider any increase of wages.

Portland Council Adopts Fender.—A committee of the city council of Portland, Ore., after conducting a number of tests of various makes of fenders on the lines of the Portland Railway Light & Power Company, has decided that the Lambert fender is best suited to the conditions, and an ordinance will be adopted at once requiring the company to use that fender on all of its cars. The present ordinance requires another make of fender, but as it is claimed that that fender is not entirely suitable, the ordinance has not been strictly enforced. The Lambert fender has withstood severe tests. It extends about three feet in front of the car and is operated automatically. A complete description of the fender will be incorporated in the ordinance.

Programme Annual Meeting Central Electric Railway Association.—The secretary of the Central Electric Railway Association has issued an attractive 4-page programme and invitation for the annual meeting which will be held at the Phillips hotel, Dayton, O., Thursday, January 23. The first page of the invitation bears a halftone engraving of one of the large Indianapolis-Ft. Wayne limited cars. An excellent programme of interest to both transportation and mechanical men will be presented. The annual dinner, which, in the past, has been such a successful event, will be held on the evening of the twenty-third. It is expected that a number of interurban managers will bring their private cars to Dayton so that an exhibit may be held similar to that given at Indianapolis a year ago.

Western Society of Engineers.—At the annual meeting of the Western Society of Engineers held in the banquet hall of the Chicago Athletic Club on January 7, the following officers were elected for the year 1908: President, C. F. Loweth, engineer and superintendent bridges and buildings, Chicago Milwaukee & St. Paul Railway, Chicago, Ill.; first vice-president, J. W. Alvord, 140 Dearborn street, Chicago; second vice-president, P. Junkersfeld, electrical engineer Commonwealth Edison Company, Chicago; third vice-president, D. W. Mead, University of Wisconsin, Madison, Wis.; treasurer, A. Reichmann, American Bridge Company. The annual meeting of the electrical section of the society was held on January 10. J. D. Ihlder of New York presented the paper of the evening on "Electric Elevators for High Buildings." An extra meeting of the society will be held in the society rooms on Wednesday, January 22. A paper on "The Wrought Compressive Member for Bridge Trusses," previously read by H. E. Horton, will be discussed.

Fire in New York Skyscraper Ties Up Subway Service.—The service in the New York subway was seriously interfered with on Saturday and Sunday, January 11 and 12, by the disastrous fire in the Parker building at Fourth avenue and Nineteenth street. The building was badly injured by the fire and was so far out of plumb that it was feared that the vibration caused by the trains might cause the walls to fall. At that point the roof of the subway is only 12 feet below the surface of the street and the tracks are only about two feet from the building line. Twice on Saturday the trains were stopped for some time by the orders of the building commissioner, and at 11 p. m. it was decided not to run any more trains north of Fourteenth street and South of Forty-second street. It was also necessary to cut down the number of trains somewhat on account of the inadequate switching facilities at those stations. The elevated and surface lines were badly congested because of the crowds that ordinarily use the subway. On Sunday many trains were run past the building slowly without stopping at the Eighteenth street station, but the service was reduced 40 per cent. On Monday trains were run on a regular schedule but not so frequently as usual.

Los Angeles-Pacific Company.—That Epes Randolph, representing E. H. Harriman, is expected to come to Los Angeles to reorganize the Los Angeles-Pacific Company is made evident by a statement made by R. C. Gillis, chairman of the executive committee of that corporation. When asked concerning the changes contemplated by the company, including the reduction in force, Mr. Gillis replied: "We will have no material changes except a minor consolidation of offices. Our road is financed, and any future plans of reorganization that we have in view will await the arrival of Colonel Randolph." The rumors that General Manager T. R. Gabel would leave the company were denied at the offices in the Los Angeles-Pacific building and also by Mr. Gabel himself. He says: "The Los Angeles-Pacific will not be operated from the Pacific Electric building nor by any one other than its own officers. The financial condition of the company is the same as that of other large organizations throughout the country—thoroughly solvent, but hard up for cash. We just reduced expenses for the time being, but none of the improvements heretofore decided upon will be abandoned for plans changed, except that there will be a temporary curtailment of construction."

Philadelphia Rapid Transit Company Sued for Electrolysis Damages.—The North Springfield Water Company has brought suit at Norristown, Pa., against the Philadelphia Rapid Transit Company for damages to its water pipes caused by electrolysis. The company is charged with "operating its electric street railway in such an unskilful, wrongful and negligent manner that the mains and pipes are greatly damaged by currents of electricity that escape from its cars and tracks, disintegrating, weakening and shortening their life, and causing a continuing damage to the complainant." The water company states that it maintains water pipes in portions of the city of Philadelphia and in surrounding towns in territory served by the Philadelphia Rapid Transit Company, and that its property is being destroyed by currents escaping from the company's rails. The complainant avers that this injury to its property by the escaping currents is progressive and accumulative, and if not stopped will result in the total destruction of the mains and pipes and prevent the complainant from performing its chartered duties to the public, and possibly cause great damage to the public by water from its leaking or bursting pipes. It is complained that this injury is not confined to the mains and pipes that are located along the streets over which the trolley tracks run, but that the corrosive currents attack and destroy the mains and pipes laid under streets that intersect such main streets and involve all their property in the entire region. Claiming that it is without adequate remedy for the damages inflicted, at law, the water company askes the court to issue an injunction, operative after a reasonable time, which will prevent the defendants from running either their cars on their power houses at Ogontz, Willow Gorve and Chestnut Hill until the defendants shall put into operation "such modern and effective devices and appliances as will prevent further injury to the water pipes." The complainant also asks the court to fix heavy damages sustained by it and require the defendant to pay them and the costs of the suit.

Traffic and Transportation

Connections of Chicago Subway.

The Illinois Tunnel Company, the operating corporation of the Chicago Subway Company, has made public certain information concerning the present status of its affairs. It has completed connections with 11 of the steam railway companies with which contracts have been made, and has now under construction connections with 7 additional roads. Connections are either completed or under construction with 14 wholesale or retail mercantile houses. There are also under construction connections with 8 warehouses. Negotiations for connections are under way with 12 additional mercantile houses. Connections have been completed with 6 large downtown buildings for the delivery of coal. The company is now operating daily 2,000 cars, of which 1,200 cars are required for the delivery of mail to and from the postoffice and 800 cars are used in the transportation of coal and merchandise. When connections are completed with 10 additional freight houses of steam railways by April 1, the company anticipates that 5,000 cars a day will be needed. The officials of the company estimate that by July 1, 1908, about 10,000 cars will be required to handle the business.

Payments to City of Indianapolis.

The Indianapolis Traction & Terminal Company has paid to the city of Indianapolis $3,969.70 under the provision in its ordinance that the city shall receive four cents for each round trip of an interurban car. During 1907 the total of such round trips in the city was 99,212½, divided as follows:

Company—	Number of trips.
Indiana Union Traction Company—	
Muncie division	9,443
Logansport division	8,226½
Broad Ripple division	14,148
Army post division	2,000
Indianapolis & Cincinnati Traction Company	15,447½
Indianapolis Columbus & Southern Company	10,160
Indianapolis Crawfordsville & Western	2,859
Terre Haute Indianapolis & Eastern—	
Northwestern division	8,539
Eastern division	8,162½
Martinsville division	7,996
Brazil	6,738½
Danville	5,522½
Total	99,242½

The total paid for 1907 exceeded that paid for 1906 by $460.48. To the amount paid by the Traction & Terminal company will be added $992.43, as each interurban company must pay to the city one cent for each round trip its cars make in the city. These amounts are in addition to the $30,000 which the Traction & Terminal company annually makes to the city under its franchise for park purposes.

Hearing on Petition for Reduced Fares in Springfield, Mass.

The Massachusetts railroad commission held a hearing on January 10 on petitions urging that the Springfield (Mass.) Street Railway be obliged to sell six tickets for 25 cents, or 25 tickets for $1.00, and to run more cars in Springfield. A hearing also took place on a petition that the company be obliged to issue 3-cent tickets for workingmen in Chicopee, good in the morning and evening. The company was represented by H. C. Page, vice-president and general manager, and Bentley W. Warren, counsel.

City Solicitor Wooden of Springfield introduced H. A. Booth, who said that in the last four years the gross earnings of the company had increased 37 per cent, its operating expenses 59 per cent and the number of passengers carried 37 per cent. Mr. Booth said that when he rode on a crowded car from Chicopee to Springfield on one day the conductor was unable to collect 75 cents or $1.00 in fares because the car was so crowded. The hearing was continued until February 4.

The Springfield (Mass.) Street Railway, as a retrenchment measure, has abandoned the half-rate tickets for evening school pupils and students at commercial schools. The value of unused tickets was refunded on presentation at the office of the company. Heretofore pupils of the night schools have had a 2½-cent fare just as the day school pupils have had, the same books being supplied on presentation of certificates, but stamped to indicate that they were for evening use. H. C. Page, vice-president and general manager of the company, said that the cutting off of evening school and commercial school tickets was not confined to Springfield, but that it was general throughout Massachusetts, not only on the lines in which the New York New Haven & Hartford Railroad has been interested, but on others as well. The action, he said, had been made possible by the supreme court decision in the Amherst case. This suit was brought by F. H. Chapin of Amherst, a student at the Northampton commercial high school, against the Connecticut Valley street railway company to enforce the penal clause of the statute for the failure of the company to accept a half-fare ticket from Chapin. A jury found the company guilty, but the decision was a mere form to allow the case to go to the supreme court, which ruled in October that the commercial high school of Northampton is not a school within the meaning of the statute.

Improvements in Service of Louisville Railway.

R. S. Smith, traffic manager of the Louisville (Ky.) Railway, has submitted to the mayor and general council of Louisville the reply of that company to the request for improvements in the service. In his letter Mr. Smith states:

"By reason of circumstances, we have been compelled to employ a considerable number of conductors and motormen, some of whom have not yet had opportunity to gain full experience. This condition is being rendered less serious every day, and we have no reason to doubt that within 30 days substantially all grounds for complaint of this kind will cease to exist.

"There are many things which disarrange a schedule of street car operation that are entirely beyond the control of the company. The rails of our line cross the rails of steam railroads at 34 places. It is within bounds to say that the cars of the Louisville Railway cross the tracks of steam railroads 12,000 times a day. At these crossings safety requires gates or other appliances, which stop the street cars until the engines or engines and trains of the steam railroads have passed over the intersection. Sometimes these trains are very long and take considerable time in passing, and in many instances a certain amount of switching is done backward and forward over the intersection. Our cars are delayed at these crossings an average of 600 times daily.

"In regard to arrangement of schedules wherever possible with due regard to conections with cars on other lines for the purpose of transfer, this is an obvious duty upon the part of the company, and we will make every effort to comply with your suggestion in this regard. Here again a moment's consideration will show the importance of regulating the above mentioned causes of delay, which are beyond our control.

"In reference to the matter of transfers, we have a system which includes about 500 different transfers. We do not think that any system of transfer should be provided by which a passenger can be taken from a given point and returned to the same, or nearly the same, point for one fare. After going over the matter, however, with your committee, we have determined to put in a number of additional transfers, being all the special ones suggested, and some others which we had added thereto. These added transfers are not in accordance with the practice which we have heretofore adopted of excluding transfers from one paralel line to another, but as there seems to be a special desire for them, we have concluded to yield to your request and to add them to the transfers now in force.

"In regard to heating cars according to the provisions of the ordinance, we make the best effort in our power to do this. The fact is, however, that we have very many more complaints from passengers wanting fresh air, that the cars are close and overheated, than that they are too cold, and you can well appreciate the difficulty there is in satisfying a carload of passengers on this point—some asking for one temperature and some for another.

"We believe that if the service on the Louisville Railway is compared with that in other cities of the size of Louisville and greater, it cannot be said that we do not possess a modern and convenient system of travel.

"No rules are made governing the conduct of such a company as ours that are not believed to be in the interest of the general public. In some instances the reasons for these rules are not always apparent, and seem to bear hard in individual cases; but they are not adopted without careful consideration, and we are always more than willing to give the reason for them, and to change them if these reasons do not justify them."

Mounted Police Expedite Traffic in Chicago.—T. E. Mitten, president of the Chicago City Railway, has written a letter to Mayor Busse praising the work of the mounted police, who have expedited traffic in the central business district. Mr. Mitten cited several specific instances showing that cars make better time through the congested district, and added: "There is also a much greater regularity of service, which, of

course, tends to reduce overcrowding. I feel that you ought to know what the result has been and at the same time desire to express to you my very great appreciation of your co-operation, a continuation of which will make the real solution of the traction question—i. e., reducing overcrowding—very much easier of accomplishment."

Limited Service Extended by Ohio Electric Railway.—Effective on January 19 the Ohio Electric Railway will extend the limited service inaugurated on December 15 between Columbus and Dayton, O., to Richmond, Ind. The distance from Columbus to Richmond is 112 miles.

Five-Cent Fare Sought Between Council Bluffs and Omaha.—At the meeting of the West End Improvement Club of Council Bluffs, Ia., on January 7, steps were taken to secure the establishment of a 5-cent fare between Council Bluffs and Omaha on the lines of the Omaha & Council Bluffs Street Railway. A hearing on the subject will be held by the interstate commerce commission in Omaha on January 20.

Electric Express Company Service.—The desire of the Electric Express Company to start express service between Springfield, Mass., and Hartford, Conn., is indicated by a petition to the selectmen of Longmeadow, Mass., by the Springfield Street Railway for permission to use its lines and cars as a common carrier of newspapers, baggage, express and freight. A hearing on the subject will be held on January 29.

Fares Raised in Massachusetts.—Directors of the Medfield & Medway Street Railway and the Dedham & Franklin Street Railway of Westwood, Mass., have decided to raise fares. The fares for rides between Franklin, Medway, Millis and Medfield will be 7 cents instead of 5. From Medfield to Dedham the fare will be doubled to 20 cents. The Lexington & Boston Street Railway, which is controlled by the Boston Suburban Electric Companies, will probably increase its fares.

To Investigate Schedules in Savannah, Ga.—After a conference between representatives of the Savannah (Ga.) Electric Company and city officials of Savannah, it was announced that the company has agreed to have an expert investigate the schedules concerning which complaint has been made. This expert is employed by the firm of Stone & Webster and he will make a detailed inspection of the situation in Savannah and report to the company.

Orders Increased Service on Brooklyn Rapid Transit Line.—The New York public service commission, first district, has ordered the Brooklyn Rapid Transit Company to add at least 25 cars to its service on the Brighton Beach line. Complaint has been made to the commission that on this line the company has been operating trains of only two and three cars. The order issued by the commission is that the trains shall have more cars and that in the rush hours more trains should be operated.

Increased Fares or Reduced Service.—James L. Richards, president of the Newton & Boston Street Railway of Newton, Mass., and other roads, made an address before the Newton Club on January 11 in which he spoke of the necessity for roads which are not profitable of increasing fares or reducing the service. Mr. Richards said that one reason for the decline in earnings was the failure of the old management to allow for the depreciation of the property. He favored a reduction in the number of trains on the line between Framingham and Newton.

New Transfer System in New Orleans.—The new transfer system of the New Orleans (La.) Railway & Light Company was introduced on January 15. Transfers will be issued to any line except the St. Charles-Tulane and the Esplanade-Canal belt, and at any point along the various lines. Transfers will be issued on the payment of cash fares only and only upon request as fares are paid. Passengers are urged to tell the conductor at the time of paying fare at which point they wish to transfer to another line. The company has issued booklets showing the extent of the system.

Express Company Contract with Pittsburg & Butler Street Railway.—By making a contract with the Pittsburg & Butler Street Railway, Wells Fargo & Company's Express has secured entrance to Pittsburg. It is now using wagons for handling the traffic at the Pittsburg end of the electric road, but is planning to replace them with automobile trucks. It is expected that the contract with the express company will afford considerable traffic to the electric road. The other principal express companies reach Pittsburg over the steam railways. The Adams Express Company is on the Pennsylvania Railroad, the American Express Company enters on the Lake Erie & Western Railroad, and the United States Express Company secures entrance by the Baltimore & Ohio Railroad.

Construction News

FRANCHISES.

Augusta, Ga.—The Atlanta & Carolina Construction Company has applied for a franchise to build its line through the streets of Augusta and to erect terminal stations. Trackage and terminal rights in Atlanta and Athens already have been secured; the entire survey has been completed, and the contract let for part of the construction work. Matthew Mason, vice-president and general manager, Atlanta, Ga.

Calgary, Alberta.—An English capitalist has applied to the city council of Calgary for a 15-year franchise for the construction and operation of an electric railway in that city. A similar application by the same interests was made to the Edmonton, Alberta, council. At the expiration of the franchise the company may sell its holdings to the city.

East St. Louis, Ill.—A franchise has been granted to the East St. Louis & Suburban Railway Company to lay tracks on Tenth street, between St. Clair and Illinois avenues. The company applied for the franchise about a year ago, but on account of the opposition of residents along the line favorable action has been delayed. It is stated that work will be started immediately.

Monongahela, Pa.—The council has approved the application of the Monongahela & Carroll Street Railway for the construction of its line in Monongahela. The road will be continued to Bentleyville and later to Washington, Pa., and must be completed and in operation within three years. A bond of $5,000 to insure the early beginning of the work must be deposited with the city inside of 30 days. Nominal capital stock, $12,000. E. B. Hartman, Jr., W. D. McBryar, E. W. Marshall, W. S. Walsh and W. E. Walsh, all of Pittsburg, are interested.

Niles, Mich.—The franchise granted to the Niles & Buchanan Railway Company about two years ago has been forfeited on account of the inability of the company to secure capital for the completion of the line. The company was formed to build an electric railway from Niles to Buchanan, as a tributary to the Southern Michigan Railway, operating between St. Joseph, Mich., and South Bend, Ind. The promoters, however, have purchased the abandoned roadbed of the Michigan Central Railway between Niles and Buchanan and tracks have been laid to the city limits of Niles. It is stated that as soon as the financial stringency is relieved the company will seek another franchise and complete the road.

Washington, D. C.—The senate district committee has reported favorably on a bill authorizing the Washington Railway & Electric Company, the Capital Traction Company, the City & Suburban Railway and the Anacosta & Potomac River Railroad to extend their tracks to the new Union station. Construction is to begin within 30 days and be completed within 12 months from the date of the passage of the act. Amendments providing for universal transfers and a franchise tax were defeated.

RECENT INCORPORATIONS.

Southern Street Railroad.—Incorporated in Illinois to operate street railways in Cook county. Capital stock, $10,000. Incorporators: James C. Cleary, John A. Early and E. G. Stevens.

St. Paul Minneapolis & Seattle Electric Railway, St. Paul, Minn.—Incorporated in Minnesota to build an electric railway from St. Paul and Minneapolis, Minn., to the Pacific coast, with branches extending to Fargo, N. D., and Aberdeen, S. D. Capital stock, $500,000,000. Incorporators: William C. Webber, Rochester, Minn.; David Phillips, Mazeppa, Minn.; Samuel A. Phillips, James Mosop, St. Paul; Glenn W. Martens, Pierre, S. D. The headquarters of the new company will be at St. Paul.

TRACK AND ROADWAY.

Ashtabula (O.) Electric Street Railroad.—This company has been organized by C. G. Nelson, J. E. Anderson, J. V. Paulson and others of Ashtabula, O., to build an electric line about five miles long from Ashtabula to Ashtabula Harbor. A small power house is to be built.

Atlanta Norcross & Gainesville Electric Railway.—This company, which was formed to build and operate an electric railway from Atlanta to Gainesville, Ga., by way of Chamblee, Doraville, Norcross and Buford, 50 miles, has applied for a charter. The company also will operate an electric plant and

sell electric light and power. Capital stock, $15,000. Incorporators: H. D. Jaquish, C. C. Sanders, W. B. Smith, M. M. Ham, J. W. Bailey, H. H. Dean and I. L. B. Stevens.

Bayou Teche Railway & Light Company, New Iberia, La.—An inspection of the route of this company's proposed line between New Iberia and Jeannette, La., has been made by H. H. Fine, superintendent of construction for the company, and R. E. Huston of the Huston Engineering Company, and it is stated that construction will be started in January. (Noted November 16, 1907.)

Beaver Falls & Koppel Electric Railway, Pittsburg, Pa.—This company is reported to have started work on its proposed line between Beaver Falls and Ellwood, Pa. S. L. Tone of Pittsburg is interested. (Noted December 21, 1907.)

Buffalo Lockport & Rochester Railway, Buffalo, N. Y.—This company expects to have its cars running from Rochester to Albion, N. Y., on April 15 and into Lockport by July 1, connecting at this point with the Buffalo cars of the International Railway. With the completion of these sections of the Buffalo Rochester & Lockport line it will be possible to make a cross-state trip by trolley from Buffalo to Albany with the exception of a 30-mile break from Little Falls to Fonda, which cities are connected only by the New York Central steam road. (Noted August 31, 1907.)

Calumet & Lac La Belle Traction Company, Calumet, Mich.—It is reported that this company, which was formed to build an electric railway between Calumet and Mohawk, will begin work on the line this month. Sidney M. Weil is financial agent of the company.

Chicago Lake Shore & South Bend Railway, South Bend, Ind.—The construction work on this line from South Bend, Ind., to Kensington, Ill., is progressing rapidly. A total of 48 miles of track has been laid to date and grading is so far advanced that it is stated that rails will be laid on an additional 13 miles within 30 days. The engines for the power house at Michigan City are now on the ground ready to be installed. J. B. Hanna is president and J. W. S. Reigle, chief engineer. (Noted December 21, 1907.)

Cleveland Alliance & Mahoning Valley Railway, Cleveland, O.—J. W. Holcomb, who is promoting this interurban line between Ravenna and Warren, O., announces that construction work will be started about March or April 1. In addition to electrifying the track from Ravenna to Newton Falls, which was purchased from the Baltimore & Ohio Railroad Company, nine miles of grading and tracklaying must be done. It is believed that the road will be in operation by September 1, 1908. When completed it will form a connecting link between the Northern Ohio Traction & Light Company line at Akron, O., and the Mahoning & Shenango Railway & Light Company at New Castle, Pa. (Noted August 3, 1907.)

Granger, Wash.—Several business men and property owners in the Sunnyside valley are planning to form a company for the construction of an electric railway which will serve this section of Washington. Walter Granger, who has charge of the government reclamation work in the Sunnyside valley, is said to be the leader in the movement.

Hanover & McSherrystown Street Railway, Hanover, Pa.—An extension of this line from North and Church streets in McSherrystown, to the southwestern limits of Littletown, 5.7 miles, has been authorized. The company also is permitted to build an extension in Queen street, Littletown, a little over half a mile. Robert E. Manley, general manager, Hanover, Pa.

Hanover & York Street Railway, York, Pa.—The opening of the extension from Hanover to York, Pa., which this company has had under construction since last fall, will probably take place on February 1, instead of January 1, as earlier expected. Tracklaying was completed on January 9, most of the overhead work has been finished and the work on the viaduct, which has caused the principal delay, is now said to be far enough advanced to permit opening the line on the first day of February. The extension is 18¼ miles long and has been built by Dodge & Day, New York City, and John H. Dobbling of York, Pa.

Johnstown Passenger Railway, Johnstown, Pa.—Improvements for the coming year to the amount of $100,000 were voted for at a recent meeting of the directors of this company. Of this amount about $62,000 will be expended on the new system in the Morrellville district, for which a franchise was recently granted by the city councils. The main line of the system between the eighth ward transfer station and the Moxham bridge will also be rebuilt. No action was taken on the proposed extension of the line from Walnut Grove to Geistown, as the company will not build the line unless the right of way is secured without cost to the corporation. S. E. Young, secretary and manager, Johnstown, Pa.

Lake City, Ia.—A corps of engineers is working southeast from this city surveying for a proposed interurban electric line between Lake City and Lanesboro. The enterprise is backed by local capitalists, who propose later to extend the line to Des Moines by way of Jefferson and possibly to Sac City, Ia by way of Yetter.

Little Rock & Pine Bluff Traction Company, Little Rock, Ark.—The contract for the electrical supplies for building this company's 50-mile interurban line between Little Rock and Pine Bluff has been awarded to the Westinghouse Electric Company for $115,000. The Arkansas Corrugated Metal Culvert Company, Little Rock, Ark., has secured the contract for all culverts and conduits. Considerable progress on the grading is reported and it is stated that a further extension to Stuttgart, Ark., may be built by the company. (Noted August 31, 1907.)

Milwaukee, Wis.—It is reported that a number of Milwaukee business men are considering a project for a subway from the corner of Third and Grand avenues to the south side and that some sort of a proposition regarding it will be made to the city council in a short time.

Milner & Northside Railroad, Milner, Idaho.—About eight miles of this proopsed 65-mile line has been graded and work, which has been suspended on account of the bad weather, will be resumed as soon as possible. All of the steel for the bridge across the Snake river has arrived at Milner and work upon the structure will begin shortly. It is estimated that the road will cost $25,000 per mile or about $500,000, exclusive of the cost of maintenance. D. C. McWatters, president, Milner, Idaho. (Noted December 14.)

Minneapolis St. Paul Rochester & Dubuque Traction Company, Minneapolis, Minn.—Contracts for building this line probably will be let some time during February or March. All surveys and 21 miles of grading have been completed and it is stated that practically all of the right of way has been secured. The road will connect Minneapolis and St. Paul with Northfield, Owatonna and Rochester, Minn.; Cresco, Decorah and Dubuque, Ia.; a total distance of 265 miles. M. W. Savage, president, Minneapolis; F. G. L. Hunt, International building, Minneapolis, chief engineer. (Noted November 30, 1907.)

Moorhead, Minn.—The Northwestern Interurban Railway has applied for a 20-year franchise to construct its line over a portion of First avenue north from Front street north to the eastern limits of the city. The franchise also calls for a terminal in Moorhead on the bank of the Red river about half a block from the north bridge. Access will be afforded to the river for "Soo" freight for Fargo and Moorhead and the freight facilities of that section will be greatly improved. It is stated that as soon as navigation has ceased a bridge will be built over the river for the use of both the interurban and "Soo" cars, provided congress takes action on the matter. The interurban company, through an arrangement with the Fargo & Moorhead Street Railway Company, will run its cars from Dilworth and beyond to the business district of Fargo. The road must be built within a year from the date of the franchise. (Noted November 2, 1907.)

Nashville Interurban Railway, Nashville, Tenn.—It is stated that this company will suspend grading on its interurban road from Nashville to Franklin on January 15, resuming as soon as the worst of the winter weather has passed, or about April 1. By that time all bridges will be ready to be placed and the work pushed to completion. About two-thirds of the grading has been completed. President H. H. Mayberry is quoted as saying that in the meantime the contracts for the bridge and track materials and equipment will be awarded and all unfinished work of that kind completed by spring. (Noted January 11.)

Ohio & Southern Traction Company, Columbus, O.—It is reported that surveys are being made for an extension of this line, which now runs from Columbus to the Hartman stock farm south of the city, to Washington Court House.

Pasadena, Cal.—Plans for incorporating a company to build an electric line on Lincoln avenue out to the foothills to the north are being considered by the North Lincoln Avenue Improvement Association of this city. It is stated that the company will be incorporated for $75,000, which it is believed represents more than the cost of constructing the road. A meeting will be held in the near future and a franchise applied for. A. J. Toolen, Gowan D. Francis and W. M. Mason, all of Pasadena, are president, secretary and treasurer, respectively, of the temporary organization.

Philadelphia Rapid Transit Company.—It is reported that more rapid progress was made on the construction of the eastern section of the Market street subway during December

than during any month since the contract was undertaken in May, 1906. Within the last 30 days the Millard Construction Company, which has the contract, has added 500 new men to the construction force, in the effort to have the subway completed by August 15. Of these 300 are assigned to the night shift.

People's Railway, Dayton, O.—It is stated that this company proposes to extend its line from Fairview park down Salem pike to Catalpa drive. It will then cross over to Covington pike, thus forming a loop. George C. Towle, general manager, Dayton, O.

Portland Eugene & Eastern Railway, Portland, Ore.—Work on this line, which was suspended during December on account of the tightness of the money market, will be resumed between Eugene and Springfield, Ore., some time this month. The franchise covering crossing of the county roads expired on December 6, but an extension of 90 days has been granted by the county court. A. Welch and others of Portland are interested. (Noted December 14, 1907.)

Portland Gray & Lewiston Electric Railway.—Surveys have been completed between Portland and Lewiston for this proposed line and plans for the permanent location of the route are now being made with a view to starting work early in the spring. John A. Jones, Lewiston, Me., chief engineer. (Noted August 17, 1907.)

Pueblo & Arkansas Valley Electric Railway, Pueblo, Colo.—N. C. Van Natta, chief engineer of this company, writes that the line will extend from Pueblo to Fowler, Colo., and that surveys have been completed for the entire distance, 36 miles. Contracts will be let as soon as estimates have been prepared and additional right of way secured. The road will be built for high-speed freight and passenger service. Ninety-one per cent of the route will be tangent and 65-pound rails will be used.

Shreveport, La.—It is stated that an interurban line from Shreveport, La., to Marshall, Tex., is being promoted by John Lorenz, formerly of Jackson, Miss., and S. A. Guy of Shreveport, La. The road will be financed with eastern capital, although residents along the proposed route will be solicited for subscriptions. It is announced that preliminary work will be started soon.

South Bend-Raymond Electric Company, Raymond, Wash.—It is expected that as soon as this company has completed the extension of its transmission line to South Bend, 3.9 miles, it will undertake the construction of an electric railway connecting the two towns at a cost of $150,000, including equipment. J. H. Marshall, engineer.

Southern Michigan Railway, South Bend, Ind.—It is stated that this company is planning to build an interurban line between Kalamazoo and Niles, Mich. The company operates an interurban line from St. Joseph to South Bend by way of Niles. J. McM. Smith, general manager, South Bend, Ind.

Topeka Railway, Topeka, Kan.—It is stated that this company is planning to build a viaduct over the Santa Fe tracks at Topeka to cost about $50,000 and be completed some time during the present year.

Ventura Terminal Railway, Los Angeles, Cal.—This company proposes to build an electric railway to the cement rock quarry at Tidewater, where a cement factory will be built, a distance of 25 miles, and a 5-mile branch to Nordhoff and the Ojai valley. Preliminary surveys have been made and most of the right of way secured. Part of the capital has been obtained and contracts are to be let as soon as the money market becomes easier. These enterprises will be owned and financed by the Ventura Industrial & Securities Company, which will sell bonds. William A. Ramsey, chief engineer, I. W. Hellman building, Los Angeles, Cal. (New road.)

POWER HOUSES AND SUBSTATIONS.

Coney Island & Brooklyn Railroad, Brooklyn, N. Y.—The Raymond Concrete Pile Company has the contract for placing the piles for the foundation of the new Smith street power house. Ford, Bacon & Davis are the engineers and A. Pasquini, New York, is the general contractor.

Lewiston Augusta & Waterville Street Railway, Lewiston, Me.—This company expects to place contracts during the next two months for the construction of two substations. E. D. Reed, general manager.

Torrington & Winchester Street Railway, Burrville, Conn.—It is reported that this company, which is owned by the Connecticut Company, is contemplating abandoning its present power house at Burrville and building a new one at Torrington, Conn.

Personal Mention

Mr. J. C. Kilpatrick, claim agent and paymaster of the Illinois Traction System, has resigned to engage in business in California.

Mr. W. B. Sutherland, Rochester, N. Y., has been appointed counsel for the public service commission of New York, second district.

Mr. G. E. Miller, superintendent of the Union Electric Company, Dubuque, Ia., has resigned to accept a similar position with the Chattanooga Railways at Chattanooga, Tenn.

Mr. W. P. Larcey, heretofore superintendent of the Evansville & Southern Indiana Traction Company at Princeton, Ind., has resigned to become associated with the Louisville (Ky.) Railway.

Mr. W. H. Tarrant, for the past three years chief engineer of construction for the Illinois Traction System, has resigned. His duties will be assumed by Mr. R. McCalman, engineer of maintenance of way.

Mr. Louis E. Cushing having resigned as superintendent of the Taunton & Pawtucket Street Railway of Attleboro, Mass., the duties of the office of superintendent will for the present be performed by Mr. A. C. Ralph, general manager.

Mr. A. J. Brown has been appointed superintendent of the Cincinnati Northern Traction Company, succeeding Mr. C. E. Palmer, resigned. Mr. Brown has been superintendent of the Dayton & Western Traction Company at Dayton, O.

Mr. Lawrence Manning has resigned as general manager of the Owosso & Corunna Electric Company, Owosso, Mich., effective on January 1. Mr. Robert Gale and Mr. Eugene Bremer have been appointed local managers to succeed Mr. Manning.

Mr. A. L. Neereamer, general superintendent of the Columbus Delaware & Marion Railway, has resigned, effective at once. With Mr. Neereamer's resignation the office will be abolished and its duties distributed among other members of the operating force.

Mr. R. R. Hayes, trainmaster of the Western Ohio Railway at Wapakoneta, O., has been appointed superintendent of the Chicago South Bend & Northern Indiana Railway, with headquarters at South Bend, Ind. Mr. Hayes' former associates on the Western Ohio Railway presented him last week with a fine diamond ring.

Mr. G. W. Wattles, for the past year vice-president of the Omaha & Council Bluffs Street Railway, was elected president of the company at a meeting of the board of directors on January 13. He succeeds Mr. Guy C. Barton, who has retired from active business affairs. Mr. Wattles will be succeeded as vice-president by Mr. Frank T. Hamilton.

Mr. W. A. McWhorter has resigned as master mechanic of the Birmingham Railway Light & Power Company, Birmingham, Ala., to become associated with the Galena-Signal Oil Company as expert on street railway lubrication, with headquarters at the Atlanta office of the company. He will be succeeded at Birmingham by Mr. A. Y. Evans.

Mr. R. M. Howard, formerly general manager of the Clinton (Ia.) Street Railway, has been appointed general manager and superintendent of the Green Bay Traction Company and the Green Bay Gas & Electric Company, Green Bay, Wis. The management of these properties heretofore has been under the direction of Mr. George W. Knox of Chicago, vice-president, and Mr. Melvin J. Kinch, superintendent.

Mr. J. H. Handlon has been appointed claim agent of the United Railroads of San Francisco, succeeding Mr. A. K. Stevens, recently retired after 25 years of service with the company. Mr. Handlon formerly was chief clerk of the operating department, and will be succeeded by Mr. C. I. Kephart, formerly assistant chief clerk. Another appointment announced is that of Mr. Thomas Finegan, who will become purchasing agent of the company.

Mr. George Weston has been appointed a member of the board of supervising engineers, which has charge of the rehabilitation of the properties of the traction properties in Chicago. Mr. Weston has been heretofore assistant chief engineer of the board, in charge of track reconstruction, reporting to Mr. Bion J. Arnold, chief engineer. Mr. Weston will represent the city on the board and succeeds Mr. Charles V. Weston, resigned to become president of the South Side Elevated Railroad. A portrait and biographical sketch of Mr. Weston

were published in the Electric Railway Review of May 11, 1907, page 618.

Mr. J. F. Wessel has been appointed electrical engineer of the Apperson traction properties located at Lynchburg and Roanoke, Va., and Montgomery, Ala., of which Mr. R. D. Apperson is president. Mr. Wessel's jurisdiction also extends over the Lynchburg Water Power Company and the Petersburg Gas Company, which are owned by the Apperson interests. Mr. Wessel was for a number of years with the General Electric Company at its Baltimore office.

Mr. Thomas Finigan, formerly connected with the North Jersey Street Railway Company of New Jersey (now the Public Service Corporation) and who has been assistant purchasing agent of the United Railroads of San Francisco for the past three years, has been appointed purchasing agent of that company, vice Mr. C. D. Baldwin, resigned. Mr. Joseph H. Handlon has been appointed claims agent, vice Mr. A. K. Stevens, resigned. Mr. Handlon has been connected with the United Railroads of San Francisco as chief clerk to the late general manager, G. F. Chapman, for about five years. Previous to this time he held various positions with the North Jersey Street Railway Company of New Jersey, both in the claims department and with the general superintendent, the Brooklyn Heights Railroad Company of Brooklyn, N. Y., and the Metropolitan Street Railway Company of New York City.

Mr. A. W. Jordan, who has recently been appointed traffic agent of the Chicago & Joliet Electric Railway and superintendent of Dellwood Park at Joliet, Ill., has had a number of years of experience in this line of work. He obtained his public school education in Kalamazoo, Mich., and began his business career as a stenographer in the legal department of the Grand Rapid's Railway. Since that time he has been connected continuously with electric railways. For eight years he was confidential secretary to G. Stewart Johnson, former manager of the Grand Rapids Railway, and in that capacity was closely identified with Reed's Lake Park. After the death of Mr. Johnson, Mr. Jordan became passenger agent under Mr. Theodore Stebbins, general manager for the receivers of the Appleyard lines in Ohio. When these lines were sold to the Schoepf syndicate Mr. Jordan was made general passenger agent and later general freight and passenger agent of that division of the Schoepf roads. When the consolidation of all the divisions of those properties, first as the Indiana Columbus & Eastern Traction Company and afterward as the Ohio Electric Railway, he was made assistant general passenger and freight agent for all the lines in Ohio, which position he retained until November 1, 1907. Mr. Jordan began active work for the Chicago & Joliet Electric Railway on January 1 of this year and is now engaged in showing Chicago people what a delightful place Dellwood Park is for summer picnics and excursions. He reports that prospects are good for a successful season.

A. W. Jordan.

Obituary.

Alexander L. Crawford, well known in the local street railway circles of Philadelphia, died at his home on North Sixth street, Northern Liberties, Pa., aged 85 years. At the time of his death he was a director of the Second & Third Streets Passenger Railway and had been connected for many years with the street railway lines of that section.

William H. Patterson, president of the Grand Rapids & Kalamazoo Valley Traction Company, died at Battle Creek, Mich., on January 10, aged 49 years. He was at one time at the head of the street railway system in Bloomington, Ill., removing from that city about ten years ago to Chicago and later to Michigan, to become identified with electric traction development in that state. During his residence in Illinois he served at one time as president of the Illinois Street Railway Association.

Financial News

Brooklyn Rapid Transit Company.—The New York stock exchange has listed $375,000 additional 50-year mortgage bonds due in 1945, making a total of $7,000,000 listed; $629,000 additional Brooklyn Queens County & Suburban Railroad first consolidated guaranteed 5 per cent bonds due in 1941, making a total of $2,884,000 listed; $3,500,000 Brooklyn Queens County & Suburban road first mortgage 5 per cent bonds due in 1941; and $1,860,000 additional Brooklyn City Railroad first mortgage 5 per cent bonds due in 1941, making a total of $6,000,000 listed.

Chicago Union Traction Company.—Charles H. Aldrich has appealed to the United States supreme court concerning the reorganization plan. A hearing will be held in Washington on January 22. Mr. Aldrich, representing various security holders, charges that his clients are not being treated fairly by those in charge of reorganization; that Judge Grosscup has exceeded his authority in recognizing the reorganized company and has "extrajudicially approved and associated himself with the scheme and has ever since, out of court and personally, advocated such scheme and actively co-operated with the promoters thereof." As the Chicago Railways Company ordinance must be accepted by February 1 the success of the reorganization plan is endangered once more.

Grand Valley Railway Company, Brantford, Ont.—This company, control of which passed to a syndicate of Pittsburg and Buffalo capitalists a short time ago, has acquired control of the Brantford Street Railway and the Woodstock Thames Valley & Ingersoll Electric Railway Company, and proposes to rehabilitate the three properties and build 90 miles additional track, including seven additional miles in Brantford. The company holds a Dominion charter authorizing it to build and operate vessels, construct telegraph or telephone lines, operate an express business and granting other broad privileges. The company is authorized to issue bonds at the rate of not exceeding $30,000 per mile of completed electric railway. The financial interests are represented by the Traction Securities Development Company and bonds to be issued as fast as the new work has been completed are reported fully subscribed. Murry A. Verner of Brantford, Ont., is president of the company.

Lehigh Valley Transit Company, Allentown, Pa.—At the annual meeting of stockholders on January 13 John C. Dawson and C. E. Ingersoll of Philadelphia were elected directors to succeed John C. Newbold and David Young. Mr. Dawson was elected vice-president. The annual report showed gross earnings of $926,799 by the railway lines and $104,761 net earnings from electric light properties and other sources. The gain in railway gross earnings was 4 per cent. Gross earnings from the electric lighting department increased 15 per cent. There was a surplus of $5,264 after payment of fixed charges.

Lynchburg (Va.) Traction & Light Company.—An offering of $200,000 out of an authorized issue of $250,000 of 6 per cent convertible bonds, secured by the general mortgage executed recently to the Logan Trust Company of Philadelphia as trustee, has been made by Bioren & Co., of Philadelphia. The bonds are convertible into stock at par at any time until maturity, on December 1, 1917. The bonds are dated December 1, 1907, and are subject to call on any interest date at 103 and interest.

Newtown (Pa.) Railway.—A certificate has been filed at Harrisburg showing the creation of $375,000 indebtedness as part of the plan for the sale of the property of the Newtown Railway and the Newtown Langhorn & Bristol Street Railway to the Bucks County Electric Railway.

New York City Railway.—In an opinion delivered by Justice Peckham the United States supreme court has denied the petition for the issuance of a writ of mandamus against Judge Lacombe of the United States circuit court of New York, directing him to vacate orders for the appointment of a receiver for the New York City Railway and the Metropolitan Street Railway. In his opinion Justice Peckham said: "Jurisdiction to appoint a receiver by a circuit court of the United States in cases of railroads engaged in interstate commerce has existed by reason of diversity of citizenship in various cases between the parties to the litigation, and not because the railroads were engaged in interstate commerce. The necessary diversity of citizenship is alleged to exist in the cases before the circuit court, and there is no suspicion as to the truth of the averment. * * * While so holding we are not unmindful of the fact that a court is a very unsatisfactory body to administer the affairs of a railroad as a going concern.

and we feel that the possession of such property by the court, through its receivers, should not be unnecessarily delayed. There are cases—and the one in question seems a very strong instance—where, in order to preserve the property for all interests, it is a necessity to resort to such a remedy. A refusal to appoint a receiver would have led in this instance almost inevitably to a very large and useless sacrifice in value of a great property."

North Jacksonville Street Railway Town & Improvement Company, Jacksonville, Fla.—The property of this company was sold under foreclosure on January 6 to Henry M. Endicott, Jr., of Boston, Mass. for $70,000. This road had been controlled by colored people and was built with capital raised by their efforts. The property was sold under decree of foreclosure of the United States circuit court in the suit wherein Mr. Endicott was complainant and the company and others defendants.

Rochester (N. Y.) Railway & Light Company.—An initial dividend of 5 per cent has been declared on the $6,500,000 common stock.

Springfield (Mass.) Street Railway.—At the annual meeting of stockholders on January 8 Henry C. Page, vice-president and general manager, was elected a director.

Underground Electric Railways, London.—Holders of over $16,000,000 of the American issue of $16,550,000 of 5 per cent profit sharing notes have accepted the offer of Speyer & Co., and have sold the December coupons to that firm.

West End Street Railway, Boston.—It is announced that shareholders subscribed for about $920,000 of the $1,010,900 new stock offered recently for subscription.

Western Ohio Railway, Lima, O.—The $400,000 of preferred stock has been listed on the Cleveland stock exchange.

ELECTRIC RAILWAY EARNINGS.

American Railways Company, Philadelphia (Subsidiary Companies).

Gross earnings—	1907.	1906.
December	$ 231,561.55	$ 234,798.76
July 1 to December 31	1,571,486.39	1,490,715.99

The Lackawanna avenue bridge, the principal thoroughfare in Scranton, Pa., was closed to all traffic (including street cars), affecting receipts there for about 10 days in December.

Norfolk & Portsmouth Traction Company, Norfolk, Va.

November—	1907.	1906.
Gross earnings	$202,006.99	$145,950.21
Operating expenses	144,252.60	86,910.14

Rochester (N. Y.) Railway & Light Company, common, 5 per cent.

Syracuse (N. Y.) Rapid Transit Company, common, 3 per cent.

Manufactures and Supplies

ROLLING STOCK.

Topeka Southwestern Railway, Topeka, Kan., is asking prices on a number of cars.

Newell Street Railway, Newell, W. Va., it is reported, will purchase a number of cars to be used as trailers.

Northern Ohio Traction & Light Company, Akron, O., it is reported, will soon place an order for four interurban cars.

Westchester Traction Company, Ossining, N. Y., expects to make a considerable increase in its equipment during 1908.

Syracuse & Suburban Railroad, Syracuse, N. Y., is reported to have placed an order with the Jewett Car Company for a number of cars.

Jacobs Welding Company, Chicago, Ill., has ordered from the McGuire-Cummings Manufacturing Company one 34-foot closed car body with steel underframe and McGuire-Cummings 39A trucks.

Indiana Union Traction Company, Anderson, Ind., is preparing the specifications for a number of cars, to replace those lost in the destruction of the Tipton, Ind., car house, reported in the Electric Railway Review of November 9.

SHOPS AND BUILDINGS.

Washington & Canonsburg Railway, Washington, Pa.—The company's car house and repair shops were badly damaged by fire recently. The loss will reach several thousand dollars. Two cars were damaged.

TRADE NOTES.

R. C. Hallett has been appointed manager of the railway department of the Vacuum Cleaner Company, with headquarters in the main office, 72 Trinity place, New York.

Clark Manufacturing Company, Grand Rapids, Mich., has been organized for the manufacture of a lightning arrester, the invention of George W. Clark. The company will be incorporated with a capital stock of $10,000. The officers are: George W. Clark, president; J. B. Doyle, treasurer; L. L. Ronan, secretary.

Western Tube Company, Kewanee, Ill., on January 13 elected the following officers: William B. Schiller, president; Edward Worcester, vice-president; and John D. Culbertson, secretary and treasurer. These three with Taylor Allderdice and J. C. Bannister constitute the board of directors. Mr. Bannister is manager of the company.

F. K. Rhines, engineer, has become assistant to the treasurer and general manager of the General Fireproofing Company of Youngstown, O., having assumed the new position January 1. Mr. Rhines formerly was engineer with the East Iron & Machine Company, bridge builder, at Lima, O., and more recently has been chief engineer and general manager of the Dixon Engineering & Construction Company of Toledo, O.

Lord Electric Company announces that W. R. Garton, formerly president and treasurer of the W. R. Garton Company of Chicago, whose resignation from the Garton company and association with the Lord Electric Company was mentioned in the Electric Railway Review of December 28, has been appointed general manager of its manufacturing department and will be located at the company's general offices, 213 West Fortieth street, New York City.

B. S. Barnard & Co., manufacturers of electrical clay conduits, 39 Cortlandt street, New York, have opened a western office at 429 and 430 Monadnock block, Chicago, in charge of E. F. Kirkpatrick, who has recently formed a partnership with B. S. Barnard, and is vice-president of the company. Mr. Kirkpatrick has been identified with the electrical business in Chicago and the middle west for 20 years, and has a wide circle of acquaintance. For the past seven years he has been connected with the McRoy Clay Works.

Glidden Varnish Company, Cleveland, O., announces that its new factory at Cleveland is entirely completed and in full operation, after having been in course of construction for a year and a half. The old factory, which has been the home of the company since it was organized in 1874 as Glidden, Brackett & Co., is idle for the first time in its history. The magnificent new plant, which has cost over a half million dollars, occupies 17 acres and is built entirely of brick, concrete and steel, is the largest and most perfectly appointed exclusive varnish factory in the world both in capacity for

making and for storing varnish. It also has a very large and complete grinding department, where the celebrated Jap-a-Lac is made. The company is naturally proud of its new home and extends a cordial invitation to visitors to Cleveland, who are interested, to call and inspect its works.

Wheel Truing Brake Shoe Company, Detroit, Mich., is one of the companies that report no great decrease in business as a result of the late financial stringency. Electric railway managements have found the wheel truing device so economical in extending the safe operating period of wheels that the demand has been maintained through the lethargic period. By the use of the truing brake shoe many companies have been able to take wheels, partially worn through the chill, from the scrap pile and obtain a large mileage from them.

American National Corporation has been incorporated with a capital stock of $50,000 to succeed the American Engineering Company of Indianapolis, Ind. It has the same officers as the old company, with the exception of the secretary, W. H. Kirshner, taking the place of E. W. Barrows. Charles N. Wilson, whose resignation as president of the American Engineering Company was announced in a recent issue of the Electric Railway Review, heads the new corporation, W. W. Critchlow is vice-president, and the officers, together with Charles N. Van Cleve and F. S. Hines, form the board of directors. The corporation will build electric railways and audit the accounts and appraise electric lines.

Railway Specialty & Supply Company, Great Northern building, Chicago, has been appointed agent for the Hayes Track Appliance Company, Geneva, N. Y., in the Chicago district. The company is prepared to furnish catalogues and issue descriptive matter and all information desired in connection with the Hayes derail. The company has also been appointed agent in Chicago for the sale of Kopp signal glass manufactured by the Pittsburg Lamp Brass & Glass Company. This glass has been used for a number of years on almost every railroad in the country. It was the first solid color glass manufactured on a commercial scale. The company will furnish promptly all styles of lenses, roundels and lantern globes or any information regarding them.

Lord Electric Company of New York, Boston and Chicago has very recently made a marked change and improvement in its manufacturing department. It is greatly broadening the field of its activities and the scope of this department, having acquired valuable patent rights, and it is preparing to manufacture the devices covered by those patents. The company has been actively engaged in the electrical field manufacturing and supplying rail bonds, lightning arresters, kindred devices and appliances. The thoroughness with which the company has undertaken and prosecuted its work has been demonstrated by the broad field which has been covered and the amount of trade developed. The success attained in bringing out and developing its line has encouraged the company to take on additional patented specialties, which, it is expected, will appeal to the operator because of their superior character and the fact that they effect a saving, thus insuring increased dividends. The Lord Electric Company, through this extension of its business, will be given greater prominence in the electrical field than it has before assumed.

National Tube Company, Pittsburg, Pa., announces that on January 1, 1908, the sales departments of the Western Tube Company of Illinois and the Shelby Steel Tube Company of New Jersey were consolidated with the sales department of the National Tube Company and hereafter all business will be done under this name. While it has been well known to the trade that the Western and Shelby companies were constituents of the National Tube Company, these concerns have hitherto maintained separate sales departments. The personnel of the new sales organization of the National Tube Company is as follows: Edward Worcester, first vice-president and general manager of sales; James W. Downer, assistant general manager of sales; John Duncan, assistant general manager of sales; H. S. White, assistant general manager of sales. All these officers will be stationed at the general office of the company at Pittsburg. For the greater convenience of the trade nine local sales offices will be maintained instead of five, and will be located as follows, in charge of the following managers: New York, Battery Park building, Clifton Wharton, Jr., manager of sales; suboffice, Pennsylvania building, Philadelphia; Pittsburg, sixteenth floor Frick building, A. M. Lally, manager of sales; Chicago, Commercial National Bank building, H. S. Raymond, manager of sales; St. Louis, Chemical building, E. A. Downey, manager of sales; San Francisco, Crocker building, George S. Garritt, manager of sales; Thomas W. Brooks, assistant manager of sales; Portland, Ore., R. R. Hoge, manager of sales; suboffice, Seattle, Wash.; Denver, Majestic building, Edwin H. Fowle, manager of sales; New Orleans, Hugo Weidmann, manager of sales; Atlanta, Ga., Candler building, Edward Worcester, Jr., manager of sales.

ADVERTISING LITERATURE.

Samson Cordage Works, Boston, Mass.—A calendar of handy size and unique design directs attention to the merits of Samson spot cord.

Worcester Polytechnic Institute, Worcester, Mass.—The thirty-eighth annual catalogue of the Worcester Polytechnic Institute is a pamphlet of 232 pages, 5¾ by 8¾ inches.

Arlington Manufacturing Company, Canton, O.—A booklet describes various paint products especially made for railways, builders, contractors, manufacturers and industrial plants.

Gulick-Henderson & Co., 439 Third Avenue, Pittsburg, Pa.—Results of tests made by this company are contained in recently issued bulletins, one devoted to "Cupola Melting" and the others to "Iron Melted per Pound of Coke."

Railway Specialty & Supply Company, Great Northern Building, Chicago, Ill.—Bulletin S1127 describes a new bond wire protector, which is designed to prevent vibration in bond wires and to hold them out of the way of tools used in track work. The device has been approved by the signal board of one of the largest railway systems.

Murray Iron Works Company, Burlington, Ia.—An interesting and instructive publication is devoted to the nomenclature of various types of Corliss engines, built by this company. Each type is first illustrated by a large halftone, followed by cuts from detail line drawings in which each part is named individually. Three halftone views are included to show the extent of the company's plant.

Allis-Chalmers Company, Milwaukee, Wis.—The hydraulic transmission pump, described in Bulletin No. 1604, is built for any capacity desired up to 400 gallons per minute, and pressures as high as 6,000 pounds per square inch. Pumps of this type are particularly adapted for apparatus of all kinds which depends for its successful operation upon the delivery of water or other liquids under heavy pressure.

Taft-Pierce Manufacturing Company, Woonsocket, R. I.—A pamphlet entitled "A Modern Specialty Factory," by James B. Griffith, a series of three articles reprinted from the Business Man's Magazine, is being distributed. This company specializes in manufacturing machinery or mechanical appliances for inventors, owners of patents, etc. The catalogue is well illustrated with views of the machine shop and reproductions of blanks used in the factory records.

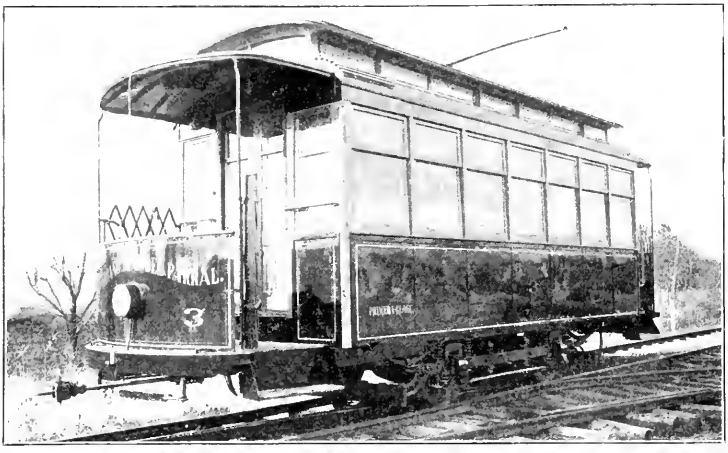
Massachusetts Fan Company, Watertown, Mass.—This company has now in press an additional section of its perpetual catalogue. This section, which comprises 16 pages, and is entitled "Vertical and Horizontal Engines for Fan Driving," includes illustrations, descriptions, dimensions and horsepower tables. The entire catalogue is thus brought up to a total of 116 pages of matter relating to blowers and exhausters, heating, ventilating, drying and mechanical draft apparatus, etc.

Westinghouse Electric & Manufacturing Company, Pittsburg, Pa.—Circular No. 1137 comprises 54 pages which are of especial value as a permanent reference for those who have to do with integrating wattmeters. The publication includes accurate and detailed descriptions of the meters for single-phase and polyphase alternating-current circuits and for direct-current circuits. The instruments described are suitable for all classes of service, including switchboard, house and portable meters. Each class of meters has the fundamental principles on which it operates described and plentifully illustrated. There are 62 engravings serving this purpose and the book includes a number of useful tables of standard capacities. Sixteen pages of the pamphlet comprise diagrams of connections for the various types of meters described.

James G. Wilson Manufacturing Company, 3 West Twenty-ninth Street, New York, N. Y.—Catalogue No. 34, which has just been issued, is a complete handbook of various types of rolling shutters and apparatus in bronze, steel and wood. The publication is prepared with a view to presenting useful and valuable information to engineers and architects in preparing building plans and specifications and contains not only working drawings of the various types of doors and partitions but also presents a large number of halftones showing the types of doors installed in different classes of buildings. These serve to indicate the door peculiarly adapted to any particular class of structure. The features to be considered in specifying a particular type of door are also fully covered. Features of convenience, such as wire glass panels for furnishing light and wicket doors in large rolling doors, are also shown. The working drawings showing the device peculiarly adapted for bridging the space occupied by rolling steel shutters in the car house of electric lines, as well as a continuous-current device, are features of the catalogue.

DANVILLE CARS FOR MEXICO.

The Danville Car Company, Danville, Ill., has recently built for the street railway system of Parral, Mexico, four of its semi-steel semi-convertible motor car bodies for first-class service. The length of the body of each car over corner posts is 19 feet 5½ inches; total length over bumpers, 28 feet 5½ inches. The width over all is 8 feet 2 inches. Two second-class closed trailer car bodies of the same dimensions were also built at Danville for this street railway system.

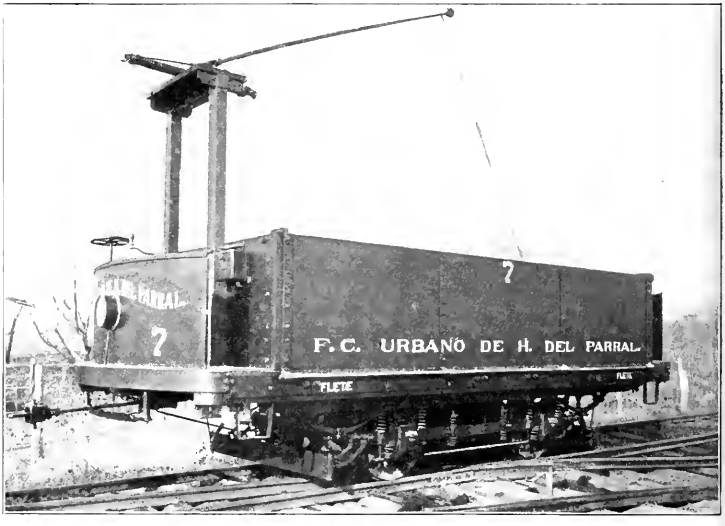


Danville Semi-Steel Cars for Mexico—First-Class Passenger Car.

The interior finish of the cars, including doors, sashes and moldings, is of ash. The side sills are of yellow pine with a steel plate between. Subsidiary sills on each side for the truck are also framed of yellow pine, while the end and cross sills are of oak. The body framing is of ash and the longitudinal rails and plates of yellow pine. The sides of the cars are covered longitudinally with tongued and grooved yellow pine and from the arm rail down are covered with No. 14 sheet steel in panels. The interior sides of the car are of No. 14 sheet steel riveted together in one length and forming an interior truss. The roof is of the monitor deck type, extending the entire length of the body.

The first-class motor cars have five cross seats on each side and four longitudinal seats in the corners, of Hale & Kilburn manufacture. The second-class trailers are equipped with longitudinal seats made of ash plate. The curtains are of printed duck mounted on Hartshorn rollers with Forsythe No. 26 bottom fixtures.

In addition to the above equipments the Danville Car Company has also built for the same company one 24-foot motor gondola car, 8 feet in width, and four 24-foot trailer gondola cars of the same width as the motor cars. The bottom framing of the trailer gondola cars is of yellow pine. The side sills of the motor gondolas are plated with steel, the subsidiary sills on each side for the trucks being of yellow pine. Each motor car is equipped with a brake staff on each platform provided with a malleable iron ratchet brake handle. The drawbars are of plain wrought iron with link-and-pin couplers. Sand boxes, worked by a pedal, are located at diagonal corners of the cars. One 12-inch pedal alarm gong is placed on each platform.



Danville Semi-Steel Cars for Mexico—Motor Gondola.

Austria has 292 miles of electric railways, of which about 50 per cent is double track.

WESTINGHOUSE COMPANY REORGANIZATION.

The reorganization committee of the Westinghouse Electric & Manufacturing Company, at a meeting held in New York on January 10, practically perfected its plan for the reorganization of the company. The appointment of this committee was noted in the Electric Railway Review of December 28, 1907. The plan, in its general outlines, has been adopted by unanimous vote of the members of the committee, but is subject before final adoption to the consent of noteholders and bondholders and to the subscription of $7,000,000 by George Westinghouse and his associates for new stock. The plan will be printed in detail and sent to security-holders and creditors next week. The principal provision contemplates the creation of a first mortgage bond issue of $45,000,000 to bear interest at 5 per cent. Of the entire issue $18,500,000 will be convertible bonds and will be offered in exchange for the $18,500,000 outstanding convertible 5 per cent bonds. The proceeds of the remainder will be utilized to pay off the floating indebtedness and outstanding short-term notes and debentures. According to the report of Haskins and Sells, certified accountants, the company had on the date of the report a floating indebtedness of $14,000,000. It is proposed to fund most of this indebtedness by offering to creditors the new bonds, dollar for dollar, for their claims. Holders of the $1,969,000 debenture certificates of the $6,000,000 6 per cent collateral notes, due on August 1, 1910, and the French loan, due on October 1, 1917, are to be asked to exchange their securities, dollar for dollar, for the new bonds. The floating and funded indebtedness of the company amounts to between $43,000,000 and $44,000,000.

In order to provide working capital the plan provides for the sale of $7,000,000 stock at par. It is understood that George Westinghouse and his associates have agreed to take this stock or at least such portion of it as is not desired by stockholders. There is now outstanding $4,000,000 preferred stock and $24,000,000 assenting stock. The new stock will be of the latter class.

Economy of private power plants equipped with Western Electric generators is the subject of a recent circular.

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

A young man, 27 years of age, with ten years' experience, wants position as engineer or electrician; unmarried; habits strictly temperate; high-class references. Address "No. 710," care Electric Railway Review, Chicago.

Storeroom man wishes to make change. At present employed; can furnish first-class reference from present employers. Able to do any kind of office work. Address "Storeroom," care of Electric Railway Review, Chicago.

Position wanted by a young man (23) of good habits; have been connected four years with the operating and purchasing departments of an electric street railway company; can give good references. Address "No. 528," care of Electric Railway Review, Chicago.

Position as chief electrician or superintendent; 16 years' experience lighting, power and traction work, alternating and direct current; graduate of well-known school; excellent testimonials; disengaged. Address "No. 529," Electric Railway Review, Chicago.

Auditor, experienced in electric railway and lighting and construction accounting, wants position with a fair-sized company. Energetic and good systematizer. Best references. Address "No. 527," care of Electric Railway Review, Chicago.

Position by a single man, 29 years old, practical electrician and machinist, 10 years' experience, familiar with electric car and locomotive repairs, power and substation practices. Non-union man. Address "No. 630," care of Electric Railway Review, New York, N. Y.

Position of chief motorman or instructor by a first-class competent man who has had 12 years' experience in that line. Thoroughly understands economy in regard to use of power and care of rolling stock; familiar with quadruple equipments and air brakes; highest references. Address "Chief Motorman," care of Electric Railway Review, Chicago.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Position wanted by first-class engineer and machinist with 16 years' practical experience with compound Corliss engines, Allis-Chalmers and Westinghouse steam turbines, surface condensers, A. C. and D. C. electrical apparatus. Age 35. A1 references. Address "No. 532," care of Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

Position wanted by unmarried man (22) with a city or interurban electric railway or with electric light and power company. Would prefer position in engineering, erection or operating department. Technical electrical graduate. Two years' experience with firm of contracting engineers in drafting room, shop work and erection work. Familiar with the design and erection of complete steam and electric plants. Am at present employed as erecting engineer by a small concern, but wish to make a change. Permanent position and good chances for advancement are of more importance than the question of salary. Best references furnished as to character and ability. Location anywhere. Address "No. 531," care of Electric Railway Review, Chicago.

Wanted—Position with interurban road by an engineer having eight years' experience in power station and general railway design and construction work. Age 33; best references furnished. Prefer position with road now under construction. Address "No. 534," care of Electric Railway Review, Chicago.

Position Wanted—Have had wide experience in all kinds of street railway work, estimating, specifications, superintending and directing, overhead, underground and power station construction. Have for three years been superintendent of lines for large Massachusetts railway company. Technical education. Nine years' experience. Age 30 years. Wide acquaintance. Best of references. Address "No. 533," care of Electric Railway Review, Chicago.

POSITIONS OPEN.

Twelve offices, covering the entire street railway and manufacturing world. Positions open everywhere: office, sales and technical. Write today, HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

MISCELLANEOUS WANTS.

Want to buy second-hand equipment, machinery or material? A card inserted in the Electric Railway Review, stating just what you want, will bring immediate response. The cost is small—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Send orders to Electric Railway Review, 160 Harrison St., Chicago.

What have you to sell in the way of second-hand equipment, machinery or material? Buyers read the "For Sale" cards on the following page and there is the place to tell your story. "For Sale" cards are inexpensive—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Special rates on contracts for 100 inches or more to be used within one year. Now is the time to send your order to Electric Railway Review, 160 Harrison St., Chicago.

BUSINESS OPPORTUNITIES.

WANTED—RAILWAY SPECIALTIES. WE HAVE OUR OWN MANUFACTURING AND SELLING ORGANIZATIONS, WITH FACILITIES FOR SELLING THE RAILWAY TRADE. WE DESIRE TO SECURE FOR MANUFACTURE AND SALE SOME GOOD RAILWAY SPECIALTIES. ADDRESS "H. M." CARE OF ELECTRIC RAILWAY REVIEW, CHICAGO.

BOOKS AND PUBLICATIONS.

Copies of the Street Railway Review of January and February, 1906, are wanted. Name condition and price. Address "No. 535," care of Electric Railway Review, Chicago.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 530," care of Electric Railway Review, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

Interstate commerce national legislation to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts expunged from, and the parts added to, the interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

New Traffic Association.

The electric railways of the north central states have a most excellent organization in the Central Electric Railway Association. This body has just completed its second year, and, as clearly stated in the annual address of the retiring president, H. A. Nicholl, general manager of the Indiana Union Traction Company, a large amount of valuable work has been accomplished. At the meeting held on Thursday of this week an auxiliary association, known as the Central Electric Traffic Association, was formed. This new organization will hold its meetings at the same place and one day earlier than its parent, the Central Electric Railway Association. As outlined by its organizers elsewhere in this issue, there are a great number of problems of traffic and interline business which demand the attention of this new organization. It will have for a leader and valuable assistant the Central Electric Railway Association, which has done so much for its individual and company members.

New York to Chicago by Trolley.

The New York Evening Post recently published a summary of an experimental "trolley trip" from New York City to Chicago which presents some interesting figures. According to this report the journey required traveling a distance of 1,497 miles, of which two were covered on foot, two by stage and 230 by steam railroad to fill six gaps still existing between the electric railways. Four of the uncompleted connections were in the state of New York and two in Indiana. While the value of such figures is very small as far as any practical consideration is concerned, the facts are exceedingly interesting as an illustration of the extent of the interurban development. It is very probable that within the next year or two the remaining gaps will be closed up and that it will be possible to make a continuous journey by electric railway between these cities and also to extend it to St. Louis. However, the fact that the distance traversed, 1,479 miles, is about twice the air line distance from New York to Chicago is a sufficient indication of its unpractical character and of the fact that the interurban electric roads are not being developed with this end in view.

Location of Shop Motors.

Comparatively little attention appears to be given to the location of motors in repair shops, except in cases where the machines are individually driven. Space is often ample to allow a shop motor to be placed almost anywhere out of the way of the movement of the shop employes, and, as the amount of power involved is seldom large, it is considered that it does not pay to spend much time in the location of the motor itself. At the same time a few points ought not to be overlooked in each case that bear directly upon low cost of installation and operation. It is seldom realized that the mechanical side of a group drive deserves far more attention than is usually given to it, but it is easy for the friction of the shafting and pulleys to consume as much power as the shop machines themselves. A well-lined and lubricated shaft, on the other hand, can sometimes be found which will run with its idle machinery four or five minutes after the power is shut off, and such an installation can in a small shop compete in operating economy with an individually driven arrangement of motors and tools. The location of the shop motor so as to provide a direct or belted shaft connection at a middle point is mechanically advantageous, and if couplings are provided in the shaft repairs can be made without shutting down all the tools. An even distribution of the strains on the shafting and bearings tends to reduce friction losses, and, while this can doubtless be obtained by a carefully installed end drive, it can be better maintained by a center drive and with less chance of misalignment.

Placing Shop Motors Overhead.

The location of shop motors on the floor has the advantages of decreased cost of installation, greater speed of erection, less danger of accident through the breaking of mechanical adjuncts and better accessibility. In a railway shop, however, space is valuable for working purposes, even if the cost of real estate is low, and the suspension of the motor from the ceiling or preferably its attachment to an overhead platform gives a freedom of movement below that is impossible with the motor on the floor of the main repair shop. The wiring is more readily kept out of the way in such a case, and with intelligent inspection of a regular character the motor and its driving connections with the shaft need not suffer in point of maintenance. The location of repair shop motors in places free from extreme heat and dirt is worth taking some trouble to secure, and in this connection the blacksmith shop is not a favorable site even for blower motors, unless care is taken to inclose them so that flying particles of metal and dust cannot get into the moving parts. On the whole, a location on an overhead platform near the center of the machine shop is probably the most desirable place for the small motors used in driving machine tools in street railway car maintenance.

Reinforced Foundations for T-Rails.

Last year the New York State Association devoted considerable attention to the discussion of the use of T-rail in city track construction. A paper on this subject was presented by C. Gordon Reel, general manager Kingston (N. Y.) Consolidated Railway. This important contribution was founded on the extended experience of the author and his conclusions were substantiated by favorable reports regarding the use of T-rail in a large number of cities scattered broadcast from coast to coast. Since Mr. Reel's paper was read and published (Electric Railway Review, January 26, page 111) other papers on the same subject have followed, having been read before railway and civil engineering, civic and municipal associations. With these reliable statements of approval and the favorable results from experience wherever the standard rail section has been used, a foundation has been laid that should greatly assist railway companies in their endeavors to obtain consent for the use of T-rail within municipal limits. When municipal authorities are convinced of the practicability of the T-rail tracks, the next problem confronting the engineering department of a

railway is the choosing of a type of substructure which is best adapted to local conditions. H. L. Weber, chief engineer of the Ft. Wayne & Wabash Valley Traction Company, has had a wide experience in designig track foundations for use in the larger cities of northern Indiana, over the tracks in which cities operate some of many heavy interurban equipments. In this issue Mr. Weber describes, illnstrates and exhibits detail costs of construction for several types of rail foundations. Especial attention is called to the use of a steel reinforcement in the concrete under rail joints. This article should be of particular interest to those who have so stanchly upheld the merits of concrete girders for supporting track rails.

PRELIMINARY POWER STATION PLANS.

One of the most troublesome questions that is liable to come up in connection with the development of a new power station or the extension of an existing plant is the matter of preliminary plans. In order to obtain close bids upon equipment the railway company must know accurately the capacity of the installation required and the position which each class of apparatus will probably occupy when the plant is completed. If preliminary plans are prepared in detail the chances are ordinarily that important changes will be made in the subsequent layout, and the expense of engineering in such a case may easily run too high. On the other hand, unless the limiting dimensions of the plant can be approximated closely, accurate cost estimates are exceedingly difficult to realize; the manufacturers of the different machines and equipments may have to bid higher to cover contingencies, and there tends to develop a general uncertainty as to the final correct assembly of the station.

Perhaps there is no point where an experienced consulting engineer can be of greater help to his clients than in these preliminary stages. A skilled designing organization, with a sense of proportion developed by the intimate study of hundreds of installation data, will strip the superfluities from a problem in design very quickly if the requirements are made plain by the client. The assembly of a great variety of apparatus under a single roof on plan and in elevation is merely a matter of finesse to the experienced engineer. The cost of drawing up detailed schemes can generally be avoided in the preliminary work of a large engineering organization, accustomed as it is to close fits of equipment and approximately accurate methods of assembling apparatus of different makes according to various schemes of arrangement. This kind of work can be handled in a rough way by the engineers of an operating company in cases where there is no outside advice retained, but great care is necessary to avoid going too much into detail. For the early work pencil sketches and cardboard templates are generally good enough to make clear to executive officers and bidders the probable shape and tentative make-up of the completed plant.

To secure bids upon apparatus it is not, of course, absolutely necessary to make up any sketches of the completed plant, but it is highly desirable to do this to the extent of showing several arrangement schemes in outline. Total capacities may be determined without plans, but the subdivision of these capacities often hinges on the possible arrangement to a very large degree. It is an easy matter to procure the over-all dimensions of all sizes of standard apparatus from the nearest district offices of their manufacturers, and these over-all dimensions are all that are necessary in the preparation of preliminary sketches. Seldom do the final plans of a new station appear clear to the designers at first, and excessive attention paid to filling in details of apparatus is largely wasted before the contracts are awarded. If the general arrangement schemes, however, are worked out with considerable care, the adjustment of subsequent details becomes easier; the proper size of machinery for different locations can be more readily settled; the manufacturer can more easily suggest desirable modifications in the original scheme; the purchaser stands closer to accurate cost estimates, and the final assembly of the apparatus of the successful bidders becomes more certain in its mutual adaptation.

THE BOSTON ELEVATED RAILWAY.

The pamphlet report issued by the Boston Elevated Railway under date of December 31, 1907, is the tenth annual report of the directors of that company. It contains statistics and facts which stamp this company as an unusual public service corporation. The principal figures for the fiscal year ended September 30 last, which is covered by the pamphlet report, were published in the Electric Railway Review of November 9, 1907, while an abstract of the statement of President William A. Bancroft was given in our issue of January 11.

The Boston Elevated Railway does not include in its report the details of the operating revenue and operating expense acounts, but its information is so much fuller than that given by most companies that a valuable analysis of the sources of revenue and the charges for expenses can be made. As the operating expenses are divided under the principal headings of maintenance, transportation and general expenses, it is possible to show what proportion of the gross earnings and of the operating expenses was absorbed by each of these departments. The comparison becomes more interesting if shown on a revenue car-mile basis, a reduction which is possible because the company includes car-mile figures in its report. The car-mile results for the last fiscal year as compared with the previous fiscal year show the following:

Per revenue car-mile, cents—	1907.	1906.
Gross earnings from operation	26.80	26.90
Transportation expenses	12.66	11.72
General expenses	1.89	1.95
Maintenance roadway and buildings	2.04	2.41
Maintenance equipment	1.94	2.43
Total operating expenses	18.53	18.51
Net earnings from operation	8.27	8.39

From the foregoing it will be observed that while there was a slight decline in car-mile gross earnings a slight increase in operating expenses took place. This is due to an increase of 0.94 cent in transportation expenses, reflecting the high costs of wages and materials which have been felt by substantially all railways. Had the general expenses and the expenditures for maintenance of roadway and buildings and of equipment continued at the same rate as in the previous year the net earnings from operation would have been appreciably reduced, but reductions in expenditures of these departments made the total operating expense per car-mile but slightly above that of the preceding year.

In the report for the year ended September 30, 1903, President Bancroft announced a revision of wages. Under this plan young men who spent the time required to learn enough of the business to perform regular duties were to be paid at the rate of $1.00 a day. After men were accepted for service on the surface lines they were to be paid minimum wages of $1.50 a day, if they reported for duty at the car houses and remained there during the prescribed hours even without working. This latter arrangement applied also to extra men. It was also decided to allow an increased compensation of five cents a day for every five years of continuous service up to 15 years of such service, and any employe who in the judgment of the management should be unfit to perform any duty in the service of the company, and had been continuously employed by the company for 25 years, or had reached the age of 60 years and had been continuously employed by the company for 15 years, was to receive a sum not exceeding $25 per month during the rest of his lifetime. These provisions applied also to elevated carmen and to various others connected with the operation of cars. To induce meritorious service it was decided to pay $15 at the end of each calendar year to each car service man who had rendered

continuous and satisfactory service throughout the preceding 12 months.

In the report which is just issued the details of these payments in the last fiscal year are given. Learners received $27,670 and new or extra men received, as guaranteed minimum wages, $42,822. Long-service men received as increased compensation under the plan $66,630, while the company paid in pensions $11,326. For satisfactory service the company paid $55,320, or $15 each to 3,688 men. The aggregate sum of these increased payments was $203,768. Beginning with 1907 the company made further provision for an increase in the pay of its car service men and those directly connected with the operation of cars. Under this provision the railway paid out in increased wages $97,726, making with the $203,768 a total of $301,194.

ANNUAL REPORT.

Toledo Railways & Light Company.

Operating expenses and taxes of the Toledo (O.) Railways & Light Company in the year ended December 31, 1907, required 58.67 per cent of gross earnings, as compared with 52.34 per cent in the previous year and 50.85 per cent in 1905. The operations in three years compare as follows:

	1907.	1906.	1905.
Gross earnings	$2,362,976	$2,047,611	$1,913,456
Operating expenses and taxes	1,386,427	1,071,773	972,994
Net earnings	$ 976,549	$ 975,838	$ 940,462
Interest	653,372	509,607	510,307
Divisible income	$ 323,177	$ 466,231	$ 430,155
Dividends	120,000	240,000	240,000
Surplus	$ 203,177	$ 226,231	$ 190,155

The figures for 1907 include the operations of the Toledo Gas Electric & Heating Company from June 1, 1907. Henry A. Everett, the president, states that this property "will be of great value to the Toledo Railways & Light Company, which now owns and operates the entire street railway system of the city of Toledo, furnishes electricity for light and power, owns and operates the only artificial gas plant furnishing gas for light and fuel, and furnishes hot water heating."

The company also acquired during the year the entire capital stock of the Toledo Ottawa Beach & Northern Railway and the Toledo & Western Railroad. In addition to these holdings, it owns the entire stock of the Maumee Valley Railways & Light Company, operating entirely in Ohio, and of the Adrian (Mich.) Street Railway. These four roads operate a total of 126 miles of track.

In his statement to stockholders Mr. Everett states:

The franchises of this company are being operated under something more than 100 ordinances of the city of Toledo and proceedings of the Lucas county commissioners, all favorable in their terms. Those relating to gas, electricity, power, light, heating and the underground conduit system are perpetual, subject only to the ordinary police regulations, and to the statutory requirements of the state of Ohio that the prices to be charged shall be regulated at intervals of not exceeding 10 years. The rights of the company to operate its street railway in certain streets will expire on November 9, 1910, but the larger part of the system is being operated under ordinances which expire in 1914, 1915 and 1916, and the demand for transfers from one part of the system to the other makes it practically certain that no considerable change in the present operation or in fares will be made until about 1914.

Extensive betterments have been made on the electric, gas, heating and railway plants so that the capital requirements for 1908 will be small. The buildings on Central avenue, consisting of general shops and car storage building, have been equipped with a sprinkling system, and a 50,000-gallon tank erected. This reduces the insurance rate at this station on buildings and cars from an average of 1.35 to 0.30.

Mr. Everett states that the discontinuance of dividends was decided upon by the directors on account of the financial conditions, which made it impossible to dispose of any of the treasury assets, and the large expenditures for betterments.

Communications

PRACTICAL VIEWS ON TRUCKS FOR ELECTRIC MOTOR SERVICE.

To the Editors:

In an article in the Electric Railway Review for October 19, 1907, page 679, entitled "Practical Views on Trucks for Electric Motor Service," by Franklyn M. Nicholl, a number of points in relation to the M. C. B. type of truck are brought up and discussed. It very wisely presents the subject for discussion at this time when efforts are being centralized on the standardization of the various parts of electric motor trucks.

Before considering a few points in the article, let me ask the author for his authority when he states that the type of the steam passenger coach truck, known as the M. C. B., was designed and adopted by the Master Car Builders' Association? In other words, has the association ever adopted a standard type of truck?

In the analysis of the M. C. B. type of electric motor truck the author finds that two separate and distinct frames constitute its principal parts, one being the main truck frame and the other consisting of the axle and equalizing bars. Between these two frames the motors are suspended, and, because of the propelling force of the motors and the independent movements of the frames, the author infers that the frames are made antagonistic to each other, resulting in excessive wear between the parts in contact, and inability to maintain squareness. Unquestionably his inference would be correct if the motors were rigidly connected to both frames, but he has overlooked the fact that provision is made against interference between the independent movements of the two frames by a flexible connection of the motors to the main frame. I agree with the author's statement generally that there would be advantage in truck construction and operation if the motors could be so mounted on a truck that their propelling force and resistance thereto would be involved by only one frame, or, more properly speaking, by the frame composed of equalizing bars and axles. Such an arrangement is a mechanical impossibility in connection with the so-called M. C. B. design. There is on the market at the present time, has been for eight years past, and will undoubtedly remain for a long time in the future, a truck which to my mind is more properly and thoroughly equalized than the so-called M. C. B. It has for one of its basic principles the mounting of the motors on the axles on one side and on a frame on the other side which constitutes and performs the same functions as the equalizing bar in M. C. B. trucks. I refer to the Brill No. 27-E truck.

The paper does not discuss the defects in the basic principles of the truck in question, but it is evident that the writer realizes the defects and that they are inherent, for he suggests a form of truck from which he eliminates the swing bolster and the equalizing bar principles. While it is true that the type of swing bolster used in this (the so-called M. C. B.) truck is inadequate for the speeds and curves of modern electric practice, yet I do not believe that the compensation for undue lateral motion to the car at curves can be met in a practical manner by track construction. The inadequacy of the type of swing bolster used in the M. C. B. type of truck is due, I am convinced, to the lack of elasticity in this motion. The defect, according to my knowledge and experience, is completely overcome in the other truck referred to—the Brill No. 27-E—by what is called the spring link suspension device.

The reasons given by the author for eliminating the equalizing bar principle and reducing the truck to a single frame are, first, that the position of the brakeshoes in relation to the wheels will remain normal at all times; secondly, that each motor will receive its equal share of the load. Both

of the advantages named can be secured in a properly designed truck without the sacrifice of principles which have proved to be essential to safety and to easy riding, which a single frame construction would entail. In suggesting a single-frame truck the author reverts to a type of construction long since discarded in this country but still used in Europe, where the trucks are notoriously hard riders, and where, within the last two years, three serious cases of derailment with consequent loss of life have occurred.

There are few engineers or operators who will agree to an advantage in the elimination of the active principles involved and performed by equalizing bars. The very object which the author seeks to accomplish, viz., "squareness," would be most certainly defeated by the elimination of the equalizing bar principles, for the reason that no road is mathematically perfect: the only way possible for the four wheels and frames with a load sustained at a normal center to follow the irregularities in the roadway is to shift the load from one pair to the other pair of wheels diagonally across the truck, which throws all the torsional strains on the side frames at their junctions with transoms and end bars, loosening the fitting in time, and really helping the truck "out of square," followed with useless and unnecessary flange wear and more serious possibilities of derailment.

The lack of sufficient flexibility to accommodate itself to every track condition and the lack of stability of the main frame are the principal defects of the M. C. B. type of truck. I fail to see how the M. C. B. type of truck can be modified to suit the present and future requirements of both electric and steam operation. I should like very much to see a thorough and far-reaching investigation of the merits of this truck question, and suggest further discussion.

It would be interesting to have the experience and practice of electric railway engineers and operating men made known at this time on this subject.

C. LOOMIS ALLEN,

Vice-President and General Manager Utica & Mohawk Valley Railway.

Utica, N. Y., January 17, 1908.

[The Electric Railway Review will be pleased to receive with a view to publication the discussions requested by Mr. Allen from electric railway engineers and operating men interested in truck development.—Eds.]

CANADIAN ELECTRIC RAILWAY STATISTICS.

Statistics compiled by J. Lambert Payne, comptroller of railway statistics of the department of railways, Dominion of Canada, include the following figures for electric railways for the year ended June 30, 1907, according to the Montreal Gazette:

The paid-up capital was increased by $11,337,505, bringing the total amount up to $75,195,475. The mileage, however, remained almost stationary, and stands at 814.52. The gross earnings were $12,630,430, showing an increase of $1,663,559 over the preceding year. The operating expenses, which aggregated $7,737,251, were larger by $1,062,214, leaving a favorable balance of $4,971,624. The proportion of operating expenses to gross earnings was 61.25. The total number of passengers carried was 273,999,404, a gain of 36,344,330 over 1906.

A special effort was made to ascertain the total amount of capital invested in the construction and equipment of electric railways in Canada, but the difficulties were for the time being insurmountable. The returns received showed a total cost of roads and rolling stock amounting to $52,399,818, but it was not practicable to obtain reliable figures with respect to the primary outlay on seven systems which were either in process of construction or had been purchased at forced sale.

The officers and employes of the Canadian electric roads are classified as follows: Staff officers, 190; clerks, 483; conductors, 2,394; motormen, 2,252; other employes, 3,712; total employes, 9,031; total pay list, $5,291,585. It will be seen that the total pay list represents 68.26 of the total operating expenses.

With respect to equipment it was ascertained that 207 cars were added during the year, of which 162 were of Canadian manufacture.

Mileage has increased since 1902 by 46.0 per cent. Within six years other important increases by percentages are: Paid-up capital, 88.2; gross earnings, 118.9; net earnings, 113.0; operating expenses, 125.2; passengers carried, 126.5; and tons of freight carried, 66.3. While the volume of freight traffic is not relatively large, it nevertheless indicates the possibilities in that regard. There has been a small decline during the past two years, but on lines equipped for that class of transportation, and following an enterprising policy, the growth has been satisfactory.

The record of accidents shows that 71 persons were killed and 1,736 injured. Out of 71 fatal accidents, 22 took place in Montreal and 20 in Toronto. Singularly, however, not a single passenger was killed in Montreal, while nine lost their lives in Toronto. Of the 1,736 non-fatal accidents, many of which were of a minor character, 400 occurred in Montreal and 696 in Toronto.

REPORT OF THE NEW YORK PUBLIC SERVICE COMMISSION, FIRST DISTRICT.

The New York public service commission, first district, transmitted on January 20 its report to the New York legislature for the six months ending December 31, 1907. An abstract of the report follows:

Subways.

Upon entering office the commission found the Manhattan-Bronx subway almost completed. The Manhattan-Brooklyn subway had also been completed as far as the Battery and was being operated. Work was progressing upon an extension from Two Hundred and Thirtieth street to Van Cortlandt park, which will cost about $700,000 when finished. A ventilating system was being installed in the subway, at an expense of $500,000. Actual work was just beginning on the Brooklyn subway loop. The tunnel portion of the Manhattan-Brooklyn subway, extending from the Battery to Borough hall, Brooklyn, was nearing completion. The rapid transit board had authorized the drawing of a contract for certain changes in the subway at Ninety-sixth street whereby grade crossings would be eliminated. The commission secured the approval of the corporation counsel and the board of estimate and apportionment, which set aside $850,000 for the work. The requisite number of consents of property owners has nearly been secured.

After full discussion of the advisability of the so-called Fourth avenue subway in Brooklyn the commission determined that the plans should be continued. The commission changed the plans so as to eliminate certain heavy grades, and also to increase the headroom in the subway from 13½ to 14½ feet. This latter change will make it possible to operate steel cars used by suburban lines through the tunnel, and if found desirable, to run it in connection with suburban roads, and thus bring suburbanites from Long Island into the heart of Manhattan. The alterations are a decided improvement and it is expected that the commission will be ready to invite bidders toward the close of January.

As planned the subway loop, which is to connect the three bridges on the Manhattan side, contained a number of grades ranging from 4 to 5.5 per cent. In some instances they were so related as to increase the risk of collision unless the trains should be run at considerable distances apart. The headroom was not sufficient to permit cars used in the suburban service upon electrified steam roads to be operated through the loop. A revised scheme had nearly been perfected at the close of the year whereby the steep grades would be eliminated in all but one instance, the headroom increased so as to allow for every possible use of the subway in the future, and a rearrangement of the tracks would increase the facility of operation. These changes would increase the safety of operation and the carrying capacity of the loop, for 25 per cent more trains could be run through it in a given time. The cost of operation would be reduced materially, and less expensive equipment could be used.

The commission has directed that plans be prepared for a subway from the Manhattan bridge through Canal street to West street, there connecting with the ferries. The estimated cost of this Canal street line complete is $7,000,000.

This commission has determined upon a new rapid transit route in Manhattan and the Bronx. The estimated cost of this line, including two branches in the Bronx, is $60,000,000.

Rapid Transit Law.

Bonds issued for subway construction are reckoned as part of the debt of the city, although the bonds so far issued

are entirely for a self-supporting undertaking; that is, the contractor has undertaken and given security to pay the interest and a per cent each year toward a sinking fund to retire the bonds. The taxpayers will not be called upon to pay a dollar, either as interest upon these bonds, or to secure their retirement upon maturity. Because of the financial condition of the city, and the present limitation upon the power of the commission to secure the use of private capital in the construction of rapid transit routes within New York City, the commission makes the following recommendations as to legislation:

(1) A constitutional amendment exempting from the 10 per cent debt limit bonds for the construction of rapid transit lines, when, so far and so long as such rapid transit lines shall be self-supporting.

(2) An amendment to the rapid transit law providing that leases of extensions of rapid transit lines may terminate at the same time as the original lease, this commission having the power, in conjunction with the board of estimate and apportionment, to fix terms, conditions and compensation and to readjust the same each 20 or 25 years thereafter.

(3) An amendment to the rapid transit law which shall give the local authorities and this commission the power to allow the construction and operation of rapid transit lines by private companies upon the payment of part of the earnings to the city or other proper terms, and with a reservation to the city of the privilege to purchase at any time after a certain period of not more than 20 or 25 years and without any payment for the franchise itself; and

(4) An amendment to the rapid transit law making it possible for the local authorities and this commission to let contracts for operation for a longer period than 20 years, or else to make the lease terminable at any time after a certain perid of not more than 20 years, with a provision that the equipment shall be purchased at a fair price by the city on the termination of the lease.

Financial and Traffic Statistics.

The assets of the street surface, elevated and subway railroads under the jurisdiction of the commission as of June 30, 1907, were $624,076,226.15. The total laibilities were $617,676,278.18; excess of assets, $6,399,947.97. The earnings from operation of these companies in the year ended June 30, 1907, were: From passenger transportation, $65,568,031.89; from freight transportation, $290,515.04; from express transportation, $132,559.10; from mail transportation, $60,227.01; from miscellaneous sources, $42,443.25; gross earnings, $66,093,776.29.

The operating expenses were: Maintenance of way and structures, $4,303,898.20; maintenance of equipment, $5,625,603.02; maintenance of power plant, $6,107,673.39; operation of cars, $15,830,593.89; general expense, $6,145,293.99; total operating expense, $37,013,062.49; net earnings from operation, $29,080,713.80; income from other sources, $2,757,281.60; net income, $31,837,995.40.

For the year ending June 30, 1906, the total number of passengers carried by all the railroads of the state was 1,630,775,156, of which 1,535,017,181 were carried by the street surface, elevated and underground railroads. Of this number, 1,249,829,568 were carried by the railroads now operating under the jurisdiction of this commission. From the reports for the year ending June 30, 1907, it appears that the increase in passengers on these roads within the first district over the preceding year is 73,338,898, making a total of 1,323,273,368, a daily average of upward of 3,560,000. A large proportion of this traffic—conservatively estimated at 60 per cent, or something more than 2,000,000—travels within the limits of four hours, 7:30 to 9:30 in the morning and 5 to 7 at night. When this commission came into office these corporations were thus carrying 500,000 passengers an hour—more than 10 per cent of the entire population of the city—during some portions of the day, yet the service given was greatly below that required for a decent handling of the traffic.

Improvements in Present Rapid Transit Facilities.

All told, 179 hearings were held between July 18 and December 31, 1907. As a result of these hearings the commission has issued 186 orders. Of these 84 were complaint orders, i. e., orders transmitting a complaint with notice to satisfy or reply within 10 days; 46 were orders for hearings; 42 were final orders; and 14 were general orders calling for information.

General Investigation of Transit Lines.

The investigation of the Interborough-Metropolitan Company, the Brooklyn Rapid Transit Company and their subsidiary and controlled companies had not been completed at the end of the year.

Upon the evidence and subsequent observations, the commission ordered changes in the service rendered in the subway and on the elevated roads of Manhattan that called for increase in facilities of between 20 and 25 per cent. Later it appeared that the service as rendered in obedience to this order was not sufficient, and other observations were taken which were made the basis for further orders.

So far as the surface lines of Manhattan are concerned, the commission has required increases in service on Broadway, on Madison and Fourth avenues, and on Eighth avenue. In addition the commission had a careful examination made of 1,600 cars belonging to the New York City Railway. Upon the results of this examination a final order has been issued requiring that all cars be overhauled and put in condition, at the rate of 10 cars a day after February 15, 1908. The financial condition of the New York City Railway Company, which resulted in the appointment of receivers by the federal court, has retarded to some extent the plans of the commission for improvement of surface transportation in Manhattan, but the commission has issued orders upon the receivers and expects them to be obeyed.

The congestion on the Brooklyn bridge has received constant attention. The bridge structure, including the Manhattan terminal, is under the complete charge of the bridge department of the city. The result, therefore, has been that this commission has not found it possible to require or even recommend radical changes as to bridge operation. Reports show that the cars of the Coney Island & Brooklyn Railroad, although numbering one-ninth of the total surface cars operating over the bridge, were producing over one-half of the breakdowns. Orders have been issued accordingly, requiring this company to overhaul its cars and place them in first-class condition. The statistics taken on October 17, 1907, show that 426,364 persons crossed the bridge, requiring 15,263 elevated and surface cars to transport them, and that in the heaviest hour of travel 54,726 persons crossed the bridge in one direction.

A conservative estimate of the increases required of all the operating companies indicates that over 15,000,000 additional seats per annum have been added to the service in this city under orders of the commission.

Accidents.

The total number of accidents reported by transportation companies for the six months was 24,209. The total number of deaths occurring in connection with such accidents was 288. This is appalling! The commission believes that no more important work could be undertaken than the reduction of this death list; and a departmental committee, consisting of the electrical engineer, chief of the division of transit inspection and the chief clerk of accidents, has been directed to make a thorough investigation to ascertain whether it will be possible to adopt any method that will result in fewer persons being killed. Judicial processes in the natnre of criminal prosecutions and civil suits for damages, partially because of the length of court calendars and the skill of counsel employed by the companies, have not been adequate; and regulative requirements by public officials are all the more necessary.

Franchises and Capital Issues.

All companies have been required to file documents showing their franchise histories, and the compilation of the data as thus obtained is expected to be of the utmost value in determining the duties as well as the rights of the companies. Preparatory to the preparation of uniform forms of accounts, the companies have filed data showing the present method of keeping their accounts, and so far as steam railroads are concerned the form of accounts has been prescribed by the commission in conformity with the form of the interstate commerce commission and the public service commission for the second district.

No applications have been received for the approval of additional issues of stock. Three applications have been considered for approval of bonds, but no determination was reached before the end of the year.

The commission deemed it necessary to require sworn statements as of July 1, 1907, showing the amount of stock held in other companies. No applications have been made for approval of the transfer of franchises.

The new car shops of the Indiana Union Traction Company at Anderson, Ind., of which a complete description with illustrations was published in the Electric Railway Review of January 18, page 67, were formally opened on January 15. Members of the Anderson Commercial Club and prominent city and county officials were taken to the shops in a special car as the guests of President Brady and General Manager Nicholl of the company. Upon entering the shops the members of the party had the novel experience of having the car in which they were seated picked up by a large traveling crane and carried from one end of the building to the other.

ANNUAL MEETING OF THE CENTRAL ELECTRIC RAILWAY ASSOCIATION.

H. A. Nicholl, president of the Central Electric Railway Association, called the annual meeting to order at 10:30 o'clock on Thursday morning of the present week at the Phillips House, Dayton, O. Mr. Nicholl read the annual address of the president, which appears elsewhere.

A standing vote of thanks was given to the Indianapolis Traction & Terminal Company for giving the Central Electric Railway Association the free use of an office for headquarters. The report of W. F. Milholland, secretary and treasurer, was read and approved.

Charles F. Price, general passenger agent Western Ohio Railway, then read his address on the "Promotion of Traffic," which will be found in another part of this issue. This address contained many interesting views on advertising problems, which were quite freely discussed by the various traffic officials present.

F. W. Brown (Michigan United Railways) said that he had had successful results from the use of unique advertising cards that merchants would willingly display in their windows.

Mr. Price thought that the payment of cash for newspaper advertising assured better space and better results than if transportation had been given.

E. C. Van Valkenburgh said that where a definite scheme of advertising was followed out it was seldom, if ever, that satisfactory results were not obtained. Advertising had failed where it was not suited to the territory or to the character of the traffic. He thought magazine advertising would greatly help a large system. If timetables of interurban roads were buried in newspapers as steam railway timetables are, the advertisements would not be of any particular value, but the time of trains could be presented in small space and do interurban roads good. He believed in a picture that would attract the eye, and thought that trademarks which could be shown every day were of great value.

F. D. Carpenter, President-Elect.

W. P. Cosper (Lord Electric Company) suggested that interurban roads place better information concerning movements of trains with hotel clerks and in hotels.

F. A. Burkhardt (Ohio Electric Railway) showed a small 8-page timetable which contained information desirable for travelers. The booklet cost $2.50 per thousand.

Afternoon Session—Telegraph Signal.

At the opening of the afternoon session, Chauncey P. Button, general manager Telegraph Signal Company, Rochester, N. Y., read a paper entitled "The Telegraph Signal System." (To be found elsewhere.)

After a detailed description and illustration of the signal by the aid of a working installation of two semaphores, H. A. Nicholl (Indiana Union Traction Company) opened the discussion. He related how his company had installed the telegraph signal system on one division 54 miles long and had ordered additional equipment for the Muncie-Indianapolis division, 57 miles long.

G. A. Kelsay, superintendent of power Indiana Union Traction Company, under whose jurisdiction the installation mentioned by Mr. Nicholl had been placed, outlined its many desirable qualities. He emphasized the valuable feature of repeating to the dispatcher a record that the semaphore blade had fallen to "Danger" and that that record in permanent form showed the number of the particular blade which had fallen. The dispatcher on the Union Traction lines had found the signals to be of great assistance in advancing trains.

Mr. Kelsay then described the method of lighting the semaphore targets. The semaphores are installed at double-ended sidings, on the opposite side of the track from the switchstands. Each semaphore is lighted by two 300-volt incandescent lamps connected with a feeding circuit controlled from a nearby substation. There are installed 14 semaphores so lighted and 12 which are lighted with long-burning oil lamps. The two incandescent lamps on the semaphore post are not on one circuit. One of the lamps is wired in series with a switch light at one end of the siding and the second semaphore light is connected in series with the lamp on the switchstand at the other end of the turnout. In this way it is hardly possible to have both semaphore lights out at one time, because, should there be a failure on one circuit, that failure will be indicated by there being no light at one of the switchstands, and will immediately be noted by a train crew. On tangent track in clear weather the lights behind the semaphore glass could be seen clearly for four miles.

Mr. Kelsay had in mind an improvement of the semaphore lighting which comprised the use of two glasses in front of the lamps—one of red to indicate danger, and one of green to indicate clear. Should either glass be broken a white light would show. This could be considered as a danger indication.

While the signals on the Union Traction line had been connected to take their source of current through the dispatcher's office from a trolley circuit, Mr. Kelsay thought that on the score of reliability it would be more advisable to have an independent source of current supply, say from a storage battery equipment already installed nearby. Then, in event of a trolley circuit-breaker opening, there would be no interruption on the signal system.

Brake Rigging.

R. C. Taylor, superintendent of motive power Indiana Union Traction Company, chairman of the "Standardization" committee, presented a report on "Fundamental Brake Rig-

ging for High-Speed Electric Railway Cars." This report, which is to be found elsewhere, was discussed and accepted as presented with the instruction of the association that the committee confer on the same subject with the "Standardization" committee of the American Street and Interurban Railway Association.

In discussing brake rigging, Carl Peterson (Baldwin Locomotive Works) said that the truck manufacturers would gladly welcome the assistance of the operating men in the common desire to improve existing types of trucks.

S. D. Hutchins (Westinghouse Traction Brake Company) emphasized how desirable it was for the purchasers of cars to supply the air brake manufacturers with accurate weights of those cars if they expected the best braking results. The tendency was to require shorter stops and this the brake manufacturers were endeavoring to meet. Pressures as high as 95 pounds could be used in the brake cylinder when cars were running at 60 miles per hour. As outlined by Mr. Taylor, with such pressures, mechanical means must be provided to reduce the brake pressure as the co-efficient of friction increased; with steam railroad brakes the pressure was reduced as the speed decreased. Probably the brake which came nearest to meeting the desired requirements was the magnetic traction brake, which provided that when the wheels skidded the braking power was lessened until the wheels revolved again and the brakes likewise set.

Ordinarily with a 4-motor car the braking force was designed to be applied at 100 per cent of the light weight on all axles. If there were idle axles they would be braked at 90 per cent of their load. The higher braking power applied to axles carrying motors than to idle axles was necessary for absorbing the momentum of the rapidly revolving armature. The ideal braking equipment of the automatic type for a high-speed interurban car carried 50 pounds air pressure in the cylinder, and the leverage was designed on this basis. For emergency stops 60 pounds pressure could be admitted to the cylinder and thus a 20 per cent greater braking power be obtained. This was then braking the car to 120 per cent of its light load.

W. T. Van Dorn described some brake tests which had been made on the Chicago Burlington & Quincy Railroad.

F. D. Norveil, chairman of the "Traffic Organization" committee, told of the formation of the new traffic association. In addition to the announcement, which is given elsewhere in this issue, of the formation of the association, Mr. Norveil spoke of the committees which will be formed and of the vice-chairmen who may be appointed in different districts.

Officers.

The following officers were elected for the year 1908: President, F. D. Carpenter, general manager Western Ohio Railway, Lima, O.; first vice-president, A. A. Anderson, general manager Indianapolis Columbus & Southern Traction Company, Columbus, Ind.; second vice-president, F. J. J. Sloat, district manager Cincinnati Northern Traction Company, Cincinnati, O.; treasurer, W. F. Milholland, Indianapolis, Ind.; executive committee (members from Indiana), H. A. Nicholl, general manager Indiana Union Traction Company, Anderson; C. D. Emmons, general manager Ft. Wayne & Wabash Valley Traction Company, Ft. Wayne; Charles G. Lohman, superintendent Chicago South Bend & Northern Indiana Railway, South Bend; H. S. Dickey, general superintendent Winona Interurban Railway, Warsaw; T. F. Grover, general manager Terre Haute division Terre Haute Indianapolis & Eastern Traction Company, Terre Haute; executive committee (members from Ohio), C. N. Wilcoxon, general manager Cleveland Southwestern & Columbus Railway, Cleveland; E. C. Spring, manager Dayton Covington & Piqua Traction Company, West Milton; F. W. Coen, general manager Lake Shore Electric Railway, Cleveland; George Whysall, general manager Columbus Delaware & Marion Railway, Marion, O.; Irwin Fullerton, auditor Detroit United Railway, Detroit, Mich.

Central Electric Railway Association—Group of Members and Guests at Dayton Meeting.

In accepting the office of president, Mr. Carpenter made a strong argument for standardization of equipment and operating methods.

The annual banquet was held at the Phillips House on the evening of the last day's session, Thursday, January 23. This was an especially pleasant affair, the arrangements for which had been under the charge of the following committee: John F. Ohmer, E. C. Spring, F. J. J. Sloat and T. A. Ferned-

ing. Mr. Spring acted as toastmaster. The association was welcomed to Dayton by Mayor Edward C. Burkhart. The evening programme included addresses by H. A. Nicholl, F. D. Carpenter, B. V. Swenson, J. Sprague McMahon, Judge Dennis Dwyer, E. B. Grimes, Dr. D. Riley and Edward Hanley. Elsewhere in this issue will be found abstracts of the addresses by Messrs. Grimes and Dwyer. The attendance at the banquet and meetings was 130.

ORGANIZATION OF CENTRAL ELECTRIC TRAFFIC ASSOCIATION.

The Central Electric Traffic Association was organized at meetings held at the Phillips house, Dayton, O., on January 22 and 23. This association will be allied with the Central Electric Railway Association, which held its annual meeting at the same place on January 23.

After articles of association had been drafted and accepted the most serious business which remained was the selection of a permanent chairman. It was finally decided that the permanent chairman should be a salaried official, expert in matters relating to freight and passenger tariffs. After a conference with representatives of the Central Electric Railway Association it was decided to select one man to fill the offices of chairman of the Central Electric Traffic Association and secretary and treasurer of the Central Electric Railway Association.

The meeting of traffic officials was called to order at 11 a. m. on Wednesday, January 22, by F. D. Norveil, general passenger and freight agent Indiana Union Traction Company. John H. Crall, general passenger and freight agent Terre Haute Indianapolis & Eastern Traction Company, was elected temporary chairman and R. A. Crume, auditor and purchasing agent Dayton & Troy Electric Railway, temporary secretary. An adjournment was then taken until 2:30 o'clock in order to give the committee appointed at the preliminary meeting in Indianapolis an opportunity to consider articles of association. In the afternoon this committee, of which W. S. Whitney, general passenger and freight agent Ohio Electric Railway and Cincinnati Northern Traction Company, was chairman, reported articles of association. These articles are similar to those adopted by the Central Passenger Association and the Central Freight Association, the steam railway organizations.

Purposes of the Association.

As adopted the articles state that the objects of the organization are:

The purposes of this organization are to promptly secure to each of the parties authentic information in relation to the tariffs, rate sheets and ticket regulations of the respective parties, and changes therein, and the due filing and publication thereof; to aid in securing compliance with the federal and state laws relating to and regulating commerce; and to enable the parties hereto to mutually confer, advise and act in relation to the subjects above stated, and the proper methods to secure the purposes aforesaid.

An abstract of the principal other features follows:

The Central Electric Traffic Association is to comprise roads located within the area bounded as follows: Illinois, Indiana, Ohio, southern peninsula of Michigan, thence on the line from Buffalo to Pittsburg, south through Wheeling, W. Va., southern bank of Ohio river to Ashland, Ky., direct to Richmond, Nicholasville, Versailles, Frankfort, Shelbyville, Louisville and southern bank of Ohio river through Paducah, Ky., to East Cairo, Ill. Connecting railway and transportation companies not in this territory may become members by a majority vote of members of the association.

The members agree to submit questions of common interest upon which action is desired to the association, to be considered promptly under its rules; and to arbitrate all differences upon questions coming within the scope of this agreement which are not otherwise properly reconciled. Each member agrees that it will send to the chairman copies of each local and joint state and interstate tariff of rates and of charges therein, also classification and rules at the time of making, issuing or filing the same with the interstate commerce commission; also of all agreements or arrangements with other common carriers in relation to the rates coming in whole or in part under this agreement.

The association shall meet on the Wednesday before the fourth Thursday of January, March, May, September and November, or at other times upon five days' notice at the request of five members of the association or of the chairman.

Nothing shall be so construed as to confer on the majority the power to make rates for any member, but as regards the fixing, maintenance and changing of rates and the relations of the members as common carriers to the public, each member reserves to itself the right at all times to take separate and independent action.

Provision for Arbitration.

The executive officer of the association shall be a chairman. The chairman shall construe this agreement and all resolutions adopted thereunder. His decisions shall be subject to appeal to the association or to arbitration, but shall be conformed to until such appeals are decided. He may suspend the interim action of committees which he finds to be in conflict with these articles or rules connected therewith, or he may reconvene them to reconsider their action.

In case of disagreement on any subject on which any of the committees are authorized to act, and upon which prompt action is required, the question at issue shall be submitted to the chairman for decision. In case the subject is one which, in the judgment of the chairman, does not require immediate decision, or which requires further investigation and consideration, it shall be further considered at a meeting of the association, to be called by the association at the earliest practicable day after the necessary information has been obtained. If no agreement can then be reached, the question shall be decided by arbitration. If any member of this association objects to the decision of the chairman the case shall at once be reported to the association for its action.

If any case is submitted to arbitration, it shall go to the decision of one or three arbitrators, experienced in traffic matters, as may be decided by the parties at issue in each instance. The decision of a majority of said three shall be final. If either or both parties to an issue fail to appoint their arbitrators within 10 days after appeal to arbitration, the chairman may designate the arbitrators for the delinquent party or parties, and the two so chosen shall select a third. The chairman shall in no case act as an arbitrator. The expenses of arbitration shall be shared equally by the parties to the submission, unless otherwise agreed.

A "Standard Auditing" committee, to consist of accounting officers of three companies, shall be appointed annually, said committee to have charge of the accounting of this association and conduct the periodical examination of its accounts.

This organization shall continue for one year and thereafter until dissolved by majority vote; but any member of the association may withdraw therefrom after said year by giving 30 days' notice.

Co-operation of Two Associations.

When the foregoing articles had been reviewed the following committee was appointed to take up with a committee of the Central Electric Railway Association some of the questions concerning the relations of the two organizations: A. G. Kelly, auditor and general passenger and freight agent Ft. Wayne & Springfield Railway, chairman; Charles G. Lohman, general superintendent Chicago South Bend & Northern Indiana Traction Company; W. S. Whitney, F. D. Norveil and Charles F. Price, general passenger agent Western Ohio Railway. The meeting was then adjourned until January 23.

The foregoing committee met the following committee, appointed by H. A. Nicholl, president Central Electric Railway Association: F. J. J. Sloat, district manager Cincinnati Northern Traction Company; C. N. Wilcoxon, general manager Cleveland Southwestern & Columbus Railway; F. D. Carpenter, general manager Western Ohio Railway; R. T. Gunn, superintendent of transportation Ft. Wayne & Wabash Valley Traction Company; and J. F. Starkey, division passenger and freight agent Indiana Union Traction Company.

The meeting was called to order at 10 a. m. on January 23 and the committee reported that it had been unanimously decided that the two associations should act together, and that the election of a secretary and treasurer for the Central Electric Railway Association would be postponed until a suitable man to fill that office and the chairmanship of the traffic association is secured. Members were requested to endeavor

to locate a desirable man for the position. Applications are to be addressed to the president of the Central Electric Railway Association, who will refer them to the traffic association, the members of which will confer with the executive committee of the railway association. The traffic association will have the dominating influence in the choice of this man inasmuch as its interest in the matter is vital. The report of the committee was adopted. To further the selection of a chairman the following committee was appointed: W. S. Whitney, Charles G. Lohman and Charles F. Price. The articles of association will be published and mailed to all members and any others that might joint on presentation of the advantages to be derived from membership.

The meeting then adjourned to meet on March 25.

Those Who Attended.

The following attended the meeting of traffic officials:

Indianapolis & Cincinnati Traction Company—George S. Henry, traffic manager.

Ft. Wayne & Springfield Railway Company—W. H. Fledderjohann, president; and A. G. Kelly, auditor and general passenger and freight agent. Representing also Marion Bluffton & Eastern Traction Company.

Indianapolis & Louisville Traction Company and Indianapolis Columbus & Southern Traction Company—R. J. Thompson, assistant secretary and treasurer.

Chicago South Bend & Northern Indiana Traction Company—C. G. Lohman, general superintendent; and C. H. Walter, traffic agent.

Ohio Electric Railway Company and Cincinnati Northern Traction Company—W. S. Whitney, general passenger and freight agent.

Ft. Wayne & Wabash Valley Traction Company—R. T. Gunn, superintendent of transportation; and H. E. Vordemark, auditor.

Cleveland Painesville & Eastern Railroad and Cleveland Painesville & Ashtabula Railroad—R. S. Schmock, general passenger agent.

Terre Haute Indianapolis & Eastern Traction Company—C. S. Kitch, district passenger and freight agent; and J. H. Crall, general passenger and freight agent.

Dayton & Troy Electric Railway—H. P. Clegg, president; R. A. Crume, auditor and purchasing agent; O. H. Merlin, general passenger agent; L. J. Johnson, general freight agent; and C. M. Paxton, general manager.

Louisville & Southern Indiana Traction Company and Louisville & Northern Railway & Lighting Company—F. E. Cole, superintendent.

Springfield Troy & Piqua Railway—J. M. Brick, general passenger agent.

Indiana Union Traction Company—J. F. Starkey, division passenger and freight agent; and F. D. Norveil, general passenger and freight agent.

Michigan United Railways—F. W. Brown, general passenger and freight agent.

Western Ohio Railway Company—F. D. Carpenter, general manager; Charles F. Price, general passenger agent; and C. C. Collins, general freight agent.

Dayton Covington & Piqua Traction Company—M. M. Smith, local auditor; and John J. White, general freight agent.

Toledo Urban & Interurban Railway—C. J. Laney, assistant general freight agent.

Dayton & Xenia Transit Company—R. J. Wells, general passenger and freight agent and auditor.

Kokomo Marion & Western.

Muncie & Portland.

Improvements of the Seattle Electric Company.

During the year 1907 the Seattle Electric Company, Seattle, Wash., increased its single-track mileage from 102.29 to 141.66. The car equipment was increased by 63 double-truck single-end motor cars and 14 double-truck trail cars, built by the St. Louis Car Company, and by 8 cable cars, two box cars and 8 flat cars, built in the company's shops. New shops and a power house were also erected at Georgetown. These were described in the Electric Railway Review for June 22, 1907, page 806, and for June 29, 1907, page 845. Generating equipment of 14,000 kilowatts capacity is now on order and will be installed during the year. A large amount of new track construction is also proposed.

It is reported that all records for subway traffic in New York were broken on Monday, January 20, when 704,879 passcarried 910,215 passengers.

CHANGES IN THE WASHINGTON RAILWAY & ELECTRIC COMPANY.

The contest for control of the Washington (D. C.) Railway & Electric Company was settled by the election of new directors representing Washington interests at the annual meeting of the stockholders on January 18. William Loeb, Jr., secretary to President Roosevelt, was elected a director with the understanding that he may be made president later. Allan L. McDermott of Jersey City, N. J., accepted re-election at the request of the board of directors with the understanding that he will resign when the directors decide on the best man for permanent president. The directors elected were as follows: Woodbury Blair, Allan L. McDermott, Clarence F. Norment, George H. Harries, William Loeb, Jr., George Truesdell, Ward Thoron. Messrs. Norment, Thoron, Blair and Truesdell will constitute the executive committee. The board organized by electing the following officers:

President—Allan L. McDermott.

First Vice-President—Clarence F. Norment.

Second Vice-President and General Manager—George H. Harries.

Comptroller and Treasurer—W. F. Ham.

Secretary—F. J. Whitehead.

More than 118,000 shares of stock out of about 150,000 outstanding were voted. The proxy committee, representing the Washington interests, voted nearly 100,000 shares. The former directors who were not re-elected were James B. Lackey of Washington, John C. Dorson of Philadelphia, R. T. W. Duke, Jr., of Charlottesville, N. Y., and George W. Young of New York.

BUREAU OF INSPECTION INDIANA RAILROAD COMMISSION.

The second annual report of the railroad commission of Indiana includes a report to the commission by Alexander Shane, chief inspector of the bureau of inspection, which was established June 1. That part of the report dealing with electric railways states that 499.38 miles of electric lines have been inspected, on which eight defects on bridges were found, 50 defects on signals and 25 defects on roadway and track. There are yet 1,039.55 miles of electric line to be inspected.

While making inspection of electric lines quite a number of test stops were made to determine the efficiency of the braking power and the minimum distance in which cars could be stopped. It was found that more satisfactory results could be obtained on cars equipped with straight air and that the application of sand very materially assisted in making a stop on a dry rail and especially so on a bad one. It was found also that the sanding arrangement on these cars was not at all satisfactory. If the sand box is located on the body of the car and the sand pipes lead from the car to the rail they do not sand the track on a curve. To overcome this a rubber hose is sometimes used to lead from the sandbox to the pipes which are fastened to the truck. Pneumatic sanders are generally used, and it was found that when the air was put on full force it would not deliver sand but would blow through, and was not at all satisfactory. It is the opinion of the inspector that these defects can be overcome, however.

The report states that the railroad and traction officials have co-operated with the inspectors and have afforded them every facility for making these inspections with a view to making travel safer.

The Indiana appellate court, in affirming a judgment against the Louisville & Southern Indiana Traction Company for running over a 6-year-old child in a street of New Albany, took occasion to suggest that the company use more cars and less speed in congested districts. The court said that parents are not necessarily negligent in failing to anticipate the negligent operation of a car at a high rate of speed in connection with the attempt of a child to cross the track

GENERAL ELECTRIC GAS-ELECTRIC CAR FOR RAILWAY SERVICE.

On February 3, 1906, occurred the first trial run of a gasoline-electric car built for the Delaware & Hudson Company by the General Electric Company and the American Locomotive Works. This car was described and illustrated in the Street Railway Review for February 15, 1906, page 79. The car was 65 feet long, seated 40 passengers and weighed complete 65 tons.

The General Electric Company has just designed and built complete except for the car body and trucks another gas-electric equipment, which is described and illustrated herewith. By way of contrast with its prototype the latest car, having about the same service characteristics, is 50 feet long, seats 44 passengers and weighs fully equipped but 31.4 tons.

Car Body.

The car body is of the combination type, and comprises one ordinary passenger compartment, a smoking room, a baggage room, an engine room, a toilet and an observation compartment. The car is single ended, with the controlling apparatus situated in the engine room.

The principal dimensions are as follows: Length over all, 50 feet; length of engine room, 9 feet 6 inches; length of baggage room, 5 feet 8 inches; length of smoker, 7 feet 11 inches; length of passenger compartment, 18 feet 6 inches; width over all, 8 feet 8 inches; height over all, 12 feet 10½ inches; seating capacity, 44; total weight of car and trucks fully equipped, 31 tons.

This car was designed throughout with special reference to the service required, the main object in view being to secure the maximum carrying capacity, with a minimum weight, and at the same time to have a car of great strength. The shape of the ends is semi-circular in order to reduce the air resistance to a minimum when traveling at high speed. The frame for the roof and sides is of T-sections bent to the required shape and braced diagonally. The exterior of the car is of steel plate, while the interior is finished with selected Mexican mahogany. No wood is used in the engine compartment. The floors of the passenger and baggage compartments are of two layers of wood with paper between, armored on the under side with steel plates. The roof, which is fireproof, is of a plain oval shape; the monitor construction was not used because it would have added needlessly to the weight. Special attention has been paid to ventilation, 12 ventilators of the globe suction pattern being furnished in the roof. The center sills consist of 6-inch I-beams, and the outside sills are 6-inch channels, and these are braced diagonally.

The seats are upholstered in green leather. The interior is lighted with individual lamps, there being one light for each seat. A headlight is also provided. The steps are arranged so that the bottom one folds up automatically as the vestibule door is closed.

The car body was built by the Wason Manufacturing Company, Springfield, Mass., in accordance with the designs of the General Electric Company.

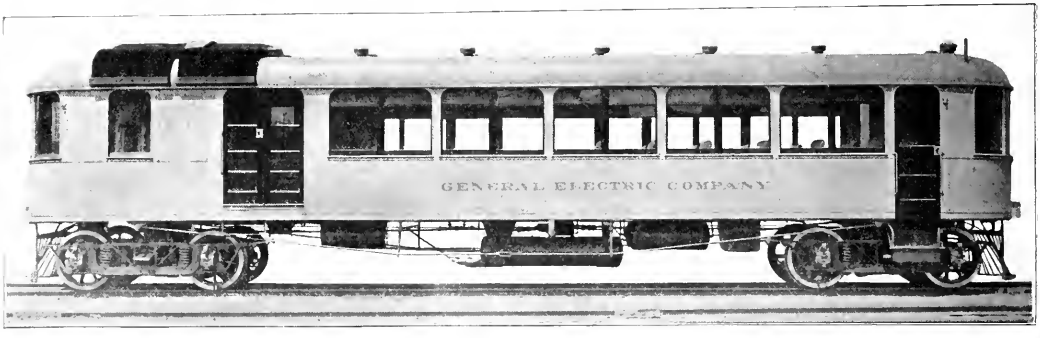
General Scheme of Operation.

The gasoline engine is direct coupled to a 90-kilowatt direct-current generator, which furnishes current at a variable potential. This current is fed to the motors through the medium of the control system, by which the voltage of the generator may be governed according to the requirements. The two motors are of the GE-72-A type, each rated at 60 horsepower.

Engine.

The engine was designed and built by the General Electric Company, with special reference to the requirements peculiar to gasoline-electric cars, special attention being given to simplicity and the reduction of the number of parts and the weight to a minimum.

When running at 550 revolutions per minute the engine develops 100 horsepower and has a greater capacity at increased speeds. There are eight cylinders, each of which is 8 inches in diameter and has a stroke of 7 inches. The cylinders are placed at 90 degrees to one another and at an angle of 45 degrees with the vertical. Each cylinder is composed of one piece, a casting of soft fine grain cast iron. There is one admission and one exhaust valve for each cylinder, which are arranged in such a manner as to permit the inspection of both valves by the removal of two nuts. The pistons are of the trunk type; they are made of cast iron and are rendered gas tight in the cylinders by the provision of three split piston rings. The connecting rods, which are made of chrome nickel steel, are connected to the pistons by means of hollow pins shrunk into the body of the connecting rods. The crankshaft is made in one forging of 0.40 carbon steel; it is a 4-throw crank having an angle of 180 degrees. All of the crank pins lie in the same plane, the two center pins occupying the same angular position, while the two outside crankpins are set at 180 degrees to the center crankpins. This arrangement of cranks with cylinders set at 90 degrees to one another gives a very satisfactory system for balancing purposes. Two connecting rods are coupled to each crankpin.



General Electric Gas-Electric Car for Railway Service.

Each cylinder is fastened to the engine base by six bolts. The engine base proper is made of one casting of Parsons manganese bronze. The crank casing, which is made oil tight, is of aluminum.

All of the valves, both admission and exhaust, are actuated by one cam shaft, which is driven from the main engine shaft by two gear wheels with 2 to 1 reduction, which greatly simplifies the design of the engine. This cam shaft is entirely inclosed in a circular tunnel, which runs the

entire length of the engine base, the tunnel being formed in the main casting.

There are two carburetors of the float feed type. The ignition system is of the high-tension type, a separate coil being provided for each cylinder. The coils are energized by means of a small accumulator. Sparking at the proper instant in each cylinder is secured by means of a roller commutator.

For starting a special breech block mechanism has been provided, which fires a charge of black powder into one of the cylinders.

The cooling system for the cylinders operates on a thermo-siphon principle. The radiator, which is situated on the roof of the car, is divided into four separate nests of radiating tubes, which are of the spiral-finn pattern to give a maximum cooling area per unit length.

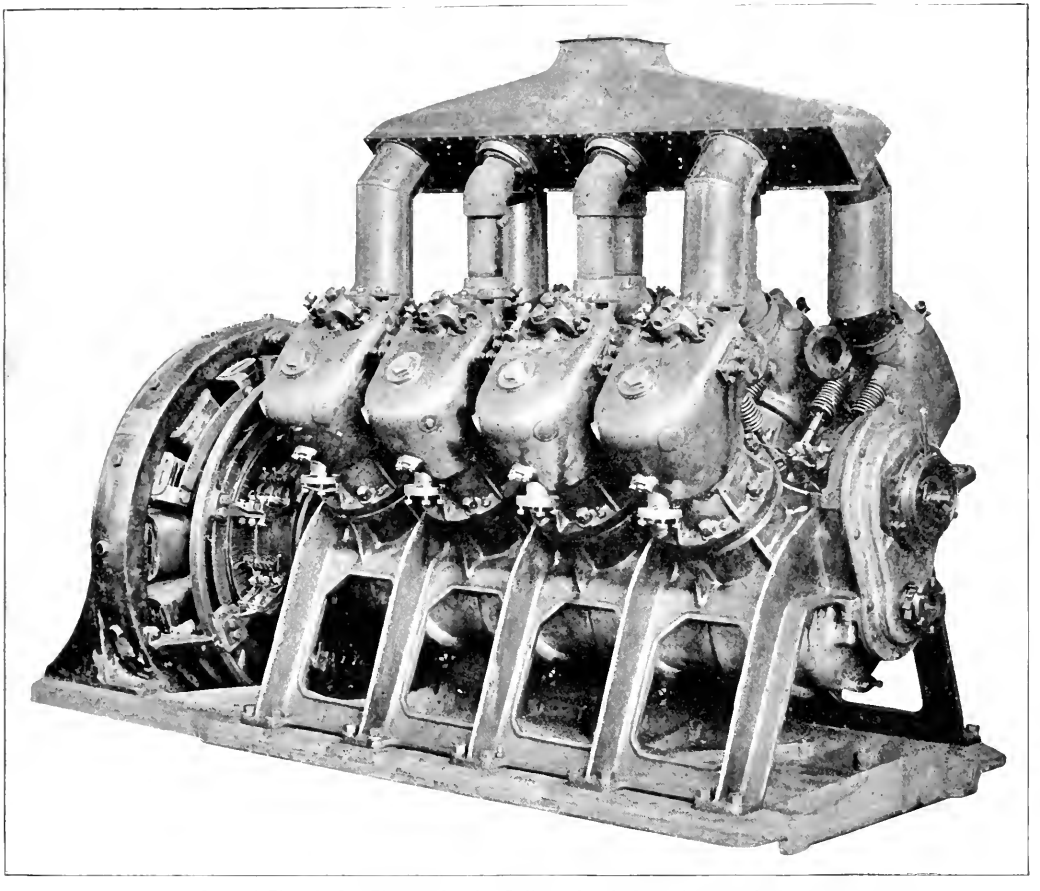
The total cooling surface is approximately 1,300 square feet. Each pair of engine cylinders is connected to one nest of tubes and the four nests are in turn connected by means of three copper pipes. The system is simple and eliminates the necessity of using pumps or cooling fans; also, it is easily drained and may be filled from the side of the car.

The gasoline is stored beneath the car in a steel tank having a capacity of 90 gallons, and is raised to a small auxiliary tank in the cab by a diaphragm pump, being filtered in transit from the tank to the pump. The gasoline is fed by gravity to the carburetor.

Forced lubrication is used and for this purpose there is a nest of pumps operated from the main shaft. All of the oil used for lubricating purposes similarly flows to the crank chamber, whence it can be drained. The big ends of the connecting rods are lubricated by scoops, which dip into the oil in the bottom of the crank chamber, the oil being forced to the crankpin as the crankshaft revolves.

Generator.

The generator is a General Electric 90-kilowatt 8-pole separately excited unit, specially designed with a view to procuring the lightest possible machine for the necessary output, and at the same time keeping the temperature rise to within a reasonable figure. It is provided with commutating poles, which, in conjunction with the potential type of control, gives great flexibility of current output.

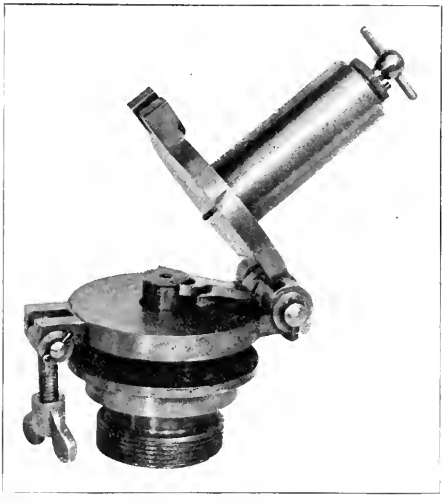


General Electric Gas-Electric Car for Railway Service—Engine and Generator.

The normal pressure when running at 550 revolutions per minute is 250 volts, at which time the current will amount to 360 amperes, but at starting a current of 800 amperes can be secured at a corresponding decrease in voltage. It would be impossible to commutate so large a current in a machine with so great a capacity per pound without the use of commutating poles. The total weight of the generator, including exciter, is

2,740 pounds, while a standard machine of this output weighs 8,800 pounds. As is only natural in a machine where the weight has been so materially reduced, the temperature rise is higher and the efficiency lower than in standard apparatus of the same output. The higher temperatures are provided for by the type of insulation employed, no paper or muslin being used in the machine. The armature coils are insulated with mica, the interpolated pole coils with asbestos and the field coils are wound with enameled wire. The armature leads to the commutator are riveted as well as soldered, although the precaution has been taken to use pure tin for soldering, which has a melting point of over 200 degrees C. Air ducts are provided to insure a large volume of air being circulated through the core. The efficiency is 88 per cent, being only about 3 per cent lower than a standard machine having a temperature rise of 35 degrees C.

The exciter is a 3-kilowatt 70-volt shunt-wound machine, with its armature mounted directly on the armature shaft of the main generator and its field yoke supported by the bearing



General Electric Gas-Electric Car for Railway Service.—Breech Block for Starting.

brackets, enabling it to fit under the back ends of the generator armature windings.

Control System.

The speed of the motors is governed by a potential control, the generator being separately excited and the terminal voltage of the motors being varied by means of a rheostat in series with the exciting circuit. The simplest explanation of the controlling system is arrived at by considering the circuits separately. The armature circuit of the main generator comprises the armature, fuse, two contactors in series, reverser and two motors. The motors are connected in series or in parallel, according to the position of the controller handle, and they are grounded to the truck framework, while the solenoid coils for operating the contactors are energized by a storage battery floating across the field circuit. The reverser is operated as usual by a separate reverser handle on the controller.

The current from the exciter passes around the field of the main generator and through the rheostat, the function of the controller being to cut in and out this rheostat as occasion demands.

A storage battery which floats on the exciter circuit is used for supplying the lighting circuits and its charging and discharging are controlled by means of a reverse current relay, which permits the lights being supplied directly from the exciting circuit or from the storage battery, according to the voltage of the exciter circuit. A Tirrill regulator is used for regulating the voltage on the lighting circuit. These arrangements enable the car lights being used when the engine is at rest.

The master controller, which has some unique features, is of type C-44, and gives seven steps with the two motors connected in series and eight steps with the two motors connected in parallel. It is provided with four handles, three of which are mounted one above the other on concentric shafts. The function of the top handle is to advance and retard the ignition of the engine, the second controls the throttle of the engine, while the third handle controls the generator field resistances and the contactors, which establish the circuit for the motors, besides transposing the motor connections from series to parallel. The fourth handle operates the reversing switch and controls the direction of rotation of the motors.

The car is heated by passing part of the exhaust gases through pipes suitably located in the car body.

A straight air brake equipment is provided and the air is supplied by means of a compressor, which is direct connected to the engine. The working pressure is 60 pounds per square inch and this is kept constant in the storage tank by a mechanical governor. Hand brakes are also provided.

The trucks were built by the American Locomotive Company. They are of the swing bolster type, and have wheels 36 inches in diameter. One motor is mounted on each truck. The journals are of the M. C. B. standard pattern.

The interior of the cars can, of course, be designed to suit the requirements or service, making this type available for use as private cars, with sleeping and dining accommodation, as inspection cars, wrecking cars, baggage cars, etc.

This car made a satisfactory test run of 78 miles over the tracks of the Delaware & Hudson Company on January 15, 1908, carrying a party of officials of the General Electric Company, American Locomotive Company, Delaware & Hudson Company and several electric railways.

On the test run the car carried its full capacity of passengers. Twenty-three stops were made, the average length of a stop being slightly less than one minute. The engine, however, ran continuously during the trip. The speed of the car varied from 23 miles per hour on a + 1.3 per cent grade, to 56 miles per hour on a — 0.25 per cent grade. Where traffic conditions permitted a speed of 50 miles per hour was recorded on level track and from Albany to Mechanicsville a speed of 47 miles per hour was sustained on a steadily rising grade.

The operation of the equipment was in every way satisfactory, neither vibration nor sound of the engine reaching the passengers. The car heated readily from the exhaust system, though the day was cold and the air keen. The 8-cylinder gas engine developed at times 150 horsepower and the two 60-horsepower motors were under such perfect control of the operator that the acceleration was noticeably smooth and free from jerks. The relatively small space occupied on the car by the power plant and its control by one man are worthy of note.

Plans for Elevated Road in Cincinnati.

Judge Rufus R. Smith of Cincinnati, O., representing the Cincinnati Traction Company, recently announced before the City Club of that city that the interests represented by W. Kesley Schoepf, president of the Cincinnati Traction Company, would finance the project of J. G. Schmidlapp for an elevated railway. The plans for the road have been considered for several years, but no active steps have been taken because there is no Ohio law favorable to the construction of elevated roads. A movement is now on foot to secure the passage of a law which will place the construction of elevated roads on the same basis as surface roads.

ELECTRIC RAILWAY PROGRESS AND CONDITIONS IN THE CENTRAL STATES.*

BY H. A. NICHOLL, GENERAL MANAGER INDIANA UNION TRACTION COMPANY.

Prior to two years ago the electric railways in Indiana and Ohio each maintained a separate organization—the Ohio organization known as the Ohio Electric Railway Association and the Indiana organization known as the Indiana Electric Railway Association.

Recognizing the similarity of conditions and the value of co-operation, the two oganizations amalgamated under the title of the Central Electric Railway Association. We are now on a stronger and more substantial footing than ever before.

Standardization.

Our "Standardization" committee has favorably reported standards for wheels, brakeshoes, rails and axles, and these recommendations have been unanimously adopted by this association. These standards were considered of such importance that they were practically all adopted by the American Street and Interurban Railway Association. This speaks well for our "Standardization" committee and the work done by this association.

Our committee on "Rules" has also reported on a standard code of rules for interurban railways, which has been adopted. Copies of these rules have been requested by railways located in various districts, all over the central states, and all emphatically pronounce them practical and complete.

We must not stop at merely adopting these standards by the association itself, but each individual member must see that the standards are put into actual use on his system.

We have only just begun our task. Other essential features must be standardized, such as brake rigging, couplers, drawbars, height and width of cars; also our tickets, accounting and track and bridge construction, and through the connecting of all the roads together it will be possible for longer hauls to be made and heavier and greater traffic transacted. This will enable us to more thoroughly compete with the steam roads for both long and short distance travel.

Traffic.

At the present time a person can buy a through ticket from almost any point in one central state to almost any other point in Indiana, Ohio, Illinois, Michigan, northern Kentucky and parts of Pennsylvania and New York, and in soliciting and encouraging this business more commodious and faster service has been put on our electric railways.

Our freight and express has been thoroughly exploited with good results. Quite a few of the leading lines are now handling express matter through the "old line" express companies, and we must look forward for an extension of this portion of our business, as no doubt it will prove most profitable for us to work in conjunction with these express companies. They can and will turn over to us business from far and remote sections of our country, which we could not hope to get through any express department which we would inaugurate ourselves, and which latter service usually does not contemplate the collecting or delivery of express matter.

United States Mail.

The carrying of United States mail on trains of the electric railways has not been entirely satisfactory. The compensation allowed by the federal government for this purpose not being considered adequate for the service rendered, and, according to a report made by the committee appointed by the American Street and Interurban Railway Association, it was apparent that no satisfactory results had been obtained by them, either through application to the postoffice authorities in charge of these matters or the house committee on postoffices and post roads; therefore it would seem wise that this association should well consider the advisability of the appointment of a committee to confer with the American association committee to see if we could render them any assistance looking toward the enactment of proper legislation through which we could secure a greater volume of this class of business at rates that would compensate us for its handling.

At the present time there is a wide variation in the rates of fare per mile charged by electric railways in our territory. An equalization of the rates should be made, so that all roads will have practically the same basic rate of fare.

Our interchangeable coupon book, which has been in use on some 24 of our properties, aggregating a mileage of 2,363 for this last three years, does not seem to meet with the same degree of favor that it enjoyed in its earlier use, and I believe this association should take steps either to modify the conditions under which it is sold or to adopt some other form of mileage book similar and corresponding to the $15 1,000-mile book now sold by some companies.

It has been thought well that the traffic officials of our various lines should act more nearly as a unit, and therefore a traffic association, auxiliary to but a part of the Central Electric Railway Association, has been formed.

Growth in the Central Territory.

We must not lose our identity entirely in advancement. We must still retain our individuality and the distinctive appearance of electric railways, and should not attempt, at any time, to approach the operation of the heavy freight and passenger trains entirely distinctive of the steam railroads.

We now have in operation four distinct systems of electric transmission for the propulsion of cars. Each apparently is giving satisfaction in its locality. However, it would appear that some uniform system should be adopted in the future after it has been clearly demonstrated which system is the best for universal use.

During the last year the electric railways of Indiana have been extended and new ones put in operation to the extent of 100 miles, thereby increasing the total mileage in operation in that state from approximately 1,350 miles to 1,750 miles, and at this time there are approximately 200 miles under construction. In Ohio there have been put in operation approximately 35 miles, which has increased the mileage in operation in that state from 2,359 miles to 2,395 miles, and there are approximately 135 miles under construction. In southern Michigan there have been constructed and put in operation during the year about 60 miles of road, increasing the total from 700 to 760 miles. This same increase in mileage and consequent increase in new business may be expected from year to year in the same or greater ratio.

Two-Cent Fares.

We have all met the 2-cent fare law, which has unquestionably operated against us, in favor of our steam road competitors. How far-reaching the effect of this law on our earnings will be is yet to be seen, but we are of the opinion that it will require superior service on our lines, for both long and short hauls, to permit us to hold the major percentage of the business which we now enjoy.

In this connection I wish to state that there seems to be a growing opinion among leading electric railway managers that in certain localities the electric railways have been carrying passengers at a rate not commensurate with the service given and that a readjustment and increase in the rate of fare must soon be made, so as to more nearly approach the 2-cent legal rate charged by steam roads.

Fraudulent Claims.

In view of the fact that street and interurban railway corporations are made victims of fraudulent claims and at times are required to pay such claims, and believing that each of the member companies ought to be, as far as possible, protected against this class of claims, I would suggest that we seriously consider the appointment of a committee to devise a plan of exchange through our secretary's office of certain information regarding claimants for substantial amounts, the claim department of each member company to report upon blanks for the purpose such information for the benefit of any or all of the other member companies who may desire to make inquiry.

The Association.

We have 22 companies contributing to the success of the secretary's office, and 392 individual members in the association.

The supply men have taken an unusual interest in our meetings and have been of great assistance to us, not only in a financial way but in aiding our committees to secure valuable information from the companies they represent; also by the exhibition of their wares and appliances and through the zeal and vim which they have injected into our conventions.

I wish to publicly thank Hugh J. McGowan, the president of the Indianapolis Traction & Terminal Company, for his liberality and great kindness to this association. He has for the last two years given the room which we now occupy in the traction terminal building free to this association, and if rent were paid for it at the usual rate it would amount to approximately $500 per year.

I assure you that your president feels the high honor you conferred upon him at this time last year, and he wishes to thank you all for the able support you have given him.

*Abstract of president's annual address before the Central Electric Railway Association, Dayton, O., January 23, 1908.

FUNDAMENTAL BRAKE RIGGING FOR HIGH-SPEED ELECTRIC RAILWAY CARS.*

BY R. C. TAYLOR, SUPERINTENDENT MOTIVE POWER INDIANA UNION TRACTION COMPANY, CHAIRMAN "STANDARDIZATION" COMMITTEE.

Supplementing the very excellent paper on brake rigging prepared by Fred Heckler (Lake Shore Electric Railway) and read at the November meeting of this association (Electric Railway Review, November 23, page 817), the "Standardization" committee has continued its work of considering and investigating the question of the proper standards for foundation brake apparatus. This subject for the present purpose will be confined to the consideration of foundation gear for high-speed interurbans and include only that part of the apparatus from the air brake cylinder to the wheels under the car.

Present Practice.

The foundation brake gear, as at present usually employed, consists of a series of lever, rods and pins of various proportions, ratios and designs for transmitting the pressure from the air brake cylinder to the shoes. The usual practice of stopping a car is by pressure applied to the brakeshoes, producing a friction between the shoe and the revolving periphery of the car wheels. The usual maximum pressure applied to the shoes is from 70 to 100 per cent of the light weight of the car.

Before submitting recommendations as to the standard brake gear the committee has deemed it advisable to inquire whether this practice of braking to 70 to 100 per cent of the light weight is the best practice. Before proceeding to design or recommend for adoption a standard form of brake gear it seems proper to consider what are the requirements of a perfect brake for stopping a high-speed interurban car.

Requirements of Brake Rigging.

Summarizing these requirements very briefly:

After a car has attained the maximum speed there may be two reasons for bringing it to a stop. (1) At some prearranged station for convenience in ordinary course of transportation business. (2) For the purpose of avoiding accident and possible injury to person or property.

To stop a car for the first reason requires a certain force which may be applied in any convenient manner to accomplish the purpose. To stop a car in the shortest possible distance, however, requires the instantaneous application of the greatest possible amount of retarding force and the continuous action of this force at its maximum until the energy of the car is entirely destroyed.

The maximum retarding force that may be applied in any given case is that due to the friction resulting from the pressure applied to the brakes against the tires of the wheel. This friction between the brakeshoes and wheels tends to impede the rotation of the wheels and through the adhesion of the wheels to the rail tends to destroy the energy of the car. The maximum retarding force, therefore, is limited to the adhesion between the wheels and the rail.

Retarding Force.

The maximum retarding force to stop a car can thus be obtained by applying a pressure to every wheel on the car and continuing the pressure necessary to produce sufficient friction to the rotation of the wheel just equal to the friction between the wheel and the rail. This maximum retarding force, if continued beyond this point, stops the rotation of the wheel, causing it to slide on the rail, very greatly reducing the efficiency of the stop.

Therefore, to determine the maximum retarding force that must be transmitted through the brake levers it is necessary to determine the coefficient of friction between wheels and rails. This will obviously vary with the weather conditions and conditions of the rail, but it has been found from a large number of experiments to average 0.18 per cent of the weight on the rail.

It has also been determined by experiment that while the same frictional resistance between the shoe and the wheel will skid the wheel at any speed, the pressure required on the brakeshoe to produce this same frictional resistance varies inversely as the speed of the car. Consequently a higher brakeshoe pressure is required to skid wheels at high speed and a lower brakeshoe pressure at low speed.

With a coefficient of adhesion of 0.18 per cent between the wheels and rails there is required to skid the wheels a ratio of brakeshoe pressure to total weight on braked wheels at 7½ miles per hour of 0.70 per cent, at 20 miles per hour of 0.95 per cent, at 40 miles per hour of 1.20 per cent, at 60 miles per hour of 2.40 per cent.

Consequently the foundation brake rigging throughout should be so designed as to sustain without distortion or undue wear a pressure of 2.4 times the total weight of the car to which it is attached. It was the intention of your committee to submit detailed dimensions of the car body levers and truck levers which it recommended as standards, but on investigation it was found that the arrangement of the electrical apparatus under the car, the design of the trucks themselves and the electrical apparatus mounted thereon made it quite impracticable at this time to do so, and therefore it submits for your consideration the following fundamentals of recommended practice for foundation brake gear.

Fundamentals of Design.

1. Total lever ratio, 10 to 1.
2. Maximum braking pressure, 2.4 per cent of car weight.
3. Maximum pressure in brake cylinder, 90 pounds.
4. Maximum stress in all brake levers, 23,000 pounds per square inch.
5. Maximum stress in all brake rods, 15,000 pounds per square inch.
6. Maximum stress in all brake rod jaws, 10,000 pounds per square inch.
7. Maximum shear on all pins, 10,000 pounds per square inch.
8. Diameter of pins to provide a bearing value, 23,000 pounds per square inch.
9. Maximum hand brake power, 2.4 per cent of weight of car.
10. Equalized brake levers.
11. Inside-hung brakes.
12. Brake hangers on part of truck not spring supported.
13. Brake lever to bring a straight-line bearing on shoes.
14. Brake hangers and heads designed for maximum shoe wear.
15. Central Electric Railway Association standard brake head and shoes.
16. Automatic slack adjuster.

Friction Regulation.

Lastly, but not the least important, there should be provided an automatic friction regulator so that a high-speed interurban car may be equipped to get the maximum possible retarding force on the shoes without skidding the wheels. If the above recommendations are adopted it is quite certain that the apparatus will be free from many of the objections of present designs, that the brake rigging will be reliable and free from failures and that a high-speed car may be reduced from maximum speed to a stop in the very shortest possible distance and in the shortest length of time.

*Abstract of report presented before the Central Electric Railway Association, Dayton, O., January 23, 1908.

EMPLOYES' CLUB ILLINOIS TRACTION SYSTEM.

The employes of the Illinois Traction System have recently organized the Interurban Club at Springfield, the object of which is to promote a closer fellowship between the officers and employes of the company as well as to provide a place where the men may meet and spend their idle time pleasantly and profitably. The club is composed of all classes of employes and anyone connected with the company is eligible to membership.

At 613½ Monroe street, Springfield, the club maintains four rooms, nicely furnished in mission style, consisting of a parlor, reception room, poolroom and cardroom. The parlor contains a piano and a music box and the reception room has a large library table on which are kept a number of papers and books which are of interest to the electric railway men.

The expenditure of money is controlled by a board of governors, consisting of two officials and two employes.

Each member carries a membership card which entitles the holder not only to the privileges of the home organization but also to those of the branch clubs now being formed at Decatur, Champaign, Danville, East St. Louis, Staunton and other cities served by the Illinois Traction System. The dues are $1.00 per month and the payment of each month's dues is recorded on the back of the membership card, which thus indicates whether the man is in good standing.

V. C. Gourly, ticket agent at Springfield, is the organizer and first president of the club.

THE PROMOTION OF TRAFFIC.*

BY CHARLES F. PRICE, GENERAL PASSENGER AGENT, WESTERN OHIO RAILWAY.

The question of traffic, and its promotion, is an important one to the interurban railways. This has been the subject of reports from committees at the meetings of the American Street and Interurban Railway Association conventions, both at Columbus, O., and at the more recent one at Atlantic City last October.

Traffic is the means by which the interurban and street railways receive the revenue to operate and keep up their equipment and pay dividends to their stockholders, and, as a traffic official, I desire to state here, and I know that I voice the sentiment of every interurban railway traffic official, that I am pleased to see the Central Electric Railway Association allot at least a portion of its time to a discussion of this subject.

The name "Traffic" covers all the business done by a railway, and my capacity being in the passenger department of the line I represent, I presume that it is the desire to hear something about the promotion of passenger traffic.

The steam roads long ago conceded to their electric rivals the local business, but still dispute the long haul. The local business rightfully belongs to the electric railway, and, with the right kind of service, it will always have it. The advantage of being taken from the center of one town and landed in the center of another is offered by no other means of interurban transportation. In this connection I do not believe that the rates of fare should be lower than those of the steam road, to obtain and hold this travel, except for the round trip. The accommodation, which includes not only the advantage of being landed "up town" but the frequency of service as well, appeals to the traveler and secures him, with anything like reasonable and comfortable service.

However, while this traffic belongs to the electric railways, it must not be conceded that any kind of accommodations for local business will suffice. The local business should be encouraged and fostered, for it is a valuable asset and should be accommodated with comfortable waiting sheds at all stopping points in the rural districts, frequent service, clean cars, fast time and, in the winter time, the cars should be warm.

Changes in schedules, it is my opinion, should be avoided as much as possible. People living in the country become accustomed to a regular time for their car. Then there is a change and it takes some time to get them accustomed to the new order of things and, no matter how well you advertise the change before it goes into effect, there will be a loss of business for a while, and after it goes into effect it may be that complaints begin to come in about the service not being so satisfactory as it used to be, and the result is that some of your former patrons may, for a while, use some other means of transportation, although not quite so handy as the trolley. They will, however, come back gradually, but a regular schedule the year round can be handled much better by the electric lines than the steam roads, because the short days do not necessitate running trains later in the morning or earlier in the evening, for the electric cars run every hour.

The development of the country along electric lines for suburban residences should be encouraged. Commuters' rates should be reasonably low and the service such as to encourage the every-day travel. Secret societies, lodges, theatrical parties, basket ball, foot and base ball do much toward increasing the revenue. Along our line the members of the various I. O. O. F. lodges are now making trips every week or ten days to some other town, carrying on their work and contesting for a prize which will be awarded the latter part of February. They never go in less than carloads and return early at night, always before the time arrives for shutting down the power. Any suggestions that might be given here for rates for theaters, parks, etc. would probably be out of place, as those matters are governed entirely by the local situation and conditions and I only intend to touch upon the subject of "Promotion of Traffic" as a general proposition.

Handling Baggage.

The commercial business of the electric lines is constantly increasing. When I say this, I do so in regard to our line, which handles baggage on every car and checks 150 pounds free with every ticket costing over 20 cents. We are handicapped on interline business, however, by the variance in which baggage is handled. Some lines still charge 25 cents per piece for baggage and only have two or three cars during the day that baggage can be hauled on. This service is no inducement to the traveling man. Other lines charge a different rate per hundred because their rate of fare is lower. The baggage matter should be uniform and I think that the line which charges 25 cents per piece for baggage should accept the prorate of the revenue received when it receives baggage from a line that charges excess.

When the question of handling 150 pounds of baggage free came up after the legislature of Ohio passed the 2-cent bill for steam roads, making their rates the same as those on the Western Ohio, we considered the advisability of making the change very seriously at first and had some doubt about it, but we are more than pleased with the result since we adopted the baggage rate in effect on steam roads. Our rates of fare and baggage rates are the same as our steam road competitors' and our baggage receipts from excess baggage are larger than we received before and we are hauling the 1-trunk passengers going on a visit that we did not get before. The careful handling of baggage is a feature not to be overlooked in the effort to promote traffic. It is just as important to deliver a piece of baggage at its destination as it is the passenger. Records by checking and receiving agents, as well as conductors, are a great help in tracing lost baggage. Employes handling baggage ought to be impressed with the importance of prompt forwarding and sure delivery of all baggage.

Excursion Business.

Last season we ventured into the excursion business on a much larger scale than usual, having for several years sold excursion boat tickets from connecting points as far south as Dayton on the Dayton & Troy. I believe there is a great future for the summer boat business, judging from our experience last summer. On two different occasions we joined the Detroit & Cleveland and Cleveland & Buffalo boat lines in cheap excursions to Niagara Falls. We had one just before the steam lines had theirs and one immediately afterward. We made the same rate as the steam roads and had two carloads the first time and three the last, every passenger on the first one being a living advertisement of the excellent service. We had nearly a carload from one town on our line where they took the car at 4 o'clock in the morning and made 131 miles to reach the boat. In both instances the excursion party was landed in Toledo by 9 o'clock in the morning, before the heat of the day, making a cool, clean and pleasant trip.

We consider the success of the Niagara Falls excursions the very best kind of an advertisement for our lines and in addition to the advertisement we made a nice profit on the business. Excursions of this kind, where they can be run, help in the work of educating the public to the use of the electric roads.

We run several excursions each season to Cleveland, issuing an exchange order on the Nickel Plate road, good at Mortimer. I am a believer in the most liberal form of advertising. For our Niagara Falls business we occupied half pages in the daily papers along the line, using a large cut of the City of Erie, one of the Cleveland & Buffalo steamers, and large display type; we also got out bills in two colors. We reserved berths upon application, and after the excursionists returned took the pains to inquire as to how the trip was enjoyed and did not have a complaint from a single one of the several hundred persons. Everyone in the two parties was a talking advertisement for our service, and hereafter we can be relieved of the expense of a large amount of advertising we were compelled to do last season to induce the public to try the "electric way" for business which had heretofore been monopolized entirely by the steam roads.

We have also stimulated travel by getting business men in the various towns along our line to run "shopping" excursions, and they have been very satisfactory revenue getters.

Week End Excursion Rates.

The roads which constitute the "Lima Route," the Toledo Urban & Interurban, the Western Ohio and the Dayton & Troy, have in effect what are termed "Week End Rates" to Dayton, Toledo and Springfield, from all stations on the Western Ohio, and from Dayton, Springfield and Toledo to all points on the Western Ohio. These rates are a fare and a third for the round trip, good going every Saturday and Sunday and returning including the Monday following date of sale. Prior to putting these rates into effect we had a 1-fare rate for the round trip, good going and returning on Sundays only, but we tried the experiment of increasing the rate and making a more liberal time limit, and not only did our revenue increase, but more tickets are sold than under the former arrangement. We also check baggage on these tickets.

For the long haul, I believe that a reduction, if only a slight one, will bring additional business, provided the road giving it is prepared to give the passenger an easy, comfortable ride, free from delays and annoyance. The time need not be as fast as the steam line, but the equipment should be

*Abstract of paper read before the Central Electric Railway Association, Dayton, O., January 23, 1908.

such that he can enjoy just as easy a trip. In this connection I desire to state the fact that the keeping of trains on time is an important item to be taken into consideration, in local as well as in limited service. The time should be fast, but with enough time to enable the cars to make the schedule should they be held up from any unavoidable cause. A schedule that is so fast that cars cannot be kept reasonably on time should be changed.

Party rates are a means of developing a considerable amount of business. The rates differ greatly. Some lines give a rate for 10 or more passengers going on regular cars. Others have 25 the minimum number to secure reduced rates. Our line has always withheld making any reduced rates, except to parties of 50 or more, which includes special car service if desired. I am of the opinion that granting a reduced rate of fare to a small number of passengers is unwise from the fact that I have noticed that they usually go anyhow. If the party lacks in numbers, my observation has been that the revenue to the company amounts to more, and I think an electric railway with hourly service should value that as an inducement, together with the fact that parties can return home earlier at night and in closer proximity to their homes, than by steam road. The argument is all in favor of the electric lines; then why disturb the rate except for an unusual number?

The long haul business will never be successfully handled, in my opinion, until cars for this business are run in trains, and I believe that the time is not far distant when all of the through business will be handled in this manner. The great drawback to the present manner of handling through business over foreign lines is that the motor cars, like the steam engines of the other railroads, have to be at their own barns to be gone over each day. This sometimes necessitates passengers changing cars, which results in anything but satisfactory service. Trailers would obviate all that annoyance and I venture the prediction that the time is approaching when motor cars will haul trains of several cars from as many different points to junction points, where they will be transferred to as many destinations several hundred miles from the starting point. When this is accomplished it will be common for passengers to go to and from Buffalo, Cleveland, Toledo, Detroit, Dayton, Columbus, Cincinnati, Indianapolis, Chicago, Louisville, St. Louis and intermediate points. The public does not patronize the electric lines because of its greater love for them, but because of the convenience.

Treatment of Passengers.

Agents and conductors should be courteous and accommodating, patient and considerate. If an excited individual rushes up to the ticket window and asks what time the 11 o'clock train goes, the agent should not give way to his feelings, but should tell him. When cars are late, they should keep those waiting informed. They should be posted on the time of the steam roads, location of hotels at the different towns, and other things of which the traveling public requires knowledge. Our line supplies conductors with a schedule giving the time of every steam road at every station we connect with, so that he is prepared to answer questions of that nature which come to him dozens of times daily. This schedule contains the time of our competing steam roads also. I believe the traveling public should have any information desired, and you will make a friend of the traveler by giving help sooner than by letting the conductor or agent say to him, "I don't know."

I believe the public is entitled to every confidence in reference to the matters which concern them, some of which I have mentioned above. The closer this relationship is drawn between the public and railways the more considerate the former will be and the more pleasant and enjoyable will be that relationship. The public should be made to feel that the patronage is appreciated and sought, and the more of this spirit that can be infused through courteous and painstaking employes the better will be the showing in receipts.

For the information of the traveling public, we have placed in all of our ticket offices large bulletin boards with a blackboard in the center, and rows of boxes on each side for the time folders and advertising matter of our own and other electric lines. On the blackboard we make announcements of excursions, attractions and other matters of interest to the public. We find this way, and the hanging of bills in our cars, the best way to reach our regular patrons, but for any extra occasion we use the newspapers liberally.

Electric lines can do a good business in handling theatrical companies, and that class of business is increasing each year. We are probably better equipped to handle this kind of business than some roads, from the fact that we do a heavy freight business and have freight motors and trailers and we press them into use whenever occasion demands for handling the scenery and baggage.

In the matter of interline or through business I do not believe it is justifiable to make a rate much below the steam road, the frequency of the service being worth something. On the line of the "Lima Route," we meet the steam road rate between Toledo and Dayton and from all stations to either of these places. The Lake Shore Electric has put in a 30-day rate of $1.50 from Toledo to Cleveland. This is considerably below the steam road rate and the result will be interesting to traffic officials.

In the promotion of through or interline business I am of the opinion that more of this business might be obtained, even though the electric mileage is much longer in some instances, if the rate were made to meet the steam road or short line, and the revenue prorated per rate where there was a different rate per mile, than by the roads holding out for their local, as some do. The sooner electric lines get out of the rut of doing business on street car line methods and follow the steam road plan, which is the result of years of experience, I believe they will add more to their revenue. In this connection, the recent movement to organize a traffic association among the electric railway traffic officials, I am of the opinion, will solve this question in a manner that will be satisfactory

I believe it timely and proper to speak a word to the executive officers. I know you will soon see the good results obtained from the formation of the Central Electric Traffic Association. We are all working for the same end. We believe in a distinct organization, one before which only traffic will be discussed. Matters of issuing tariffs, etc., can thus be more economically handled. At the short session held in this room yesterday afternoon more traffic was discussed and more done toward promoting traffic than at any previous meetings of the association.

Advertising.

In advertising too wide a circulation cannot be given timecards, maps, etc., bills, attractive posters or billboard advertisements and the newspapers. In the newspapers you reach all classes. You reach the regular patron of your road who is also reached by your bills. You reach the occasional traveler who may or may not see your bills. You reach the person who has never patronized you and never sees your bills, and he is the individual you want to reach. The newspapers go into the private offices, storerooms, shops and homes, and reach daily thousands of people who have not been educated to use the electric railways. Anything with the name of your road on is a good advertisement and a promoter of traffic. During the past two years the roads constituting the "Lima Route" have several times covered the states of Ohio, Indiana and Michigan with advertising matter, placing large timecards, maps, etc., in every depot and hotel and other public places. It is true that all of the matter put out does not stay permanently, but some of it does, and that which does not stay remains long enough to do some good, and we have absolute knowledge that a great deal of business has been brought to our lines through the means I have mentioned. The public needs to be educated to use the electric railways. True, they have been in operation for a number of years, but so have the steam roads, and they advertise more and more each year.

Equipment.

Not all, however, depends on the advertising matter you may put out. Your road ought to give better service than it advertises and never give poorer. Have something in your equipment that will cause passengers to speak favorably of your line. The service should always keep abead of the patronage. The Lake Shore and Pennsylvania railroads did not wait to see if their New York-Chicago limiteds would pay by first putting ordinary trains in the service and then put on the luxurious trains they now have. They built the trains first and put them into service and offered them to the public for approval, and the result is that when one of the lines recently announced its intention of lengthening the time, the public raised such a clamor that the road abandoned the idea. Why? Because the public had been educated to use the trains.

So it is with the electric railway. People have become educated to the advantages of its local service and attention must now be turned to the development of the through business, the handling of which now confronts them.

In handling this subject I have done so with a realization of the fact that it will be impossible for me to cover all phases of the question. A traffic man, either passenger or freight, stands between the public and the company. He is the one who hears the complaints and has the rough places to smooth over so the figures will appear on the ledger in the right color of ink. The man who brushes up against the exacting public is the one capable of giving suggestions as to the "Promotion of Traffic." Now that this association has taken up the important matter of traffic, I hope to hear some phase of it discussed at future meetings, that we may all profit by it.

THE TELEGRAPH SIGNAL SYSTEM.*

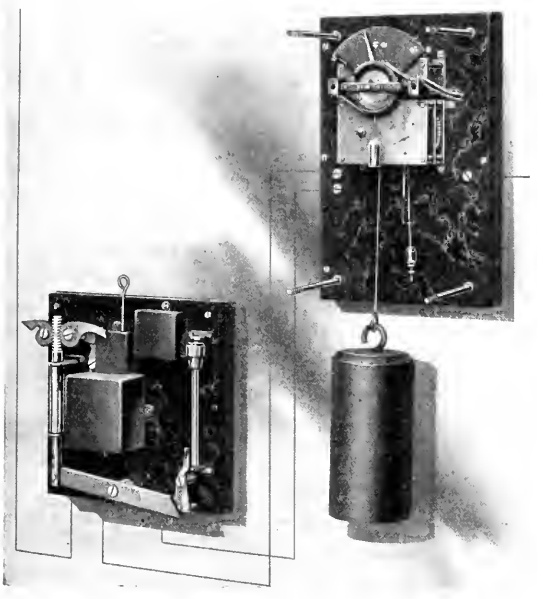
BY CHAUNCEY P. BUTTON, GENERAL MANAGER TELEGRAPH SIGNAL COMPANY.

The development of our electric railways for interurban service has been so wonderfully rapid as to cause astonishment not only at home but abroad. In fact, Germany and other foreign countries send representatives here for enlightenment in this particular field.

It must have been gratifying to you gentlemen of the central west to hear the real good things these representatives have said about the systems which your enterprise has made possible. Such prestige as this deserves to be carefully safeguarded, and in pursuance of such a course would it not be wise and timely to take a careful inventory of every single feature which is a part of your operating system?

Requisites of a Good Road.

There are a great many requisites. You possess practically all. Why not make it all? Then when you hear these good things said about you as a whole what an added



Telegraph Signal System—View of Semaphore Control Device Opened.

satisfaction it would be to you to know that you have taken advantage of every available means in providing for the safe and efficient handling of the lives and property entrusted to your care.

Your roadbeds are excellent, likewise your equipment. Your electrical and mechanical departments show evidence of skilful guidance and generous expenditures. The personnel in your train service is, as a rule, excellent. I have observed many instances of courtesy on the part of your trainmen to your patrons which bespeak credit to your discipline and to the intelligence of your employes. Your system of train dispatching could be improved by standardization. This accomplished, you have little left to gain from the steam railroads as to operation, notwithstanding their many years of dearly bought experience, except to profit by their mistakes.

Accidents.

During the year ending June 30, 1907, the railroads in the United States killed 5,000 and maimed 76,286 passengers and employes, an increase of 775 killed and 9,577 injured over the corresponding period for the previous year. The disastrous record of casualties to passengers in train accidents, 4,108 killed, is due, in a large measure, to 10 accidents which caused the death of 291 persons. The larger part of this loss of life and property could have been avoided and at nominal cost. For the sake of all interests, humanitarian and financial, and keeping in mind the great responsibility that rests upon the shoulders of the different railway officials, should not this lesson of the past year's losses cause a united effort toward putting a stop to it?

There are accidents occurring on the electric railways in the central west as well as other parts of the country that are costing hundreds of lives and thousands of dollars. These accidents could be averted by expending $1.00 per month per station for insurance against such a happening by adopting a signal system. I cannot consistently advocate an automatic block signal, for on many of the single-track lines the traffic is so heavy as to make such a system wholly impracticable, if not an impossibility, inasmuch as it is not of sufficient flexibility to meet the conditions on such a line. On the other hand, the lines where the traffic is light and conditions possibly favorable to such a system, the revenues are not such as to make its adoption possible, for it must be borne in mind that only about 20 per cent of the electric roads in the United States are dividend earners.

This very fact has been an incentive to inventors to perfect a signal for use on interurban lines which is of sufficient flexibility to permit of its successful use on the heavy traffic line and sufficiently low in cost of adoption to bring it within the reach of all.

Steam Road Comparisons.

From the train dispatchers' standpoint let us consider the conditions that obtain on the steam road and compare them with the electric road. The dispatcher on the electric road has, as a rule, a great many more trains under his watchful care than has the dispatcher on the steam road and issues about twice or three times as many orders. More brief, to be sure, but every one has the same stamp of importance on it. The dispatcher on the steam road has a means of getting in touch with the train crew at practically every switch on his line by instructing the telegraph operator to throw a semaphore signal against the train and then issuing the orders through the medium mentioned. The dispatcher on the electric road has no such advantage and should have just as reliable a means of getting in touch with his trains, for schedules are disarranged here as on the steam roads and traffic fluctuates to an even greater extent.

To be sure the electric road has a telephone which enables the train crew to communicate with the dispatcher. But what a one-sided arrangement! The dispatcher should by all means have as great or greater power to stop any train in his district and issue such instructions to it as conditions might necessitate.

The movement of neither people nor cars is regular on interurban lines and some little mishap on the line may cause the best dispatcher's best built castle to be quickly shattered; and it must be as quickly rebuilt. The method of having reporting stations is not adequate to the needs on such occasions, therefore the dispatcher should have a means of throwing a semaphore signal to danger at any selected point.

Overrunning Orders.

Experience has shown that the greatest danger of collisions between opposing trains is due to the motorman overrunning his orders, that is to say, running beyond the siding which the dispatcher, by special order, has named as the meeting point for the two trains.

Man is not infallible and it is not a reflection on the railroad official that his men frequently overrun their meeting points, for very often it is the most reliable man in the service who thus errs; however, it is a reflection on the railroad official who does not provide a means to avert such occurrences when the consequences of forgetfulness are brought to his attention almost daily.

It can consistently be held that a signal system is an essential safeguard in handling trains with a telegraph or telephone dispatching system. It should be within the power and the duty of the dispatcher to set the signal to danger at the siding at which the trains are to meet the moment he fixes a meeting point other than the regular meeting point provided for on the timetable. Then when the motorman forgets his order, as he does frequently, and the conductor fails to check him, as he does frequently, the dispatcher's signal stands at danger at the meeting point, a preventive against accident.

The first car of the two to arrive at the meeting point finds the signal set in a horizontal position, indicating danger. The conductor or motorman quickly communicates with the dispatcher by telephone as follows: "Stanley and Thompson

*Read before the Central Electric Railway Association, Dayton, O., January 23, 1908.

at No. 3 or Troy," the dispatcher in turn reminding them of their order to meet a certain train at that point and further instructing them as to restoring the signal to clear or otherwise.

Here is provided a means of enforcing obedience to your dispatcher's orders. The American Railway Association rules require the placing of the "middle order" in the hands of the operator at the meeting point when practicable as a means of reminding the crews and enforcing obedience to orders. This, of course, is not possible with a telephone dispatching system with no operators at the meeting point, but by having your dispatcher place the signal at danger at the meeting point you are taking a step in advance of the American Railway Association which should cause them to sit up and take notice.

Value of Signal Control.

A telephone dispatching system with a reliable signal under the control of the dispatcher is the best, safest and quickest means of dispatching trains. Compared to the actual need, but little thought has been given to this branch of the service, but during the past year the Central Electric Railway Association, aided by the electric railway press, has stimulated thought upon the subject; indeed it was the well-known need of an adjunct to your telephone dispatching system, together with the encouragement and active aid of the members of this association, that caused this signal to be perfected to meet your practical requirements.

About two months ago an electric road in the state of Illinois suffered a head-on collision which caused the death of 17 persons and injury of many more. The damage claims filed thus far amount to $219,000. It might be timely to say the Telegraph Signal Company's signaling apparatus, for preventing head-on collisions, could have been rented and operated for a period of 1,500 years for that sum.

Not long ago a general manager in New York state, upon whose line several head-on collisions had occurred, accompanied by the usual fatalities and property loss, offered in extenuation for his not taking means to avoid a recurrence that it was pretty handy to throw the current off the line when advice was at hand that a collision was imminent. This is a most unsatisfactory manner in coping with the dangers of forgetfulness. In the great majority of cases the first information you obtain from a crew overrunning its order is in the accident report which almost invariably follows.

Without a safeguard every meeting point fixed by special order has an element of danger lurking about it which should be eliminated.

With the telegraph signal system to throw a signal to danger at some point on the line the dispatcher simply turns a 2-point switch to connect with a 200-volt circuit, this being brought from the trolley line if desirable, and reduced by resistance coils from 500 or 600 volts. He then inserts a plug, in hole No. 3, for instance, throws the 2-point switch and a few seconds later semaphore No. 3 on the line is released and gravitates to danger. Immediately following this the device records the number of the signal that has operated by cutting the same number of holes in a tape as corresponds with the number of the semaphore that has operated.

The response is given, not by the operation of the master machine in the dispatcher's office or the line machine at the distant station or the releasing trip at the distant station, but by the semaphore actually gravitating to the full danger point, this in turn causing the device to automatically record the fact by wire.

As it is physically impossible for the main office to get the indication until the semaphore blade has reached the full danger point, danger of false indication is eliminated, and if other than the desired signal has operated from any error of the dispatcher in inserting the plug in the wrong hole, no deceptive response is given, for the number of the particular signal which has operated is received and none other.

This signal is operated from central energy. There are no local batteries along the line to depend upon. The lamps use oil or electric lights on the semaphores as desired. We use one bare galvanized iron line wire. There can be an unlimited number of signals on a circuit, 50 if desired. Such signals have been in use for quite a few months on the Indiana Union Traction Company's line, Anderson to Wabash, and that they have satisfactorily acquitted themselves I think can be vouched for by the president of your association, H. A. Nicholl.

A rolling mill engine of 25,000 horsepower capacity, said to be the largest in the world, has been built by the Allis-Chalmers Company for the Carnegie Steel Company plant at Sharon, Pa.

ELECTRIC RAILWAYS AND THE GENERAL PUBLIC.*

BY E. E. GRIMES, OHMER FARE REGISTER COMPANY.

The value of the electric railway to the general public is incalculable. It is the modern means to the rapid transaction of business in cities and in rural regions. In short, it carries the general public to the farmhouse gate and to the very doors of the humble cottage and of the stately mansion of the city, and is, therefore, nearer to the people in all respects than the steam lines.

The "General Public."

All sorts of passengers are included under the broad and familiar title of "General Public":

The man who wants the door ajar, and for "his rights" will fight;
The other man across the aisle, who wants the door kept tight;
The man who wants a window up, the man who wants it down;
The woman who can't find her fare until she's 'way up town.

The mother with her baby boy, close cuddled in her lap,
Who, when he tries to stretch himself receives a gentle slap,
Which is to show, to all aboard, that he's not nearly three,
And must behave himself—the dear—while he is riding free.

The man who plays the porker's part, and takes up all the space
That would accommodate, at least, two others of his race.
The women who cannot decide just which will pay their fare,
Until they almost tempt—but, no—conductors never swear.

The man who has imbibed too much, and swings his heavy load
Upon the people's knees and feet, and tries to run the road.
The "gent" who says, "You've got my fare," and when he's told, "Nay, nay,"
Declares that he'll be put off first before he's made to pay.

The "chappie" who ne'er makes a move to offer up his seat
Unless the female passenger is pretty, young and sweet.
The woman who will ne'er get off with face toward the fore,
But leaves the car in crawfish style—and picks herself up sore.

The fussy man with bundles, which he pokes into your eyes;
The market basket patron, who, for cheek, should take the prize.
The "lady" who insists that she should ride back in the place
Where rude and thoughtless men and boys blow smoke right in her face.

Indulgent mothers who permit their darlings' little feet
To wipe their muddy shoes upon the newest, softest seat.
And various other types there are, for you have seen them, too,
You'll find them everywhere you go—from Dayton to Peru.

There is a disposition on the part of certain representatives of the public to find fault with corporations in general, and with street and interurban railways in particular. Nothing pleases them. They are displeased with themselves. Cars are either too hot or too cold. The schedule of operation is unsatisfactory and the service is poor in all respects. If the car is only partly filled they remark about the road losing its business, and they wisely shake their heads, as much as to say "they know why"; if it is well filled they maintain that it is uncomfortably crowded and the road is doing too much business.

This is an unfortunate and regrettable condition. In these later years of exposure, condemnation and punishment of the big as well as of the petty grafters, much has been done to relieve corporations from paying tribute to municipal and county highwaymen, and much has been done, also, to improve the standard of official public service. The people are aroused at last and are taking a more active interest in all municipal, county and state affairs.

General Public is not a sordid, mean, retrogressive old grafter. He is hereabouts, and in the wide territory we have indicated, a notably intelligent, fair-minded and progressive exponent of American enterprise. In his dealings with the electric railway managements he is met by men of the highest character; men who are accustomed to do business on a large scale; men who know what they want and who are able to solve perplexing problems on the spur of the moment; men who, along with their own interests, are seeking to give the

*Abstract of address delivered at annual banquet Central Electric Railway Association, Dayton, O., January 23, 1908.

public the best possible service that can be evolved from the wonderful development of electrical transportation.

Old General Public, he must yield
A point or two to 'lectric roads,
If he expects that they will come
And haul his various kinds of loads.

And 'lectric lines must give and take—
The latter knockers say they do.
But who can know how much is spent
Before the roads can earn a sou?

When interests are so closely knit,
As public weal and railway line,
It's meet for each to form a trust
And merge them into one combine.

There is no class of men who work a greater number of hours, or who are called upon to render more prompt and decisive action, or to exercise brighter or keener faculties, than the active, operating railway officials. They are constantly on the alert. In the service and in the protection they give the general public, they sacrifice their rest, their comfort, their health and their lives.

PUBLIC TAXATION.*

BY JUDGE DENNIS DWYER, PRESIDENT DAYTON COVINGTON & PIQUA TRACTION COMPANY.

I may picture the bright and scientific side of your work and that of others, and the influence it is exerting along the lines of human progress, but there is another side to this subject, and that is, to make the properties you manage and control, if possible, make dividends for your stockholders. This feature of the work admonishes me to call your attention to the subject of public taxation.

In this state the most recent discussion of the question leads in the direction of relieving all real and personal property of individuals from all forms of state taxation, except inheritance taxes, and outside of the latter of raising sufficient revenue for state purposes from licenses, taxes on intoxicating beverages and on public utility and other corporations in the forms of franchise and excise taxes.

According to the scheme contemplated, each county and municipality would be free to levy and collect taxes for its needs without any partnership with the state, either in assessment or distribution. The plan suggested is more simple in its operation than the one at present in force; the only objection is the danger that such a method of raising the entire revenue for the state, in such a manner, will lead to reckless extravagance in legislative appropriations. For when the taxes to be raised do not directly affect the individual citizen, when he does not see the money come out of his pocket, and besides as it mostly affects public ntility and other corporations, he is liable to become indifferent as to the amount to be levied and collected, and this situation affords the best opportunity for vultures and schemers who are anxious to fatten on liberal legislative appropriation to put in their work.

We hear every day of new suggestions as to how more revenue can be raised from corporations. At the present time there is a bill before the legislature whose author boasts that if it passes $12,000,000 will be raised annually from excise, franchise and other taxes on public utility and other corporations.

I am not now, never have been, and never will be in favor of shielding corporations in the slightest particular from a full discharge of their public duties, neither am I in favor of holding up any man or corporation unjustly who puts money into a public enterprise. Corporations are composed of individual stockholders who invest their money, it may be true, in the expectation of profit, but in a great many cases they are unfortunately disappointed. This brings me in this connection to the interurban electric railways of Ohio as showing how disappointing they have been so far to their stockholders.

The report of the Ohio railroad commission just issued for the year 1907 gives the names of 58 interurban electric roads within the state with an aggregate capitalization of $114,326,903, with gross earnings of $12,256,659, and with operating expenses of $7,403,396, about $4,000,000 of which had been paid out for labor, leaving for interest on bonds, insurance, taxes, maintenance, betterments and dividends on stock, $3,984,558, and of this only $628,579 was available for dividends. Three of the roads reported show a deficit, making them practically insolvent, and only eight out of the 58 roads paid any dividend, and these only from 2 to 5 per cent. If the aggregate of dividends paid should be estimated on the capital stock of $114,326,903 it would amount to only three-fifths of 1 per cent. It may be said, however, that the capitalization of the electric railroads is too high, that there is too much water in the stock. That may be true as to some who were compelled to sell their bonds and stocks in advance of construction at considerable below par, but conceding for the sake of argument that the capitalization is too high and that we cut it down one-half, which is far below the actual cash cost of the roads, even then the dividends declared would not be over 1⅕ per cent on the dollar in the entire capital stock so reduced.

The foregoing facts should be brought home to all fair-minded people, for there is danger that the present tax rate of nearly 6 per cent, as the railroad report shows, on the gross earnings of the interurban street railroads, will be greatly increased if the new scheme of legislation becomes a law. It is to be regretted that the people who had the public spirit to invest their money in interurban street railroads, which have done so much for the prosperity of the towns and cities through which they run, and for the farmers along their lines in enhancing the value of their real estate, and in furnishing them such modern convenience for travel and traffic, should be the only sufferers. Yet such is the case, and from the statistics shown it is evident that any further increase of taxes will result in forcing many of the interurban street railroads into the hands of the receivers, thereby ruining their stockholders and lessening the efficiency of the roads to the public as carriers of passengers and freight.

Does the public want this condition of the interurban electric railroads to happen which means lowering of wages to employes, ruin to stockholders, no further building of new or extensions of present roads, for nobody under the circumstances will take their bonds or stock, and what is true of interurban electric roads is no doubt equally true of steam railroads, so that it is up to the public to determine whether such legislation shall be enacted as will practically wreck the entire railroad system of the state.

There is not today a trunk line of steam railroad but needs, in the interest of its stockholders and of the public welfare, that is, for the protection of life and limb against accidents and for the dispatch of business, to be double-tracked, and many of them were proceeding to do this when the present panic began, but all double-tracking, which would afford employment to many thousands of people, has stopped, because money could not be had to go on with the work, and it is certain that if the legislation sought to be passed of cutting down rates of transportation at one end and increasing the burdens of taxation at the other end should be enacted, that no bonds or stock can be sold, and therefore it will be a long day before the work of double-tracking or building new extensions will be again begun.

I am no idle dreamer, nor do I want to create any false alarm, I speak only of what I know and of what should be patent to every observing person when I admonish the public of the danger of following the advice of demagogues in hostile legislation against public utility corporations. Let them be punished, and severely, too, for discrimination in rates whenever they occur. Let them be compelled to obey the law as to equal and just treatment to all their patrons and to the public, but permit them to conduct their business so that their stockholders will have some chance and the era of railroad building which has been stopped will return when money matters are again adjusted.

If, therefore, a prudent conservative course of legislative action is adopted by the law-making power, in dealing not only with electric and steam railways, but with all other public service corporations and enterprises with a view to their regulations, not destruction, and the bright anticipations for the future pictured by me in the first part of this address will be more than realized, redounding to the prosperity, honor and glory of the American people. If the contrary action is taken at the behest of demagogues, I draw the veil.

*Abstract of address delivered at annual banquet Central Electric Railway Association, Dayton, O., January 23, 1908.

Ticket Selling on London Underground Railways.

A consular report states that the underground electric railway companies of London are about to try the experiment of employing women ticket sellers or "booking clerks" at stations. It is stated that the principal reason for doubt as to the success of the plan rests in the hours of duty, which range from 5 a. m. to 12:30 a. m. Moreover, the employment of women restricts the opportunity for training young men who may pass into other branches of the service. In addition to women ticket sellers the underground electric railway companies are about to enlarge on an experiment, which already promises success, in the use at station entrances of automatic ticket machines with slots for half pennies and multiples thereof.

ELECTRIC NOTES ON SMALL STEAM TURBINE PLANTS.*

BY C. W. PEN DELL.

We shall consider a small plant as being one that requires two 500-kilowatt generators to start with and the ultimate capacity of which will not exceed 3,000 kilowatts, the probable final layout being 500 kilowatts and two 1,000-kilowatt units.

On account of characteristic efficiency curve of the engine it has become common practice to connect to reciprocating engines electrical generators which will deliver their rated capacity, with maximum generator efficiency, at the time when the engine is operating most economically.

When turbines were first put on the market it was natural that experience gained with engine-driven units should be considered when determining the size of generator to attach to a turbine. What was supposed to be the maximum load the turbine would carry with satisfactory speed regulation and permissible steam consumption was taken as the overload capacity of the generator. Standard practice being to allow a 50 per cent overload capacity in generators, two-thirds of the capacity assumed as the maximum for the turbine was called the rated capacity and a generator of corresponding size attached. Subsequent tests have shown, however, that the point assumed as the full load rating of the turbine is not its point of highest efficiency and the question of whether the relative turbine and generator capacities should be connected together is one that is receiving attention at present.

Heating.

On account of their high speed the cubical contents and heat radiating surface of turbo-generators are small, which tends to give high operating temperatures. The fields, wherein most of the machine losses are converted into heat, are extremely compact and are not cooled except by the air they draw into their center by centrifugal fan action and discharge outward into the armature winding. The cooling of the armature must be effected by the air, whose temperature is already quite high. The excitation must be higher with inductive load than with non-inductive load, consequently the field losses and machine temperature will be higher with a certain kilo-volt-ampere load at 80 per cent power factor than a unity power factor. Tests have shown that the temperature of a turbo-generator will follow very closely the amount of load on the unit. When with an engine-driven unit it would take the generator a couple of hours to attain the maximum temperature on overload, the turbine-driven generator will reach its maximum temperature corresponding to a definite load in from 15 minutes to half an hour. This being the case, we must evidently take the 2-hour overload rating off such generator and connect to the turbine a machine which is capable of carrying indefinitely the maximum load we wish to put upon it. In other words, if a turbine will carry 750 kilowatts with satisfactory speed regulation and steam consumption connect to it a 750-kilowatt flat generator. Specifications covering the generator should guarantee a rise in temperature with 750-kilowatt load at 80 per cent or lower power factor and should also state excitation current at the power factor.

The maximum efficiency of a turbine occurs at about 25 per cent beyond the point originally assumed as the rated capacity. When operating below this point the efficiency falls off rapidly, but the drop on overload is very slow. This being the case, it is often more economical, when investment and fixed charges on a plant are taken into consideration, to operate the turbines at heavy overload, even with reduced economy in steam consumption, and get as great an output as possible from each unit. This is another argument in favor of putting larger generators on turbines than has been the practice.

Frequency.

Modern alternating-current practice dictates that a three-phase system is one to install for all except very special conditions.

At present there are only two frequencies that can be considered as standard in the United States, that is 25 cycles and 60 cycles. The speed of 60-cycle turbo-generators is higher than that of 25-cycle units, but this difference affects the electrical operation of the plant very little, except at times when generators are being synchronized; it being somewhat easier to synchronize 25-cycle generators than it is 60-cycle generators. Synchronizing turbo-generators is accomplished more readily than with engine-driven units on account of the uniformity of turbine speed and there being no periodic fluctuations of frequency due to unequal angular velocity at different parts of the revolution as with engine-driven units. Lamps should never be used, except in cases of emergency, in synchronizing turbo-generators. A synchronism indicator, with a dial of such size as to be easily seen by attendant from a position in front of generator switches, should be installed on switchboards in all cases. In synchronizing operators should be careful to bring speed of the incoming machine very closely to that of other machines already on the bus. It is preferable to bring incoming machine up to a speed slightly below that of other machines and then close generator switch with a slightly increasing speed on incoming machine. This method of synchronizing should be adopted to maintain the mechanical balance of turbine unit; it is somewhat difficult to maintain the mechanical balance of turbine units with the best of care and sudden jars due to careless synchronizing have been known to throw them out of balance. The jar is the least, of course, if switch is closed with incoming machine in exact speed and phase synchronism with the bus, but this condition is somewhat difficult to attain and there is less liability of trouble if generators are synchronized as given above.

In a 60-cycle plant there should be an automatic voltage regulator which could be made to maintain the bus voltage constant at all times or it could be compounded to raise the voltage as the load comes on. There would then be hand-operated induction regulators on the lighting feeders leaving the plant.

On account of the high voltage all switches about the plant must be of a type that have their make and break contacts immersed in oil and great care should be exercised in the selection of such switches. The voltage on which such switches are to be operated is not the only thing to be considered, the kilowatt capacity behind the switch when it is opening the circuit under short-circuit conditions being one of the main things to be taken into acount; that is, switches leading from the main station bus must be of such design that they will open connections to a short-circuited feeder when backed up by the full overload capacity of all generators that can be connected to the bus at one time. From the above we can see that the ultimate capacity of the station must be considered when selecting the oil switches to be used. On account of the high momentary overload capacities being specified on turbine units the switches, as well as other parts of the plant, must be designated to take care of these high overload capacities.

The matter of whether there shall be one or two buses in a station is one on which there is a great diversity of opinion. Some claim that the installation of two buses needlessly complicates the station layout and renders trouble and shutdowns more liable; others claim that, although two buses do complicate the station somewhat and render first cost higher, such duplication of buses gives them a greater flexibility of operation which more than offsets the added complication of the plant and extra first cost.

With the buses at top and back of switchboard the wire runs to switches will be short and simple. From the switches wires can be carried on porcelain insulators and iron pins supported on iron pipe work to a suitable point where they will go up through the floor to feeder regulators, lightning arresters and wire tower. The feeder regulators would be operated by means of chain and sprocket wheels from hand wheels on the switchboard. If there is room to do so the station buses should have sectionalizing switches somewhere near their middle points so that one half of the bus could be killed aud the other half kept alive; the use of sectionalizing switches at various points in the plant will facilitate greatly the work of any necessary repairs or changes.

On account of the voltage all switchboard instruments would be operated by means of current and potential transformers; the potential transformers stepping the voltage down to 110 volts for voltmeters and wattmeters and current transformers would all be of such ratio that full scale deflection would be obtained on ammeters with five amperes flowing in transformer secondaries. This protects the switchboard attendant from coming in contact with high voltage and renders the switchboard wiring very much more simple. The design of the station would include all the necessary instruments for getting the instantaneous load on generators and circuits and for recording the kilowatts generated and output to the various feeders.

There would be two exciters for the plant; one motor-driven for regular operation and a steam-driven unit for starting the plant and for use when the motor-driven unit is out of commission for any reason. These exciters should be designated to operate in multiple when being controlled by the bus voltage regulator.

*Abstract of paper presented before the Northwestern Electric Association, Milwaukee, Wis., January 16, 1907.

A COMPARISON OF SUBSTRUCTURES FOR TRACKS IN STREETS.

BY H. L. WEBER, CHIEF ENGINEER FT. WAYNE & WABASH VALLEY TRACTION COMPANY.

Until the last few years the low cost of wood ties made it possible to meet at a comparatively small expense the severe conditions imposed on the track substructure by the heavier types of rolling stock. With the steady increase in the cost, ties now costing about $1.00 each, f. o. b., it has become necessary to find a substitute which will have a longer life and cost less. That portion of the track, therefore, which performs the function of transmitting the load from the rails to the subgrade must, by reason of this consideration alone, receive the serious attention of those who have this department of a railway in charge.

Good Track.

Increasing the weight of the rail sections will help, but it will not fully meet the requirements. For all track foundations must be provided, and only a permanent way will meet the demands, provided, of course, that in the end a financial saving is effected. This saving in money may, perhaps, not be obtained in the track alone. There is still to be reckoned the comparative effect on the patrons' nerves. If a passenger can ride over the road without being jarred into a state of nervousness, then it is safe to assume that the roadbed has been well built. Nerves, therefore, as well as the obvious saving to rolling stock by attention to track conditions, are assets that all companies should rate liberally.

Convenient service, the maintaining of regular schedules, the proper handling of the car by the motorman around curves, over switches and special work—all help to increase the value of a road to its patrons and are dependent in great measure on a well-kept roadbed. This factor of the railroad problem thus warrants much study.

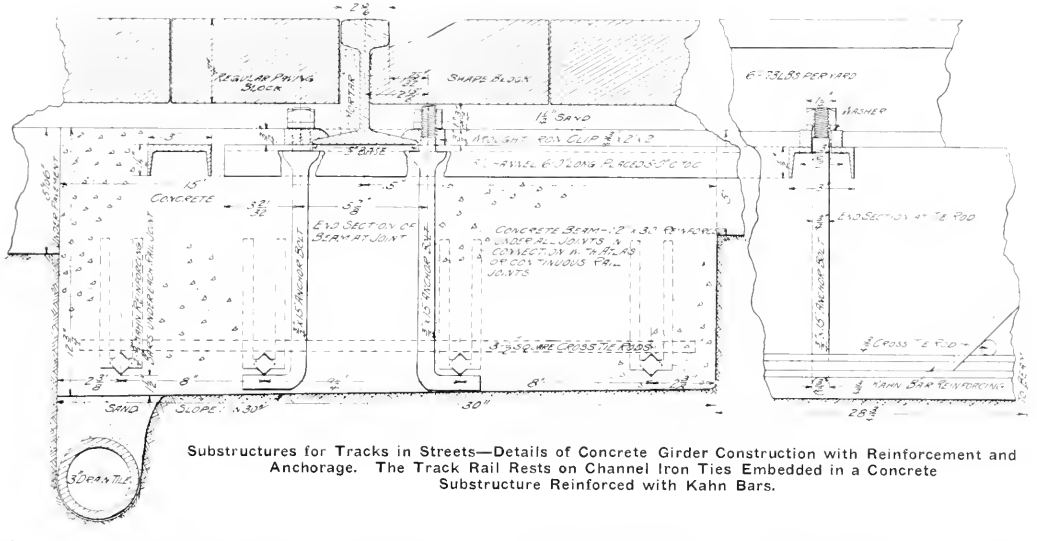
Foundation.

The selection of too heavy a rail section is poor economy when it brings about a reduction in the quality of the ties and the foundation. My experience has been that consideration should first be given to the tie, second to the foundation, and last of all to the rail. As a matter of fact, the load, rail, tie and foundation are to be considered in the order just mentioned when determining what duties the ties will have to perform. In a permanent way, where the tie and foundation are integral, they may be considered first.

In one locality a certain type of construction will afford a permanent foundation, and show a great saving in cost over any others, while in another locality, on account of various conditions, this same construction may be an absolute failure. Many failures of concrete girders for supporting track rails have been due to adverse subgrade conditions, such as a wet, poorly drained subgrade, the presence of quicksand, or of a soft, spongy soil. Wherever subgrades of this character are encountered a sheet foundation of concrete with ample drainage and plenty of bearing surface should be used to support the permanent way.

Using Old Boulder Paving.

In the early days of the horse car many tracks were paved with boulders. Today these stones are found to be as good as when they were first laid. They may not have been worth much when laid, and their value has not increased with age, but they were the best form of paving that could then be had.



Substructures for Tracks in Streets—Details of Concrete Girder Construction with Reinforcement and Anchorage. The Track Rail Rests on Channel Iron Ties Embedded in a Concrete Substructure Reinforced with Kahn Bars.

When heavy equipment makes it necessary to reconstruct these old tracks a very good rubble-concrete foundation may be made from these old boulders. In some instances this old material has amounted to 25 or 33 per cent of the aggregate. If it is used in the track foundation it need not be hauled away and it also saves hauling new material, thereby halving the cost of the concrete. If the work is properly done the results are very satisfactory. As an example, the East Washington street paving in Ft. Wayne, Ind., as illustrated herewith, which thus constructed cost but $3.07 per cubic yard, as against $5.50, which would have been the cost had the old material not been used.

Reliance on Concrete.

It generally lies with the engineer to determine how he can utilize what is furnished him. He is governed by conditions and cannot follow out a theory. Each job has its governing factors, which must receive due consideration.

In either the concrete beam or sheet concrete types of foundation reliance must be placed on the concrete to support the rails and their loads. In my opinion it is practicable to rely on the concrete also to hold the rails in position if

anchor bolts are used, as illustrated, and properly designed fittings, including joints such as the Atlas or Continuous, with or without reinforcement under the joints, as the conditions may demand. In one of the illustrations a method is shown for placing Kahn reinforcing bars in the concrete girder under each joint.

Cost of Construction.

With these ideas in mind I offer the accompanying track schemes as suggestions. Estimates of the cost are shown. In constructing a foundation according to either plan the subgrade is first prepared, the drainage arranged, the track assembled and placed to the proper grade and line before the concrete foundation is put in place. The costs shown are for a single track, exclusive of rails, rail joints, bolts and bonds.

Concrete Beam Construction.

In this concrete beam track there are required as fittings channel iron crossties weighing five pounds per foot, with anchor bolts and clips on 5-foot centers, and tieplates spaced midway between ties with anchor bolts and clips, thus spacing the anchorages on 2½-foot centers. The costs in detail are:

	Per lineal foot.
Ties, anchor bolts, clips and tieplates (as above)	$0.55
Excavation for track 18 inches deep	.17
Concrete	1.35
Brick paving	.88
Total cost	$2.95

Carnegie Steel Ties with Concrete Beams.

To lay the single track with Carnegie steel ties weighing 14.5 pounds per foot of tie, and spaced in concrete beams on 5-foot centers, the cost will be:

	Per lineal foot.
Ties, bolts, clips and joint reinforcement	$0.60
Excavation	.22
Concrete	1.35
Brick paving	.88
Total cost	$3.05

Rubble Sheet Concrete.

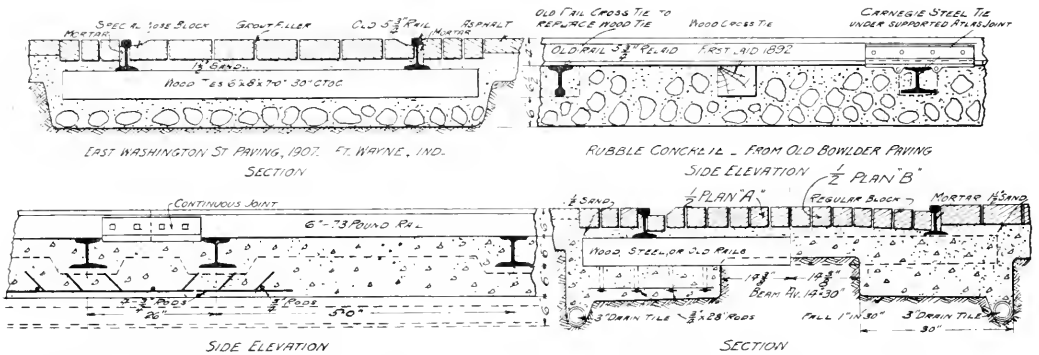
The actual cost of rubble sheet concrete on the East Washington street improvement in Ft. Wayne will next be given. This piece of track was relaid with the old 5¾-inch steel that had been in service on this street for 14 years. The rails were reversed, placing the outside of the rail heads to the gauge side. The base was so badly eaten away with rust that it was necessary to place the ties on 30-inch centers. The excavation was exceedingly deep, ranging from 18 inches to 48 inches. The following statement gives the cost for construction, exclusive of rail, joints, bolts and bonds:

	Per lineal foot.
Taking up and relaying track to line and grade, wood ties, 30-inch centers, and spikes	$0.42
Excavation	.72
Concrete foundation, $3.07 per cubic yard	.74
Brick paving	.88
Total cost	$2.76

Rubble Concrete and Carnegie Ties.

If Carnegie steel ties or old steel rails for ties had been used in place of wood, and the other details not been changed, the cost would have been as follows:

	Per lineal foot.
Tracklaying, including ties, necessary fastenings and labor	$0.60
Excavation, 18 inches deep	.19
Concrete, $3.07 per cubic yard	.74
Brick paving	.88
Total cost	$2.31



Substructures for Tracks in Streets—Sections Above Showing Track on East Washington Street, Ft. Wayne, with Ties of Old Rails, Wood and Carnegie Steel; Sections Below Showing Beam Construction with Kahn Reinforcement Under Joint and Drainage.

Reference to the accompanying track sections will show three plans for laying bricks between the rails:

Plan A, of which a half section is shown, requires a special block with the corner clipped off. The brick next the rails is laid on its side under the ball. Against it is the special block, and this in turn is followed by the regular blocks in their order.

Plan B requires none but the regular blocks. Both plans contemplate laying the blocks parallel with the rails.

The East Washington street track earlier referred to was laid, as shown in the illustration, with the Weber nose block manufactured by the Metropolitan Paving Brick Company of Canton, O. This style of paving has proved to be popular with the city engineers and very satisfactory to the traveling public. By its use street railroad companies can make and maintain a very neat appearing street and one which will meet with the general approval of city authorities in connection with the T-rail.

The improvements completed by the Northern Texas Traction Company of Ft. Worth, Tex., during the year 1907, according to a statement given out by the company, include the enlargement of the substation located near the city limits, the erection of a portable substation for the Ft. Worth-Dallas interurban line and an additional exciter in the power station. Contracts were let for a new engine and generator and a new system of coal handling apparatus was installed. A large amount of city track extensions was completed and several lines were relaid with heavier rails.

INDIANA ENGINEERING SOCIETY ANNUAL CONVENTION.

The Indiana Engineering Society held its twenty-eighth annual convention at Indianapolis on January 16, 17 and 18. This society is composed of engineers of the various classes and heads of engineering departments in Purdue University and other colleges of the state. There are now about 75 members, 9 new members being admitted during the year.

A report of the committee on electric railways was read by Robert P. Woods, chairman, Indianapolis. An abstract of this report follows:

Report of the Committee on Electric Railways.

The state of Indiana may take just pride in her interurban railways. The substantial character of the construction, the excellent operating service given and the large increase warrant it. The greater the mileage the more people benefited. On January 1, 1908, there were in Indiana 30 separate systems in operation, with a total mileage, exclusive of city street car lines, of 1,539. The smallest, the French Lick & West Baden Railway, is but 1.09 miles long, while the largest, the Terre Haute Indianapolis & Eastern Traction Company, has 351.40 miles of road. During the last four years 835 miles of lines have been built. The following new mileage, classified as to method of power distribution, was constructed during the last year:

Three-Phase Alternating-Current-Direct-Current Systems.

	Miles.
Evansville & Eastern Electric Company—Newburg to Rockport	21.00
Ft. Wayne & Wabash Valley Traction Company—Logansport to Lafayette	38.10
Indianapolis Columbus & Southern—Columbus to Seymour	23.35
Indianapolis Crawfordsville & Western Traction Company—Indianapolis to Crawfordsville	45.00
Terre Haute Indianapolis & Eastern Traction Company—Plainfield to Harmony	39.31
St. Marys to Illinois state line	6.00
Winona Interurban Railway Company—Peru to Chili	9.24

Single-Phase Alternating-Current System.

	Miles.
Ft. Wayne & Springfield Railroad—Ft. Wayne to Decatur	21.50
Indianapolis & Cincinnati Traction Company—Shelbyville to Greensburg	21.07
Toledo & Chicago Interurban Railway Company—Garrett to Kendallville	12.00
Auburn to Waterloo	6.00

Direct-Current System (600-Volt).

	Miles.
Lonisville & Northern Railway & Light Company—Watson to Sellersburg	4.15

Direct-Current System (1,200-Volt).

	Miles.
Indianapolis & Louisville Traction Company—Seymour to Sellersburg	40.92
Total	286.71

It is safe to state that the record for 1907 will not be beaten for some time to come. Should the 41 miles between Crawfordsville and Danville, Ill., be constructed, Indianapolis will then be connected by interurban lines with St. Louis, Mo., a distance of 300 miles, via Danville, Champaign, Decatur and Springfield. It seems likely that the short gaps connecting Indianapolis with Buffalo, N. Y., via Cleveland, will be closed before another year. Through service between Indianapolis and Louisville was inaugurated November 6, 1907.

Mention should be made of the new electrical equipment of the Ft. Wayne & Wabash Valley Traction Company at the Spy Run power station, which was put in operation in March, 1907. This consisted of five 1,500-kilowatt, one 500-kilowatt and one 400-kilowatt Westinghouse turbines. From this station power for electric car service is transmitted to Lafayette, 114.10 miles distant.

Mergers.

In March, 1907, the Terre Haute Indianapolis & Eastern Traction Company was incorporated. It absorbed the Terre Haute and Brazil city lines and light properties and 10 interurban lines, to wit: The Indianapolis & Northwestern Traction Company, Indianapolis & Western Traction Company, Indianapolis Coal Traction Company, Indianapolis & Martinsville Traction Company, Indianapolis & Eastern Traction Company, Richmond Street & Interurban Company, Terre Haute & Clinton Traction Company, Terre Haute & Harmony Traction line, Terre Haute & Paris line and Terre Haute & Sullivan line, an aggregate of 351.40 miles of interurban railways.

Traffic.

There are now 11 interurban lines entering Indianapolis. During the year a total of 99,242 passenger car round trips were made by these roads. Probably upward of 5,500,000 people were carried.

The express and freight business is showing a marked increase. Probably 12 to 15 per cent of the general gross earnings of interurbans are from this class of service. The express branch is attracting the attention of the steam road express companies. On September 17, 1907, the United States Express Company began a regular express car run out of Indianapolis to Lafayette, via Lebanon, and from Lafayette east to Ft. Wayne.

Legislation.

The last Indiana legislature gave the state railroad commissioners broad jurisdiction over the interurban railways and their activity in this direction, as shown in 1907, will be beneficial to the traveling public. They have ordered the attorney-general to file suit against an interurban company for the alleged violation of the new safety appliance law, and have sent warning notices of the penalty attached for failure on part of motormen to signal at grade crossings and failure on part of traction companies to keep crossings in proper repair.

Outside of Indiana the general character of interurban development has been along lines similar to our own.

The increasing demand for reliable scientific data on matters pertaining to the technical side of electrical railway operation prompts a leading technical journal to suggest that investigations and tests ought to be made covering such subjects as train movements, studies of trucks, brakes, energy consumption of cars, electrical characteristics of rails, bending moments of poles, transmission losses, energy values of fuel, ways of improving operating features, protective devices, electrolytic corrosion, and like subjects. The theme is a worthy one, but who will pay the expenses? The answer probably is, joint work by federal and state governments, technical universities, traction companies and electric railway and engineering associations. The idea is a worthy one.

Papers Presented.

An excellent paper on 1,200-volt direct-current power for electric railways was presented by J. P. Moore, Indianapolis.

Charles H. Heron, assistant engineer Indianapolis Traction Terminal Company, Indianapolis, presented a paper on "Types of Traction Cars." Mr. Heron described the many types of traction cars now in use and pointed out necessary improvements and changes, which in his opinion could be satisfactorily made. He recited the many difficulties that the manufacturers of interurban cars had to encounter, and also the provisions of the Indiana law regarding the operation of cars relative to over and under crossings. Mr. Heron exhibited a number of blue prints showing the dimensions of various types of cars and criticized the various types.

Mr. Heron's paper was followed by the reading of a paper on "Track Construction in Streets for Interurban Service," by Thomas B. McMath, engineer and track superintendent Indianapolis Traction & Terminal Company. The author described the method of construction of the city lines of Indianapolis, which he stated were carrying more interurban cars than any other system in the country.

An interesting report was made by the committee on "Materials of Construction." This report called attention to the fact that electric railway companies are using vast amounts of cement and concrete in the construction of tracks, bridges, viaducts, etc. Several interesting lectures were illustrated by lantern slides, showing the tests of reinforced concrete in the multiplying positions in which it is now being used.

Prof. G. A. Young, Purdue University, gave an interesting illustrated lecture on gas engines and gas producers.

"Smoke Abatement" was a subject that was given considerable attention and the methods of employing mechanical stokers were described. This question is of interest to the

managers of the various electric railway power houses, because of city ordinances with a view to smoke abatement.

At the closing session Prof. W. K. Hatt, professor civil engineering Purdue University, was re-elected president; Charles C. Brown, editor Municipal Engineering, vice-president; and J. S. Brossman, mechanical engineer, Indianapolis, secretary.

TWO-CENT STEAM RAILWAY FARES AND INTERURBAN ELECTRIC RAILWAY TRAFFIC.

Since the publication in the Electric Railway Review of last week of a number of interesting letters concerning the effect of 2-cent steam railway fares on interurban electric railway traffic the following additional communications have been received:

Eastern Wisconsin Railway & Light Company.

N. C. Draper, vice-president and general manager Eastern Wisconsin Railway & Light Company, Fond du Lac, Wis.: "A strictly modern electric railway, with a run of not exceeding four hours, need not fear competition with any steam railway, even should the rates of fare be the same on both lines."

Benton Harbor-St. Joe Railway & Light Company.

H. C. Mason, general manager Benton Harbor-St. Joe Railway & Light Company, Benton Harbor, Mich.: "Changes in steam railway fares have not affected our traffic or our rates of fare."

Columbus Magnetic Springs & Northern Railway.

H. E. Buck, general manager Columbus Magnetic Springs & Northern Railway, Delaware, O.: "The adoption of 2-cents-per-mile fares by steam railways has affected the traffic of electric railways; but I believe that such fares have not caused changes in interurban electric railway fares. We receive 2-cents-per-mile fares on our 19-mile road."

West Penn Railways Company.

G. R. Folds, general manager West Penn Railways Company, Connellsville, Pa.: "Our lines operate in many instances in direct competition with steam roads which charge only 2 cents per mile and our business on all lines has ever been steadily increasing. How much greater this increase would have been had the steam road fares remained on the 3-cent basis it is difficult to estimate. Questions of speed, comfort and frequency of schedule, besides convenience of points of boarding and alighting, are very important factors in the transportation problem. Aside from this, local conditions often greatly affect a situation."

Northampton Traction Company, Easton, Pa.

Thomas A. H. Hay, president Northampton Traction Company, Easton, Pa.: "My opinion is that the reductions to 2 cents per mile will increase the earnings of both steam and electric railways. The people will travel on the steam road for 2 cents where they would not have gone if they had had to pay 3 or $3\frac{1}{2}$ cents per mile, and, having gone from larger points to larger points, they will utilize the interurban roads to go to the smaller ones. I am speaking now of our own section, where we have hilly roads, and where our street railways and interurban roads penetrate by direct routes into the towns that the steam roads can only reach by the most circuitous routes. Steam railways cannot hope to 'compete,' as you have put it, with the electric roads, and the narrowing of the margin between steam and electric railroad fares, in the middle west, may be a matter of moment to roads there; here it is not. Besides, the one particular fundamental principle seems to be overlooked by so many, and that is, that steam roads run at infrequent and irregular intervals between towns and cities. Trolley roads run at intervals of from 10 minutes to 1 hour from 5 o'clock in the morning until after midnight, and the people learn to rely upon them. Most of the interurban roads run directly into the heart of the cities, and save either a long walk at the termini or the necessity of hiring a cab or bus to take passengers home. This last point is a matter of great moment to most people. In our own territory we can successfully compete with the steam roads, for these last two reasons. Personally, the writer is clearly of the opinion that the reduction of railroad fares will result in increased travel, both for the electric roads and the steam roads. There is only one thing that the writer fears more than anything else, and that is that ultimately the railroads themselves will electrify one or two tracks, and avoid the dust, and smoke, and cinder nuisance, which deter many passengers from going on the steam roads, regardless of fare or time. I have been actively engaged in the business of our community for 10 years and in close personal contact with many people, and the managers of the great roads would be surprised to know how many passengers prefer the trolley, with its slow progress and small cars, to the handsome cars and fast travel of the steam road, accompanied as they are by soot, dust and sulphurous fumes, which are generally connected with the burning of coal. The electrification of the steam roads is the only thing that trolley roads need ever fear."

Grand Rapids Holland & Chicago Railway.

Charles A. Floyd, general passenger and freight agent Grand Rapids Holland & Chicago Railway, Grand Rapids, Mich.: "Judging from the experiences of several Michigan roads the 2-cent fare law has caused the steam railroads to raise their low competing rates to a straight 2-cent fare basis. The competing rate of fare on the steam railroad between the two principal points of this line was 35 cents, as against our 50 cents. On September 28 last the steam railroad rate was raised to 50 cents. However, in cases where the steam railroads have reduced their rates to comply with 2-cent laws, it cannot help but affect the electric railway business. Still, this will not be serious, as the frequent service offered by the electric lines and the fact that interurban cars take the passengers from their homes directly to the very doors they wish to reach, are features most attractive and popular."

Michigan United Railways Company.

J. M. Bramlette, general manager Michigan United Railways, Jackson, Mich.: "I cannot see, to the present time, that the recent reduction of steam railroad fares to two cents per mile has affected us in the least."

York Railways Company.

David Young, Jr., general manager York (Pa.) Railways Company: "In my opinion the 2-cents-per-mile fare law does not affect in any way the receipts of competing trolley lines. The only advantage that steam railroads have over electric lines is in the use of commutation tickets, which in many cases cost an average of only a little over one-half of 1 cent per mile. The railroad companies are able to make this low rate by merely adding cars for certain stops which would have to be made anyway, while the electric lines, unless multiple control is used, have to send out a crew with each car."

Scioto Valley Traction Company.

Frank A. Davis, president and general manager Scioto Valley Traction Company, Columbus, O.: "I do not think the adoption of the 2-cents-per-mile fare by steam railroads has affected the traffic of this company to any appreciable extent, and the passage of the 2-cent fare bill has not caused us, in any way, to change our passenger tariff. This road, however, is possibly situated differently from most electric railroads, in that we operate with a third rail, and plenty of power, and maintain pretty fair schedules, our time between terminals on both divisions being substantially the same as is made by the competing steam roads. On one division we have as a competitor the Hocking Valley Railroad Company. Shortly after we went into operation this company reduced its fares between competitive points to substantially one and one-fifth cents per mile, and has been operating on that basis for something over two years. We seem, however, to be able to hold the business, even against this extremely low rate, and are carrying not less than 75 per cent of the local business on this line, on a tariff of 2 cents per mile one way, with a reduction of 10 per cent on round-trip tickets. I have no positive knowledge, but I have been informed that the 2-cent law did seriously affect the earnings of some of the electric railroads which are operating on slower schedules, and I believe some of the roads in this locality did reduce their fares to some extent after the passage of the 2-cent bill, although I do not think there was any material or general reduction of fares."

Iowa & Illinois Railway.

P. P. Crafts, general manager Iowa & Illinois Railway, Clinton, Ia.: "Regarding the effect which reduction in steam railroad fares may have on electric lines, I believe that this is a matter governed considerably by local conditions. Speaking from my personal experience, the reduction in fares has not affected either of the roads of which I am manager, and we have steam railroad competition. Generally speaking, the frequent headway and good service given by interurban roads prevent steam railroad competition, even at the same rate of fare, from having any great effect upon the business, admitting, of course, good service on the part of the interurban road."

STEAM NOTES ON A TURBINE PLANT.*

BY J. L. HECHT.

In order to confine ourselves to certain definite limits we shall assume that the steam turbine plant in question shall contain 500-kilowatt and 1,000-kilowatt turbo-alternators of the vertical shaft Curtis type. We shall not confine ourselves to either the design or to the operation of this plant but shall try to point out the effect of a few details of design on the operation of such a plant.

Superheating.

The type of turbine engines being assumed, let us direct our attention, for the time being, to the boilers. Of course we want superheaters in connection with the boilers. Some may ask, Why superheat the steam? For several reasons, the principal and most easily explained one of which is that the internal friction of the steam traveling at high velocities through the turbine has a very important effect on the efficiency of the turbine and it is more or less definitely known that the internal friction in the steam varies with the per cent of moisture carried in suspension in the steam. Now, we know that ordinary dry saturated steam in expanding and doing work, as it would in expanding through a turbine, would tend to become very moist before leaving the turbine, therefore it becomes evident that the proper degree of superheat is such that the steam will be at the point of priming as it leaves the turbine. Unfortunately, however, we reach the practical limits of superheat, to wit, from 100 to 200 degrees F., long before we reach the desired degree of superheat.

In some of the earlier superheated steam installations, the usual specifications for high pressure steam piping, valves and fittings were followed, but soon trouble developed. It was found that the usual bronze valve stems, discs and seats would not stand the superheat and after some experimenting nickel steel was adopted for this work. It was observed that in a short time cast-iron fittings and even ferro-steel fittings when exposed to a temperature of more than 500 degrees F. would change in form as well as in length and the more webs and lugs there are on the fitting the greater the distortion will be. The webs instead of giving strength tend to set up unequal strains in the fittings which under the high temperature take on a permanent set, probably because of molecular action taking place in the iron. This trouble has been overcome by use of cast-steel fittings. It has frequently been stated that the objection to using superheated steam is that the superheater tubes burn out. This has not been our experience. We know of superheaters which have been in service continuously for seven years, without loosening a tube, and, in fact, in our experience we have never lost a superheater tube.

Condensers.

The question is very frequently asked, Why is it of advantage to use high vacuums with steam turbines when there is no advantage in having more than 27 inches of vacuum for a reciprocating engine? The reason is, that the steam does its work, in a turbine, in an entirely different manner from the way in which it does its work in a reciprocating engine. In an engine the potential or pressure energy in the steam does the work by exerting a direct pressure on the piston. In a turbine the work is done by the kinetic or velocity energy in the steam.

The kinetic energy varies directly with the mass or weight of steam, also with the square of the velocity. Now considering that the turbine nozzles or buckets, at any particular section, have a certain definite area, it is evident that the velocity will increase directly with the increase in volume of steam. Now, if we will refer to the steam tables we will find that at a vacuum of 26 inches, referred to a 30-inch barometer, one pound of steam occupies 175 cubic feet. If that vacuum is increased to 28 inches, referred to a 30-inch barometer, a pound of steam occupies 350 cubic feet, or exactly double the volume that it had at 2 inches less vacuum.

Now, since this steam must flow through a certain definite area of opening it is evident that the velocity of any certain weight of steam at 28 inches of vacuum will be double the velocity of a like weight of steam at 26 inches of vacuum. The kinetic energy is quadrupled, and after passing the 28-inch vacuum point, this increase becomes even more marked. If we increase the vacuum to 29 inches, only one inch increase in vacuum, we again nearly double the volume of the steam and again quadruple the kinetic energy. Furthermore, in a turbine high vacuums do not produce the bad effects which they produce in reciprocating engines. In a turbine, for instance, there is not the alternate heating and cooling of the cylinder walls, since a turbine has a continuous flow. Also as the vacuum is increased we do not with turbines arrive at the question of making large cumbersome cylinders and pistons to take care of the excessive volumes which are encountered with high vacuums. Looking at the above it is also apparent that the exhaust connection from a turbine to its condenser must be very large, since with the high vacuums used in the operation of turbines, the exhaust steam has five or six times the volume that the exhaust steam from a reciprocating engine has, and this is a reason for placing condensers on steam turbines as close as possible to the exhaust chamber of the turbine.

As between the jet and the surface condenser, the choice must, to a large extent, be the same as it would be in the case of a reciprocating engine plant. If there is plenty of good fresh condensing water, we would, of course, ordinarily install a jet condenser, because of its simplicity and cheapness. On the other hand, if the condensing water available is such that it would be injurious to the boilers, we would of course install a surface condenser, so that the exhaust steam could be saved and returned to the boilers, there being only a small percentage of loss. The difficulty encountered in a reciprocating engine plant when operated with surface condensers is that the boiler feedwater finally becomes very much charged with cylinder oil, and in spite of any filters or separators in existence, must be occasionally renewed. In a steam turbine plant this difficulty is not encountered, as no cylinder oil is used in these turbines, and the exhaust steam after being condensed is practically pure water. In fact, if it were not necessary to make up a certain amount of boiler feed with impure water, the feedwater in a turbine plant operated with surface condensers would become so pure that it would probably be injurious to the boilers.

In operating a plant of this kind the internal arrangement of the condenser makes a large difference. It is easily possible to build a surface condenser so that the condensation when leaving the condenser to go to the feedwater heater will have the temperature of either the exhaust steam from the turbine or the temperature of the circulating water as it leaves the condenser. In the latter case the condensation would go to the heater at a temperature as low as 45 degrees F. in winter, while in the former case the condensation will usually have a temperature of about 90 degrees F. This is an important detail and we believe that most of the condenser manufacturers now build condensers to operate with either of the above results. Where it is possible to make the expenditure for a surface condenser, instead of a jet condenser, it is advisable to do so with this type of plant.

Auxiliaries.

The question very often arises as to whether the auxiliary machinery in this type of plant should be motor driven or engine driven. After going into detail, it is evident that in nearly every instance there is not only no advantage in using motor-driven auxiliaries, but in most cases a decided disadvantage. Placing motors on all the auxiliaries necessarily limits the salable output from the generator. In case of an electrical shut-down in a plant, all the auxiliaries immediately shut down, making it not only more difficult to bring the plant back into operation, but this at times might prove disastrous to the equipment. It might be interesting to state that we recently made some calculations on the comparative cost of operating a steam-driven and a motor-driven generator for furnishing field excitation to a 3,000-kilowatt plant. The figures show that with coal at $2.00 a ton, there would be a saving of $200 per month in operating a steam-driven generator. The reason for this was that every pound of exhaust steam from the steam-driven generators could be used to good advantage in heating the boiler feedwater.

Step Bearings.

Two features of a turbine plant of this kind which are novel and have not been mentioned are the step bearing pumps and the accumulator. The vertical shaft Curtis turbine runs on a film of oil, the oil being pumped into the step bearing under a pressure varying in different sized units. It would be about 300 pounds in the sizes mentioned. The usual arrangement is to have at least two step bearing pumps, one of which would be running at all times when a turbine is in operation. The other one would have in its steam line a throttle valve controlled by the oil accumulator, the accumulator being nothing more than a vertical cylinder loaded with iron weights; this cylinder floats on a plunger which is anchored to a foundation. The plunger is cored to the bottom, where a pipe connects it to the oil pressure line. In case of any fluctuation in the steam pressure or other cause for

*Abstract of paper read before the Northwestern Electrical Association, Milwaukee, Wis., January 16, 1908.

drop in the oil pressure, the accumulator maintains a constant pressure on the oil system for a few minutes. At the same time, if the pressure in the oil system were steadily falling, the accumulator, because of the dropping of the floating cylinder, would automatically start up the second step bearing pump through the throttle valve on the second step bearing pump controlled by the accumulator as mentioned above.

Aside from the step bearing there are three guide bearings which are also supplied with oil from the step bearing pump. All of the oil after passing through these various bearings is returned to a filter, where it is filtered, cooled and again passes to the step bearing pumps, and is thus kept circulating in a closed circuit, so that it will be seen that very little oil is lost. In the operation of a system of this kind the quality of the oil used makes a considerable difference. We have found that certain oils due to the high velocity of the turbine will emulsify. Other oils which do not emulsify may not have body enough to lubricate properly. It is not difficult to find an oil of the proper kind after it is known what the necessary viscosity, gravity, volatility, etc., of the oil are.

TICKET FRAUD DISCOVERED.

The arrest on Saturday, January 18, 1908, of Charles F. Tabler, H. R. Wimsatt and Andrew Leo Lucas made public a very clever scheme to defraud the Washington Railway & Electric Company of Washington, D. C. The railway companies in the District of Columbia sell six tickets for a quarter. The tickets for the Washington Railway & Electric Company are made by the Hamilton Bank Note Company of New York, of which Charles F. Tabler was superintendent of the engraving department. Wimsatt is supposed to be a stock broker and Lucas is a former conductor of the railway company. Tabler, through his position with the Bank Note company, was able to admit Wimsatt at night to the Bank Note company's plant, where they abstracted tickets to the value of several thousand of dollars. These tickets were shipped to Washington to Lucas, whose business it was to dispose of them, the proceeds of the conspiracy being divided among the three men.

Information came to the office of the railway company toward the end of November that counterfeit or stolen tickets were being dealt in, and the matter was placed in the hands of Drummond's Detective Agency of New York City, of which A. L. Drummond, formerly chief of the United States secret service, is general manager. Mr. Drummond is probably one of the best qualified detectives to handle the matter of counterfeit tickets. His personal investigation speedily convinced him that the tickets were not counterfeit but were genuine and that the source of supply must have been someone in the Hamilton Bank Note Company. Further work on the case discovered Charles F. Tabler as the connecting link between the Bank Note company and the outsiders. After that the matter was very plain sailing. Tabler, who is a resident of New York City, was arrested in Washington, where he had gone. Lucas, a resident of Washington, was also arrested there, and Wimsatt, who is a resident of Washington and New York City, was arrested in New York City.

The arrest of these men nipped in the bud a big scheme for counterfeiting the bonds of a well-known railway company. When Tabler was arrested and his house and effects searched, there were found thousands of the tickets as well as finely engraved plates and dies. During the investigation of the case the associates of Tabler and Wimsatt were found to be a complete force for the turning out of an engraved bond. These included a script engraver, a title engraver, a transfer man, a geometrical lathe man, a plate cleaner and such other men as are necessary for this class of work.

Independent of the information which the railway company had, the Hamilton Bank Note Company, through its effective system of checking its work, discovered that something was wrong with these railway tickets and at once notified the Washington Railway & Electric Company and thereafter co-operated in every way that lay in its power. Both the railway company and the Bank Note company are determined that these men shall be punished to the full extent of the law.

REPORT OF THE NEW YORK PUBLIC SERVICE COMMISSION, SECOND DISTRICT.

The first annual report of the New York public service commission for the second district has been submitted to the legislature. With regard to the inspection of electric roads the report says that the commission intends to cause annual inspection of each electric railroad within its jurisdiction. A summary of the inspections made during the past six months is published with the report. The inspections made include examination of track, roadbed, bridges and other permanent structures, power houses, car barns and repair shops, methods of operation, protection of grade crossings by steam roads, train dispatching, block signals, train rules, running schedules, discipline, sufficiency of service and maintenance of equipment. The inspections show general improvement in track, roadbed and equipment of the electric roads in this district. Where practicable derailing devices have been required to be installed at grade crossings of electric and steam lines. The speed of suburban and interurban roads has in recent years added greatly to the danger at highway crossings and accidents at such crossings have materially increased. Greater consideration must be given in the future to protection of the public at crossings of this character.

The part of the report devoted to electric lines also includes consideration in detail of bridges, trestles, structures, guard rails and braces, power brakes, operation of trailer cars, single-truck cars, height of car step, vestibules, the overhead trolley and third-rail systems and high-potential or alternating-current systems. The commission is giving attention to the advisability of ordering an increase in the equipment of electric cars, especially those in high-speed service, with some form of power brakes. The subject of vestibules is also receiving attention. Some special statistics of electric roads are set forth in the report.

During the year ended June 30, 1907, the report states that the electric roads expended over $4,982,000 for permanent additions and betterments. The cost of work completed since June 30, 1907, or now in progress, amounts to $7,279,000. For additions to rolling stock and equipment during the year ended June 30, 1907, over $61,224,000 was expended. Additions made since June 30, 1907, or for which contracts have been placed, amount to $1,215,000.

Since the advent of the Grand Rapids-Muskegon Power Company into the field the Grand Rapids Grand Haven & Muskegon Railway and the Grand Rapids Holland & Chicago Railway have ceased generating their own power and have purchased it from the power company's hydroelectric plant on the Muskegon river. In regard to the new arrangement W. K. Morley, president and general manager of the Grand Rapids Grand Haven & Muskegon Railway, which has been purchasing its power since April 1, 1907, says: "Aside from the saving in cost, the experiment has proven a success. We began to purchase our current from the power company on April 1 under a purely experimental contract. We find that the uncertainties of securing coal supply, especially in the winter season, the delays occasioned by tieups on railroads, other accidents which cause delays, and last, but not least, the uncertain price of coal, have all been overcome by the new arrangement. Then there is the liability of disablement of the generating plant, and other accidents which cause delay in service are overcome. Our power house and generating plant have been leased to the power company, the machinery is kept in readiness to start to forestall any possible delay and they have matters arranged so that a tieup from any reason is almost an impossibility."

News of the Week

The Cleveland Situation.

The Ohio supreme court, in a suit brought by a taxpayer of Cleveland against the Forest City Railway Company, upheld the validity of the 3-cent fare franchise in Dennison avenue from Twenty-fifth street to Lorain avenue. As this is the basic franchise of the low-fare line, the succeeding franchises being regarded as extensions of the original grant, this decision is regarded as a great victory for the low-fare interests and Mayor Johnson. The mayor and F. H. Goff have continued throughout the past week their negotiations in the effort to determine a valuation of the Cleveland Electric property. The principal questions discussed have been the value of paving and the amount of overhead charges to be included. The two men differ widely, not only in their total estimates, but also in their methods of attaining the final estimates. Meetings have been held twice a day, but no important developments have been reported.

Association Meetings in New York.

F. W. Simmons, president of the American Street and Interurban Railway Engineering Association, has called a meeting of the executive committee of that association, to be held at the Engineering Societies building, New York City, on Wednesday, January 29.

A meeting of representatives of the member companies of the American Street and Interurban Railway Association will be held at the Engineering Societies building on Thursday, January 30, as previously announced, for the purpose of organizing a fourth affiliated association, to which is to be committed lines of work pertaining to transportation, traffic and general operation.

The annual meeting of the executive committee of the American association will be held on the following day, January 31, and it is desired to have the organization of the transportation association completed so that it may be ratified by the executive committee.

A meeting of the executive committee of the Accountants' association has also been announced to be held on February 1.

Legislation Affecting Electric Railways.

Virginia.—A bill has been introduced into the state senate to repeal the law which prohibits the building of any railroad parallel to the line of the Richmond Fredericksburg & Potomac Railroad. The bill is introduced in the interests of the Fredericksburg & Southern Railway, which has applied for a charter to build an electric line which would parallel the steam road. The latter is owned partly by the state.

New York.—Senator McManus has introduced a bill into the legislature providing for a 5-cent fare from New York City to Coney Island. He has also introduced a bill to secure reduced fares for workingmen going to or coming from their places of employment, by providing that a person boarding subway, elevated or surface cars between 5 and 9 a. m. and between 5 and 9 p. m. shall, upon payment of a 5-cent fare, receive a return trip ticket.

Massachusetts.—Two bills introduced into the legislature aim to place the regulation of heating and ventilation of street cars in the hands of the state railroad commission instead of the police. One of the bills imposes a fine of $25 per car for each trip while the car is not properly heated.—House bill No. 224 extends employes' rights to compensation or action against the employer for injuries received through the negligence of a person in the service of the employer to cases involving street railway cars and elevated railway cars and trains, instead of being restricted as heretofore to steam railroads.—Senate bill No. 53 gives persons whose property abuts on an electric railroad location in a private way or across private land, or on premises purchased for the purposes of such location, the same right to collect damages as persons now have where their property abuts on a public way taken for an elevated railroad location. It also makes the same provisions apply to an embankment as well as to an elevated structure.—A bill to allow street railways to charge admission fees to parks and recreation grounds owned by them is offered on petition of Bentley W. Warren, attorney for the Boston & Northern, Old Colony and several other street railways.—House bill No. 75 authorizes the state highway commission to require overhead electric wires and conductors to be placed underground in conduits, the work to be done in all Massachusetts cities and towns of 25,000 inhabitants or more by January 1, 1912, and in all other cities and towns of the state by January 1, 1914.—Of several bills changing the organization of procedure of the Massachusetts railroad commission, one offered by E. Moody Boynton would abolish the commission and establish a railroad court, with chief justice at $7,500, two assistant justices at $5,000 each, and two inspectors at $2,500 each. Another bill makes it the duty of the board to give hearings in the cities or towns where cases arise, instead of only at their offices; but allows such hearings to be given by one member. A third bill provides for the election of the members of the board by the general court, for terms of three years, and the expenses to be paid from the state treasury instead of by assessment on the railroad and railway companies. Another bill gives the supreme or superior court jurisdiction in equity to review, annul, modify or amend orders, rules and regulations or the rulings of any state board or commission relative to street railway companies, both as to law and facts. Still another gives the railroad commissioners authority to revise, annul, modify or amend in accord with public interests all orders, rules and regulations relating to street railway companies made by local boards of aldermen or selectmen.—A bill to compel street railway companies to equip end doors of surface cars with dark curtains is offered by Representative Kenney of Taunton.—Bills introduced on the petition of President William A. Bancroft of the Boston Elevated Railway provide for giving that company common carrier rights in the handling of baggage, express and freight, and for allowing it to purchase or acquire other street railway or electric railroad corporations. It is suggested that this latter bill looks to the acquirement of the Boston & Providence Electric Railroad, now projected by Stone & Webster.

Supreme Court Denies Petition for Appeal from Chicago Union Traction Reorganization Plan.

What is believed to be the last obstacle in the way of the reorganization of the Chicago Union Traction Company by the Chicago Railways Company was removed on Thursday of this week when the United States supreme court denied the petition of Charles H. Aldrich and Henry Crawford for an appeal from the order of Judge Grosscup approving the plan of reorganization. The attorneys, who represented the minority stockholders of the West Chicago Street Railroad, protested against the order of the court for a lease of the Union Traction properties to the Chicago Railways Company for a short term, pending the actual sale of the property. The supreme court dismissed the petition on the ground that no constitutional questions had been infringed upon by the city ordinance authorizing the sale of the traction properties to the Chicago Railways Company or steps taken thereunder, and consequently it had no jurisdiction.

On Saturday of this week the properties of the Chicago Union Traction Company will be sold at public auction under the decree of foreclosure. The Chicago Railways Company is expected to be the only bidder. The plan is that immediately after the sale the receivers will turn over the properties to the Railways company, making a short-term lease for the purpose if necessary. The Railways company will at once take possession and operate the lines, notifying the city that it is in undisturbed possession of the property, as required by the franchise ordinance of February 11, 1907, and that it accepts the ordinance. The new securities of the Chicago Railways Company will then be issued in exchange for the old ones and the work of rehabilitating the property in accordance with the provisions of the ordinance will be taken up as rapidly as physical conditions will admit. The universal transfer system will go into effect as soon as the company accepts the ordinance. Transfers will be exchanged between the Chicago City Railway and the Chicago Railways companies at all intersecting points except those north of Twelfth street in the business district. The through routes provided by the ordinance will be established as soon as the board of supervising engineers can make arrangements for them. This will depend chiefly upon the progress of the work of reconstruction, as many of the north side lines are not in a suitable condition for the operation of the heavy cars of the Chicago City Railway.

Hearing on New York Rapid Transit Law.

The New York public service commission of the first district held a public meeting on Friday, January 17, for the purpose of hearing suggestions as to amendments to the rapid transit law which would make contracts for the construction and operation of additional subways more attractive to private capital. The commission is now nearly ready to advertise for bids for the Brooklyn Fourth avenue route and the Broadway-Lexington route, but, remembering its experience of last spring, when no bidders were found for the Lexington avenue subway, is apprehensive lest the same condition be found to exist in regard to the new proposed routes.

Practically every civic organization of the city was represented. The sentiments expressed were almost unanimously in favor of subway construction by the city and an extension of the leasing terms, limited by the Elsberg law

to 20 years with a provision of renewal for 20 more years. Opinion was divided, however, as to the wisdom of excluding bond issues for subway building from the restrictions of the city's debt limit.

Ex-Senator Elsberg, who was one of the speakers, stated that he was convinced that the leasing term would have to be extended to allow the contractor a profit and that under the present law private capital was not likely to invest. He and other speakers thought the commission might well be given power to determine the leasing term.

B. S. Coler, president of the borough of Brooklyn, disagreed with a statement of Comptroller Metz that the city was not financially able to build any more subways at the present time. He said the city could build subways in many directions without additional burdens on the taxpayers.

J. Edward Swanstrom, former president of the borough of Brooklyn, who represented the Citizens' Central Committee, favored an increase of the lease term to 35 years, with a provision for a 20-year renewal. He also suggested that the period of renewal be left to the discretion of the commission. He was not in favor of exempting certain classes of bonds from the debt limit so long as the city is controlled by a political administration.

Henry C. Wright, secretary of the City Club, said that private capital should be allowed to build subways where better results could be obtained in that way. He favored a 50-year lease.

Fined for Failure to Comply with Schedule Required by City.—The Winnipeg Electric Railway Company has been ordered to pay $12,000 in fines as a result of its failure to run its cars according to the schedule passed by the city council.

American Institute of Electrical Engineers.—H. W. Fisher, Pittsburg, Pa., chief engineer of the Standard Underground Cable Company, will, on Friday, February 7, present to the Toledo section of the institute a paper entitled "Electric Cables."

Louisville Railway Not Considering Pay-As-You-Enter Cars.—In regard to newspaper reports that the Louisville Railway was about to adopt the pay-as-you-enter car, R. R. Smith, traffic manager, writes that the company has not considered adopting these cars, at least within the near future.

McAdoo Tunnel to Open in February.—At a meeting of the Hoboken, N. J., board of trade on January 15 William G. McAdoo, president of the Hudson & Manhattan Railroad, announced that the tunnel under the Hudson river from Hoboken to Manhattan would be opened the first week in February and that the fare from Hoboken to Thirty-third street and Sixth avenue, New York, would be five cents.

Northwestern Electrical Association.—At the annual meeting of the Northwestern Electrical Association, which was held in Milwaukee on January 15 and 16, as reported in last week's issue of the Electric Railway Review, the following officers were elected: President, P. H. Korst of Janesville, Wis.; first vice-president, John Wright of Antigo, Wis.; second vice-president, John S. Allen of Lake Geneva, Wis.; secretary and treasurer, Thomas R. Mercein, Milwaukee, Wis.

American Institute of Electrical Engineers, Wisconsin Branch.—The January meeting of the Wisconsin branch of the American Institute of Electrical Egnineers was held at Madison, Wis., on January 23. W. B. Crabtree, engineering salesman of the Northern Electric Manufacturing Company, read a paper on "Hydro-Electric Development in the South from a Commercial Standpoint," which was followed by abstracts of New York papers by C. L. Byron and a general discussion.

Power of Indiana Railroad Commission.—Judge Vincent Carter of the Indianapolis superior court has made a ruling holding that the act creating a state railroad commission is constitutional, and that said commission has power and authority to make compulsory the interchange of traffic between steam railroads and also between steam and interurban railroads. This decision will probably settle the authority of the commission in this respect, since no appeal has been taken.

Protest Against Elevated Loop Extension.—A meeting of the Union Loop Protective Association was held in Chicago on Thursday of this week. A committee was appointed to appear before the city council committee on local transportation and protest against any plans of the elevated roads to lengthen the station platforms or to build tracks on two levels at the crossings at the entrances to the loop. The association is getting up a petition to protest against any further development of the loop.

Indianapolis Viaduct Declared Unsafe.—The Indianapolis & Cincinnati Traction Company and the Indianapolis Columbus & Southern Traction Company have been compelled to suspend freight traffic out of Indianapolis. The city engineers have reported to the board of public works that the Virginia avenue viaduct is no longer safe for interurban traffic. Passengers using these lines are compelled to transfer at the city limits. A contract will be let as soon as possible for the repair of the viaduct.

License Tags for St. Paul Cars.—The St. Paul (Minn.) assembly has passed an ordinance requiring the Twin City Rapid Transit Company to pay to the city a license fee of $10 for each car operated and to post conspicuously on the outside of each car a tag bearing the car's license number in figures not less than 4½ inches high. The company has heretofore been required to pay the $10 license fee, but the provision for posting the number on each car is an innovation intended to remove all possibility for disputes between the company and the city in regard to the number of cars on which fees should be paid.

Through Service Indianapolis to Terre Haute, Ind.—The Terre Haute Indianapolis & Eastern Traction Company of Indianapolis, Ind., has announced that through passenger service between Indianapolis and Terre Haute will be established on Saturday, January 25, the link from Brazil to Greencastle having been completed. Cars will be operated on a 1-hour headway and will stop at all stations. It is proposed to establish a limited service later. The running time for the 73 miles will be 3 hours and 15 minutes. The fare will be $1.25 for a single trip, or $2.40 for the round trip. The fare on the steam roads, the Vandalia and the Cleveland Cincinnati Chicago & St. Louis, is $1.44 each way. The company now has a continuous line from Paris, Ill., to the Ohio-Indiana state line.

The Indiana Strike.—The strike on the city lines of the Indiana Union Traction Company, which was declared on January 1 by members of the Amalgamated Association of Street and Electric Railway Employes, is still in progress officially, but seems to be dying out. The company's cars have been run on schedule time for about two weeks past, but the number of passengers is reported as very small, due to the boycott by the members of labor unions and their sympathizers. There have been no disturbances of late and at Muncie the 600 special deputy sheriffs, who were sworn in at the beginning of the strike, have been dismissed. The few strikers on the local lines at Elwood returned to work on January 17, after learning that they would not receive strike benefits for the first two weeks. It is reported that an unsuccessful attempt was made last week to ground the high-tension transmission line north of Marion.

Pennsylvania Railroad Commission Appointed.—Governor Stuart of Pennsylvania has appointed the members of the state railroad commission, which was created under an act passed at the last session of the legislature, to take effect on January 1, 1908. The members of the commission are as follows: Chairman, Nathaniel Ewing of Uniontown, judge of the United States district court of western Pennsylvania, to serve for five years; Charles N. Mann of Philadelphia, deputy prothonotary of the courts of Philadelphia county, to serve for four years; and John Y. Boyd of Harrisburg, a retired coal dealer, to serve for three years. The commission is composed of three members at a salary of $8,000 a year and is authorized to appoint an attorney at a salary of $4,000 a year, a secretary at $4,000 and a marshal at $2,500. It is also authorized to appoint an accountant, an inspector of railroads and an inspector of electric railways. The principal office will be at Harrisburg.

American Railway Insurance Company.—Henry N. Staats, vice-president and general manager of the American Railway Insurance Company, Cleveland, O., which was formed on January 10, 1907, by 27 electric railway and power companies for the purpose of carrying their own insurance, advises us that the following new companies have joined the organization within the past three months: Albany & Hudson Railroad, Hudson, N. Y.; Fairmont & Clarksburg Traction Company, Fairmont, W. Va.; Green Bay (Wis.) Traction Company; Eastern Wisconsin Railway & Light Company, Fond du Lac, Wis.; De Kalb Sycamore & Interurban Traction Company, De Kalb, Ill.; Benton Harbor-St. Joe Railway & Light Company, Benton Harbor, Mich.; Escanaba (Mich.) Electric Street Railway; People's Traction Company, Galesburg, Ill.; Choctaw Railway & Lighting Company, McAlester, Okla.; Corning (N. Y.) Gas & Electric Company; New London Gas & Electric Company; Fulton Light Heat & Power Company; Dayton Lighting Company; Rockville Gas & Electric Company; Stanford Gas & Electric Company. As previously mentioned, the purpose of the company is to carry the companies' fire insurance at actual cost, thus avoiding the necessity of paying the high rates charged by the old-line insurance companies. The company maintains an inspection and survey bureau for the purpose of inspecting the various plants and suggesting improvements that will reduce the fire risk.

Traffic and Transportation

Effect of New Subway on Brooklyn Rapid Transit Lines.

J. F. Calderwood, third vice-president and general manager Brooklyn Rapid Transit Company, has made a statement concerning the effect of the first week of operation of the Brooklyn subway on the lines of the Brooklyn Rapid Transit system. Receipts, he said, had held up well. The chief changes had been in the distribution of traffic, changes which are thus far more or less confusing. There has been a midday decrease in bridge traffic and a falling off in traffic to and from South, Hamilton, Wall and Fulton ferries. On the other hand, travel in the borough in midday has kept up. A 10 per cent increase in the service on the Montague street line has been found necessary, while a decrease in surface travel on the Brooklyn bridge has been shown. In conclusion Mr. Calderwood stated:

"One thing we are sure of, that there is added comfort and convenience for the traveler, and the result of the subway will be added facility to the operation of Brooklyn lines."

Comment on New Transfer System in New Orleans.

The New Orleans Picayune of January 16 contained a long article commenting on the new transfer system of the New Orleans (La.) Railway & Light Company, which went into effect on January 15. An abstract of this article follows:

"The conductors were furnished transfer slips for the exchanges between the lines. There are altogether in the city about 900 transfer points. The conductors reported generally that there was no trouble about the transfers, the people understanding very well what was expected of them and the conductors accommodating themselves to the new arrangement. Notices posted in the cars state that the passenger must get the transfer when paying his fare so that if he forgets it until nearly at the transfer point he will not cause confusion by asking for it. In some cases where passengers forgot to do this this they were given the transfers anyway, but their attention was called to the notice posted in the car.

"William H. Renaud, secretary to the president of the company, who has been designated to look after the workings of the transfer system, said that on some of the lines he went over he did not find that the number of passengers had increased very much, and on some not at all, and that everything was working well everywhere."

Universal Transfers in District of Columbia Discussed.

The subject of universal transfers in the District of Columbia was discussed before a committee of the house of representatives at Washington, D. C., on January 16. Gen. George H. Harries, vice-president Washington Railway & Electric Company, appeared before the committee. He said in part: "I know congress has the right to require universal transfers in the district. But is it just? Think of the tremendous expenses the railways have to bear. However, if you will allow us to charge a flat 5-cent fare instead of selling six tickets for 25 cents, we will be willing to put a universal transfer arrangement into effect."

General Harries outlined the work that the roads have accomplished in the district, and added: "Except from the standpoint of the man who wants something for nothing, the universal transfer has no defense. As it is now, a man can ride 14 miles in the district for a fare of 4½ cents."

General Harries said that it was impossible for the companies to provide seats for every one during rush hours. To do this he said it would be necessary to triple the number of cars, and the roads could not afford to do this.

Representatives of various citizens' associations asked that extensions be permitted and urged that better service and extension of facilities were needed, instead of transfers or reductions in fares.

Plan to Haul Freight Cars of Steam Roads in Springfield, Mass.

The Springfield (Mass.) Street Railway has been developing a plan whereby the freight cars of steam railways may be operated over the various lines of the company in Springfield, Westfield, Palmer, Ware and Chicopee, in the night and early morning hours. Under this plan, if adopted, freight cars will be run from steam railways directly to manufacturing plants, where they can be unloaded. Freight cars, after being loaded at manufacturing plants, will be hauled by the street railway company to the steam roads.

Whether application is made to the city council of Springfield for permission to maintain a general freight service over the street railway tracks at such times as will not interfere with passenger traffic will depend upon the attitude of the public. Arrangements have already been made by the Springfield Railway with a manufacturing company located at Palmer to lay a track to its plant so that freight cars can be run between the plant and another plant owned by the same company in Worcester, Mass. Tentative plans have also been made for a freight service for plants in Brightwood which desire better freight accommodations than they now have. The United States armory at Springfield desires the accommodations which a freight system on the electric road would provide.

Henry C. Page, vice-president and general manager of the company, is quoted as follows on the subject:

"The effective working out of this big scheme would be for the advantage, not only of the street railway, but of the manufacturing plants of the city, which are put to a heavy daily expense for trucking, and of the whole community. It would enable concerns which cannot afford to expand because they cannot pay the prices for land located on railroads or near the freight houses, to go into the outskirts of the city where land is cheap. Sooner or later the little available land on railroad tracks will have been used up. Then such a scheme as is planned will be demanded. We can run railroad freight cars over our lines in the night time and in the early morning, when there is little passenger traffic and when few cars are running, and discommode the public in no way at all. We will not fight to put the scheme through. If the people want it, they can have it. If not, we will not try to force it upon them. But it is bound to come, for the experience of Providence with such a system of freight car delivery is not to be ignored. We have a right, I think, under our franchise and the statutes, to build special trolley freight cars of our own and run them; but this would mean transshipping from our cars to the factories and from our cars to the railroad, which would mean a lessening of the saving to the factories because of the additional labor cost. We have proposed to the brewery that it build and operate its own cars, and we will charge for the use of our lines and our power. We figure that we can do the transfer work of the factories economically, especially as we would be able to use our power, which lies idle during a large part of the 24 hours."

Transfers in Pittsburg.—A committee of the city council of Pittsburg, Pa., will endeavor to arrange for a conference with the officials of the Pittsburg Railways Company on the subject of transfers.

Ask Owl Car Service for Toledo.—A resolution has been introduced into the city council of Toledo, O., requiring the Toledo Railways & Light Company to operate cars on all its lines from midnight until 5 a. m.

Transfers in New York.—Officials of the New York City Railway are quoted as stating that transfers will be given to Ft. George for the present subject to a general decision on the question of transfers between the lines of the Third Avenue Railroad and those of the Metropolitan Street Railway. This decision will not be made until the Third avenue receivership is made permanent.

Limited Service Between Cincinnati and Dayton, O.—Walter A. Draper, secretary of the Cincinnati Northern Traction Company, Cincinnati, O., writes as follows regarding the establishment of a limited service between Cincinnati and Dayton, O., by this company: "The old running time between Cincinnati and Dayton was 3 hours and 5 minutes and limited service has been put in with stops only at ticket offices, reducing the running time to 2 hours and 15 minutes, while the running time for local trains has been reduced to 2 hours and 58 minutes."

Record Run on Inland Empire System.—The record run of an Inland Empire system train from Colfax to Spokane, Wash., was made recently by a stock train of five cars of cattle and hogs, shipped to Spokane packers from Colfax. The train was reported in at the junction at Spokane 2 hours and 45 minutes after the conductor had given the sign at Colfax, and 3 hours from the time the last animal was driven into the cars at the Inland stockyards at Colfax the last one was out of the train at Spokane. The distance traveled was 76 miles.

Decision on Transfer Question in Shreveport, La.—District Judge Murff rendered a decision on January 15, making perpetual an injunction restraining the city of Shreveport from enforcing an ordinance requiring the Shreveport Traction Company to issue transfers. In declaring the ordinance unconstitutional, Judge Murff said that the franchises of the company were in the nature of contracts and had no provision requiring transfers, and while the city may have been unwise in granting such franchises, that did not alter the contracts. Attorneys representing the city will appeal the case to the Louisiana supreme court.

Construction News

FRANCHISES.

Acworth, Ga.—Austyn Granville of New York and others have applied for a franchise for an electric railway which is proposed to connect Acworth, Kenesaw, Lena, Noonday, Elizabeth, Marietta, Allatoona, Barton, Hugo, Emerson and Cartersville, Ga. It is stated that a part of the tracklaying has been completed.

Berkeley, Cal.—The San Francisco Oakland & San Jose Railway has applied for a franchise for a new line on Sacramento street the entire length of the city.

Bloomington, Ind.—The city council has granted a franchise to the Grand Central Traction Company, which proposes to build from Indianapolis to Evansville, Ind.

Cairo, Ill.—The city council has granted a 50-year franchise to the Cairo Terminal Traction Company, which proposes to build an electric line from Cairo to Mound City, Mounds and Villa Ridge. The company is a subsidiary of the Illinois Traction System. (Noted July 6, 1907.)

Culiacan, Mex.—The city council has granted permission to Engineer Francis Butterfield for the construction of street railway lines in the city.

Dallas, Tex.—The Texas Traction Company, which is now completing its line from Sherman to Dallas, Tex., has applied for a 20-year franchise for an entrance into the city. With the application the company filed an agreement previously made with the Dallas Consolidated Electric Street Railroad and the Metropolitan Street Railway for the use of their tracks. A small additional amount of new trackage is also desired. The total trackage applied for within the city will provide adequate terminal facilities with an alternate route in case of a blockade on one line. There will be a loop in the business section east of the postoffice. It is expected to run cars into the city by May 1. (Noted January 11.)

Enid, Okla.—A 50-year franchise has been granted to George W. Bear for an electric line from Enid to Blackwell, Okla. It is stated that work is to be started within three months.

Goderich, Ont.—The by-law recently presented for passage regarding the guaranteeing of the bonds of the Ontario & West Shore Electric Railway to the extent of $150,000, has been passed. The various guarantees now amount to $400,000 and the company is authorized to issue bonds up to $15,000 a mile for about 35 miles of track.

Houston, Tex.—David Daly, manager of the Houston Electric Company, has formally accepted the franchise granted by the commissioners of Harris county for an extension from Houston to Harrisburg.

Mineola, N. Y.—The New York & North Shore Traction Company has applied to the supervisors of Nassau county for a franchise to build an electric railway on the county highways from Mineola to Westbury, N. Y.

Minden, La.—The city council has granted a 50-year franchise to the Minden Traction Company, which proposes to build and operate an electric railway or a gasoline motor car line in the streets of Minden. It is proposed also to build an amusement park. H. A. Davis and J. B. Story are the promoters.

Monongahela, Pa.—The application of the Monongahela & Carroll Street Railway for a perpetual franchise in Monongahela has been denied by the city council. It is stated that an ordinance for a limited franchise will be presented at the next meeting. The company proposes to build an electric line to Bentleyville and later to Washington, Pa.

Portland, Ore.—The United Railways Company has applied to the county commissioners for a franchise from the city limits of Portland south on the Macadam road to the Clackamas county line. It is proposed to extend the line to Hillsboro and Forest Grove, Ore. E. E. Little, president. (Noted October 19, 1907.)

Shelbyville, Ill.—A 20-year franchise has been granted to the Mattoon Shelbyville Pana & Hillsboro Traction Company for the operation of its line through the main streets of Shelbyville. The line when built will form part of the proposed interurban system from Indiana to St. Louis.

Salt Lake City, Utah.—At a recent meeting of the board of directors of the Utah Light & Railway Company, a resolution was adopted, on the recommendation of President W. H. Bancroft, that the franchise granted to the company on December 2 be accepted. This will mean the building of several new lines and the construction of a $300,000 power plant at Devil's Gate, 18 miles east of Ogden.

Washington, D. C.—The Washington Spa Springs & Gretta Electric Railway has secured a franchise within the District of Columbia for its line from H street, Washington, along the Bladensburg road to the District line, whence it will run to Bladensburg and Spa Springs, Md. It is stated that construction is to begin at once. A power house is to be erected at Beverly, Md. B. J. Stephens of Hyattsville, Md., is president; Charles D. Eldridge of Myersville, Md., is the engineer. (Noted December 14, 1907.)

Washington, D. C.—The bill providing for the extension of the tracks of the Anacostia & Potomac River Railroad, the Washington Railway & Electric Company, the Capital Traction Company and the City & Suburban Railway to the new union station was passed by the senate on January 20. An amendment providing for universal transfers was defeated.

RECENT INCORPORATIONS.

Fitzgerald & Ocilla Railway & Power Company, Fitzgerald, Ga.—Incorporated in Georgia to build an electric railway between Fitzgerald and Ocilla, Ga., and also to furnish power for electric lighting and commercial purposes. Capital stock, $50,000. Incorporators: S. T. Holzendorf, New York, N. Y.; L. C. Holzendorf, Valdosta, Ga.; C. P. Holzendorf, Atlanta, Ga.; R. I. Kirkland, Irwin county, Georgia; C. A. Holzendorf, T. M. Parsons, D. B. Jay and Clayton Jay of Fitzgerald, Ga.; and B. F. Holzendorf, Douglas, Ga.

Red Bud & Belleville Interurban Railway, Red Bud, Ill.—Incorporated in Illinois to construct an interurban railway from Red Bud in Randolph county, through Monroe and St. Clair counties to Smithton, Ill. Capital stock, $2,000. Incorporators: Conrad Becker, Charles C. Smith, Herman Schryver, Red Bud; John Keller, Hecker, Ill.; B. A. Gundlach, Belleville, Ill.

TRACK AND ROADWAY.

Boston (Mass.) Elevated Railway.—A bill has been introduced into the Massachusetts legislature to give this company permission for an extension from its present terminus at Sullivan square, Boston, to Medford.

Central Crawford Traction Company, Guys Mills, Pa.—This company has been organized by about 100 representative farmers of Crawford county, Pennsylvania, for the purpose of building or securing the building of an electric line railway from Long's Stand, four miles east of Meadville, to Clapville, a distance of 20 miles, thus completing a connection between Meadville and Titusville. A committee of six was appointed to secure the right of way, which it is believed will be readily donated. It is then proposed to tender the right of way to some company that will build the line. If no such company is found the Central Crawford Traction Company will build the line. Two separate companies two years ago proposed to build a line over this route, but although a small amount of grading was completed the projects were abandoned. Dennis Smith is president and Joseph H. Heard secretary-treasurer.

Central Texas Traction Company, Corsicana, Tex.—The stockholders of this company have voted an increase of capital stock and have completed the plans for beginning construction of the proposed electric railway from Corsicana to Palestine, Tex., 52 miles. Work was started on the line several months ago, but was suspended on account of a defect in a franchise. M. P. Taret, chief engineer. (Noted June 22, 1907.)

Columbus, Miss.—It is announced that David J. Parsons is making estimates and preparing plans for a street railway and electric lighting plant. He wishes to hear from manufacturers of all kinds of electric supplies and equipment for the power plant, railway and shops.

Elyria Southern Railway.—This company proposes to begin construction this spring on its line from Elyria to Columbus, O., by way of La Grange, Spencer, West Salem, Ashland and Mansfield. A power house and repair shops are to be built at Elyria. The officers of the company are as follows: Summer B. Day, Lorain County Bank, Elyria, president; Frank H. Foster, Elyria, vice-president; W. E. Elliott, Elyria, vice-president and general manager; W. E. Moser, Elyria, secretary; J. M. Starr, La Grange, treasurer; G. A. Kagron, Elyria, engineer.

Guelph Radial Railway, Guelph, Ont.—This company soon will apply to the Ontario legislature for an amended act of incorporation allowing it further time in which to complete the construction of several authorized branch lines, and to increase the capital stock. The road is owned by the city of Guelph.

Georgia Railroad, Columbus, Ga.—This company is reported to be making surveys for an electric railway from Columbus north along the Chattahoochee river to West Point, Ga., 31 miles. F. E. Reidhead is manager.

Illinois Traction System, Champaign, Ill.—This company has officially accepted the 50-year franchise recently granted by the city council of Ottawa, Ill., for the Chicago Ottawa & Peoria Railway, which is to build the company's line to Chicago. According to an agreement with the cities of Peoria and Ottawa work must be started on the line between these cities by March 1 and at least $100,000 must be expended during the year. It is stated that rails and other material have been ordered.

Intermountain Railway, Denver, Colo.—This company, which is to electrify the line of the old Denver & Intermountain Railroad from Denver to Lakewood and Golden, Colo., is now distributing poles along the right of way. It is stated that electric cars will be run into Golden by June 1. (Noted November 23, 1907.)

Kalamazoo Elkhart & South Bend Traction Railroad, South Bend, Ind.—John M. Caulfield, first vice-president, writes that this company has secured all of the right of way and franchises for an electric line to connect the cities named in the title, a distance of 73 miles. The private right of way is 50 to 100 feet wide. Surveys, maps, profiles and estimates have been completed. The company is in a position to furnish 25 per cent of the cost of construction and equipment and to begin work within 30 days after the road is financed. The following officers were elected at a meeting on January 8: President, A. D. Harris; first vice-president, J. M. Caulfield; second vice-president, H. C. Morgan; secretary, E. C. Vincent; treasurer, A. Hunsberger; auditor, J. A. Bowman; attorney, F. E. Lambert.

Kingston (N. Y.) Consolidated Railroad Company.—This company is reconstructing its lines with 90-pound T-rails.

Lake Shore Electric Railway, Cleveland, O.—This company is reported to be securing renewals of options for a private right of way between Fremont and Genoa, O., paralleling the Lake Shore & Michigan Southern Railway.

Lake View Traction Company, Memphis, Tenn.—H. E. Craft, vice-president of the Lake View Traction Company and its subsidiary, the Clarksdale Covington & Collierville Traction Company, which proposes to build a line from Memphis, Tenn., to Clarksville, Miss., is quoted as saying that the date for awarding contracts has not yet been determined but that capital has been secured. Surveys have been completed and the right of way has been secured. H. G. Ferree is chief engineer.

Little Falls, N. Y.—It is reported that surveys are to be started at once on a proposed electric railway from Little Falls to Tribes Hill, N. Y., 35 miles, and that New York capitalists are interested in the project.

Massillon Wooster & Mansfield Traction Company, Cleveland, O.—This company proposes to built an electric railway connecting Massillon, Orrville, Wooster, Ashland and Mansfield. The officers of the company are as follows: President, C. V. Hard; vice-president, M. L. Smyser; secretary, E. S. Landes; and treasurer, N. Amster. (Noted August 24, 1907.)

Missoula-Bitter Root Traction Company, Hamilton, Mont.—E. V. Lewis, secretary, writes that this company, incorporated in Montana to build an electric railway from Missoula to Hamilton, a distance of 47 miles, has completed surveys, but does not expect to begin active work until next fall. The route includes Florence, Stevensville and Corvallis. J. L. Humble of Corvallis is president and S. C. Finkelnberg is chief engineer. (Noted April 27, 1907.)

Missouri Oklahoma & Gulf Railway, Muskogee, Okla.—It is reported that this company intends to convert for electrical operation that portion of its steam road between Muskogee and Waggoner, Okla., about 15 miles, with the intention of extending this service should the experimental line prove successful. The location of a large packing plant at Falls City, midway between Waggoner and Muskogee and a suburb of the latter city, is said to have increased the necessity for service of this kind between the two cities. William Kenefick, president, Kansas City, Mo.

New Orleans & Seashore Air Line Railway, New Orleans, La.—This company has recently been organized for the purpose of building an electric railway from Algiers to Grand Isle, La.

Prosser Traction Company, Prosser, Wash.—This company, which was incorporated about a year ago to build a 10-mile electric line westward from Prosser and another 35-mile line eastward from that city, intends to start construction work early in the spring. The first section will be built from Prosser west to Belma, nine miles, and later the extension south from Prosser to Paterson on the Columbia river will be undertaken. These lines will serve an immense wheat belt which at present is without transportation facilities other than wagon roads. When built the line will connect at Prosser with the North Coast Railroad now building from Prosser to North Yakima and Spokane, Wash. Frederick Finn, Prosser, Wash. is president. (Noted February 9, 1907.)

St. Francois County Electric Railway, Farmington, Mo.—This company expects to begin work at once on two 2,600-foot extensions to its city lines in Farmington.

San Francisco Vallejo & Napa Valley Electric Railway, Napa, Cal.—This company has formally opened for traffic its extension from Napa to St. Helena, Cal. L. J. Perry is general manager.

Southern Colorado Power & Railway Company.—This company, recently organized, which has purchased the Trinidad Electric Railroad, the Trinidad Light & Power Company and the Stonewall Valley Electric Railway, is now extending the Trinidad line to Cokedale, the coke camp of the American Smelting & Refining Company, and will build 30 miles of line to the coal mines at Stonewall. The company also proposes to build electric railways and power lines to all the towns in the vicinity of Trinidad. Joseph J. Henry of Denver, Colo., is interested in the company and represents a large syndicate. (Noted January 11.)

Toronto, Can.—It is reported that the Turbine Steamship Company of Toronto is negotiating with the Michigan Central Railway for the transfer or lease of the steam line on the west bank of the Niagara river connecting Ft. Erie with Niagara-on-the-Lake, the purpose being to electrify the line and operate it in connection with the Turbine Company's boats which ply between Niagara-on-the-Lake and Toronto.

Windsor Essex & Lake Shore Rapid Railway, Kingsville, Ont.—Grading has been completed on the section of this road between Kingsville and Leamington and tracklaying will be pushed with the expectation of having cars in operation between these two points in the near future. (Noted November 2, 1907.)

Winona Interurban Railway, Winona Lake, Ind.—It is reported that work on the projected line between Valparaiso and Fort Wayne, Ind., will be started at once. The line has been under consideration for two years and the surveys have been made.

POWER HOUSES AND SUBSTATIONS.

Coney Island & Brooklyn Railroad, Brooklyn, N. Y.—This company proposes to build during the present year six new substations. Plans for two of them have been prepared by Ford, Bacon & Davis, New York. They will be two stories in height and of fireproof brick and steel construction.

Marquette County Gas & Electric Company, Ishpeming, Mich.—This company has just completed a new boiler house and has added the following new equipment to its power station: One 500-kilowatt vertical Curtis turbine, one 200-kilowatt Buffalo Forge Company engine, direct connected to a 110-kilowatt direct-current generator, also a new storage battery.

Missouri Water Light & Traction Company, Nevada, Mo.—It is reported that this company will place contracts during the next few weeks for the installation of the following apparatus: Two 225-horsepower water-tube boilers, 600-horsepower exhaust steam heater, 600-horsepower live steam water purifier, and the necessary piping. Hiram Phillips, receiver.

Portland Eugene & Eastern Railway, Portland, Ore.—This company, which proposes to build an electric railway from Eugene to Springfield, Ore., has filed notice of an appropriation of 2,000 cubic feet of water per second from the McKenzie river at the point of its proposed hydro-electric power plant. A. Welch of Portland is interested. (Noted January 18.)

Sydney & Glace Bay Railway, Sydney, Can.—A. N. McLennan, manager, writes that this company is now building a new power house, 50 feet wide by 75 feet long. The equipment will consist of three 150-horsepower return tubular boilers and one 300-horsepower vertical engine, built by the Robb Engineering Company, Amherst, Nova Scotia, one Crocker-Wheeler 250-kilowatt railway generator, one 200-horsepower McKewan engine and one Westinghouse 150-kilowatt railway generator. As previously noted the contract for the power house has been let to Rhodes, Curry & Co. of Amherst, N. S.

Personal Mention

Mr. B. M. Arnold, supervisor of terminals of the Illinois Traction System at Springfield, Ill., has been transferred to Decatur, Ill., as division superintendent, succeeding Mr. J. E. Mcnell, who has been transferred to Springfield to succeed Mr. Arnold.

Mr. Charles Fifer, formerly superintendent of the Salem Electric Railway at Salem, O., has resigned, effective on February 1, to accept a similar position with the Philadelphia Coatesville & Lancaster Passenger Railway at Parkesburg, Pa. He will be succeeded at Salem by Mr. Herman Gaver.

Mr. Allan L. McDermott of Jersey City, N. J., was re-elected president of the Washington (D. C.) Railway & Electric Company on January 18. Mr. William Loeb, Jr., secretary to President Roosevelt, who has frequently been mentioned as a candidate for the office of president of the company in connection with the proposed reorganization, was elected a member of the board of directors.

Mr. W. P. Bailey, formerly connected with the auditing department of the Terre Haute Indianapolis & Eastern Traction Company, has resigned to become superintendent of the Michigan City and Laporte lines of the Chicago South Bend & Northern Indiana Railway. Mr. Bailey began his street railway service as a conductor and has worked his way up through several intermediate positions.

Mr. Hugh T. Miller has resigned as secretary and treasurer of the Indianapolis Columbus & Southern Traction Company at Columbus, Ind., to devote his time to his campaign for the governorship of the state of Indiana. Mr. Ira E. Guthrie, formerly auditor of the company, was chosen to succeed Mr. Miller as secretary and treasurer, at a meeting of the directors held on January 21. Mr. Joseph I. Irwin, president, and Mr. A. A. Anderson, general manager, were re-elected.

Mr. Samuel Insull, president of the Commonwealth Edison Company of Chicago, and also president of the Louisville & Southern Indiana Traction Company and the Louisville & Northern Railway & Lighting Company, has been appointed a member of the honorary committee to represent the United States at the international exposition of electrical appliances, to be held in Marseilles, France, April 19 to October 31. Mr. Insull will represent the National Business League of America.

Mr. M. McAulay, heretofore assistant superintendent of the Detroit Monroe & Toledo Short Line Railway, has been appointed superintendent of the company, effective on January 1, as announced in our issue of January 11. Mr. McAulay was formerly with the Detroit United Railway, serving from 1901 to 1902 as car house foreman, and from 1903 to 1906 as assistant superintendent of its Orchard Lake division. On July 1, 1906, he was appointed assistant superintendent of the Detroit Monroe & Toledo Short Line, where he has since remained. His headquarters will be at Monroe as in the past.

Mr. A. G. Reynolds has been appointed chief clerk to Mr. William A. Bancroft, president of the Boston Elevated Railway. Mr. Reynolds has been connected with the Boston Elevated Railway since 1899, for six years in the maintenance of way department and for two years in President Bancroft's office. He was formerly treasurer of the Newburyport & Amesbury Horse Railroad, in charge of the electrical construction and equipment of the Toledo street railway for the Thomson-Houston Company, acting superintendent of the same road after its construction and superintendent of the East Side Street Railway, Brockton, Mass.

Mr. H. H. Polk, president and general manager of the Interurban Railway, Des Moines, Ia., announces that, effective on February 1, the existing positions of general freight agent, general passenger agent, superintendent and general roadmaster will be abolished and the following new positions created: Traffic manager, in charge of freight, passenger and industrial departments; general agent, in charge of the Des Moines station; and superintendent of track and motive power, in charge of track, buildings and equipment. The following appointments have been made: Traffic manager, Mr. R. A. Belding; general agent, Mr. J. F. Johnston; industrial agent, Mr. Geis Botsford; ticket auditor, Mr. E. B. Bieghler, heretofore superintendent; superintendent of track and motive power, Mr. F. S. Eberhart, heretofore general roadmaster.

The department of motive power and machinery of the Boston Elevated Railway has been divided into two new departments, the department of power stations and the department of rolling stock and shops. Mr. John Lindall, heretofore superintendent of motive power and machinery, has been appointed superintendent of rolling stock and shops, with general supervision of cars and equipment, shop work and car house methods. Mr. James D. Andrew has been appointed superintendent of power stations, in charge of the maintenance and operation of power houses and substations, distribution of power, receiving of coal, etc. Both superintendents are under the charge of Mr. Paul Winsor, chief engineer of motive power and rolling stock, who reports to the vice-president. Mr. Andrew has heretofore been in charge of the power plants of the New York Edison Company.

Mr. J. E. North, whose portrait is presented herewith, has recently resigned as electrical engineer of the Ohio Electric Railway, with headquarters at Springfield, O., to accept a position with the Robbins & Myers Company, manufacturer of the "Standard" motors and generators, of Springfield. Mr. North came to Springfield in 1903 to become connected with the electrical department of the lines composing the Appleyard system, which was acquired in 1906 by the Indiana Columbus & Eastern Traction Company. Three months later he was appointed assistant electrical engineer, which position he held until May, 1906, when he was appointed chief electrical engineer of the Indiana Columbus & Eastern, which has recently been taken over by the Ohio Electric Railway Company.

J. E. North.

Mr. Gurdon W. Wattles, whose portrait is presented herewith, was recently elected president of the Omaha & Council Bluffs Street Railway of Omaha, Neb., succeeding Mr. Guy C. Barton, resigned, as previously noted in the Electric Railway Review. Mr. Wattles was born at Richford, N. Y., on May 12, 1855, and in 1867 removed to Carroll, Ia. He attended the Iowa State College at Ames, Ia. In 1880 he became president of the First National Bank of Carroll, Ia., and, after removing to Omaha in 1892, was successively vice-president and president of the Union National Bank. In 1898 he was president of the Trans-Mississippi and International exposition at Omaha. His street railway connection dates from 1902, when he became associated with the Omaha & Council Bluffs Street Railway as director. Since 1905 he has been vice-president of that company. He has been president of the Omaha Grain Exchange since its organization in 1904, and has been vice-president of the United States National Bank of Omaha for several years past.

Gurdon W. Wattles.

Ask Investigation of Electric Railways.

A number of citizens' associations of the District of Columbia have jointly adopted a resolution petitioning congress to direct the bureau of corporations or the interstate commerce commission to make an investigation of the electric railways of the district with respect to their organization, capitalization, etc., and to ascertain whether legislation requiring the companies to render better service should be enacted. A second resolution petitions congress to grant authority to the district commissioners to regulate the service of the companies.

Financial News

Cleveland (O.) Electric Railway.—At the annual meeting of stockholders on January 15 the directors were re-elected. The place of Charles L. Pack, who had retired, was not filled. Horace E. Andrews, the president, reported that the gross earnings for the year ended December 31, 1907, approximated $5,700,000, a gain of $100,000 over the previous year. After the meeting of stockholders the board organized by re-electing the old officers.

Concord Maynard & Hudson Street Railway, Maynard, Mass.—The Massachusetts railroad commission has approved the issue of $25,000 additional stock by this company. The stock is to be sold at $100 per share.

Denver City Tramway Company.—William G. Evans, the president, states: "For 1907 the total valuation placed by the assessor upon all taxable property within the city and county of Denver is $118,921,855. No one can reasonably claim that the value of the property of the Denver City Tramway Company equals the one-hundredth part of all the property values in Denver. If the value of the property and franchises of the tramway company were the one-hundredth part of all the taxable values, it would in fairness be assessed at the one-hundredth part of $118,921,855, or $1,189,218.55. Yet the assessment upon the property of the company and of the subsidiary companies for 1907 is $3,200,000. In addition to the general taxes and to the various amounts paid for paving and other public improvements, a payment of $5,000 is made each month to the city treasury. From May 15, 1906, to December 31, 1907, there have been levied against the company and paid as they became due, the following amounts: Expended on account taxes, $162,499.93; expended on account franchise payments to city of Denver, $95,000; expended on account public improvements (which are in the nature of a tax, such as street paving, surfacing, grading in public improvement districts, donation of property to widen streets, etc., ornamental poles on Sixteenth street, etc.), $19,808.95; total, $277,308.88."

Indianapolis & Louisville Traction Company, Louisville, Ky.—On the advice of G. S. Payne, county attorney, the commissioners of Clay county at Brazil, Ind., have decided to refuse to give the $36,000 voted to the Indianapolis & Louisville Traction Company by the taxpayers of Harrison township in 1906, as a bonus for building a branch line through that township. The commissioners took the position that the petition signed by 500 taxpayers and all the proceedings connected with the transaction were irregular and void. The county treasurer had already received $20,000 of the total amount, and the commissioners directed that mandamus proceedings be started to prevent the county treasurer from paying this money to the traction company.

Seattle (Wash.) Electric Company.—Frank Dabney, the treasurer, has filed a statement with the city comptroller of Seattle, Wash., showing that gross earnings in 1907 were $2,951,646. There was due to the city on account of the percentage tax $57,307. Of this amount $9,105 had been paid by deposits accompanying applications for franchises, leaving still due $48,202. This amount was paid when the statement was filed. Most of the lines pay 2 per cent of gross earnings to the city.

Schuylkill Railway Company, Girardville, Pa.—Results of operations in the year 1907 were as follows: Gross receipts, $207,034.96; operating expenses, including taxes and insurance, $104,083.61; net receipts, $102,951.35; interest charges, $68,500; surplus, $34,451.35.

Spokane & Inland Empire Electric Railway, Spokane, Wash.—Jay P. Graves, the president, has issued a circular letter to stockholders stating that the new power plant now nearing completion will effect a large saving in expenses, and that the completion of the Moscow extension will produce a heavy increase in gross earnings. It is stated that more small farms have been sold along the lines of the road in the last year than were sold in the same territory in the 10 years preceding.

Syracuse (N. Y.) Rapid Transit Company.—An initial dividend of 3 per cent has been declared on the $2,750,000 common stock.

Toledo (O.) Railways & Light Company.—At the annual meeting of stockholders on January 16 John F. Collins and Albion E. Lang of Toledo and Charles W. Wason of Cleveland retired as directors. S. D. Carr and J. K. Secor of Toledo, R. B. Van Cortlandt of New York, J. F. Demers of Quebec and W. E. Hutton of Cincinnati have been elected new directors.

Union Railway.—Receivers have been appointed for two subsidiary roads of this company, which is controlled by the New York City Railway. On January 19 Justice Mills of the New York state supreme court appointed Leslie Sutherland temporary receiver of the Yonkers Railroad and J. Addison Young of New Rochelle temporary receiver of the Westchester Electric Railroad of Mt. Vernon, N. Y. The receivers were appointed on application of the directors, who declared that the debts of the two companies aggregate about $5,000,000, and that they have small assets. Application has also been made to the court for a receiver for the Tarrytown White Plains & Mamaroneck Railway of White Plains, N. Y. An order to show why the Union Railway Company should not be dissolved will be returnable on March 9.

United Railways Investment Company, New York.—Edward B. Smith of Philadelphia has been elected a director.

West Chester (Pa.) Street Railway.—At the annual meeting of shareholders on January 13 the following statement for the fiscal year ended June 30, 1907, was made: Gross earnings, $100,421.67; operating expenses, $54,524.05; net earnings, $45,897.62; taxes and interest, $36,711.63; net income, $9,185.99. George D. Woodside was elected a director and treasurer to fill the vacancy left by the death of his father, John W. Woodside.

ELECTRIC RAILWAY EARNINGS.

Brockton & Plymouth Street Railway, Plymouth, Mass.

November—	1907.	1906.
Gross earnings	$8,085.13	$7,211.55
Expenses and taxes	7,258.71	5,471.36
Net earnings	826.42	1,740.19
Interest charges	1,751.69	1,813.73
Deficit	925.27	73.54

Columbus (Ga.) Electric Company.

November—	1907.	1906.

Dividends Declared.

Nashville (Tenn.) Railway & Light Company, preferred, 2½ per cent.

Twin City Rapid Transit Company, Minneapolis, common, quarterly, 1¼ per cent.

West Penn Railways, Pittsburg, preferred, quarterly, 1¼ per cent.

Manufactures and Supplies

ROLLING STOCK.

Milwaukee Coke & Gas Company, Milwaukee, Wis., is in the market for six motor cars.

Webster Monessen Bellevernon & Fayette City Street Railway, Monessen, Pa., is in the market for two cars.

Texas Traction Company, Dallas, Tex., has placed an order with the St. Louis Car Company for 12 double-truck cars.

Chippewa Valley Electric Railroad, Eau Claire, Wis., is considering the purchase of two interurban cars. The company does not know, at present, when it will be ready to place the order.

Henry M. Warren, Grand Avenue hotel, Asbury Park, N. J., is in the market for one 4-foot 8-inch gauge and one 3-foot gasoline or gasoline-electric car.

South Bethlehem & Saucon Street Railway, South Bethlehem, Pa., is negotiating for the purchase of two semi-convertible double-truck cars and one single-truck freight car.

Seattle Electric Company, Seattle, Wash., which was reported several months ago to be considering the purchase of from 50 to 75 cars, will probably place this order within the next few weeks.

Municipality of St. Petersburg, Russia, is reported to be in the market for 57 motor cars and 210 trailers, and it is believed that prices on this equipment will be requested from builders in the United States.

Toronto Railway, Toronto, Ont., will adopt the pay-as-you-enter type of cars during the course of the year. It is said the system is somewhat different from that originated by the Montreal Street Railway, in that the Toronto car has one entrance door only, 37 inches wide, located in the rear of the car on the left side. The exit is in front on the right side. The conductor will stand outside the car at the entrance door to collect fares. Fourteen of these cars have been completed and 11 more are under construction.

Choctaw Railway & Lighting Company, McAlester, Okla., as reported in the Electric Railway Review of November 9, 1907, has placed an order with the Niles Car & Manufacturing Company for two double-truck passenger cars. The order was placed in November, 1907, and delivery is to be made January 15, 1908. The specifications include the following details:

Seating capacity ..... 50 passengers	Length of body .....36 ft.
Weight .....54,000 lb.	Height—
Wheel base .....6 ft. 6 in.	Sill to trolley base.....9 ft.
Length, over vestibule...46 ft.	Track to trolley base... 12 ft. 6 in.
Over all .....48 ft.	Body .....Wood
Width, inside .....7 ft. 6 in.	Underframe ....Combination
Over all .....8 ft. 10 in.	

Special Equipment.

Air brakes ....Westinghouse	Safety tread .....Stanwood
Couplers .....Niles	Sanders ....Nicholls-Lintern
Curtain material ...Pantasote	Seats .....Hale & Kilburn
Gears and pinions....Nuttall	Trolley poles and attachments .....Nuttall
Heating system.....Consolidated Car-Heating Co.	Trucks .....Taylor
Headlights .....Crouse-Hinds	Varnish .....Chicago
Motors 4 GE-57	

SHOPS AND BUILDINGS.

Columbus (O.) Railway & Light Company.—A contract has been awarded to J. E. Snyder of Columbus for the erection of a car house at Fourth and Merritt streets. The building will be of brick, 174 by 132 feet, and will cost about $15,000. A repair shop will be installed.

Ft. Wayne & Wabash Valley Traction Company, Ft. Wayne, Ind.—Among the improvements contemplated for the present year is the erection of a modern terminal station at Logansport, Ind.

Omaha & Council Bluffs Street Railway, Omaha, Neb.—Half a block of land at Tenth and Pierce streets has been purchased for $26,000. As soon as the lease on the buildings that now occupy it expires a new car house will be built.

TRADE NOTES.

Central States Bridge Company, Indianapolis, Ind., has received a contract from the Winona Interurban Railway, Winona Lake, Ind., for a bridge across the Pennsylvania Rail-

road, one mile west of Warsaw, Ind. It is stated that the contract price is $26,000.

General Fireproofing Company, Youngstown, O., held the annual convention of its sales agents at the plant on January 9 and 10.

Berger Manufacturing Company, Canton, O., has filed notice of an increase in capital stock from $1,500,000 to $2,000,000.

Manning, Maxwell & Moore, Incorporated, New York, announces the removal of its Cleveland, O., office from the Williamson building to 2 St. Clair avenue.

St. Louis Car Company, St. Louis, Mo., has completed an order for 24 sets of No. 62 double trucks for the Illinois Traction System. These trucks are in service, and the company reports they are giving the best of results.

Pressed Steel Car Company, Pittsburg, Pa., has appointed Fritz von Hiller its representative at Mexico City, succeeding D. G. Farragut, resigned. The Buenos Aires office has been moved to Calle Tucuman, No. 305, Buenos Aires, Argentine Republic.

Vacuum Cleaner Company's main offices are at 425 Fifth avenue, New York, and not at 72 Trinity place, as was stated in an item in the Electric Railway Review of January 18, which announced the appointment of R. C. Hallett as manager of the company's railway department.

Pantasote Company, 11 Broadway, New York, states that its new product, Agosote headlining, is receiving considerable attention. The company claims for it all the qualities of a perfect lining, as it is waterproof, will not warp, shrink or blister, and is homogeneous in its composition.

Niles Car & Manufacturing Company, Niles, O., held its annual meeting on January 22. The old board of directors and officers were re-elected and dividends declared on both common and preferred stock. The president's report was satisfactory and the sales department predicts fair business for the coming year.

Lumen Bearing Company, Buffalo, N. Y., on January 3 and 4 observed its fourth annual gathering of office and sales forces at the Buffalo plant. The daily sessions were devoted to discussing business methods and plans with an occasional original paper on a subject particularly relative to bearings. The meetings wound up with a banquet, given by the company, at which 16 were present.

Lord Electric Company, New York, has taken over all the patents, granted and pending, of W. P. Cosper, covering controller regulators. Mr. Cosper has been awarded the agency for the central western territory, with headquarters at Chicago, instead of being located at New York as originally announced. Mr. Cosper's controller regulators are very unique and cover the desirable features of a regulator designed to positively control the acceleration of motors. Many new features, it is stated, are embodied in these devices which should at once appeal to the railway manager. The Lord Electric Company is preparing to fill orders now in hand and accumulate stock for future demands.

Maryland Railway Supply Company of Baltimore City, 510 Continental building, Baltimore, Md., has been organized to handle various lines of steam and electric railway supplies, under exclusive territorial contracts, in the eastern and southern states. It has already made arrangements with several leading companies along these lines. The principal office of the company will be in Baltimore, but branch offices in the north, east and south will be opened as the business justifies. A general agency for the New England states will be established at once and traveling salesmen will look after southern trade. Nelson E. Perrin is president, Charles Elliott vice-president and general manager, who will have charge of the operation of the company, and Thomas W. Boykin secretary and treasurer.

Washburn Steel Castings & Coupler Company, Minneapolis, Minn., closed its plant on November 1, 1907, and for the past two months has been engaged in remodeling and rebuilding it from end to end. As a result the company is now in a position to turn out 25,000 freight couplers, a proportionate number of passenger and engine couplers, and 150 tons of miscellaneous steel castings a month, and still has space for a considerable tonnage for its electric railway devices. Stanley Washburn, vice-president, states that with the first of the year his company has entered on a new departure and is placing more extensively on the market its line of traction couplers, especially the widely advertised L-5 coupler for heavy railway work. For a year past this has been in the experimental stage, but the trials have been so successful that every effort is now being used to give it general introduction. To this end J. L. Hopper, who is well known in the railway supply and steel casting business, has been appointed the company's representative in the traction belt, with headquarters at Cincinnati, O. Although actual orders during the first month of the new year have been slow, Mr. Washburn states that inquiries and requests for quotations indicate that the coming year, as a whole, will be the best the Washburn company has ever enjoyed.

Massachusetts Chemical Company, Walpole, Mass., reports that business shows a decided upward tendency and that orders are coming in briskly, besides many inquiries, both domestic and foreign, for Armalac and the company's other products. During the past week several large consignments of Armalac have been shipped for use in the repair departments of various electric railways. The company states that its contention that a weekly or semi-weekly bath of Armalac will save hundreds of dollars in rewinding expense on armatures, has been brought home to many large roads so forcibly that this procedure is now the practice on a number of them. Orders for its black oilproof varnish for armature finishing and frames are in gratifying volume. The company will open a branch office at 464 Monadnock block, Chicago, in charge of Arthur E. Duclos.

Lord Electric Company, New York and Boston, has completed arrangements with Charles I. Earll for the manufacture and sale of his trolley retriever and catcher, thereby coming into possession of one of the most useful devices in the electric railway field. The Earll retriever has long since passed the experimental stage. It is strong and durable, easy of access, free from complications, attractive in appearance and built on good engineering design. It comprises many desirable features, the weak points having been eliminated. Many of the largest and most representative electric railway properties have adopted the Earll retriever and catcher, and recent unsolicited letters show their entire satisfaction. The Lord Electric Company is increasing its line of desirable specialties, all of which are of interest because they embody principles which assure additional sources of economy.

Westinghouse Electric & Manufacturing Company's reorganization committee, in a circular dated January 20, has issued its final plan for the readjustment of the company's debt. The original plan, reported in the Electric Railway Review of January 18, contemplated the creation of a first mortgage bond issue of $45,000,000, to bear interest at 5 per cent. This was designed to take up all the floating and funded indebtedness, including the $6,000,000 notes sold through Kuhn, Loeb & Co., and the French loan, due in 1917. As the holders of the notes and the French security holders are quite satisfied with the original security, the committee has decided to make the bond issue $35,000,000, leaving the notes as they stand. The $35,000,000 5 per cent mortgage bonds are to mature in 25 years. Based upon statements furnished by Haskins & Sells, certified public accountants, who have been auditors of the company since 1902, the present debt, exclusive of interest, is as follows:

Unsecured debt—		
Convertible sinking fund 5 per cent gold bonds, due January 1, 1931		$18,500,000
Five per cent gold debenture certificates, due July 1, 1913		1,969,000
Bills payable	$9,209,766.21	
Accounts payable, about	3,952,843.13	
Indebtedness of subsidiary companies, etc.	1,368,390.66	
Total floating debt, about		14,531,000
Total unsecured debt to be provided for, about		$35,000,000
Debt secured by collateral—		
Three-year 6 per cent collateral notes, due August 1, 1910		$6,000,000
Ten-year 5 per cent collateral notes (French loan), due October 1, 1917, about		$2,750,000
Total secured debt, about		$8,750,000

The board of directors of the company is to be approved by the reorganization committee and a provision, satisfactory to the committee, is to be made (by voting trust or otherwise) for the future election of directors.

ADVERTISING LITERATURE.

Ohio Brass Company, Mansfield, O.—The advantages to be gained in the use of the Collin pressure regulating valve for steam are set forth in a new catalogue. Two types, B and C, are illustrated and described.

H. W. Johns-Manville Company, 100 William Street, New

York, N. Y.—Linolite—"a yard of light to a yard of space"—is a modern system of lighting described and illustrated in a neat circular recently issued.

Northern Electrical Manufacturing Company, Madison, Wis.—Some interesting facts about the single voltage variable speed system are contained in a recently issued booklet entitled "Variable Speed Motors."

Eugene J. Stern, 1402 Broadway, New York City.—"Amusement Devices That Pay" are forcibly described and illustrated in a recently issued catalogue. The firm specializes in designing and building amusement parks and devices, including scenic railways, figure eights and a large number of new and attractive devices.

Consolidated Car-Heating Company, 42 Broadway, New York, N. Y.—A circular describes and illustrates a popular type of portable vestibule heater, which is also adapted for use in small ticket offices or other places where only a moderate degree of heat is required. Two types of stationary vestibule heaters are also shown.

Standard Electric Accumulator Company, 141 Broadway, New York, N. Y.—A small pamphlet has been issued calling attention to the storage batteries of this company. The special feature in the construction of the battery is the plate. The active material and its electrode is entirely inclosed in a thin strong box of unglazed pottery.

Blake & Knowles Steam Pump Works, 114-118 Liberty Street, New York, N. Y.—General catalogue K-800 is a handsome book of 176 pages and double cover, in which the complete line of Knowles pumping machinery is fully illustrated and described. A large amount of important technical information is included, making the book valuable for reference.

Western Electric Company, Hawthorne, Ill.—A bulletin soon to be distributed is devoted to Beck flaming arc lamps. It is fully descriptive of the most recent and important developments and contains complete data covering performance. These lamps as now manufactured are suitable for use on either alternating or direct currents and have been so greatly simplified in construction that but little skill is required in operating.

The J. G. Brill Company, Philadelphia, Pa.—The January number of Brill's Magazine contains a number of illustrated articles descriptive of recent car orders, including those for the Cie Mutuelle de Tramways, Salonica, Turkey; Visalia (Cal.) Electric; Rhode Island Company, Providence, R. I.; Boise Valley, Boise, Idaho; Mahoning & Shenango (O.) system; New York & North Shore, Roslyn, L. I.; Electric Tramway, Lisbon, Portugal.

St. Louis Car Company, St. Louis, Mo.—A comprehensive catalogue showing a complete line of supplies of this company's manufacture will soon be ready for distribution. It will be prepared in the convenient loose leaf style and so arranged that supplies may be ordered by number, thus simplifying the matter and avoiding delays and misunderstandings. The catalogue is being issued under the supervision of Abe Cook, formerly with the Laclede Car Company, who has charge of the supply department and whose familiarity with the car business will insure prompt and efficient service.

NUTTALL SLEET SCRAPERS AND SLEET WHEELS.

To many street and interurban railways the problem of keeping the cars moving during sleet storms is a troublesome one. Two devices for freeing wires from sleet that are growing in popularity with trolley men are illustrated. One of these is a scraper which can be fastened to the regular trolley wheel by means of a spring. It can be attached by anybody in a moment, and as readily removed after it has served its purpose. It locks the wheel and effectively scrapes all sleet and ice from the wire. It is simple and inexpensive, and is preferred for use where only an occasional sleet storm may be expected.

Sleet Scraper.

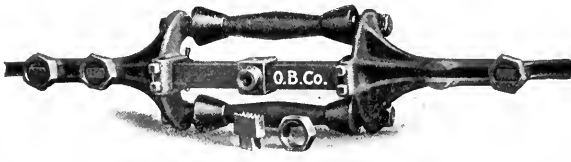
Sleet Wheel.

The second device shown is a wheel which takes the place of the regular one. It is intended for use in those sections where sleet storms are of frequent occurrence. If the storm comes during the night one of these wheels on the car that makes the first morning trip is sufficient to clean the wire for the day's traffic. During heavy storms cars equipped with wheels should be run every 15 or 20 minutes. By the use of these simple devices much delay and annoyance may be avoided. These scrapers and wheels are made by the R. D. Nuttall Company, Pittsburg, Pa. The scrapers are made in two sizes, 4-inch and 6-inch. The wheels are made 4 inches in diameter, 1½ inches through hubs and 5⅝ inches in diameter, 1½, 2 and 3 inches through hubs.

A NEW OHIO BRASS SECTION INSULATOR.

A new type of section insulator has recently been put on the market by the Ohio Brass Company of Mansfield, O. It is shown in the accompanying illustrations. The device consists of two substantial end castings of bronze, with means for attachment of the ends of the trolley wire, wood members forming the insulating medium between the sections.

Great mechanical strength is obtained from the fact that the direct pull exerted by the trolley wires is borne by two wood break strain insulators, one on each side of the suspension bar and runner piece, as shown in Figure 1. These wood break strains are similar in construction to the Ohio Brass Company's regular wood break strain insulator, that is, the malleable iron cap castings are compressed over the ends of the wood member by hydraulic pressure, which distributes the stresses evenly throughout the entire piece.



Section Insulator—Figure 1, Top View.

The malleable iron cap castings of the wood breaks are provided with internally threaded lugs and are fastened to the end castings of the section insulator by machine bolts which pass through holes in the end castings and engage the threads in the lugs. Lock washers prevent these bolts from being loosened by vibration.

Since each of the wood breaks has an approximate ultimate strength in tension of 7,000 pounds it is possible to break the largest sizes of trolley wire without injury to the insulator. The wood breaks are situated in the same plane with the trolley wire and therefore are subjected to no bending moment, being subjected to direct-tension stress only.

Section Insulator—Figure 2, Side View.

The suspension bar and runner piece are of hard wood and are separate, as seen in Figure 2. The ends of the suspension bar, which is 1½ by 1$\frac{1}{16}$ by 9¼ inches in dimensions, fit into recesses in the faces of the end castings, and a top suspension is provided for attachment to a hanger with a ⅝-inch threaded lug.

The runner bar is of the same dimensions as the suspension bar, the under edge being rounded to fit the groove of the trolley wheel. It is driven tightly into the recesses in the end castings beneath the suspension bar and is further held in place by cotter pins, as shown in Figure 1. This runner bar may easily be renewed.

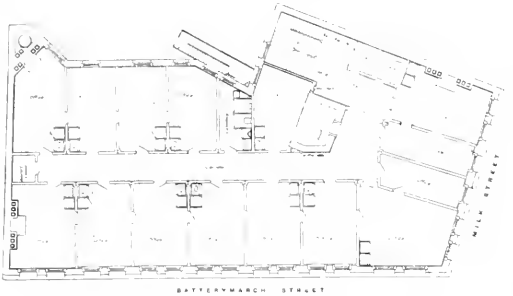
By inspection of the illustrations it will be noted that the end castings terminate in long grooved ears for the reception of the wires. These ears are each provided on the upper edge with two threaded lugs, 1¼ inches in diameter, the lugs being bifurcated. A wedge with a grooved and serrated edge, shown in detail in Figure 1, fits into the bifurcations of each of the lugs and is clamped down upon the trolley wire, lying

at the bottom of the groove, by nuts which fit the lugs. About midway between the lugs there is a projection or hump in the bottom of the groove in the ear, so that when the wedges are clamped down the wire is given a crimp, rendering it impossible for the wire to pull away. The grooves in the ears will take round, figure 8 and grooved wires.

At the tops of the end castings $\frac{3}{8}$-inch holes are drilled for feeder wire fastenings and clamping bolts are provided. The length of the section insulator is $19\frac{1}{8}$ inches over all.

EXECUTIVE OFFICES OF STONE & WEBSTER COMPANIES.

The executive offices of the Stone & Webster Companies have been moved into the 8-story office building at 147 Milk street, corner of Batterymarch, Boston. This entire building is occupied by different parts of the Stone & Webster organization, as follows: The fifth, sixth, seventh and eighth floors



Executive Offices, Stone & Webster Companies.

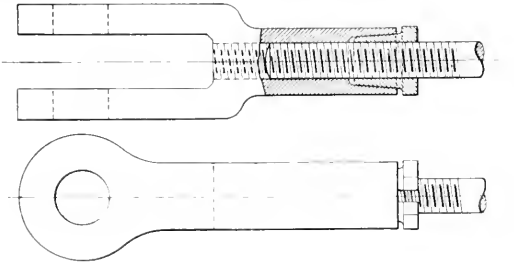
are occupied by the Stone & Webster Engineering Corporation; the third and fourth floors by the newly organized Stone & Webster Management Association; and the first and second floors by the firm of Stone & Webster.

The accompanying illustration shows the typical floor plan of the building.

THE HILLMAN LOCKED CLEVIS.

E. D. Hillman is the patentee of an adjustable clevis or jaw that can be securely locked at any desired position, which is being placed on the market by the United States Metal & Manufacturing Company of New York.

The locking is accomplished by having a conical recess in



The Hillman Locked Clevis.

the shank or stem of the clevis, this recess receiving a conical split nut. The opening in the shank for the connecting rod is threaded right or left, as desired, the nut being tapped in the same manner. When the clevis is properly adjusted the nut is screwed into the recess of the shank until the wedging causes the threads of the rod and nut and the conical sides of the nut and clevis recess to bind, this giving the lock. An adjustment can be easily and rapidly made and the clevis locked against turning at any desired point, the length of the shank determining the extent of adjustment.

This device should be of value where adjustments are necessary, as in truck brakes and brake rigging for steam and electric cars, in switch and signal apparatus, cranes, bridges and rigging. The locking feature can be incorporated in either drop-forged, malleable iron or steel clevises. Standard clevises can be treated in the same manner.

WESTERN ELECTRIC COMPANY'S EXHIBIT AT THE CHICAGO ELECTRICAL SHOW.

The exhibit of the Western Electric Company at the Chicago electrical show consisted of two parts, the telephone exhibit and the supply and power apparatus exhibit. The telephone exhibit included a full line of magneto and common battery switchboards, as well as all kinds of local and common battery and intercommunicating sets. A self-restoring drop board connected and in full operation was shown. In addition there was a full line of standard construction materials with cable terminals and showcases filled with all parts which go to make up the company's standard switchboard and subscribers' sets.

The power apparatus and supply exhibit included a 100-kilowatt 60-cycle three-phase 2,300-volt alternator, which was the largest that could be exhibited with safety on the floor of the Coliseum. The exhibit of small generators included a 15-kilowatt 250-volt direct-current engine type generator with a semi-steel vertical divided frame with laminated pole pieces. The smallest generator exhibited was a $13\frac{1}{2}$-volt 3-ampere ignition and battery charging generator. One of the Western Electric Company's latest type direct-current 250-volt motors, direct connected to a 50 KVA 60-cycle 440-volt alternator, furnished light for the booth and power to drive back-gear, continuous service, phase-wound, vertical alternating-current motors. Stators and rotors for squirrel cage and phase-wound types of machines of various classes were shown under construction. The apparatus was so arranged that the observer could see various classes and types of apparatus under construction in making his tour of inspection.

For a number of years the company has manufactured a 5-light testing regulator that can be used for testing series alternating-current lamps during the day with a maximum voltage of 440, thus eliminating the danger to lamp repair men when using a larger regulator. This regulator can also be used for lighting from 440-volt power circuits, and for this class of service the company recommends operating five series alternating-current lamps in connection with the regulator. An equipment of this kind was on exhibition and connected up so that the operation of the lamp and regulator could be demonstrated. The new Western Electric 140-volt multiple alternating-current lamp was also on exhibition and sample 110-volt alternating-current and direct-current lamps were included in the list of display lamps.

This company has recently formed a selling arrangement whereby it becomes a distributor of the Beck flaming arc lamp, and two of these lamps were on exhibition.

An interesting feature of the supply exhibition was the black enamel wire, which is said to be superior to silk and cotton, owing to the small amount of space required by the wire, the greater number of feet per pound, and the high insulating quality. A line of supplies manufactured or handled by this company was also on exhibition, including American transformers, Vulcan heating apparatus, street railway material, Electrose insulated material, Thomas high-tension insulators, Duncan wattmeters, D. & W. fuses and Deltabeston wire.

The entire exhibition was in charge of G. H. Lounsbery.

LUBRICATING GRAPHITE.

Graphites as utilized for lubricating purposes are of two kinds. One is the crystalline or foliated form of graphite commonly called "flake" and the other the amorphous form of graphite, which is non-structural, exceedingly unctuous, rich in carbon and capable of very much finer pulverization. The former is imported principally from Ceylon. The latter is mined in Mexico.

Both approximate 80 per cent of carbon (graphite). Impurities said to be carried by the foliated variety consist largely of silica, which is harsh and micaceous in nature, while any slight impurities in the amorphous (or "powder") form are soft and gritless.

While the chemical make-up is the same there is considerable difference in the mechanical action of these two formations. The amorphous graphite is peculiarly adhesive—not only does it "stay put," even under heavy frictional pressure, thereby performing its function of lubrication to better advantage, but it remains suspended in oil for a long time, thus feeding through lubricator tubes without clogging. Mixed with lubricating oils in the proportion of one teaspoonful of graphite to one pint of oil this "powdered" lubricating graphite will be found to accomplish much in the way of lubrication.

The amorphous or "powdered" graphite is mined and prepared by the United States Graphite Company, Saginaw,

Mich., which company will send on request samples and an interesting booklet "About Graphite Lubrication."

GENERAL ELECTRIC COMPANY'S EXHIBIT AT THE ELECTRICAL SHOW.

The General Electric Company's exhibit at the third annual electrical show at the Coliseum, Chicago, occupied a space of over 700 square feet in the center of the building. The exhibit was devoted principally to cooking and heating devices, among which were shown luminous radiators, coffee percolators, chafing dishes, water heaters, complete cooking and baking outfits and flatirons. An interesting feature of the exhibit was the color booth, in which color values were compared under various electric lights, including the inclosed arc, incandescent, Nernst and Welsbach types. The exhibit also included mutoscope pictures of the Schenectady factory of the General Electric Company and of the West Jersey & Seashore Railroad.

AN INTERESTING EXHIBIT OF THE H. W. JOHNS-MANVILLE COMPANY.

One of the most interesting exhibits at the Chicago electrical show was that of the H. W. Johns-Manville Company.

Last year the company exhibited for the first time its Victor combination meters, since which time these meters are said to have proved all the claims made for them. This year the company showed a complete line of both stationary and portable types.

The added attraction this year was "Linolite," a new system of lighting, which has already attracted considerable attention. The company's booth was lighted by means of Linolite in such a way as to show the features of the system to excellent advantage. Linolite, which means "line o' light," has been developed especially for window, stage and showcase lighting, as well as for the illumination of desks, pictures and room interiors. It is a new departure from the ordinary bulb lamp and consists of an aluminum reflector $2\frac{1}{4}$ inches wide and approximately 1 inch deep, in which fit tubular incandescent lamps 12 inches between centers, each lamp having a filament extending its entire length. It is stated that the light furnished by this system is much more intense and evenly distributed than is possible with the ordinary form of incandescent lamps, and with the same amount of current approximately 60 per cent more light is obtained, due to the use of a straight filament and the special form of reflector employed.

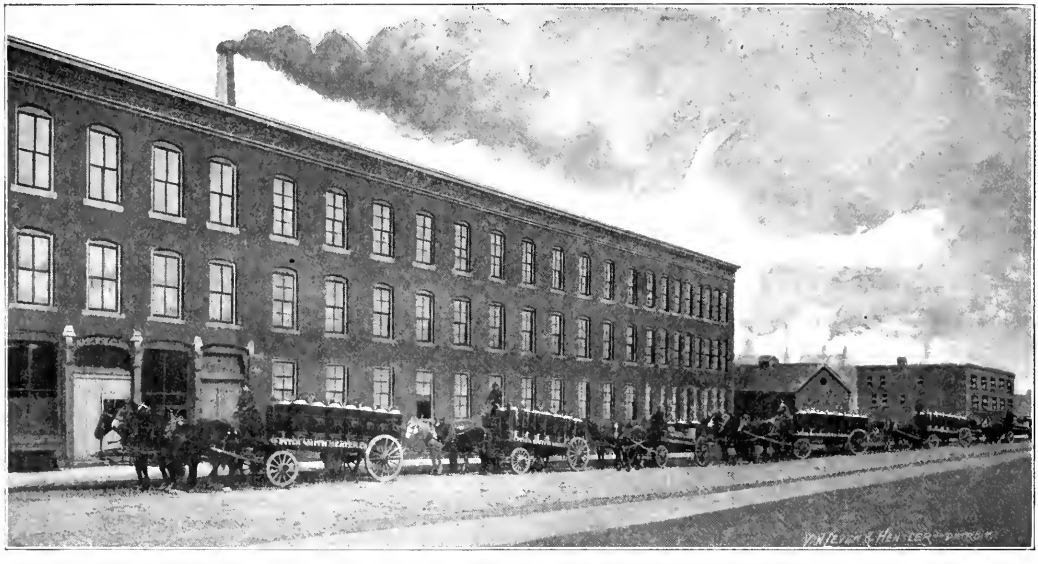
Another item of interest in this exhibit was asbestos wood, a fibrous substitute for wood, marble, slate and fiber, for fireproof construction and as an electrical insulation. This material has a wide range of uses, such as for switchboards, panel boards, fireproof barriers, etc. It can be worked with ordinary woodworking tools, the same as hard wood.

A complete line of Noark fuses and fuse devices was also shown, as well as line material, electrotherms (electric heating pads), J-M friction tape, molded mica, Monarch, Phoenix, Vulcabeston and Electrobestos insulations, asbestos pipe coverings, asbestos roofings, asbestos packings and asbestos household specialties.

The company was represented by Messrs. H. M. Frantz, manager electrical department Chicago office; F. C. Frumveller and A. M. Chamberlin of the Chicago office; A. M. Erskine, manager electrical department St. Louis office; M. H. Crosswell, manager electrical department Milwaukee office; G. A. Saylor, Milwaukee office; and W. F. Little, electrical engineer New York office.

LARGE SHIPMENT OF SMITH HEATERS.

The Peter Smith Heater Company of Detroit, Mich., announces that it has secured an order for 100 heater equipments from the Twin City Rapid Transit Company, Minneapolis, Minn. The accompanying engraving from a photograph shows the heaters loaded on wagons in front of the Smith company's plant just before shipment. This heater is known as type C, and differs somewhat in make-up from the company's type B. This heater was made up especially to meet conditions in the Twin City cars. The main object was to have a heater that could be placed in the vestibule and would not be too high to obstruct the view of the passengers. It is but 44 inches high and $20\frac{1}{2}$ inches in diameter and has ample capacity to easily heat city or interurban cars up to 40 feet inside measurement. This heater is of the magazine type and has capacity enough to run 18 hours without recoaling.



Large Shipment of Heaters for the Twin City Rapid Transit Company.

Niagara Transmission Line.

Construction has been begun on the first section, 28 miles long, of the 60,000-volt transmission line which will carry Niagara Falls current to the Buffalo Lockport & Rochester Railway. This road is now being constructed as a high-speed interurban between Lockport and Rochester, through connection with Buffalo over the International Railway being contemplated. Construction is well advanced and cars will be run over a finished portion of the road within the next few weeks. The transmission line connects with the 60,000-volt lines of the Ontario Power Company near South Greece, and runs thence across country to Albion on the Buffalo Lockport & Rochester Railway; it then parallels the railway.

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

Storeroom man wishes to make change. At present employed; can furnish first-class reference from present employers. Able to do any kind of office work. Address "Storeroom," care of Electric Railway Review, Chicago.

Position as chief electrician or superintendent; 16 years experience lighting, power and traction work, alternating and direct current; graduate of well-known school, excellent testimonials; disengaged. Address "No. 529," Electric Railway Review, Chicago.

Auditor, experienced in electric railway and lighting and construction accounting, wants position with fair-sized company. Energetic and good systematizer. Best references. Address "No. 527," care of Electric Railway Review, Chicago.

Position of chief motorman or instructor by a first-class competent man who has had 12 years' experience in that line. Thoroughly understands economy in regard to use of power and care of rolling stock; familiar with quadruple equipments and air brakes; highest references. Address "Chief Motorman," care of Electric Railway Review, Chicago.

Position wanted—The manager of a large railway, lighting and gas plant must make a change in his position owing to an unfavorable climate. Has held managerial positions for 10 years and is thoroughly familiar with the construction, organization and operation of electric railways. Correspondence solicited. Exceptional references. Address "No. 539," care of Electric Railway Review, Chicago.

Position Wanted—Have had wide experience in all kinds of street railway work, estimating, specifications, superintending and directing, overhead, underground and power station construction. Have for three years been superintendent of lines for large Massachusetts railway company. Technical education. Nine years' experience. Age 30 years. Wide acquaintance. Best of references. Address "No. 533," care of Electric Railway Review, Chicago.

POSITIONS WANTED.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Wanted—Position with interurban road by an engineer having eight years' experience in power station and general railway design and construction work. Age 33; best references furnished. Prefer position with road now under construction. Address "No. 534," care of Electric Railway Review, Chicago.

Position wanted by first-class engineer and machinist with 16 years' practical experience with compound Corliss engines, Allis-Chalmers and Westinghouse steam turbines, surface condensers, A. C. and D. C. electrical apparatus. Age 35. A1 references. Address "No. 532," care of Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

An engineer, experienced in the handling and organizing of station crews, with 10 years' experience as chief engineer in both construction and operation, as well as reconstructing old ones on a modern basis. All voltages up to 15,000, both railway and lights. Salary or per cent, depends on results. I am looking for a reputation as well as salary. Address "No. 536," care of Electric Railway Review, Chicago.

BUSINESS OPPORTUNITIES.

WANTED—RAILWAY SPECIALTIES. WE HAVE OUR OWN MANUFACTURING AND SELLING ORGANIZATIONS, WITH FACILITIES FOR SELLING THE RAILWAY TRADE. WE DESIRE TO SECURE FOR MANUFACTURE AND SALE SOME GOOD RAILWAY SPECIALTIES. ADDRESS "H. M." CARE OF ELECTRIC RAILWAY REVIEW, CHICAGO.

POSITIONS OPEN.

Technical men. Positions open in all departments. Write today if you will consider better position, change of location. Twelve offices. Service confidential. HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

Wanted—By a large street railway and lighting company, having 14 storerooms, a thoroughly experienced man, capable of taking inventories. Permanent position. Must be able to furnish best of references as to character and ability. Address "No. 538," care of Electric Railway Review, Chicago.

Master mechanic for a property having 150 to 200 cars. Must be experienced, practical and able to run shop on economical basis. Opportunity for good man to make a record. Prefer someone from middle west. Salary $125 to $150. Address "No. 537," care Electric Railway Review, Chicago.

MISCELLANEOUS WANTS.

What have you to sell in the way of second-hand equipment, machinery or material? Buyers read the "For Sale" cards on the following page and there is the place to tell your story. "For Sale" cards are inexpensive—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Special rates on contracts for 100 inches or more to be used within one year. Now is the time to send your order to Electric Railway Review, 160 Harrison St., Chicago.

MISCELLANEOUS WANTS.

Want to buy second-hand equipment, machinery or material? A card inserted in the Electric Railway Review, stating just what you want, will bring immediate response. The cost is small—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Send orders to Electric Railway Review, 160 Harrison St., Chicago.

BOOKS AND PUBLICATIONS.

Ask us about any book on electric railway and allied subjects. We publish some and sell all that are in print. The Wilson Company, 160 Harrison Street, Chicago.

Copies of the Street Railway Review of January and February, 1906, are wanted. Name condition and price. Address "No. 535," care of Electric Railway Review, Chicago.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 530," care of Electric Railway Review, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

Interstate commerce national legislation to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts enlarged from, and the parts added to, the interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

Traffic and Its Promotion.

The discussion which followed the reading of the paper of Charles F. Price, general passenger agent Western Ohio Railway, at the last meeting of the Central Electric Railway Association, showed the value of an organization for traffic officials. The traffic officials met primarily at Dayton for the purpose of forming the Central Electric Traffic Association; but they attended the meeting of the older organization and participated freely in the discussion on the "Promotion of Traffic." Mr. Price surprised his hearers by the statement that at the organization meeting of the traffic officials more was accomplished in the promotion of traffic than at any meeting of the parent association previous to that time. While the conditions under which interurban electric railways operate are very different from those which govern the management of steam roads, the freight and passenger agents of electric lines will find it profitable to observe the older established methods of their steam competitors. In the present business situation it is essential that the traffic managers of electric roads do all that lies in their power to stimulate business. If the new traffic association should consider all subjects relating to the development of traffic, it might go beyond the objects of organization as set forth in the articles of association of which an abstract was published in last week's issue of the Electric Railway Review, page 108; but it would afford assistance to those members who face competition which demands their best energies.

Cars Without Monitors.

Rolling stock can be better adapted to service conditions than has yet been done. This is a rather bold statement when one considers the results of long experience and highly developed training that are called into play in the design of modern equipments. These requisite qualities, as exemplified in many recently built cars, command our respect. Nevertheless there are cars operated on many street railways which are not well adapted to the service requirements. Such cars are frequently too large and too heavy for the traffic demands. It will be said that rush-hour service and consideration of maintenance warrant the hauling around of large and heavy cars. So they do. Yet who is willing to say that improvement along rolling stock lines is not as desirable as struggling to lower the power costs. Last June we described the new rolling stock that the Denver City Tramway had just put in service (Electric Railway Review, April 6, 1907, page 452). These cars had been designed to afford maximum seating capacity with minimum weight. Trailers are operated in Denver. These were described in the issue of May 4, 1907, page 578. The Denver trail cars have no monitor decks and thereby a considerable amount of weight is saved. In this issue a description is presented, including criticisms, of a monitorless type of car developed by the Black River Traction Company. The latest equipment in this line of development has a body 35 feet long, mounted on a running gear of special design having but two axles with a 12-foot wheel base. Automatic ventilation is provided in the car body, which has no monitor, and the complete equipment, seating 10 passengers, and equipped with two G.E.-54 motors, weighs only 10.5 tons. The excellent riding qualities of this equipment, even at speeds of 40 miles per hour, combined with the other valuable and new characteristics, should command the careful attention of those interested in more closely adapting cars to traffic.

Reduction of Accidents in Omaha.

The possible results of a well-directed and concerted campaign for the purpose of avoiding accidents is well illustrated by a statement by President G. W. Wattles of the Omaha & Council Bluffs Street Railway in his annual address to the stockholders. Mr. Wattles states that during the month of December, 1907, only 29 claims for damages were filed against the company, while the average number of claims per month for the preceding 47 months was 19. This reduction is credited by President Wattles to the campaign of education recently started by the company for the purpose of impressing upon both the public and the employes the serious effects of carelessness. As previously mentioned in these columns, the company has for several months carried large advertisements in the daily papers warning passengers against carelessness and illustrating the proper ways of boarding and leaving cars. During the month of November the practice was instituted of holding frequent evening meetings of the motormen and conductors, at which they were addressed by officials of the company on the subject of accidents. Not only have these efforts been of great service to the public but they have saved the company a great deal of money.

Mechanically Perfect Braking.

In last week's issue of the Electric Railway Review we presented a complete report of the annual meeting of the Central Electric Railway Association. The papers read at this meeting in Dayton considered topics in the operating, traffic and mechanical fields. To the mechanical man the discussion of "Fundamental Brake Rigging for High-Speed Electric Railway Cars" was undoubtedly of considerable value. R. C. Taylor, superintendent of motive power Indiana Union Traction Company, presented in this paper a problem for the air brake student and designer which if solved in a practical way will afford results of immense value. Briefly, Mr. Taylor recommends that air brake equipments should be provided with automatic friction regulators to control the braking pressure so that there will be at all times during an application the maximum possible retarding force which will not skid the wheels. The graduated release brakes as now used decrease the braking pressure as the speed decreases, and thus approach Mr. Taylor's requirements. However, to go a step farther toward a perfect brake, Mr. Taylor would have provided a mechanical means to reduce the brake pressure as the coefficient of friction between wheel and shoe increases. At first glance this seems a difficult problem, but the immense value of such a device will be an

inspiration that undoubtedly will lead to its solution. Then it will be possible to stop a car in about half the distance now required with the usual form of automatic brakes.

BETTER URBAN TRANSPORTATION IN NEW YORK.

So much has already been done and so much more seems to be in a fair way toward fulfilment in the way of relieving passenger traffic in New York, that already a more cheerful look appears on the faces of urban travelers and a more optimistic tone characterizes the headlines of the daily newspapers.

The completion of the "tube" from the Battery, Manhattan, to Borough hall, Brooklyn, has been a source of so great relief as to make life in this populous part of greater New York much more nearly worth living. Perhaps this feeling is best indicated in a few words, but the fact that a few days ago a tie-up of traffic over the Brooklyn bridge, due to some changes in track arrangement necessitated by the Manhattan terminal extension, was treated rather as a good joke than as an occasion of vituperation of the Brooklyn Rapid Transit Company. As one paper stated in its headlines, "Old Bridge Tied Up and Nobody Cared."

But, as a matter of fact, the bridge terminal has now been improved to such an extent as to be in position to take care of many of its own difficulties as they have previously existed. A great source of congestion has been the inadequacy of the Manhattan terminal to handle the 6-car trains which were essential to the handling of the traffic at the Brooklyn side of the bridge. It has therefore been necessary to run 3-car bridge trains on the shuttle system during the rush hours, involving a delay and change of cars at the Brooklyn end. With the extension of the approach over Park Row it will be possible to handle through 6-car trains to and from Manhattan, to unload and load simultaneously at that end and to avoid the crush of changing on the Brooklyn side.

With this relief and that afforded by the "tube," which appears to be operating to the general satisfaction, bridge jams should, for a time at least, be but a memory.

For relief in the direction of the Bronx, also, the plan described in a recent issue of the Electric Railway Review is passing through the preliminary stages in a hopeful way. One of the more recent suggestions which has been seized upon with avidity is that of the public service commission, which is inclined to make such arrangements as will enable the operation of steam railroad suburban trains through the proposed additional subway without "breaking bulk."

In describing certain changes which the commission has seen fit to make in the plans for the Fourth avenue subway in Brooklyn, it is stated that the object is to promote the more rapid, safe and economical operation of trains and to make it possible for cars now used in the local suburban traffic of steam railroads to be operated through the subway. It is also stated that this plan will facilitate the making by the city of more advantageous contracts for the subsequent rental and operation of the road and that it is considered a mistake to build any future subway of such dimensions that an existing railroad would be debarred from being a competitive bidder because of the impossibility of operating its own cars through it.

It is therefore concluded that the proposed Lexington avenue subway, with its crosstown connection and loop at Canal street, the latter now under construction but still capable of being changed, and all connections of the Williamsburg and Manhattan bridges and possible future connections with the Brooklyn bridge, should be constructed with a clear head room of 14 feet 6 inches instead of 13 feet 6 inches, as previously planned. It is proposed to operate the Canal street loop as two double-track railroads instead of as one single-track road—a modification which will simplify a complicated plan, bring all tracks to a level and increase the operating capacity to an amount estimated at 25 per cent, while at the same time decreasing the time required for construction.

As shown in the article descriptive of the proposed Lexington avenue subway, connection with the New York New Haven & Hartford at Mott Haven would be a simple matter. If the commission's suggestion as made to the board of estimate is carried out and the section of the subway increased to accommodate standard steam railway equipment, it will not only enable that road—and others—to operate its trains into Brooklyn, but also afford completely practicable connections with the several bridges and with any future subways that may be built in Brooklyn. Of perhaps equal importance to this very desirable feature, from the city's point of view, such a course would open the competition for operation to a larger number of bidders.

PUBLICITY—A MEANS TO AN END.

If the pay-as-you-enter cars have accomplished nothing more, they have served to demonstrate the advantages to electric railways of advertising. Various methods have been employed in advertising the pay-as-you-enter cars—leaflets, advertising in the newspapers and a legitimate use of the reading columns, coupled with all the attention to the minor details of operation necessary to the fulfilment of the promises of improved service if the public would co-operate with the companies and their employes. The results have been most gratifying without exception. What would these results have been without advertising?

In connection with operating and corporate affairs there are many possibilities in advertising. Publicity which will aid in securing the good will of the public is well worth while. For example, the effects of hostile public opinion through failure to give publicity to matters of this sort is presented in the situation of the steam railways and other large corporations today, and even some of the electric railways. The railways and other corporations are just awaking, some of them slowly, to the value of publicity. The electric railways, which are for the most part young, can take advantage of an opportunity to acquire an asset of good will which the steam railways are now paying dearly for or have yet to acquire.

There is thought to be no electric railway system with a publicity system more highly developed and with more favorable results than the Twin City Rapid Transit Company. Speaking on "Advertising from the Standpoint of the Street Railway Company" before the American Street and Interurban Railway Association at Atlantic City last fall, Arthur Warnock, general passenger agent of that company, said:

"I emphasize strongly the feeling between the press and the road because I think it a strong asset that every road should have. The good will of the newspapers is of incalculable value and a road should utilize every fair means to secure the support of its newspapers. I mean by this that the relation of the company to the public should be of such a character that in all fairness the newspapers will have a friendly feeling for the company. Criticisms, of course, will be made on the best of service, but the general trend of sentiment should be favorable. There is nothing that appeals to newspapers so strongly as the practice on the part of a public service corporation of taking the public into its confidence, and we have always taken our public into our confidence."

Recently in answer to a request for information for use in the Electric Railway Review there came a reply in which the following sentence appeared: "We have always found that wherever information is published, even in the high-grade technical papers, it is often used in such a manner by outside parties as to make it objectionable to the railroad company." The matter referred to had to do with an accident, but it was not proposed to consider the causes of the accident, but rather the manner in which disastrous conse-

quences had been prevented by the substantial character of the equipment affected.

The statement of the company in the case indicated a condition of public opinion toward it which is deplorable. The value of advertising depends on what one has to offer and how he offers it. The company in question has equipment and service which are not excelled in this country, yet it feared to advertise the good points of its equipment because of the attitude of the public toward all its affairs, with the result that it was thought the information might be so misinterpreted as to cast further discredit upon the company.

A corporation in its position needs an expert publicity manager and needs one badly. Such a position is not arrived at without its causes, but taking for granted that every electric railway intends to give the public a "square deal" and a little more, other things being equal, the advantages of publicity, even at such a stage, if persistently continued, will bring satisfactory results. For instance, the effects of publicity under an adverse state of public opinion are exemplified in the increased good will of Chicagoans toward the Chicago City Railway as a result of its campaign of publicity, coupled with its very evident intention to do all that it advertised. But "if you do not have a good proposition to offer, then make it a good proposition or do not advertise it."

ANNUAL REPORTS.

North American Company.

Gross earnings of the North American Company for the year 1907 increased 14.63 per cent over the previous year. Operating expenses increased 17.15 per cent and net earnings were 12.11 per cent higher. The appropriation for depreciation and reconstruction reserves in the last year was 40.08 per cent larger than in 1906. In the following table the earnings for two years are compared:

	1907.	1906.	Increase.
Gross earnings	$22,821,849.49	$19,907,433.31	$2,914,416.18
Operating expenses	11,693,280.09	9,981,299.92	1,711,980.17
Net earnings	$11,128,569.40	$ 9,926,133.39	$1,202,436.01
Taxes and annual charges	1,439,164.41	1,226,758.74	212,405.67
Depreciation and reconstruction reserves	1,217,353.11	869,002.74	348,350.37
Income from operation	$ 8,472,951.88	$ 7,830,371.91	$ 641,679.97
Miscellaneous income	810,459.52	302,190.07	508,269.45
Total net income	$9,282,511.40	$ 8,132,561.98	$1,149,949.42
Interest paid and accrued	5,893,446.29	1,828,335.79	1,065,110.50
Surplus applicable to dividends	$ 3,389,065.11	$ 3,304,226.19	$ 84,838.92
Preferred dividends	1,044,160.00	1,044,160.00	.....
Surplus	$ 2,344,905.11	$ 2,260,066.19	$ 84,938.92

In addition to the depreciation and reconstruction reserves shown in the foregoing statement, reserves are created for injuries and damages, legal expenses and insurance, by monthly charges made to ordinary operating expenses, "the intent of the accounting system pursued being to provide by reserves for every reasonable contingency that may occur in the operation of the properties, so that the full amount of the surplus applicable to dividends, as reported, shall actually be available for the payment of dividends."

In his address to the stockholders C. W. Wetmore, the president, states:

In revaluing the assets of the company as of December 31, 1907, the sum of $2,290,365.73 has been written off from undivided profits. To the making of this revaluation the directors have given their most careful consideration, and the valuations assigned are believed to be conservative.

As of December 31, 1907, there remains to the credit of undivided profits account the sum of $1,996,613.92. All dividends paid are charged to this account. Lest it be supposed that the credit balances, from time to time appearing in this account in the annual reports of the company, have been created by the increase in the value of its assets, as readjusted by the directors at the close of each fiscal year, or be inferred that dividends have, to some extent at least, been based upon such increment in book values, the following statement of the cash receipts and cash disbursements of the company, pertaining to its income and undivided profits account, and of the composition and application of its undivided profits, is made.

Following the reduction of the capital stock of the company to $12,000,000, and on the occasion of an application for the listing of its reduced stock, a balance sheet was filed with the New York stock exchange, as of February 1, 1901, upon which as a starting point the subsequent accounting of the company has been based.

Its cash income and disbursements from that date, February 1, 1901, to December 31, 1907, have been as follows:

Receipts—Interest received and accrued, $839,586,20; dividends received, $4,864,586,08; commissions, profits and compensation for services, $2,245,552.70; premium on capital stock, $12,459,86; total, $7,962,184.84.

Disbursements—Salaries, legal expenses, net rentals and all other expenses of administration, $517,711.20; taxes, $35,653.74; commissions, $182,500; dividends, $5,392,346.25; total, $6,128,241.19.

Excess of cash income over disbursements, $1,833,943.65

In many of the states of the United States (including Wisconsin and Missouri) laws have been enacted providing for the supervision and regulation of public service corporations, either by state commission or by municipal authority, and similar laws will undoubtedly be enacted by the other states. While varying in many particulars, the general objects of these laws may be summarized as being: (a) To enforce proper and uniform accounting and publicity of rates and accounts; (b) to compel the furnishing of standard facilities adequate for the public requirements; (c) to prescribe and enforce just and reasonable rates and practices.

The management of the public service corporations in which the North American Company is interested may claim credit for having adopted many years ago, for business reasons uninfluenced by fear of impending legislation, the essential principles, which these statutes seek to enforce.

Having anticipated the ends sought to be obtained by the legislation under discussion, we do not feel that it will have an adverse effect upon the interests of the North American Company, but, on the contrary, that its tendency will be to strengthen the position of the operating companies affected and ultimately to enhance the investment value of their securities.

Concerning the accounting methods in force, striking testimony is available in a report made on August 31, 1907, by public accountants, who were retained on behalf of the city of Milwaukee in a proceeding brought by the city against the Milwaukee Electric Railway & Light Company before the Wisconsin railroad commission, and who investigated the accounts of that company for the 10 years ending December 31, 1906. The accountants said:

"We found the books and records of the company to have been kept with unusual skill and accuracy, and we were accorded at the hands of the accounting department every courtesy which would facilitate our work, and are pleased to give here an expression of our appreciation of the consideration shown us. The attitude of the management in this respect is especially creditable, in view of the fact that our visitation was not at the instance of the company, nor was our work presumed to be for its benefit."

Mr. Wetmore also quotes that portion of the accountants' report which relates to the reserves of the company and was published in the Electric Railway Review of September 21, 1907, page 340.

The balance sheet as of December 31, 1907, shows stocks valued at $28,548,024. The company has sold to the Milwaukee Light Heat & Traction Company the entire common capital stock of the Milwaukee Electric Railway & Light Company ($9,000,000 par value) and has received in payment therefor the capital stock and refunding and extension mortgage bonds of the traction company, the sale or exchange having been made in the belief that the future development of these properties can be more effectively provided for through the instrumentality of the traction company as the controlling company. The bonds are valued at $4,520,833, and consist of $5,000,000, par value, Milwaukee Light Heat & Traction Com-

pany refunding and extension mortgage 5 per cent 30-year gold bonds. The accrued interest on these bonds is $20,833.33. Loans stood at $4,047,453. These are loans to constituent companies for construction purposes.

The report refers to the extensions of the railway lines of the Milwaukee Light Heat & Traction Company, and says that because of the adverse financial conditions the capital expenditures of the other subsidiary public service corporations have been limited to such as were deemed to be imperatively required to meet present demands, or as were unavoidable because of engagements previously entered into.

South Side Elevated Railroad.

Gross earnings of the South Side Elevated Railroad of Chicago increased 17.47 per cent in 1907 over 1906. This gain is the result of the normal increase of population in the territory traversed, the opening of five new stations on the Englewood extension and to the opening to traffic of the new Kenwood branch. On account of a normal increase in operating expenses and some extraordinary expenses which were made for the improvement of the structure and operating conditions, the increase in net earnings was 9.3 per cent. The principal results of operation for three years follow:

	1907.	1906.	1905.
Gross earnings	$2,105,193	$1,788,975	$1,713,347
Oper. expenses and taxes.	1,459,746	1,207,269	1,052,962
Net earnings	$ 645,447	$ 581,706	$ 660,385
Interest and rentals	205,939	33,750	33,750
	$ 439,508	$ 547,956	$ 626,635
Net divisible income	409,187	409,177	409,165
Surplus	$ 30,321	$ 138,779	$ 217,470

The expense of conducting transportation increased $142,537 over 1906, the total expenditure by this department being $677,482, or 32.2 per cent of gross earnings. Charles V. Weston, the president, said in his remarks to stockholders that the large increase in this expense "is due to the opening of new lines, requiring a much larger number of men and cars, and to the operation of such a service that patrons would be attracted to it from competing lines of transportation on which new and attractive service is being offered to the public."

An abstract of the address of Mr. Weston to stockholders follows:

The effect upon traffic due to the opening of the new branch lines and to the added facilities offered by the operation of express trains on the central track has been gratifying. During January, 1907, the average daily traffic was 92,411 passengers. The patronage of the road increased steadily until October, when the high mark was reached, with a daily average for that month of 126,670 passengers. The sudden depression in general business which occurred in October caused the traffic to decline during November and December. There are indications now that the low point has been reached, and that we are beginning to recover the business which was lost during the last two months of 1907.

Rapid progress is now being made toward the completion of the stock yards branch. The line will be opened to traffic on or before May 1 of this year.

The steel structure between Twelfth and Congress streets was thoroughly overhauled and stiffened at expansion points by the addition of steel channels riveted to the columns and cross girders.

During the year 123 cars went into the shops for general repairs. These cars were thoroughly overhauled inside and out. All necessary carpenter, blacksmith, electrical and machine work was done. Forty-nine platforms have been replaced where timbers were found to show signs of wear. Thirty trailer trucks were entirely rebuilt with larger axles, journal boxes, bearings and brakes of the inside equalizing type. All necessary renewals of steel tires to keep the wheels of the equipment in good condition have been made.

All new construction work authorized by the city ordinance of March 16, 1903, has been completed, except the line to the stock yards which is being constructed by the Chicago Junction Railroad, and the Union avenue yard on the stock yards branch which is being built by the South Side Elevated Railroad. The whole construction will be finished within the amount of the bond issue. Besides the additions to the elevated railroad structure, equipment and power plant, a large tract of land was purchased, on which there have been created car storage facilities which will be adequate for the business of the company for many years to come.

When the stock yards line is completed and in operation the system of tracks composing your property will represent 36½ miles of single-track railroad, exclusive of yards and sidings, capable of handling a traffic enormously greater than the capacity of the loop terminal in the downtown district. The present traffic during the rush hours at night and morning overtaxes the present terminal facilities in the business center of the city, and one of the most important problems confronting the elevated properties of Chicago at this time is the improvement of this terminal so that its capacity will approximate the ultimate capacity of the main lines. The completion of the special manganese steel work at the junctions and curves on the loop, and the installation of electropneumatic interlocked signal devices has increased the facilities for the safe and rapid movement of trains through the junctions, but no material progress has been made toward providing other much needed facilities for the relief of loop congestion. The public authorities have to date declined to permit the lengthening of platforms on the union loop. The lengthening of these platforms to allow two trains to stand in a station and unload at the same time would afford a considerable measure of relief, and is essential to any plan of operation which contemplates the joint use of one track by the trains of two companies. Although lengthened platforms will aid the loading and discharging of passengers at the loop stations, expedite the movement of trains and relieve congestion, they will not completely solve the problem of supplying terminal facilities capable of developing the full capacity of the main lines. Therefore other additional improvements must be provided. The physical conditions are difficult, and there are so many conflicting interests to be harmonized that the problem is complex. However, the problem is believed to be susceptible of solution, and it is hoped that during this year substantial progress will be made toward a final adjustment of it.

MEETING OF CENTRAL ELECTRIC ACCOUNTING CONFERENCE CALLED.

A meeting of the Central Electric Accounting Conference has been called by the chairman, M. W. Glover, auditor Ohio Electric Railway, Cincinnati, for February 11 at Lima, O. All the accounting officers of electric railways in Ohio, Indiana, Illinois and Michigan are invited and it is hoped by those who are interested in the conference that a large number will be present.

The following are some of the subjects which have been listed for discussion at this meeting: The settlement of interline ticket and mileage balances; prepaid ticket orders; the handling and settlement of overcharge and loss and damage freight claims.

In discussing the object of the meeting Mr. Glover made the following statement:

Even if the meeting of the Central Electric Accounting Conference did not result in more than the meeting together of accounting officers of the various lines in this territory and affording an opportunity of discussing matters of interest to acconntants generally, I believe the meetings would be worth the time spent attending them; hnt our record for the past year shows that at the meetings we have handled various matters and have accomplished much good, in addition to affording us the opportunity of meeting those with whom we correspond daily. I hope this conference will be continued and that we will find it possible to arrange to have regular meetings at least three times a year, and that these meetings will be well attended and that all who come will feel amply repaid for their trip.

We have always been able to complete our work within a day and I think all who have attended agree with me that the meetings have been of great benefit to them. All with whom I have talked about continuing this conference have expressed the opinion that we should not allow the conference to go by default, but should continue the meetings and invite others interested in the accounting work of electric interurban lines to meet with us and discuss matters of general interest.

The Terre Haute Indianapolis & Eastern Traction Company has established through service from Indianapolis to Terre Haute, Ind.

TRANSPORTATION AND TRAFFIC ASSOCIATION ORGANIZED.

On January 14 the committee on organization of the American Street and Interurban Railway Association, acting in accordance with a resolution passed at the Atlantic City convention, issued a circular letter to general managers announcing a meeting of representatives of member companies of the association, to be held in New York on January 30 for the purpose of organizing a fourth affiliated association, to be devoted to the interests of the operating and traffic departments. The circular setting forth the objects of the proposed association, which was signed by Calvin C. Goodrich, W. Caryl Ely and James F. Shaw, the committee on organization, was published in the Electric Railway Review of January 18, page 65.

The meeting was called to order on Thursday of this week, as announced, with W. Caryl Ely, past president of the American association, in the chair, and an attendance of about 50. Mr. Ely was elected temporary chairman and Bernard V. Swenson, secretary of the American Street and Interurban Railway Association, temporary secretary.

Secretary Swenson read the constitution and by-laws which had been drawn up by the organization committee appointed by the American association. After a discussion of several points it was adopted without change.

An abstract of the constitution and by-laws of the American Street and Interurban Railway Transportation and Traffic Association, in so far as they differ from those of the existing affiliated associations, follows:

American Street and Interurban Railway Transportation and Traffic Association—Constitution.

1. The name of this association shall be the American Street and Interurban Railway Transportation and Traffic Association, and its office shall be at the place where the secretary resides.

Objects.

2. The objects of this association shall be to bring together general managers, managers, superintendents, passenger, express and freight agents, advertising managers and other operating officials and employes engaged in or connected with the actual operation of street and interurban railway companies, for the interchange of ideas, consideration of operating and transportation problems, methods of promoting traffic, and all other matters incident thereto.

Members.

3. The membership of this association shall consist of two classes, as follows:

(a) Active members, consisting of active members of the American Street and Interurban Railway Association. Each active member shall be entitled to one vote on all questions coming before this association, which shall be cast by a properly accredited representative of its transportation or traffic department. Each active member shall send as many delegates from these departments as it may desire.

(b) Associate members, consisting of associate members of the American Street and Interurban Railway Association, who may elect to ally themselves with this association.

By-Laws.

1. The officers shall consist of a president, three vice-presidents, a secretary and treasurer, and four others, who shall constitute the executive committee. The executive committee shall have the entire charge and management of the affairs of the association. The secretary and treasurer shall be the secretary and treasurer of the American Street and Interurban Railway Association. All other officers and members of the executive committee shall be elected by ballot at each annual meeting of the association, and shall hold office until their successors shall be elected. The officers and members of the executive committee of this association, with the exception of the secretary and treasurer, shall be chosen from the transportation and traffic departments of active members

Secretary and Treasurer.

4. The duties of the secretary and treasurer shall be as follows:

(a) To receive and safely keep all moneys of the association; to keep correct accounts of same, and to pay all bills of the association approved by the president.

He shall make an annual report to be submitted to the association at its annual convention. His bond given to the American Street and Interurban Railway Association shall be and is deemed to be sufficient for all the purposes of this association.

His salary shall be fixed and paid by the American Street and Interurban Railway Association.

[Sections b, c, d, e, f, g and h outline duties similar to those for the other affiliated associations.]

[By-laws on the following subjects are in substance similar to those for the other associations: Executive committee, meetings, order of business, voting, reading of papers, papers, illustrations and models, rules of order, amendment and copy of constitution and by-laws.]

Letters were read from the following expressing their regret at their inability to be present and giving assurance of their interest and co-operation in the new association:

F. W. Coen, general manager Lake Shore Electric Railway; E. A. Newman, general manager Portland (Me.) Railroad Company; L. E. Fischer, vice-president and general manager Illinois Traction System; F. W. Brooks, general manager Detroit United Railway; T. K. Glenn, vice-president Georgia Railway & Electric Company; W. W. Cole, general manager Elmira Light & Railroad Company; W. E. Kirkpatrick, secretary and treasurer Kansas City Railway & Light Company; George B. Hippee, general manager Des Moines City Railway; R. D. Apperson, general manager Lynchburg Traction & Light Company; Calvert Townley, vice-president Connecticut Company. Other letters had been received, all of which, with one exception, favored the organization of the new association.

A nominating committee was appointed as follows: J. N. Shaw, Dana Stevens, F. W. Bacon, E. W. Peck and J. W. Brown. A committee on subjects for the 1908 convention, including Messrs. J. A. Nagle, E. B. Shaw and Duncan McDonald, was also appointed.

At the afternoon session the nominating committee reported and the following officers were elected: President, C. Loomis Allen, vice-president and general manager Utica & Mohawk Valley Railway, Utica, N. Y.; first vice-president, Robert I. Todd, first vice-president and general manager Indianapolis Traction & Terminal Company, Indianapolis, Ind.; second vice-president, George L. Radcliff, superintendent Cleveland Electric Railway, Cleveland, O.; third vice-president, Arthur W. Warnock, general passenger agent Twin City Rapid Transit Company, Minneapolis, Minn.; secretary-treasurer, Bernard V. Swenson, secretary-treasurer American Street and Interurban Railway Association, New York, N. Y. Executive committee, George W. Parker, general express agent Detroit United Railway, Detroit, Mich.; Henry C. Page, general manager Springfield Street Railway, Springfield, Mass.; N. W. Bolen, superintendent transportation Public Service Corporation of New Jersey, Newark, N. J.; H. A. Davis, superintendent railway department Nashville Railway & Light Company, Nashville, Tenn.

The president announced standing committees on the following subjects: 1. "Express and Freight Traffic." 2. "Passenger Traffic." 3. "Rules for City Operation." 4. "Rules for Interurban Operation." 5. "Training of Transportation Employes."

The committee on "Programme" reported the following tentative list of subjects: 1. "Carrying United States Mail." 2. "Operation of Multiple Car Trains on Interurban Roads." 3. "Rates and Regulations for Carrying Freight and Express." 4. "Shall Electric Railways Engage Directly in Street Car Advertising or Contract the Privilege with an Advertising Company?" 5. "Possibilities of a Well-Conducted Publicity Department." 6. "How Can a Small Road Promote Traffic and Increase Its Revenue?" 7. "Smoking on Cars."

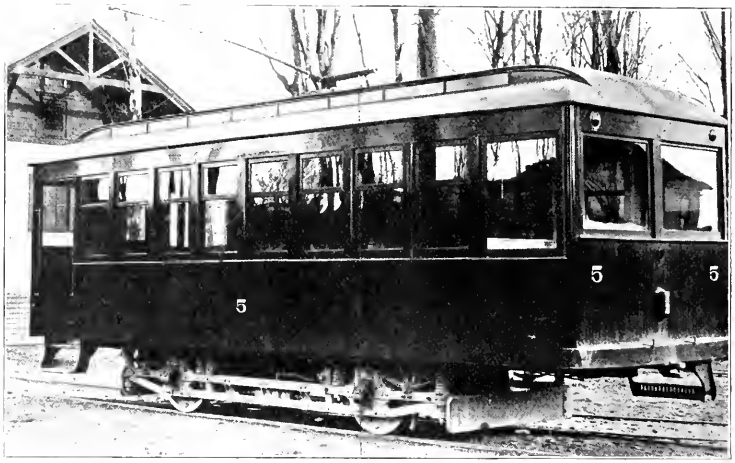
The municipality of Stratford, Ont., is said to be considering the construction of an electric railway, to be operated by the city.

LONG SINGLE-TRUCK CARS WITHOUT MONITORS.

There are electric roads which operate cars too heavy and too cumbersome for the traffic of the community which they serve. Believing that many of these railways could increase net earnings if attention were given to the problem of more closely adopting the types of rolling stock to the service required, the Electric Railway Review is pleased to present a concrete discussion of this subject by A. H. Lefebvre, secretary and treasurer Black River Traction Company, Watertown, N. Y., and T. J. Nicholl, New York City. In the Electric Railway Review, July 13, 1907, page 44, under the title "Cars for City Service," Mr. Nicholl made a plea for single-ended cars and these cars to be constructed without monitors.

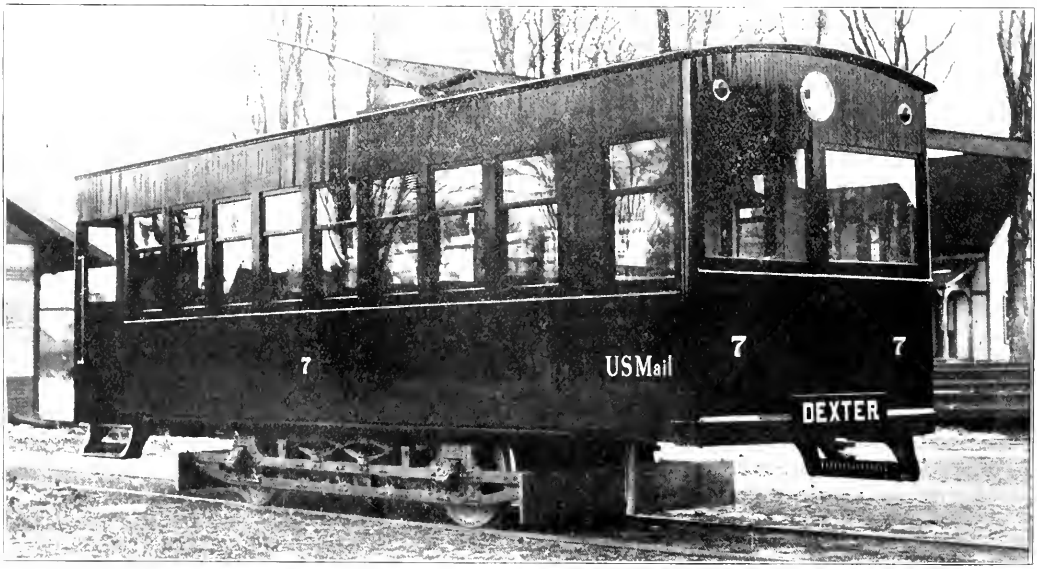
At the time this article was published the Black River Traction Company was building cars without monitors. The original cars have since been improved, and we are now privileged to present descriptions and illustrations of these equipments, together with criticisms by T. J. Nicholl and replies thereto by Mr. Lefebvre of the Black River Traction Company.

As described by Mr. Lefebvre Car No. 5 (illustrated) was the first one built by the Black River company. For purposes of good appearance a monitor, reduced in height, was retained. Car No. 5 is mounted on a Peckham type of truck and spring support, with a 10-foot wheel base. It has made quite an impression on the public, in contrast with the former type of car as illustrated by Car No. 12, shown herewith. Car No. 12 had a Peckham 7-foot wheel base truck. A criticism of Car No. 5 was that although it had a 10-foot wheel base it would not ride bad track easily because the steel underframe of the car made the equipment so rigid that it "felt" every depression.



Long Single-Truck Cars Without Monitors—Car No. 5. Low Monitor, Square Ends and 10-Foot Wheel Base.

Car No. 7 exhibits the next step in improving the design. The monitor deck was not used and for this reason the weight of the roof was reduced by 1,200 pounds. Room was also had for a stationary headlight and red markers up beyond the reach of the mud spattered by the horses' feet. The truck, as illustrated, is a radical departure. The car body rests on a bolster of four heavy elliptics with rockers below so that none of the motion of the wheels is transmitted to the car body, whose inertia is enough to permit of passing

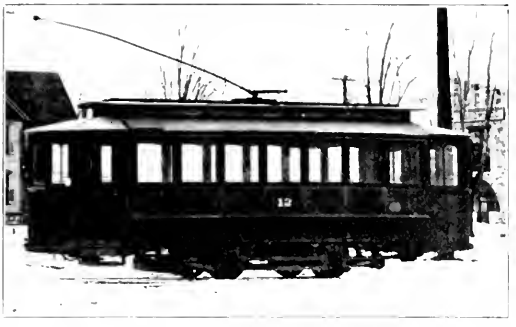


Long Single-Truck Cars Without Monitors—Car No. 7. Twenty-eight Feet 6 Inches Long, Without Monitor, 10-Foot Wheel Base.

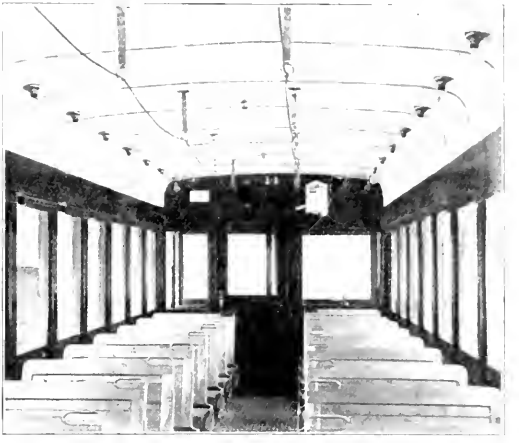
depressions of 3 inches in the track without these being noticeable inside of the car. Side springs limit the rolling motion, which is very slow and gives the same impression as the roll of heavy coaches on double trucks. Car No. 7 is 28 feet 6 inches long and weighs complete 18,000 pounds.

Car No. 14.

In the design of Car No. 14 (illustrated) the good features of Car No. 7 were retained but the roof was built still higher on the sides to permit of the sashes being raised above the passengers' heads. This type of car received the preference when competing for traffic in summer, so that the company has sold its regular 10-bench open cars and will not use that type another season. This Car No. 14 is said to be the largest single-truck car ever built for single-truck operation. It is daily making runs at 40 miles per hour between stops.

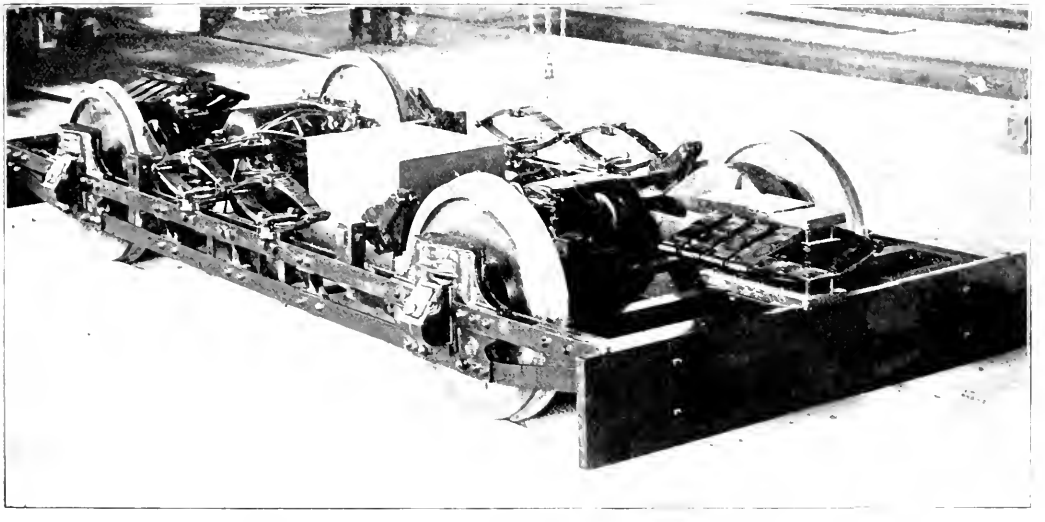


Long Single-Truck Cars Without Monitors—Car No. 12. Type Originally Operated with 7-Foot Wheel Base.



Long Single-Truck Cars Without Monitors—Interior of Car No. 14, Showing Arrangement of Lamps, Register and Ventilator.

feet, width, 8 feet 3 inches at eaves. Seats for 10 passengers, double-end control, with a locked compartment at each end for the motorman, the rear compartment being used to carry United States mail. Heywood Brothers & Wakefield walkover seats, independent air brakes on each of the four wheels, no hand brakes, steel underframe, double "Stanwood" steps 5 inches above rails, 32-inch forged steel wheels with $2\frac{1}{4}$-inch treads, wheel base 12 feet, passing easily curves of 50 feet radius. This length of 12 feet makes a 35-foot single-truck car possible. Journal bearings, $3\frac{3}{4}$ by 9 inches. No check plates.



Long Single-Truck Cars Without Monitors—Running Gear for Car No. 7.

It rides very smoothly and is the most popular car on the lines of the Black River Traction Company. This desirable quality is due to the success attending three years' use of 10-foot wheel base trucks. Experience at Watertown has satisfied the company that a long wheel base is not objectionable on sharp curves.

The principal dimensions follow: Length over all, 35 feet, width, 8 feet 3 inches at eaves. Seats for 10 passengers, double-end control, with a locked compartment at each end for the motorman, the rear compartment being used to carry United States mail. Heywood Brothers & Wakefield walkover seats, independent air brakes on each of the four wheels, no hand brakes, steel underframe, double "Stanwood" steps 5 inches above rails, 32-inch forged steel wheels with $2\frac{1}{4}$-inch treads, wheel base 12 feet, passing easily curves of 50 feet radius. This length of 12 feet makes a 35-foot single-truck car possible. Journal bearings, $3\frac{3}{4}$ by 9 inches. No check plates. Two GE-54 motors. Gears with 17 and 68 teeth, giving a speed of 40 miles per hour on level track when using 38 amperes at 550 volts. Total weight of car complete, 21,000 pounds.

The management has been highly complimented on the interior arrangement of this type of car, similar to No. 14. An interior view is presented which shows a really creditable

design. Every piece of wood is smooth, with rounded corners, so that the car is always clean. The ceiling is enameled white and reflects the light from 25 lamps to make it brilliantly lighted at night.

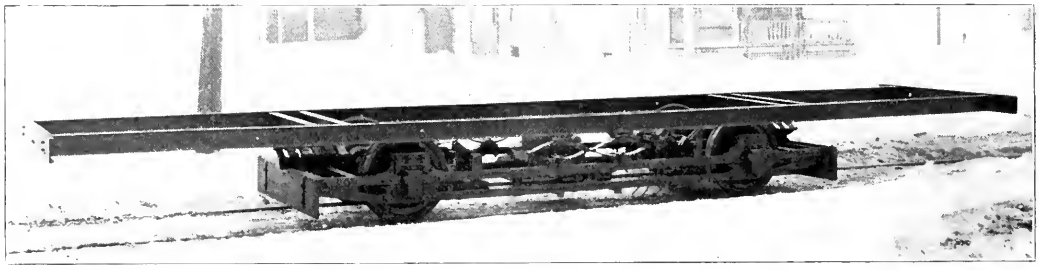
The heating and ventilation are very satisfactory even for a cold country. Plate glass is used throughout, and the motorman's cab is supplied with a cushioned seat and an 800-watt heater. This not only keeps the cab warm but also keeps the sandbox hot enough to permit of a week's supply being carried.

The design of the square front is responsible for the perfect system of ventilation (a vacuum system). The front of the car body is always in a partial vacuum when the car is moving, so that with front and rear ventilators open the air is changed in 15 seconds. With only the front ventilator open the air is changed in two minutes and with both ventilators closed in five minutes. The doors are purposely fitted rather loosely.

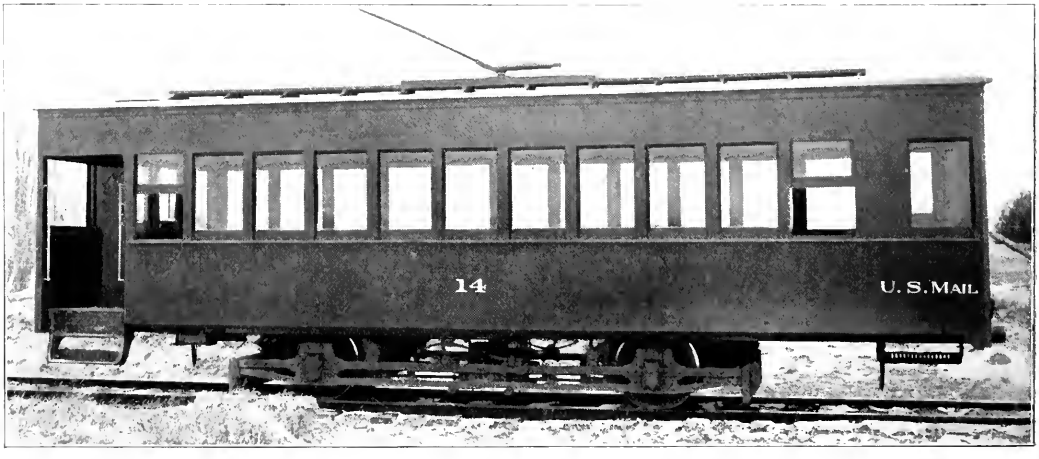
The loss of the monitor has made it possible to build a warm roof, so that the ceilings last indefinitely. The floor is double, so that heating by electricity is easy and sure in zero weather.

An interesting feature in the construction of Car No. 14 is the arrangement of the vestibule doors, which is illustrated in the plan drawing of the car and the photograph of the front platform. The motorman's compartment is shut off by a door swinging from the same hinges as the door in the entrance to the car body and it was a problem requiring considerable experimenting to so arrange the doors that in case of an accident the motorman would not be locked in by the passenger door or the passengers locked in by the motorman's door being open, as each door has a spring catch to hold it in either position.

Normally the motorman's door is closed and locked on the inside. The passenger door swings from the same hinges and when open engages a spring catch on the motorman's door, which can then be used just as readily as before, as both doors swing together when required. The same thing occurs if the motorman's door is opened wide, as shown in the accompanying photograph of the vestibule; it catches on the passenger door and does not interfere in the least if the passenger door is opened from the inside, both swinging together. As the motorman's door lock is a spring lock, this operation has the effect of locking the motorman's door until such time as it may be opened by one of the crew with one of their standard Yale keys, which are alike for all cars, switchstands, barn doors, etc.



Long Single-Truck Cars Without Monitors—Side View of Steel Underframe and Running Gear for 35-Foot Single-Truck Car. Wheel Base, 12 Feet.



Long Single-Truck Cars Without Monitors—Car No. 14. Thirty-five Feet Long, Without Monitor, 12-Foot Wheel Base.

It will also be noticed from the view of the front platform that there are no projecting grab handles to encourage boarding the cars while in motion. As Mr. Lefebvre says: "We are not leading strenuous lives out here in the north woods. We prefer to have the car stopped when passengers are boarding or alighting. On busy corners we ask the passengers to 'Leave the car by the front door, please,' and they are usually well out of the way before we can load up the waiting passengers."

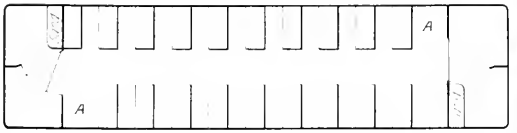
One seat is left out at each end at the spaces marked A on the diagram, as the space is found convenient to pile up

suitcases of steam train passengers. The sand boxes are covered by a leather cushion, which forms a roomy seat for the motorman and gives the new men who are being instructed a comfortable position without interfering with the safe operation of the car.

Criticisms of T. J. Nicholl.

Inasmuch as the design of Car No. 11 had been carried out along lines similar to those proposed by Mr. Nicholl in his article earlier referred to, a description and photographs of the equipment were shown him. We are privileged to abstract a letter of criticism of Car No. 14 which Mr. Nicholl recently wrote:

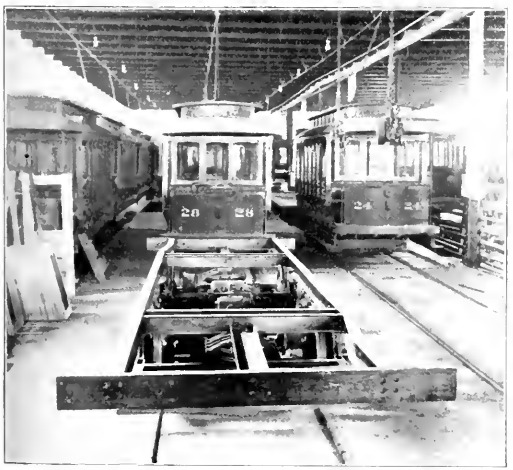
The Black River Traction Company is unquestionably right in its effort to make the plain roof popular and the officers should have due credit for a very wise move. Please



Long Single-Truck Cars Without Monitors—Floor Plan of Car No. 14, Showing Arrangement of Vestibule Doors.

note that without the monitor deck they claim a saving of about 1,200 pounds weight as well as the expense. Without doubt they get better ventilation and more room for the headlight in the proper place in permanent form. Now, who can say that the car does not, from a railroad (not a 'bus) standpoint, look better and much more businesslike than one with a monitor?

There are a few points, however, that I would change: (1) I would put the ventilation above each window with a shutter like a stove draft, so that it might be handled by each passenger to his liking the same as in Europe. (2) I would put the register on the inside on a rod instead of a cord, so as to make it unlike the signal bell cord, thus preventing



Long Single-Truck Cars Without Monitors—End View of Steel Underframe and Long Wheel Base Truck.

angry passengers from ringing up fares instead of stopping the cars. (3) I would bring the curtains nearer the glass.

Mr. Lefebvre seems very much in favor of a long wheel base, and he is right, provided one can be operated, but there must be ample play in the journal boxes, wide tread wheels and a gauge of the wheels much less than the gauge of the track. Otherwise the truck will not go around small radius curves.

I tried an 8-foot 9-inch wheel base in Rochester with Taylor trucks, but they were too rigid to go around "square angles" in the narrow streets. Cities object to side treads because they are liable to break down the pavement near the rails and often managers will object to them because they chip the wheels. With a good wide head rail, however, provided with a beveled edge, as is being used in Chicago, there should be no objection. In such cases a long wheel base can be used much more economically than double-truck cars.

The Black River Traction Company has a 35-foot car on a single truck, seating 40 people. This answers its purposes splendidly.

Mr. Lefebvre's Arguments for Car No. 14.

Replying to Mr. Nicholl's letter, Mr. Lefebvre writes, in part, as follows:

Ventilation.

As regards the ventilation, this has to be attacked with the full knowledge that the public will not agree on anything

Long Single-Truck Cars Without Monitors—Front Platform of Car No. 14, Showing Motorman's Compartment.

so we have the square front car which in parting the air forms a vacuum in the open vestibule over the step. The ventilator opening is the square hole over the door fully open in illustration of the interior of car No. 14. With this ventilator open and all other openings closed, the draft will suck a handkerchief from one's hand so that it will stand straight in a horizontal line toward the opening, when the car moves from 12 to 15 miles per hour. This refers to the front and not the rear of the car.

Under these conditions we can keep the car warm and

comfortable. No drafts are perceptible, as the front opening is fed by air coming in at the rear door and all the windows. The passengers never ask to have that opening closed, as they consider it of small moment; and as soon as the extremely cold days are past we can run with both front and rear openings open. This allows so much air to enter the car from the rear opening that passengers on the three rear seats sometimes complain that they can feel a draft on the backs of their necks, whereupon the conductor reduces the rear opening.

This system did not grow of itself. We have cut up 11 old cars in making experiments and none of these was in line with the usual practice.

Fittings.

Now, to speak about the register and signal cords. We have a fine assortment of rods and fittings, but we are satisfied with our present arrangement. We use a secret register, so it would not matter if passengers rang up a few fares now and then, but as a matter of record they have not done so as yet (three years). The ceiling is high, and as the car is almost absolutely quiet it is easier for a passenger wishing to get off to say in ordinary tones, "Court street," than it would be for him to reach up to the signal cord. Your experience, of course, has been with a noisy car, when a passenger would need a megaphone to make the conductor hear.

Trucks.

Our truck is fitted according to M. C. B. practice, i. e., the wheels are pressed on so that they have a lateral motion of $\frac{3}{8}$ inch on standard gauge track—$\frac{5}{8}$ inch on each side. The wheels are solid forged steel, 33 inches in diameter, with $2\frac{1}{4}$-inch treads.

The curves in our car barn are 45 feet radius. A dead truck with motors on it ready to place under a car body can be pushed around these curves by four men if the truck has 6-foot 6-inch wheel centers and by only three men if it has 12-foot wheel centers. All other conditions remaining the same, it takes three men to push it along straight track. So we are not worried by the operation on curves of long wheel base trucks. We forget that there are curves on our line and enjoy the long wheel base on straight track.

Regarding the reference to the Taylor truck. Our center bolsters at each end of the car are made up of five 2-ton elliptics, so that we have a carrying capacity of 20 tons under the car, aside from the limiting elliptics on each side, which carry very little weight, being there to keep the car on an even keel only. A load of 100 people, which we often carry on No. 14, lowers the car body 1 inch—of which $\frac{1}{2}$ inch is on the journal springs (four 5-ton coils) and $\frac{1}{2}$ inch on the two bolsters. A platform load is not noticeable. The car has absolutely not a particle of galloping motion.

CONDEMNS OHIO FRANCHISE TAX BILL.

F. D. Carpenter of Lima, O., president of the Central Electric Railway Association, has issued a letter condemning the Howe bill, which has been introduced in the Ohio legislature, and which, if passed, would mean the appointment of a state franchise and tax commission to value the property of public service corporations for taxation. An abstract of Mr. Carpenter's letter follows:

You may or may not be familiar with Senator Howe's new bill, which provides for the valuation of public service corporations for the purpose of taxation. This bill provides for the appointment of a commission to value for taxation the property of all public service corporations (except water transportation companies, which for some unknown reason are omitted). The property so valued shall include all tangible and intangible properties, rights and franchises of every description, and shall be estimated as a unit, a going concern.

Two rules are laid down to control the commission. The first rule provides for adding together, first, the full market value of all bonds, or other evidences of funded indebtedness; second, the full market value of notes, open accounts or other unfunded indebtedness and liabilities; third, the total average value of all the capital stock of the corporation. The amount so obtained shall be the aggregate value of the property of the company. The second rule provides that from the gross receipts of the company shall be deducted the operating expenses, but the operating expenses shall not include any interest, dividends, expenditures for permanent betterments or fictitious salaries to officers or directors. The result so obtained shall be multiplied by not less than 20, nor more than 25, and the amount so determined shall be deemed the true capital value of the company.

The valuations so obtained, or the average of these two valuations, shall constitute the valuation of the properties for taxation; but the commission may increase or diminish the amount so found at its discretion.

The amount shall be submitted to the governor, and approved by him, and shall then be certified to by the county auditors, and the valuation so fixed shall be taxed at the local tax rate in each taxing district. This tax is in addition to the 1 per cent tax now paid upon gross receipts.

The practical effect of this upon interurban companies will be to increase taxes to such an extent that it will require from 15 to 20 per cent of the gross receipts of interurban companies to pay the taxes. This is practical confiscation of the property.

From the annual report of the Ohio railroad commission you will see (page 534) that the gross earnings of the 57 interurban companies in Ohio from operations in Ohio amounted in the last fiscal year to $12,256,660; the operating expenses (page 535) amounted to $7,403,396. The net income, as defined by the Howe bill, was $4,863,334. [These figures do not balance because there was a deficit from the operations of three roads aggregating $10,070.—Eds.] If this sum is multiplied by 20 (the lowest rate provided in Rule 2 of the Howe bill) it gives a tax valuation for these properties of $97,266,680. These properties are located partly in cities, where the rate of taxation is from 3 to 4 per cent, and partly in the country, where the rate varies from 1½ to more than 2 per cent. The average rate must be estimated, but is certainly considerably above 2 per cent. Figuring the tax rate at 2 per cent upon the valuations as found above, the actual taxes that must be paid by these companies will amount to $1,945,333. Add to this the amount paid under the Cole law, 1 per cent upon gross receipts, and the total tax that must be paid by these interurban companies will amount to $2,067,899, or more than 16 per cent of the gross receipts. These same roads, in addition to operating expenses, paid as interest on their funded debt $2,399,075, and as interest on their unfunded debt $671,018 (page 537); a total interest charge of $3,070,093. Of these 57 roads (page 539) only 35 had any net income after paying operating expenses and fixed charges, and the aggregate net income of the entire 35 roads was $1,092,221, while 22 of the roads had an actual deficit aggregating $469,555. The net income of the entire 57 was only $622,666.

Only 10 of the entire number paid any dividends; 8 upon common stock, 2 others upon preferred stock, the aggregate dividends amounting to $424,834.

From the above figures you will see that the effect of the proposed Howe bill upon interurban companies would be:

(1) To absorb nearly 20 per cent of the gross receipts in taxes.

(2) To absorb in taxes four and one-half times the amount paid last year in dividends.

(3) To absorb in taxes three times the aggregate net income of all the interurban roads in the state.

(4) To absolutely destroy the value of all stock in every interurban road.

(5) To in part destroy the bonds of all interurban roads, or at least to seriously affect their value.

(6) To affect the value of the bonds would in part destroy them as collateral and result in loans being called.

(7) It will be impossible to raise a dollar for betterments or extensions of existing interurban lines, or to finance any new propositions.

If the bill becomes a law receiverships are inevitable, and it is difficult to see how a panic can be avoided. Certainly there will have to be such drastic retrenchment that there will be a serious effect upon labor and impairment of service. Other companies may raise rates; interurban companies are limited by law.

Under these circumstances do you not think it advisable to make a special effort to arouse the interest of those in your community who are interested in public service corporations, and to see to it that your local senators and representatives are fully apprised of the meaning and effect of this bill? Prompt action is necessary. We do not believe that any fair-minded or intelligent member of the assembly who knows what the bill actually means will favor it. The danger comes from their voting in ignorance of the provisions of the bill and the inevitable effect upon the public.

A Unique Electric Railway.

The new $3,000,000 office building erected in Washington, D. C., by the government for the members of the house is practically completed. It is connected with the capitol by a subway, in which a small electric railway will be operated for conveying the representatives to and from their offices.—Western Electrician.

VALUATION OF THE CLEVELAND ELECTRIC RAILWAY.

The valuation of the Cleveland Electric Railway, now in progress, involves determination of the value of (1) the physical property reproduced and (2) the unexpired franchises. When the figures have been agreed upon by the arbitrators, F. H. Goff on behalf of the Cleveland Electric Railway and Mayor Tom L. Johnson for the city, the next step will be consideration of the terms of the arrangement by which the Cleveland Electric Railway and the Forest City Railway will be controlled by a holding company.

During the hearings, which began on December 4, the following facts have developed:

Mayor Johnson has admitted frankly that the charges of the Cleveland Electric Railway Company to capital account were more conservative than his would have been under similar circumstances.

Mr. Goff has urged that in the final negotiations some consideration be given to the fact that the "lost capital account" was the result of a misguided belief that when the franchises expired they would be renewed without difficulty.

As the value of the railway is to comprise what it would cost to reproduce the property there must be added to the agreed appraised value of the physical property an allowance sufficient to cover all costs of engineering, financing and contingencies. Horace E. Andrews, president of the company, believes that to provide for expenses of this description there should be allowed one-third of the worth of the physical property.

The value of unexpired franchises is to be based upon the net earnings of lines with unexpired rights, the operating expenses (including depreciation charges) and taxes to be computed at about 60 to 65 per cent of gross earnings.

Values of Physical Property.

Under the plan of appraisal committees of two, representing the city and the company, value the different classes of property. The physical values upon which full agreement has been reached are as follows:

Track	
Pavement	
Cars	$2,634,563.23
Land	1,134,473.96
Buildings except power and battery house buildings	842,987.00
Overhead construction, including feedwire	1,007,957.55
Return circuit	95,409.02
Three power stations, including buildings	2,216,990.93
Storage batteries, including buildings	289,862.94
Shops, shop stores and shop tools	
Auditors' stores, including rails, ties and track	
Miscellaneous rolling stock and equipment	154,764.71
All items (except franchise) not included in other schedules	
Overhead charges not included in other schedules	

Work is in progress upon the other items. The report of the committee which is determining upon the value of the track is expected at any time. Substantial agreement has been reached as to the value of the pavement, but the arbitrators have not agreed as to whether the company shall be allowed anything for paving. The position of Mr. Goff on this subject was stated at one of the early meetings, as follows: "Pavement is a part of roadway with a street railroad. The city stipulates how the track shall be laid and what rails shall be used. Possibly now your specifications go into detail to such an extent as to stipulate in regard to the character of the foundation. It has been, as far back as I can remember, the uniform practice in this city to require a specific, certain kind of pavement. It seems to me that this is to be regarded as a part of the roadbed cost. It is either a part of the capital account or else must be chargeable to operating cost." Mayor Johnson is not disposed to allow much for pavement. The value of shops, shop stores and shop tools has also been substantially agreed upon. The value of auditors' stores, including rails, ties and track has been practically agreed upon, although during the inventory some question has been raised as to the unit prices which should be followed. The schedule providing for "all items (except franchise) not included in other schedules" is still open, and there is uncertainty as to admission of some of the items.

Overhead Charges.

In consideration of the amount which should be allowed for the last item in the foregoing list, there has been a wide divergence of opinion, although it is recognized that the value upon which agreement is sought is the value of the Cleveland Electric Railway if reproduced. Mayor Johnson has endeavored to minimize the necessity of a substantial allowance for the overhead charges, but the Cleveland Electric Railway has produced considerable testimony in support of its claim that engineering expenses, profits of contractors, contingencies and cost of financing would be large. The view expressed by William Barclay Parsons, who appeared before the arbitrators on January 25, was that 10 per cent should be allowed for contingencies, 10 per cent for the profits of contractors and a minimum of 5 per cent for engineering expenses, to which other essential charges might have to be added, making altogether a possible total of 30 per cent. Mr. Parsons declared that to place the property in the streets of Cleveland had taken a high order of engineering ability. It was not especially to the liking of Mayor Johnson that in response to questions Mr. Parsons expressed his belief that the Cleveland Electric Railway property could not be built in less than three years if ordinary street traffic should be permitted during the construction period. In this estimate Mr. Parsons assumed that there would be no tracks, shops, power houses, substations, car houses or definite ideas on the part of those who intended to build concerning what routes they should utilize. If the people were kept off of the streets the system could be built, he estimated, in two years.

Eugene Klapp, who is associated with Mr. Parsons, estimated that the engineering expense would be not less than 5 per cent and that 10 per cent should be provided for contingencies.

In first discussing, on January 16, the question of extra expense for which allowance should be made, Mr. Goff referred to the delay which had been experienced in the construction of the Washington Baltimore & Annapolis Electric Railway, the Utica & Mohawk road, the Chicago Lake Shore & South Bend Railway and the Youngstown & Ohio River Railroad. Mr. Goff emphasized the fact that the value as of January 1, 1908, was to be considered; that time, he said, would perhaps have been the least favorable to finance an enterprise of this character of any period since 1873.

Letters were presented by Mr. Goff concerning the percentages which should be added to the cost of labor and materials required to reconstruct the Cleveland Electric Railway with its 236 miles of track and various properties.

Stone & Webster of Boston replied that their usual charge for engineering was 10 per cent of the cost of the physical property.

J. G. White & Co. of New York replied that they usually received 10 or 12½ per cent above the cost for constructing a street railway property.

Sanderson & Porter of New York replied that their regular fee for designing and constructing a street railway property is 10 per cent of the cost, where the work is undertaken on that basis.

At the meeting on January 17 Mr. Goff presented letters from various people concerning the expense of financing and other costs incident to the construction of a new property. H. R. Newcomb, president of the Citizens' Savings & Trust Company of Cleveland, said that the Forest City Railway had sold its stock to the Municipal Traction Company at 90, the latter disposing of the stock at par. It would be practically impossible, he declared, to finance the construction of an

electric railway in a city like Cleveland for less than 10 per cent of its cost, and no contractor would undertake the construction of a property of this character for less than a 10 per cent margin to cover overhead charges. About 6 per cent should be figured for interest charges during the construction period.

Myron H. Wilson, vice-president of the Cleveland Trust Company, figured 10 per cent for discount on the bonds and 7 per cent for interest charges during the period of construction.

G. T. Bishop, president of the Washington Baltimore & Annapolis Electric Railway, said that 20 per cent of the cost was an underestimate of the percentages that should be added to the cost of the physical property to cover the expenses of organization, purchasing, engineering, superintendence and incidentals.

M. J. Mandelbaum of Cleveland, in his estimate, allowed 0.15 per cent for organization expenses, 5 per cent for engineering, 0.4 per cent for general administration, purchasing and auditing department expense, 1 per cent for caring for and handling material and 3 per cent for delays in construction without taking into account other losses incidental to delays. No allowance is made here for legal expenses of organization, litigation and incidentals, but Mr. Mandelbaum suggested an average interest charge on the cost of the property of 6 per cent during the construction period and 5 per cent for brokerage, and also stated that provision should be made for taxes for two years.

B. E. Tilton, engineer maintenance of way Cleveland Electric Railway, said that an allowance of 15 to 20 per cent would be what might be called "ideal condition values."

Valuation of Franchises.

In the valuation of the unexpired franchises it has been determined to capitalize the net earnings of the lines which have rights. It is the idea of Mayor Johnson that 65 per cent of gross earnings shall be allowed in this computation for operating expenses (including depreciation) and taxes and that the balance of 35 per cent shall be assumed as the net earnings. Henry J. Davies, secretary of the Cleveland Electric Railway, in discussing the method of computing the franchise values, said on January 24 that the earnings of each line, the earnings per car-mile, the number of passengers and the percentages of increase in traffic in the past on each line on which changes have not been made would have to be determined. "What we know of the past," he added, "will be some basis for determining what we do not know of the future. On a line with two franchises estimates will have to be made. We may decide to take the earnings as a whole and per car-mile and then estimate the growth and operating expenses on different lines. I think we will find the rate of growth higher on the long lines than on the short lines and larger on the suburban lines than on the city roads."

Reduced Prices of Materials.

The question of value of materials as of January 1, 1908, has raised discussion on the subject of values under conditions of higher costs. Mayor Johnson has called attention frequently to the decline in the price of copper, which he estimated as involving a loss to the Cleveland Electric Railway of about $1,000,000. Mr. Goff suggested that if the various lines should be operated by the company until each franchise had expired much higher prices for the materials might be granted because the values of commodities might advance.

Fares and the Security Franchise.

While there has been considerable discussion of the question of fares under the new arrangement and of the terms of a security franchise which it is proposed shall be granted to the Cleveland Electric Railway, no effort has been made to reach a compromise.

Mr. Goff has expressed the opinion that a franchise based on seven tickets for 25 cents would not enable the company to market its bonds for 75; he thought the city should grant a franchise which would make it possible for the company to raise capital without selling bonds at a discount of 20 or 25 per cent, or even 10 per cent. The cost of operation may be greatly increased, as it has been in the last 25 years. He believed that the people of Cleveland desire more rapid transit; and to meet those needs would require additional capital for the construction of track on which express trains could be operated. He said he had been told that the Forest City Railway is operating for 10 or 12½ cents per car-mile, while its gross earnings are something like 16 or 17 cents, but that no construction of the character of that of the Forest City Railway would be permitted on the new property. He declared that when the report on car-mile earnings of the Cleveland Electric Railway is completed it will be found that the operating expenses are something like 16½ cents per car-mile, while the gross earnings would be 25 or 30 cents upon some lines.

Mr. Goff said he did not think he was committing any breach of confidence when he said it was his understanding that if a franchise, based on seven tickets for 25 cents, had been granted to the Cleveland Electric Railway, it would have been unable, as the officials believe at this time, to finance any future development of the property. He would eliminate the possible construction of subways, but no capital for an express service on surface lines could have been raised.

In speaking of the straits of the company when the offer to accept a franchise based on seven tickets for 25 cents was made, Mr. Goff said that the officials "were driven pretty nearly to the last ditch and it seemed to them that they would better accept the franchise on these terms and do the best they could until possibly they had become wiser, or the people had become wiser; but they did not contemplate that they could ever raise revenue enough from operation or borrowing that would permit any development of importance. You will concede that a 3-cent fare will not yield any large revenues that will permit a rapid development of the property."

Mr. Goff also suggested that it could do no harm to the city of Cleveland if there are not unreasonable provisions of forfeiture in the lease, and that it might result in good to the municipality if in times of need the company could increase the fare and derive necessary revenue for development of the property.

Mr. Davies has also expressed the opinion that the sale of fares on the basis of seven rides for 25 cents would not "earn a dividend of 6 per cent upon the value fixed in the negotiation, on its conclusion, of our physical value and franchises."

Mayor Johnson believes that the franchise should be for a period of 25 years, the longest time for which the council could grant it; and he would make the period 50 years if the council had the authority.

The committee appointed to report upon the expiration of franchises, S. H. Tolles and Newton D. Baker, agreed that various franchises expired from 1905 to 1927, but could not agree upon other rights.

Mr. Goff Performing a Public Service.

Mr. Goff has undertaken as a public service the work which he is performing. The suggestion of this method of settling the differences was made by E. H. Baker of the Cleveland Plain Dealer. In his opening address to the city council, Mr. Goff stated that his sole financial interest in the property was the ownership of 200 shares of stock of the Cleveland Electric Railway by himself and 130 shares by his wife; and that if it was felt that any unfairness would result from these holdings he would make such disposition

of them as Mayor Johnson would approve. Mr. Goff has announced that he will accept no fee for his services.

In pointing to the difficulties of the present situation Mr Goff said he was called upon to recognize that a lease to a holding company was the only solution available to the company at this time; but if such an adjustment should be made a proper security franchise must be granted to the Cleveland Electric Railway. Unless the holding company maintained the property, providing for accident liability and depreciation, it might eventually be returned to the Cleveland company less valuable than when it was delivered to the Municipal Traction Company, which has an authorized capital of $10,000 and a paid-in capital of $1,000. Mr. Goff said that the Municipal Traction Company was irresponsible financially.

Electric Package Agency.

In the discussion concerning various assets, the business of the Electric Package Agency was mentioned. Mr. Davies said that this business is not incorporated, but is a partnership. The interest of the Cleveland Electric Railway in the furniture and equipment of the agency should be listed as an asset. The company receives from the agency such proportion of its net earnings as is shown by the number of car-miles run over the tracks of the Cleveland Electric Railway out of the total. He thought that the equipment, except the cars, had been purchased from earnings. The cars belong to the interurban companies and not to the agency.

Mr. Andrews said that while the actual tangible property might be of small value, the business is of great value; within the last six months various express companies have tried to negotiate for possession of the property, but the companies preferred to hold it themselves.

Mr. Davies said that last spring the property was inventoried at about $24,000, and it was the interest of the Cleveland Electric Railway in that amount which was estimated at that time at $4,000.

In response to a question, Mr. Andrews said that the contract with the interurban roads for the handling of this business had decided value, but that the profit was included in the gross earnings, and was part of the franchise value.

Mr. Davies added that the contract is between the Cleveland Electric Railway and the interurban companies, and that it contained a provision that earnings for the carriage of packages should be divided in proportion to length of haul.

Electrification of St. Petersburg Street Railways.

All of the 130 miles of street railway in St. Petersburg are to be electrified within the next six years. The first section, 30 miles in length, has been finished by the Westinghouse Company. For operating this section of the lines a central station has been located upon the Obvodny Canal, where it can receive coal from barges. Three turbine-alternator units placed in the dynamo room operate at 1,500 revolutions per minute and are rated at 2,200 kilowatts, delivering 6,600 volts at 25 cycles. The boiler room contains six double boilers, and the plant is also equipped with a battery of 130 cells of accumulators. Five substations are used for the line, and each of these will have a capacity of 1,000 or 2,250 kilowatts, according to its location. In the substations are installed a set of oil transformers which receive the main current from the central station at 6,600 volts. At the secondaries of the transformers the voltage is 370 volts three-phase. This is used upon rotary converters which supply direct current at 600 volts for the trolley wire. Different capacities, either 500 or 150 kilowatts, are used for the rotaries, and the machines are started up by a small three-phase motor, or else a storage battery which the station contains can be used for starting if necessary. The rolling stock used upon the first section consists of 200 motor cars. Each of the cars is fitted with two 40-horsepower motors. The old horse cars may be used as trailers.—Journal of Electricity, Power and Gas.

TYPICAL TRACTION CARS.

BY CHARLES A. HERON, INDIANAPOLIS, IND.

At the meeting of the Indiana Engineering Society at Indianapolis, Ind., on January 16, Charles A. Heron, assistant engineer Indianapolis Traction & Terminal Company, Indianapolis, read a paper on "Typical Traction Cars." After outlining the development of the cars now in use from the early horse car, the paper took up the discussion of the

Table No. 1.

TRUCK CENTERS (feet)

Length of car	Min.	Av.	Max.	Av. ÷ length
40		17		12.5
45	20	23	27	19

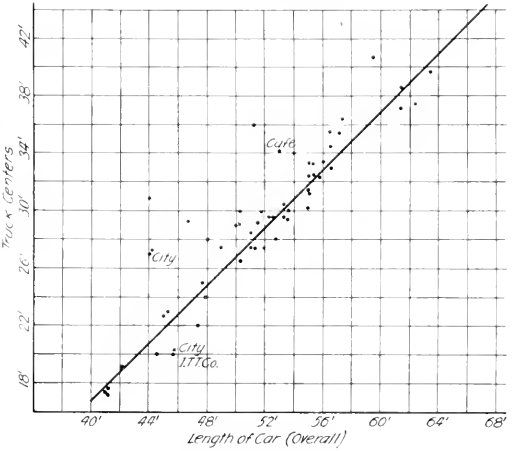
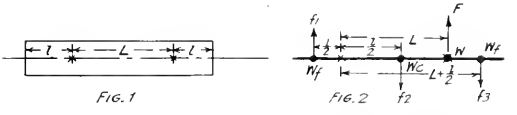
60		37		61.6
65		42		64.6

Minimum for 45-foot car is for city use.
Maximum is for express.



Typical Traction Cars—Curve 1. Relation Between Length of Car and Truck Center Distance.

dimensions, weight and seating capacity of typical cars now operated, based on a compilation made by the author from measurements of nearly 100 cars used by various companies, furnished by such representative car builders as the St. Louis Car Company, Niles Car & Manufacturing Company, The J. G



Typical Traction Cars—Figures 1 and 2. Quantities in Formula for Determining Truck Swinging Force.

Brill Company, Cincinnati Car Company and Jewett Car Company. An abstract of this part of the paper follows:

Table I and curve shows the relation of truck centers to length of car bodies. An interesting fact known to exist is that a considerable force must be exerted by the track to turn a car body when entering upon a curve. This force is greatly increased as the trucks are set back from the ends. The author has derived an equation for this force and has calculated values, assuming a 62-foot car body weighing 40,000

pounds, for different truck centers. These values have been plotted.

Let Figure 1 represent the outlines of a car body and Figure 2 represent the weights, or masses of the front, center and rear portions of the body, assuming them as concentrated at their respective centers of gravity.

W = force required to turn car body about rear truck center and applied at the front truck center.

f_1 = force required to turn concentrated weight of rear end of car about rear king bolt.

f_2 = force required to turn concentrated weight of center of car about rear king bolt.

f_3 = force required to turn concentrated weight of front end of car about rear king bolt.

$W_f = W_r$ = concentrated mass of front and rear ends of car = Wl.

W_c = concentrated mass of center of car = WL.

W = concentrated mass of car at front truck center.

w = weight per lineal foot of car body.

M_1 = rear moment = $f_1 \times \frac{l}{2} = W_r \times \frac{l}{2}$

M_2 = center moment = $f_2 \times \frac{l}{2} = W_c \times \frac{l}{2}$

M_3 = front moment = $f_3 \times (L + \frac{l}{2}) = W_f \times (L + \frac{l}{2})$

M = total moment = $W \times L = M_3 + M_2 + M_1$

$$M = WL = M_3 + M_2 + M_1 = (f_1 \times \frac{l}{2}) + (f_2 \times \frac{L}{2}) + [f_3 \times (L + \frac{l}{2})]$$

which is, therefore, the equation for the sum of all the moments of forces acting to turn the car body about the rear king bolt. This sum of moments is also equal to the moment of a force which, if concentrated at the rear king bolt, would cause the car body to turn about the rear king bolt.

This concentrated force at the front king bolt may be considered as like unto the force which must be exerted by a curved track. Solving for the force:

$$W = \frac{(W_r \times \frac{l}{2}) + (W_c \times \frac{l}{2}) + [W_f \times (L + \frac{l}{2})]}{L}$$

This equation will apply only to a stationary car. This assumption is permissible, because if in motion the force to be overcome by the track would be proportional to the velocity of the car. In fact, the force to be exerted for the car in motion may be considered as the concentrated weight, W, times the velocity, V. This turning force is a maximum when the front truck is at the point of curve; and is a minimum when the rear truck reaches the point of curve. From this position the force exerted on the curve track by the car body is centrifugal plus the minimum value of "F" to keep the car turning along the curve. Conversely this force "F" diminishes

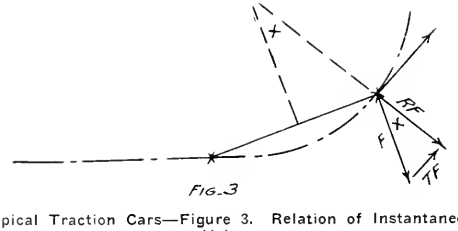


FIG. 3

Typical Traction Cars—Figure 3. Relation of Instantaneous Values.

to zero from the time that the front trucks leave the point of tangency until the rear trucks leave the point of tangency.

Consider the force acting at any point on the curve as in Figure 3.

Let F = force required to turn car body about rear trucks = WV.

TF = component of "F" tangent to curve = F sin x.

RF = component of "F" against track = F cos x.

x = angle formed between radius of curve, R, at the instant of consideration, and the perpendicular drawn from the center of curve to the center line of car body.

Table No. 2.

Side Force "W" to Front Truck Center to turn 62-foot 40,000-pound car about rear trucks for different truck centers.

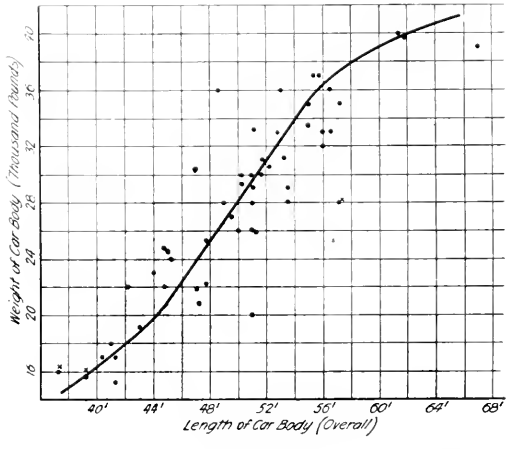
Table No. 3.

WEIGHTS OF CAR BODIES

Lengths (feet)	Min.	Av.	Max.
41	15,000	17,000	18,000
45	.....	21,500	25,000
47	21,000	24,000	.....
50	26,000	28,000	30,000
55	35,000	35,000	37,000
60	.....	38,000	.....
65	.....	41,000	.....



Typical Traction Cars—Curve 3. Relation of Length to Weight.

x is a maximum when the front truck is at the point of curvature, then sin x = o.

x is a minimum when the rear truck is at the point of curvature, then sin $x = \frac{\text{truck center}}{2R}$

Then RF = F cos x = WV cos x for each position on curve.

The maximum is seen to be F × (cos x = 1) and the minimum value of resultant force on the track to be F × (cos x) when sin $x = \frac{\text{truck center}}{2R}$

While the present position of trucks is not the most economical, placing the trucks farther apart means a change in the design of car truss, or changing the entrance from the platform. Without change of entrance the present truss framing must be abandoned and the steel truss floor used as on late steel cars for steam railroads. Although the side overhang will, of course, be increased, this may be a slight matter as compared to the decrease in impact on curve at high speeds. By lengthening the truck centers a better design may be effected for cars to be run in trains through city streets. This method of operation is, however, affected by the radius of the shortest curves.

The actual force on the curved track, then, is directly proportional to the truck centers and indirectly proportional to the radius of the curve. On long-radius curves this force decreases but little because of the small angle subtended by the truck centers.

Assuming a 3-degree curve whose radius would be 1,910 feet and a speed of 50 miles per hour (V = ft. per second), 38-foot 6-inch truck center, the 62-foot car body mentioned would hit the curve with a force of 1,532,333 pounds.

Table 3 and curve show the relation of weights of car bodies to lengths. The effect of heavier design is very manifest for cars 48 feet to 54 feet long. Beyond this length, while the design remains practically the same, the increase in weight is not in proportion to the length. The same is true for cars up to 48 feet long used for city and light suburban service.

Table 4 and curve shows relations of seating capacity to

Table No. 4.

SEATING CAPACITY

Length (feet)	Min.	Av.	Max.

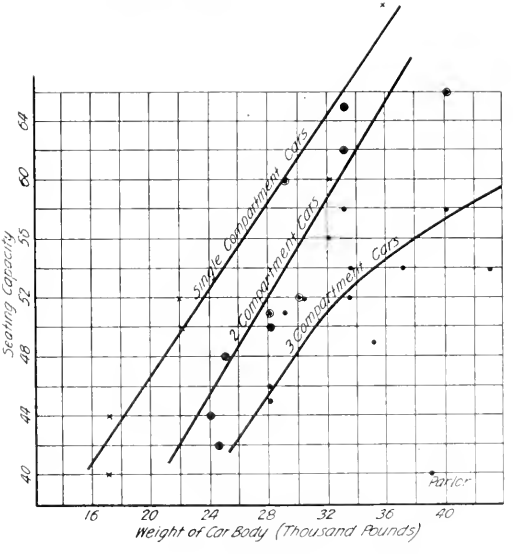
34,000	52	53	54	
40,000	40	58	58	



Typical Traction Cars—Curve 5. Relation of Weight to Seating Capacity.

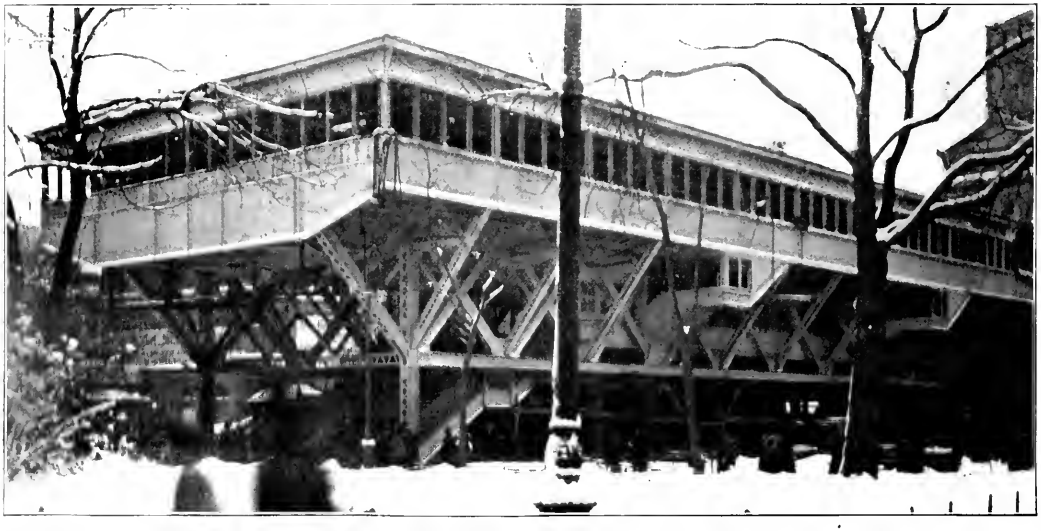
lengths of car bodies. The excess of seating capacity of 2-compartment cars over 3-compartment cars for the same length is noted, as is also noted in Table 5 and curve for weights versus seating capacities. Curve 4 shows that seating capacity does not increase in proportion to length. This is accounted for by the fact that more seat room is allowed on the larger cars. It may also be noted that 55-foot to 60-foot 3-compartment cars have practically the same seating capacity. Curve 5 shows the rapid decrease in seating capacity for the heavier 3-compartment cars. From these the relative earning capacity of baggage versus passengers is shown to be a question for the operating men to decide upon as against the convenience and safety of the traveling public.

It is stated that the Southern Michigan Railway Company, operating between St. Joseph, Mich., and South Bend, Ind., intends to use a large tract of land which it controls along the banks of the St. Joseph river near Berrien Springs, as an amusement park. Picnic grounds, a boathouse, bathing beach, a vaudeville theater and other park attractions will be provided, making it one of the largest resorts of the kind in this section of the country.

THE MANHATTAN TERMINAL EXTENSION OF BROOKLYN BRIDGE.

What promises to be a satisfactory solution of a difficulty which has caused a part of the congestion on the elevated level of the Brooklyn bridge has now been so far completed as to have been in service for several days. The trouble consisted chiefly in the lack of room at the Manhattan terminal to handle elevated trains of sufficient length to care for the volume of traffic offered during rush hours. A remedy which should afford at least a partial relief temporarily seems to have been found in the substantial completion of an extension to the former structure, the principal features of which are shown in the accompanying engravings, which also indicate the rearrangement of tracks which has been made possible by the extension.

The extension proper is 160 feet in length and is carried over Park Row and the adjacent City Hall plaza almost to the line of the fence surrounding City Hall park, thus bringing the stairway leading to the elevated track level just opposite



Manhattan Terminal Extension of the Brooklyn Bridge—General View of Extension over Park Row.

the entrance to and exit from the subway. It is a substantial steel structure, architecturally in keeping with the existing projection of the bridge approach over Park Row, and besides the broad stairway which extends across the whole width of the end (40 feet) affords room for five other stairways in addition to those which led to the bridge previously crossing over Park Row. A mezzanine floor furnishes space for the further distribution of crowds before reaching the track level above. The tracks extend to the end of the structure.

Formerly the crossovers between the inbound and outbound tracks leading to and from Brooklyn were at the point indicated upon the engraving by dotted lines. They have been removed to the position shown by the full lines and, even with this curtailment of loading and unloading space, the extension affords about 340 feet of free space between the fouling points of the switches at the crossovers and the end of the tracks. This is ample for the accommodation of 6-car trains.

Some slight alterations in the limits of the previously existing platforms are involved in the change and these are also indicated by dotted lines on the engraving. The removal of the crossovers has necessitated cutting off the ends of some of the platforms, but has also enabled the extension of other platforms in a fairly corresponding proportion.

Ample provision of stairways has been made throughout and with the additional loading and unloading space afforded by the use of trains of six cars each it is reasonable to suppose that the improvement will go far to relieve the congestion which has made the reputation of the bridge as unsavory as its original conception and construction were brilliant.

The actual results that are expected to come from this rearrangement of the Brooklyn bridge are covered in a statement given to the public by James W. Stevenson, one of the commissioners of the bridge department of the city of New York. Mr. Stevenson says that the changes are:

That 6-car bridge trains will be run in place of the 3-car cable trains which have heretofore performed the bridge service.

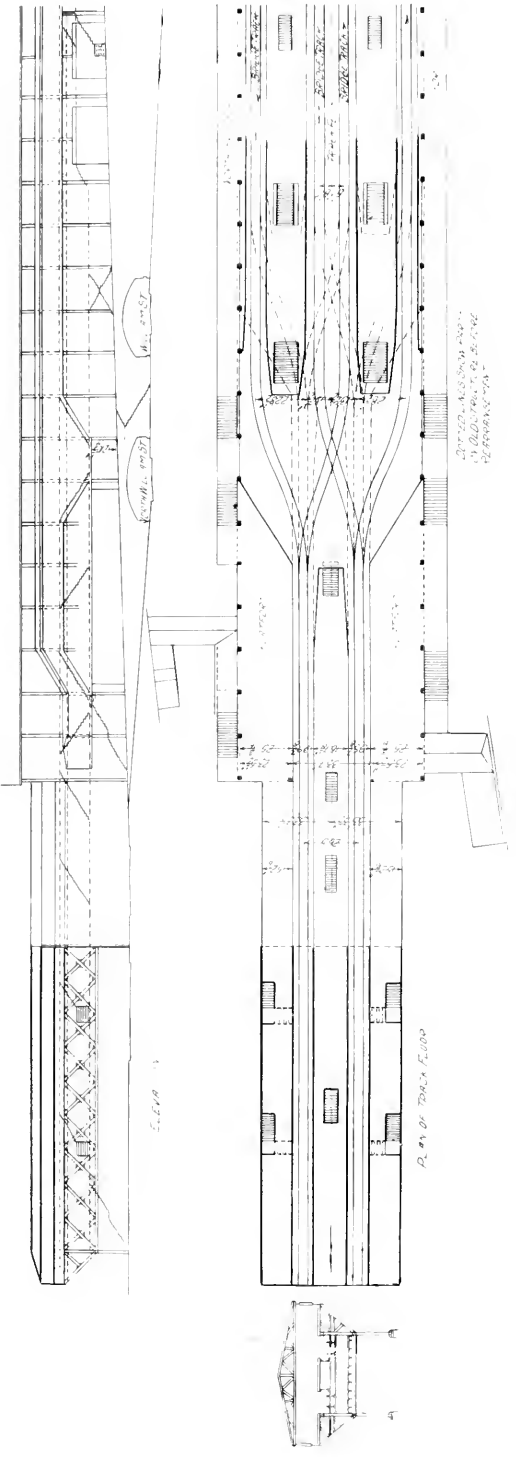
That fares of local passengers will be paid on entering, in order to save the trouble of conductors collecting fares on trains.

It is offered that the increase in trolley service will be increased from 270 to 310 cars in the morning rush hours and from 300 to 320 cars in the evening rush hours.

Beginning on January 27 (Monday) 6-car trains from all the Brooklyn elevated lines have run through to the Manhattan terminal from the various lines of the Brooklyn Rapid Transit Company; also, during the evening rush hours trains will run from the Manhattan terminal at Park Row straight through to the terminals of the several lines in Brooklyn. The important feature of this change is that it will obviate the necessity of a change at the Brooklyn end of the bridge, which has been necessary with the previous arrangement of bridge trains.

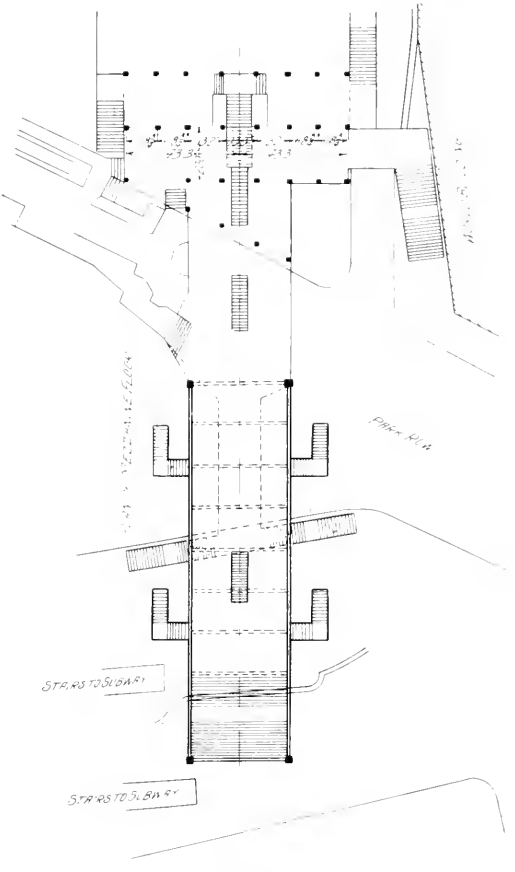
It is stated by those in position to know that the new arrangement will increase the capacity of the bridge 9,000 passengers per hour. The avoiding of a change of cars at the Brooklyn end of the bridge is the important feature. Heretofore all trains across the bridge have been shuttle trains. Under the new arrangement, which went into effect on January 27, the shuttle trains are practically discontinued. At the present time all trains run through to or from the Manhattan terminal.

It is unfortunate for the estimation in which the bridge extension will hereafter be held by residents of Brooklyn that



Manhattan Terminal Extension of the Brooklyn Bridge—Side Elevation and Plan of Track Floor.

the first impressions of its efficiency were disagreeably colored by its first two days of service—January 27 and 28—which are characterized by the New York papers in their usual unfriendly spirit as resulting in the worst congestion in its history. This was due in a large measure to the lack of familiarity on the part of the public and employes as to the proper lines of progression and partly, also, to the fact that the interlocking system is not yet in order. C. M. Ingersoll, chief engineer of the city bridge department, and W. S. Menden, assistant general manager of the Brooklyn Rapid Transit Company, both expressed the opinion that the service would be all right when the employes and the public were



Manhattan Terminal Extension of the Brooklyn Bridge—Plan of Mezzanine Floor.

accustomed to the new arrangement. The jam on Tuesday morning, though less serious than on Monday evening, caused considerable delays to several through trains and few were able to pull out promptly from the Brooklyn end, because of the crowds that attempted to board the through trains at that point. An explanation made by an engineer employed by the public service commission gives less reason for hope that the trouble will soon be abated. It is stated that the old cable cars normally carried about 10 per cent more passengers than the present cars are capable of carrying, even though six cars instead of five are run in a train, and it is hardly probable that the former headway of 60 seconds can be reduced. It is, however, stated from the same source that

the principal difficulty is in the absence of side doors and the small gate room on the elevated cars. The total width of entrance space is figured as 18 feet 9 inches less on the elevated than on the former bridge cars, equivalent approximately to a stream of nine persons abreast.

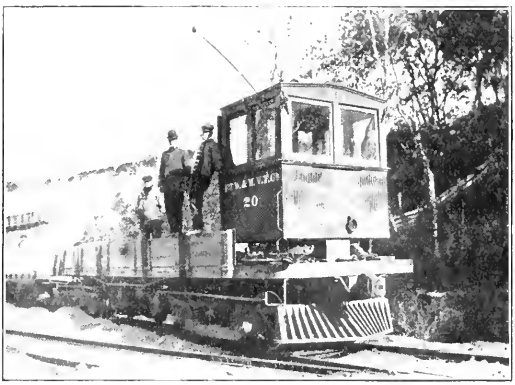
Notwithstanding these difficulties the rearrangement should result in an improvement of service and these pessimistic views are undoubtedly strongly colored by the partial failure of too optimistic expectations, especially at the outset. On Wednesday the service showed a great improvement and as many as 64 trains per hour were handled from the Manhattan terminal.

The plans were prepared and executed by the department of bridges of the city of New York, C. M. Ingersoll, chief engineer, in consultation with and in accordance with the general views of the Brooklyn Rapid Transit Company as operating tenant. The work has been pushed to completion with remarkable rapidity and there has been no substantial interference with traffic, notwithstanding that this is stated to have amounted to 426,000 persons daily.

A POWERFUL WORK CAR.

BY H. L. WEBER, CHIEF ENGINEER FT. WAYNE & WABASH VALLEY TRACTION COMPANY.

An interesting equipment which was used in the construction of the recently completed 38-mile extension of the Ft. Wayne & Wabash Valley Traction line from Logansport



Construction Car for the Ft. Wayne & Wabash Valley Traction Company.

to Lafayette, Ind., was built in the company shops at Ft. Wayne last year. This equipment is a double-truck single-end work car built for handling gravel, ties, rails and poles and can also be used as a locomotive. It was designed by and built under the supervision of Lee W. Jacques, master mechanic, and was placed in service in April, 1907.

The car is 37 feet over all. The sills consist of four 80-pound 7-inch T-rails, with wood fillers. The cab is situated on the front end of the car, immediately over the front truck, and is elevated from the car body by two pieces of 15-inch I-beams bolted to the two middle sills. This gives the cab a clearance on the outside above the floor of the car for convenience in handling long steel rails. The operating equipment consists of one L-4 controller, automatic circuit-breaker, necessary light, headlight, air pump and heater switches, fuses, etc., and the straight air brake equipment for operating the brake. One circuit of L-43 Consolidated heaters is also installed for heating the cab. The headlight can be used on either end of the cab as desired.

The trucks are of the heavy Baldwin M. C. B. type, with a 77-inch wheel base, 33-inch steel-tired wheels, with a 1 by 7/8 inch flange and a 3-inch tread. The axles are 6 inches in diameter, with 5 by 9 inch journals. Four Westinghouse No. 121 motors, of 90 horsepower each and having a gear ratio of 17 to 58, are installed. The car is equipped with straight air brakes using a D-2 E. G. Westinghouse compressor with a 12 by 14 inch cylinder. The couplers are of the Janney M. C. B. type for standard steam railroad practice.

This car was used for ballasting in connection with two locomotives run in relays. The first relay was from the gravel pit to Colburn, 10 miles, and the second from Colburn to Delphi, Rockfield, Clymers or Logansport. Each relay consisted of 10 to 14 flat cars of 15 yards capacity each, or four Rodger ballast cars of 30 yards capacity each and three to four flat cars of 18 yards capacity, making a total for each train of from 165 to 180 yards of ballast. Nineteen regular flat cars with 15 yards on each car were handled a number of times and in one instance four Rodger ballast cars, a "dead" engine and 10 flat cars were hauled and set in on the siding in order to clear up the track. In comparison with the locomotives in connection with which the relay system of hauling was used, it is interesting to note that the work car took its relays and handled them with greater ease and facility than either of the engines. The car is so constructed that it can be loaded with 18 yards of ballast, which helps to give it traction capacity.

RECEIVERS AGAIN APPOINTED FOR THE CHICAGO & MILWAUKEE ELECTRIC RAILROAD.

Receivers have again been appointed for the Chicago & Milwaukee Electric Railroad. The property is now under the direction of the United States court and the situation is entirely different from that which precipitated the unexpected appointment of receivers by Judge Tuthill of the Cook county circuit court on December 31, 1907, and the subsequent dismissal of the bill on January 4.

Upon application of several creditors three receivers were appointed for the railroad on January 27 by Judge P. S. Grosscup of the United States circuit court and one receiver was appointed for A. C. Frost & Co., of which A. C. Frost, president of the railroad, is the head. The receivers appointed for the railroad were A. C. Frost, W. Irving Osborne, vice-president of the Central Trust Company of Chicago, and D. B. Hanna, vice-president of the Canadian Northern Railway, Toronto, Ont. George M. Seward, formerly secretary of the railroad, was appointed receiver for A. C. Frost & Co. The action was understood to be a friendly one on behalf of the interests in control of the property.

These proceedings were entered into without notice to Charles G. Dawes, president of the Central Trust Company of Chicago, who had been appointed trustee under the agreement by which the former proceedings was dismissed. As soon as Mr. Dawes learned of the situation in Washington, D. C., where he had gone for a brief visit, he returned to Chicago, and protested to Judge Grosscup that it would not be proper for Mr. Frost to be one of the receivers, supporting his protest with charges of improper accounting methods. Judge Grosscup resented these charges at first, but on January 30 he announced that Mr. Frost had asked to be relieved of his appointment as receiver. In his place H. A. Haugan, president of the State Bank of Chicago, was suggested as the third receiver. The appointment of Mr. Haugan to this position was announced by Judge Grosscup on January 31.

Charges Made by Mr. Dawes.

The charges made by Mr. Dawes were contained in a letter to Judge Grosscup, of which an abstract follows:

I object to A. C. Frost as receiver of the Chicago & Milwaukee Electric Railroad for the reason that from my investigation of the affairs of this road in an effort to secure a peaceable settlement of its difficulties I have discovered that he has induced the security-holders to purchase the bonds of

the road upon statements of net earnings which are absolutely misleading.

I have in my possession the statement of accounts from the firm of Barrow, Wade, Guthrie & Co., made after an examination of the books of the Chicago & Milwaukee Electric Railroad, the Republic Construction Company, A. C. Frost & Co. and the other allied Frost interests.

This statement shows that in the case of alleged freight earnings for the year 1904, the total of which is stated to be $163,814.91, there were included charges to the Republic Construction Company, the stock of which is owned entirely by A. C. Frost, of $158,791.85 for hauling gravel and dirt and construction material, etc., for building the road itself.

This statement shows that of the total freight earnings for 1905, which were stated as $232,538.76, the sum of $228,255.80 was for the same items.

This statement shows that of the total freight earnings for 1906, which were stated as amounting to $305,450.77, the sum of $291,695.25 was made up of similar items.

The statement also shows that for the 11 months of 1907 ended November 30, 1907, the freight earnings, amounting to $313,759.13, included similar charges to the Republic Construction Company for hauling gravel and dirt to the amount of $267,792.70.

The accountants also found in connection with the passenger earnings that it was the practice of A. C. Frost & Co. arbitrarily to increase the passenger earnings by means of their checks given weekly for amounts ranging from $1,000 per week in 1905 to $3,000 per week during 1906 and 1907, which practice on the part of A. C. Frost & Co. naturally resulted in a padding of the earnings to the extent named.

The total of these fictitious passenger earnings for the year ended December 31, 1905, through this account of A. C. Frost & Co., amounted to $160,095.04; for the year ended December 31, 1906, the padding of the passenger earnings through this operation amounted to $171,619.80; for the year 1907, up to and including November 30, 1907, they amounted to $158,789, against which there are sundry credits amounting to $1,058.35, leaving the net amount for that year $157,730.65.

I submit that without entering into other matters, A. C. Frost, who is responsible for the negotiation of the securities based upon such fraudulent statements, is not a proper man to act as receiver of this road and as representative of the creditors whom he has thus defrauded.

I will also state that Mr. Frost is the president of and in control of the Chicago & Milwaukee Electric Railroad Company, and he is also the president of and in control of those corporations which have made certain contracts with said railroad, particularly the Republic Construction Company, to the profit of A. C. Frost & Co.

The report of the accountant shows that while on January 1, 1899, the capital account of A. C. Frost & Co. disclosed a credit balance of $108,812.16, through its transactions between the Chicago & Milwaukee Electric Railroad and the Republic Construction Company, A. C. Frost & Co. had increased this account on December 31, 1900, to the amount of $4,081,761.73.

I again submit that under these circumstances A. C. Frost is not a proper person to represent the creditors and bondholders, whom, in my judgment, he has defrauded.

It was my earnest hope to secure a peaceable adjustment of the difficulties of this road, and my investigation into its affairs was prompted by a feeling that an injustice in the first instance had been done Mr. Frost, which I hoped to right.

My investigation having disclosed to me Mr. Frost's unworthiness, I owe the same duty to the bondholders, and to the creditors, to protest against the continued control of this property by Mr. Frost, directly or indirectly, that it seemed to me that I owed to Mr. Frost in the first instance to protest against the manner in which I had been appointed receiver.

In this connection it is well for me to state that the action of Judge Tuthill has been justified, in my opinion. I owe it to your court to advise you of these facts, which I believe to be true.

The action of Judge Tuthill, in appointing receivers on December 31 last on an ex parte hearing, was severely criticized at the time.

Basis of Proceedings.

The appointment of receivers by Judge Grosscup was based upon several claims. Otto R. Hansen of Milwaukee secured judgment against the Chicago & Milwaukee Electric Railroad of Illinois on a note for $10,000, and the Sovereign Bank of Canada filed a bill against the Chicago & Milwaukee Electric Railroad of Wisconsin on a note for $16,000, alleging insolvency. Chicago banks also participated in the proceedings. The receivership for A. C. Frost & Co. was based on a bill filed on behalf of George A. Ball of Muncie, Ind., and others, who held a note for $50,000. This bill stated that A. C. Frost & Co. were solvent, but that they had been engaged in constructing and financing railroad enterprises, that the recent financial stringency had made it impossible to market securities advantageously and that to conserve the financial interests it was necessary that a receivership be appointed. On January 27 Mr. Frost made public a statement, in which he said:

The direct cause of the receivership is the fact that the credit of the company and the market for its securities were injured by the receivership instituted on New Year's eve, and as a result it became impossible to consummate the sales of bonds, which had been substantially completed. After conferences between the principal holders of the company's obligations it was decided that a receivership would be the best means of conserving the property and the interests of the bondholders, creditors and stockholders. There are only about eight miles of the road to be completed, and more than 50 per cent of this work has been done. The total cost to complete the road will not exceed $250,000.

Jacob Newman, who represents the holders of $1,000,000 of bonds of the road, made the following statement: "The receivership inaugurated New Year's eve necessarily destroyed the credit of the road. The bond sales, which would have been completed in four or five days, were stopped. The road has to be completed. The money cannot be obtained in the ordinary way. The $250,000 must be raised by the sale of receiver's certificates."

Statements of Judge Grosscup.

On January 29 Judge Grosscup issued a statement saying that he told Mr. Dawes he regretted that the statement of charges had been given to the press, and adding: "Mr. Frost, who built up this property—has put his life into it—has not been heard, and certainly nothing will be taken as established against him until he had been heard. I will give to the objections against Mr. Frost an early consideration with my mind unaffected until everything is fully weighed and considered."

In the statement issued on January 30 Judge Grosscup announced that Mr. Frost had asked to be relieved. "I think that in taking this step," Judge Grosscup said, "he is doing the right thing, in view of all the controversies that seem to exist within the properties, of which I was not aware at the time of the appointment. I still believe, however, that his personal help is essential to the working out of the interests involved."

The Allis-Chalmers Company recently completed what is regarded as the most powerful stationary engine ever built. This engine has a capacity of 25,000 horsepower and is designed to operate condensing at 175 pounds steam pressure and a speed of 200 revolutions per minute. It is a horizontal, twin-tandem rolling mill engine, with cylinders 42 by 70 inches, with 54-inch stroke. The engine as a whole, without foundation plates or flywheel, weighs 550 tons.

About 50 conductors employed on the lines of the Nashville Railway & Light Company's street railway system at Nashville, Tenn., were arrested on January 28 on the charge of violating a section of the city laws requiring that the names of intersecting streets be called out by the conductors. No fines were assessed in this instance, but warning was given by the court that a second violation would result in a fine in each case.

It is announced that the Schenectady (N. Y.) Railway will adopt the practice of designating the length of service of its conductors and motormen by awarding a gold stripe, to be worn on the sleeve of the uniform, for each year's service. When the wearer is entitled to five stripes he will be awarded a gold star in place of the stripes.

News of the Week

Transit Affairs in New York.

On January 22 the New York public service commission of the first district held a public hearing on the proposed Broadway-Lexington avenue subway route, the plans for which were approved by the commission on December 31. Residents of Manhattan and the Bronx spoke in favor of the route. The commission also ordered a public hearing for February 18 on the section of the Brooklyn Fourth avenue subway route under Ashland place from Fulton street to Fourth avenue.

At a meeting of the commission on January 28 the subcommittee on safety devices was instructed to consider the advisability of ordering the use of a magnetic brake on elevated trains operated over the Brooklyn bridge. The chief engineer was requested to investigate the desirability of having side doors on the cars.

The electrical inspector of the public service commission, who has for more than six weeks past been examining the rolling stock of the Union Railway of the Bronx, has reported to the commission recommending that the company be ordered to overhaul all of its cars and to rebuild some of them.

Judge Rosalsky of the general sessions court, New York City, on January 27 gave a decision in the proceedings instituted to punish Paul D. Cravath for contempt of court in declining to tell the November grand jury what Thomas F. Ryan said to him in connection with the sale of the franchise of the Wall & Cortlandt Street Ferries Railroad to the Metropolitan Securities Company in 1902. Mr. Cravath based his refusal upon the fact that he was Mr. Ryan's counsel and Judge Rosalsky upholds him in this contention. In his decision Judge Rosalsky delivered a severe arraignment of District Attorney Jerome, declaring that he so conducted the examination of Thomas F. Ryan before the grand jury as probably to invalidate any indictments which that body might have found against Mr. Ryan. Hence the court discharged the November grand jury, which had been held over on account of the Cravath incident, and directed Mr. Jerome to submit the matter anew and in a legal way.

Chicago Union Traction Reorganization Perfected.

The property of the Chicago Union Traction Company was formally sold to the Chicago Railways Company on January 25. The property of the company and its subsidiary roads was bought by the Chicago Railways Company on a general bid for $2,000,000. On the various items when bid for separately the total bids were $2,090,000. Judge P. S. Grosscup of the United States circuit court will decide which amount the company must pay. The purchasing committee consisted of L. C. Kranthoff, George Wickersham and John C. Hately. The bids for the separate properties were as follows:

West Chicago Street Railroad	$ 500,000
North Chicago Street Railroad	300,000
Chicago Union Traction Company	150,000
Chicago West Division Railway	500,000
Chicago Passenger Railway	100,000
Chicago West Division Tunnel Company	200,000
North Chicago City Railway	300,000
For various law claims	15,000
For all property which may have been overlooked, or which may be claimed	25,000
Totals	$2,090,000

A lease of the properties of the Chicago Union Traction Company to the Chicago Railways Company was executed on January 29 and Judge Grosscup directed the entering of an order approving the lease. The lease was signed by Henry A. Blair and Marshall E. Sampsell as receivers for the Chicago Union Traction Company and runs to John M. Roach as attorney in fact for the Chicago Railways Company. It provides for possession of the lines from December 26, 1907, to February 2, 1927, at a gross rental of $1,000.

Attorneys for the Chicago Railways Company later filed with the city clerk of Chicago a formal acceptance of the ordinance and a bond of $100,000 to assure the observance of the conditions.

John M. Roach, president of the Chicago Union Traction Company, was elected a director and the president of the Chicago Railways Company. Henry A. Blair was elected a director of the latter company.

The Chicago Railways Company has executed a trust deed to the Merchants' Loan & Trust Company of Chicago, as trustee. The mortgage is for $37,500,000, and covers all the properties of the Chicago Union Traction Company and its underlying roads and whatever rights have been obtained by the Chicago Railways Company under the new ordinance.

The talk of consolidation of the properties of the Chicago Railways Company and the Chicago City Railway has been revived.

Legislation Affecting Electric Railways.

District of Columbia.—Representative Hepburn has offered an amendment to the bill for temporary street railway tracks connecting with the new union station which provides that the district commissioners shall have authority to regulate the number, kind and schedules of street cars operated in the district. The bill was held over until the next district day.

Massachusetts.—Recent bills introduced into the legislature include the following: A bill to authorize the Pittsfield Street Railway to acquire by purchase the franchises and property of the Bennington & North Adams Street Railway, thus giving the New York New Haven & Hartford system of electric railways an extension into Vermont; a bill to prohibit the throwing of any lighted match, cigar or cigarette in any railroad car, except smoking cars, in any railroad station or waiting room or sidewalk or platform connected therewith, except in receptacles provided for the purpose; a bill to give personal injury or death claims against an insolvent railroad or street railway preference over all other claims except bonded indebtedness; a bill to require 3-cent fares in Holyoke between 6:30 and 7:30 a. m., 11:30 a. m. and 1 p. m., and 5 to 6 p. m., with a penalty of from $20 to $1,000 for each violation; a bill to amend the street railway location law of 1906 so as to place the revisory powers with reference to a location more completely in the hands of the railroad commission instead of the local boards of aldermen or selectmen.—A bill giving the Boston Elevated Railway the right to purchase the West End Street Railway and to increase its capital stock by an amount equal to the par value of the West End stock has been introduced into the legislature.

New Jersey.—A bill has been introduced in the house to create in place of the present state railroad commission a public service commission, with powers similar to those of the public service commissions of New York.

Ohio.—A bill has been introduced by Senator Howe of Cleveland to enable cities to establish terminal stations for steam and interurban railways. Authority is granted to such cities to lease the terminal facilities to any railroad and to issue bonds on railway terminal certificates. The bill is intended to apply principally to Cleveland, Cincinnati, Columbus and Toledo. It is provided that before cities may purchase land for stations or start the work of construction they must enter into a contract with the railways entering the city for a period of not longer than 40 years, by which the railroads agree to pay to the city an annual rental sufficient to pay the interest on the cost of the terminal station.—A bill introduced in the house by Representative Stockwell provides that consents of property owners to the operation of a street railway shall not be necessary in the case of a renewal of a franchise, whether to a new or to an old company.

Progress of the Cleveland Settlement Negotiations.

Mayor Tom L. Johnson, representing the city of Cleveland, and F. H. Goff, representing the Cleveland Electric Railway, are still holding meetings twice a day in the effort to decide on the value of the Cleveland Electric Railway property. The principal points discussed within the past week have been the amount of overhead charges and the value of unexpired franchises. At the meeting on January 23, in discussing the amount to be allowed for overhead charges, the mayor finally consented to increase his figures, allowing $973,530, a little over half of Mr. Goff's estimate. The mayor agreed to allow $24,000 for accident insurance, $18,000 for rail inspection, $12,000 for accident claims and $100,000 for incidental delays. These are items to which he has previously objected.

On the following day, in discussing the value of outlying franchises after the inside grants had expired, it was decided to ascertain the proportion of the traffic originating on the outlying lines by employing policemen to check the passengers, in order to determine a proper division of the earnings. The mayor also agreed that in estimating the earnings on such lines the possibility of an operating agreement with another company owning the inside lines should be taken into consideration. On Tuesday of this week it was decided that beginning on Thursday of this week 60 policemen should be employed to check the number of passengers boarding the cars outside of the city. The policemen were to be stationed 1,500 feet beyond the city line, and if necessary the cars were to be stopped to facilitate the count.

At the meeting on January 24 Mr. Goff suggested that in case a settlement as to the value of the franchises is not reached by February 10 the Cleveland Electric's franchises in Woodland avenue and the west side should be extended for a month. The mayor took the matter under consideration and on the following day agreed to have an ordinance introduced

on Monday extending the franchises for 60 days, provided the Cleveland Electric would permit the Forest City Railway to use jointly several short sections of track for which it has yet no grants. At the meeting on Monday Mr. Goff announced that the company would not agree to the plan.

At the Monday meeting the question of the terms by which the stock of the Cleveland Electric Railway and the Forest City Railway is to be taken over by the holding company was discussed in a tentative manner, but it was decided to wait until the valuation was settled. At this meeting Mr. Goff proposed to cut six months from the life of the Euclid Heights franchise if the mayor would make certain concessions, such as accepting Mr. Goff's views as to cost of paving and as to charging 62½ per cent of gross earnings to operating expenses instead of 65. The mayor would not accept the compromise.

On January 22 Judge Estep gave a decision that the Forest City Railway has a right to use jointly with the Cleveland Electric Railway the latter's tracks on West Twenty-fifth street, from Bridge avenue to Lorain avenue, and on Lorain avenue, from West Twenty-fifth street to West Seventy-third street. This completes a belt line around the west side and gives the low-fare company 33 miles of track in all over which its cars may now be operated. However, the decision states that the company has no right to use the poles and wires of the Cleveland Electric Railway, as provided by the city council. The decision was handed down in injunction proceedings instituted by the Cleveland Electric Railway.

On January 23 Judge Addams held that the Forest City Railway has the right to joint use of a 1,200-foot stretch of the Cleveland Electric tracks on West Sixty-fifth street, which has been contested by the latter company.

At the suggestion of Mr. Goff it was decided that the two companies should arrange for the amount of compensation to be paid for joint use of the overhead equipment in order to avoid useless duplication. A. B. du Pont, president of the Municipal Traction Company, announced that the new lines would be put in operation about February 1.

Indicted for Car Ticket Fraud.—Charles F. Tabler, Andrew Leo Lucas and H. R. Wimsatt were indicted by the grand jury at Washington, D. C., on January 24 for conspiracy in connection with the scheme to defraud the Washington Railway & Electric Company and the Hamilton Bank Note Company by the sale of stolen car tickets, as described in last week's issue of the Electric Railway Review.

Western Society of Engineers.—The next regular meeting of the Western Society of Engineers will be held in the society rooms, Monadnock block, Chicago, on Wednesday, February 5. H. B. McFarland will present a report on "A Test of a Small Suction Gas Producer Plant." At a meeting of the electrical section, on February 14, James N. Hatch will present a paper on "The Evolution of the Electric Railway."

Pittsburg Railways Company Must Pay Bridge Toll.—Judge J. W. Over of the common pleas court at Pittsburg has decided that the Pittsburg Railways Company owes the city $80,000 in back tolls for running its cars over the Point bridge across the Monongahela river and that the company must hereafter pay the city quarterly a toll of 5 cents for each trip of a car across the bridge. The back tolls represent the period from November 12, 1897, to November 12, 1907.

American Society of Mechanical Engineers.—The first meeting of the gas power section of the American Society of Mechanical Engineers will be held on Tuesday evening, February 11, in the Engineering Societies building at 29 West Thirty-ninth street, New York. The subjects under discussion will be "Experimental Gas Turbines in France" (with lantern slides), "A Simple Continuous Gas Calorimeter" and "A Gas Engine and Producer Guarantee." Other subjects relating to the question of gas power will also be discussed.

Cornell University Section A. I. E. E.—Before and after the Christmas vacation two special meetings were held. At the first Prof. W. D. Bancroft, head of the department of physical chemistry, Cornell University, delivered an illustrated talk on "The Electro-Metallurgy of Steel." At the second meeting local members abstracted the papers on "The Mechanical Engineering of Power Stations," delivered in New York in December. At the next meeting Charles F. Scott, consulting engineer of the Westinghouse Electric & Manufacturing Company, will be the speaker.

Public Utilities Commission for Kansas City Proposed.—The upper house of the Kansas City city council on January 27 passed unanimously an ordinance providing for the creation of a public utilities commission. The commission is to consist of three members at a salary of $600 a year, to be appointed by the mayor and to serve for three years, and two aldermen, one to be chosen from each house of the council, who will receive no salary and who will hold office for the length of their aldermanic term. The commission is to investigate and report to the council such matters as rates, service and franchises of public utility companies.

Motorman Held Guilty for New York Elevated Accident.—Paul Kelly, the motorman in charge of a Ninth avenue elevated train of the Interborough Rapid Transit Company, New York, that ran off the elevated structure into the street on September 11, 1905, killing 12 persons, was convicted of manslaughter in the second degree on January 24 in the general sessions court. In returning its verdict the jury recommended the prisoner to the extreme mercy of the court. The towerman in charge of the signals at the time of the accident has already been convicted. He testified that the motorman ran past the signals which were set against him, while the motorman claimed he had a clear signal.

University of Illinois.—The University of Illinois announces that the formal installation of Dr. William F. M. Goss as dean of the college of engineering will occur on Wednesday, February 5, on the occasion of the formal opening of the graduate school on February 4 and 5. At a meeting to be held at 10 o'clock on the morning of February 5, addresses will be made by the president of the university and by representatives of the trustees, the alumni and the faculty, which will be followed by the installation address of Dr. Goss. After inspection of the buildings and equipment of the college of engineering short addresses by visiting engineers will be made at a meeting to be held in the physics lecture room.

San Francisco Strikers Ask Reinstatement.—It is reported that about 500 of the union carmen who have been on a strike against the United Railroads of San Francisco since last May have recently applied to the company for employment. The strike has never been officially declared at an end, but the executive heads of the union have given the men permission to apply for their former positions. At the offices of the company it was stated that about 300 of the strikers have already been reinstated and that of the 500 now on the waiting list those who had not made themselves conspicuous during the strike would be given positions on the same terms as new men as soon as there were vacancies to be filled or new men were required.

Des Moines Interurban Railway to Reduce Expenses.—President H. H. Polk of the Interurban Railway, Des Moines, Ia., has announced that the company will be compelled to make heavy retrenchments in all departments in consequence of the heavy slump in business during the past two or three months, although it is hoped that the period of retrenchment will be of only a few weeks' duration. In the office and station forces 10 men will be laid off and 20 track employes, several freight house men and several shop employes will be dismissed. A reduced schedule for the train service will be prepared: "We have delayed the retrenchments as long as possible and have been constantly hoping, but in vain, that business would pick up so that they would not be necessary," said Mr. Polk. "Our gross passenger receipts since November 1 are about 25 per cent lower than they were a year ago and other revenues show a similar decrease. I am confident that business will pick up before long, but we simply have to cut down expenses until it does."

Des Moines Carmen Ask Increase of Wages.—The scale committee of the union motormen and conductors employed by the Des Moines City Railway on January 25 presented a demand for an increased scale of wages, effective on February 12, providing for an increase of from 35 to 45 per cent. The company's officials refused the demands, saying that under existing business conditions it would be impossible to accede. Further negotiations will follow. The men are working under a 5-year contract, signed in October, 1906, which provides for an adjustment of the scale on February 12 for the ensuing year. In case of a disagreement the contract provides for arbitration by a committee of three men, one selected by the company, one by the men and the third by the mayor of Des Moines. President George B. Hippee of the Des Moines City Railway has given out the following statement: "A committee of the car operatives, motormen and conductors employed by the Des Moines City Railway today presented a new scale asking the company to approve it. The scale calls for service pay of 23, 25 and 28 cents per hour for the three grades of employes. This is an increase over the scale adopted in October, 1906, and expiring February 12, of from 45 per cent for the lower grade men to 35 per cent for the upper grade, with an average of 40 per cent for all coming under the scale. The advance asked for is the more noticeable when it is considered that in the train department a large proportion of the men, both on the regular and extra list, get in good hours every day in the year on which they desire to work, and that most of them average six and seven days out of each week."

Traffic and Transportation

Uniform System of Printing, Publishing and Filing Tariffs in Indiana.

In compliance with a request from the Indiana railroad commission the committee of officials of interurban electric railways appointed on October 2 for the purpose of formulating a uniform system of printing, publishing and filing tariffs in accordance with the Indiana law has made its report. These rules are now being followed. An abstract of the report of the committee follows:

"1. Passenger tariffs may be divided into three classes: (a) Joint tariffs, applying between points on the lines of two or more carriers. (b) Local tariffs, applying only to traffic between points on the lines of the issuing carrier. (c) Interdivision tariffs, applying only to traffic between points on different divisions of the lines of the issuing carrier.

"2. All tariffs must be printed on durable paper of good quality from type of a size not less than 6-point full face, and stereotype, planograph or other printing press process may be used. Hectograph, mimeograph, typewritten sheets or other similar process may be used in the preparation of tariffs covering excursion fares for not exceeding 10 consecutive selling dates or for excursions limited to 30 days or less.

"3. All tariffs must be filed in covers 8 by 11 inches. Local and interdivision tariffs may be in book form, but not larger than the above figures, or loose-leaf plan may be used, the size to remain the same.

"4. It may be desirable that certain fares appearing in local tariffs be repeated in interdivision or joint tariffs, but in all cases the fares so repeated must be the same in every tariff in which they appear.

"5. Interdivision tariffs shall show: (a) Fares between each point on one division and each point on the other division or divisions to which the tariff applies. (b) Fares between each station and every other station on the division or divisions to which the tariff applies and must include explicit rules and bases from which to determine fares to and from points not named in the tariff.

"6. The title page of every tariff shall show: (a) Name of the issuing carrier, carriers or agent. (b) Indiana railroad commission number of tariff in bold type immediately below the upper border line in the center of the sheet, and immediately under this (if there is sufficient room) the number or numbers of tariffs and supplements canceled thereby. If, however, the number of canceled tariffs is too large, same may be shown on the following page, but specific reference to such list must be carried on the title page in connection with the number of the tariff. All passenger tariffs must be numbered in serial numbers. For convenience in filing the passenger department number may be placed in the upper left-hand corner immediately under the border line, and if tariff is both intrastate and interstate the interstate commerce commission filing number should be shown in the upper right-hand corner, immediately under the border line. (c) Whether tariff is local, interdivision or joint. (d) The territory which the tariff is proposed to cover briefly stated. (e) Date of issue and date effective. (f) Name, title and address of officer by whom tariff is issued. (g) On the upper left-hand corner the words, 'Only one supplement to this tariff may be in effect at any time.' (h) If tariff is issued by special permission such permission must be shown on the title page.

"7. Tariffs shall contain, in the order named: (a) Table of contents full and complete. (b) Names of participating carriers, together with their concurrence numbers. (If there are no more than 10 participating carriers, and it is so desired, this may be shown on the title page.) (c) Alphabetical list of stations must be shown, together with page numbers on which such stations may be found, and a mileage table from some given point, together with all rules and regulations applicable to the tariff.

"8. In order that the members may understand what will be acceptable to the Indiana railroad commission we submit tariffs as follows: Local and interdivision tariff of the Terre Haute Indianapolis & Eastern Traction Company; joint passenger tariff of the Indiana Union Traction Company, showing rates of fare from certain junction points to certain stations in Indiana and Ohio via various gateways (this tariff is to be reissued and on such reissue will carry notations named in the foregoing report); interdivision excursion tariff, naming rate in connection with a steam road, but only naming such rate intrastate; excursion tariff, naming rate interdivision from all points on a certain line in connection with a steam line to a point outside of the state (this being wholly interstate, it would not be filed with the Indiana railroad commission); the manner of issuing a supplement to an Indiana railroad commission or an interstate commerce commission tariff; interline excursion tariff from points on one line to a point on another line. In connection with this tariff we show the manner of filing all tariffs with the Indiana railroad commission.

"Tariffs may be printed either in squares or by head line points at the option of the road."

The committee was composed of the following: Chairman, F. D. Norviel, Indiana Union Traction Company; S. D. McLeish, Indianapolis Crawfordsville & Western Traction Company; J. W. Foutz, Terre Haute Indianapolis & Eastern Traction Company; A. G. Kelly, Ft. Wayne & Springfield Railway; George S. Henry, Indianapolis & Cincinnati Traction Company.

Four-Cent Fares an Injustice.

The Louisville (Ky.) Herald of January 22 publishes the following interview with S. H. Kendall, chairman of the railroad committee of the board of councilmen, in relation to the 4-cent fare ordinance which has been introduced in the board:

"None of us is in favor of the ordinance proposing to reduce arbitrarily the fares of the Louisville Railway Company to four cents. The company has suffered a great deal, and its conduct toward the administration in granting additional transfers, as well as its trials during two strikes recently, has led us to believe that it would be a great injustice to endeavor to pass this ordinance, and thus put an additional burden upon the corporation."

Boston & Worcester Street Railway to Maintain Schedule.

E. P. Shaw, Jr., general superintendent Boston & Worcester Street Railway Company, in answer to a question as to whether that road will try to reduce operating expenses by reducing the service, said to a representative of the Worcester (Mass.) Telegram:

"At the present time many of the street railway companies and some of the steam roads are curtailing expenses by changing their timetables to cut out trips. The Boston & Worcester Street Railway has passed through three of the best winter months, for receipts and service, since it started, and is very well satisfied with the present schedule.

"We have had many inquiries as to whether we were to make any changes in our present schedule, so I would be glad to have you quote me as saying that we will not make any changes to reduce our schedule this winter. We will continue to run every half hour as in the past, and at times when the riding demands it, we are ready to give additional service. We find that we are better able to maintain our scheduled service on account of the addition of the double track put in last summer.

"It appears that the reduction in service on the steam and trolley roads has helped us considerably, as our business has steadily increased."

Difficult Competition for an Electric Road.

The following condition of competition exists between Grand Rapids, Mich., and Muskegon, Mich., where the Grand Rapids Grand Haven & Muskegon Railway, a third-rail electric road, is in direct competition with the Grand Rapids & Indiana Railway, a steam road.

Previous to the building of the Grand Rapids Grand Haven & Muskegon Railway the Grand Rapids & Indiana road charged three cents per mile, or $1.19, between the cities named. When the electric road was completed it made the rate 60 cents. The Grand Rapids & Indiana road cut the rate to 50 cents, and this rate has been in effect up to very recently. On Sundays a round-trip rate of 50 cents was made by the Grand Rapids & Indiana road. The electric line did not meet this rate, but maintained the 60-cent rate. According to the new 2-cents-per-mile law the Grand Rapids & Indiana road is entitled to 79 cents for the trip. Recently it has placed two kinds of tickets on sale between these cities. A passenger who has baggage to check has to pay 79 cents, but if the passenger has no baggage the 50-cent rate is used. The Grand Rapids Grand Haven & Muskegon Railway has cars running on a schedule of an hour and a half, while the Grand Rapids & Indiana road has two trains each way a day. The electric cars are not equipped for handling baggage, but the company has express cars leaving in the morning and at noon on which baggage is checked, with a charge of 25 cents for each piece.

Reduced Fares to Pupils of Schools Approved in New York.

The New York public service commission, second district, through Commissioner Decker, has rendered an opinion concerning the sale of low-price commutation tickets for pupils in schools. It is held that this practice "is a long-existing and desirable custom or usage sanctioned by public policy and the public service commissions law." The opinion states:

"Generally speaking, a special rate transportation ticket, confined to a particular class of persons, involves discrimination, and, as a rule, discrimination of that character is for-

bidden by law. A practice, however, of accepting half fare for children is sanctioned by custom and usage dating back to the beginning of railroad operation. The absolute justice as well as necessity for such variation in rate need not be argued. Arising in like good public policy is the similar custom or usage of fixing and charging special low rates for children riding daily for the purpose of attending desirable schools. Ordinarily these special rates for school children are afforded by the sale of low-price commutation tickets issued in forms deemed appropriate by the carriers. The universal and continuous recognition by carriers and the public that the transportation of children for school, or, indeed, for any purposes, is invariably under conditions dissimilar to those arising in the carriage of adult persons is clearly justified in fact and in law.

"The general practice of carriers is to make half rates for all children under 12 years of age when traveling for any purpose, and the school commutation ticket is as a rule limited to those children attending public schools, or private schools having similar grades. Confined within these reasonable limits, and thus avoiding discrimination in affording rates and transportation facilities as between adult persons, it is impossible to perceive how the practice of allowing special rates for the transportation of children to and from school can produce wrongful discrimination or violate in any sense the equality clauses of the law."

Transfers in Pittsburg.—After a conference of the joint committee of councils on universal transfers with J. D. Callery, president of the Pittsburg Railways Company, it was announced by the chairman of the committee, Joseph P. Hildorfer, that the company would extend its transfer system.

Lower Rates Sought in Minnesota.—Formal complaint has been made to A. J. Smith, county attorney of Hennepin county, concerning rates of the Minneapolis & St. Paul Suburban Railway, which is controlled by the Twin City Rapid Transit Company. Residents of communities reached by the Minneapolis & St. Paul Railway desire to have it place in force 2-cents-per-mile fares.

Better Service Desired in Hartford, Conn.—A. B. Smith, general traffic manager of the Connecticut Company, New Haven, Conn., and W. P. Bristol, local manager at Hartford, Conn., met Mayor Henney of Hartford and members of the railroad committee of the common council on January 25 in relation to the service. Some complaint has been made regarding a reduction in the number of cars. Mr. Smith said that it is the desire of the company to give the best service it can under the existing business conditions.

Service Reduced by Philadelphia Rapid Transit Company.—On account of reduced traffic the Philadelphia Rapid Transit Company has withdrawn from operation 100 cars. New schedules will be promulgated soon, which will reduce the service still further. John B. Parsons, president of the company, is quoted as saying that while no employes have been dismissed, a large number would be put upon "chance work" and the hours of all will be shortened. The men will not work more than six days a week under the new arrangement.

Fares Restored by Pennsylvania Railroad.—As the supreme court of the state of Pennsylvania has decided that the act of the last legislature fixing a maximum passenger fare of two cents a mile is inapplicable to the Pennsylvania Railroad, its branches and leased lines, the company will restore on February 1 the schedule of fares which had prevailed from November 1, 1906, when the company voluntarily reduced its maximum 1-way rate to 2½ cents a mile, until October 1, 1907. On the latter date, when the 2-cent fare act became effective, all 1-way rates were reduced to conform to the law.

Hearing at Omaha, Neb.—Frank Lyon, special examiner for the interstate commerce commission, held hearings at Omaha on January 20 and 21 on the complaint of the West End Improvement Club of Council Bluffs, which desires to have the commission order a reduction in the rate of fare between Omaha and Council Bluffs. In his testimony R. A. Leussler, secretary and assistant general manager of the Omaha & Council Bluffs Street Railway, referred to the increase in the cost of labor and materials and said that the character of the service had been improved materially.

Ordinances Affecting Service in Toledo, O.—An ordinance was passed by the city council of Toledo on January 20 requiring the Toledo Railways & Light Company to establish 15-minute service on the Huron and South line from its terminus in North Toledo to the Toledo state hospital. An ordinance was also introduced providing that the company should operate owl cars at intervals of not less than one hour between midnight and 5:30 a. m., the rate of fare to be fixed by a committee of the council. The latter ordinance was referred to a committee.

Construction News

FRANCHISES.

Christiana, Pa.—The borough council of Christiana has granted a franchise to the Conestoga Traction Company of Lancaster, Pa., for the construction of its proposed 5-mile extension from Christiana to Atglen and on to Parkesburg. With the completion of this extension through connection from Lancaster to Parkesburg, 22 miles, will be afforded.

Gresham, Ore.—The Mt. Hood Railway & Power Company and the Portland Railway Light & Power Company are seeking 25-year franchises from the Gresham city council. The Portland Railway Light & Power Company is also asking for electric light and power privileges in Gresham.

Kansas City, Mo.—An ordinance authorizing the Kansas City Railway & Light Company to extend its Twenty-seventh street line from Cleveland to Jackson street was adopted by the lower house of the council on January 27.

Lincoln, Ill.—The Peoria Lincoln & Springfield Traction Company, which recently began operation between Lincoln and Mackinaw, Ill., has applied to the railroad and warehouse commission for the right to construct grade crossings in Lincoln with the Chicago & Alton and Illinois Central railroads. Practically all of the line has been completed with the exception of these crossings. The new line is a branch of the Illinois Traction System.

Pittsburg, Pa.—It is stated that three new ordinances granting franchises for a subway system in Pittsburg will be introduced in the city councils within a short time. Two will be presented by the Pittsburg Subway Company, which has been applying for a franchise for several months, but whose application was still an unsettled question at the time of the consolidation of the legislative branches of Pittsburg and Allegheny. The other will be introduced by the rapid transit committee of councils. It is planned to invite bids for the franchise and to dispose of it to a corporation which shall demonstrate its financial ability to build the subway and which shall offer the best terms to the city. There is expected to be strenuous competition between the subway interests and interests which have been seeking a charter for an elevated system.

Summerville, S. C.—A 39-year franchise has been granted to the Charleston & Summerville Electric Railway Company for the operation of its cars through the principal streets of Summerville, S. C. The company proposes to build a 27-mile interurban line between Charleston and Summerville and considerable grading has been done. Julius G. Hocke, 15 Whitehall street, New York City, president; George Tupper, Summerville, secretary and treasurer; St. Julien Grimke, Charleston, general counsel.

RECENT INCORPORATIONS.

New Orleans & Seashore Air Line Railway, New Orleans, La.—Incorporated in Louisiana to build an electric railway from Algiers, the fifth district of New Orleans, to Grand Isle, a resort on the gulf of Mexico. It is proposed to erect a large hotel and other resort features at Grand Isle and to develop large districts of swamp lands lying along the proposed route. Besides the main line, which will be 50 miles long, it is proposed to build a branch along Bayou Lafourche from Lockport to the gulf of Mexico, besides branches east and west from the terminal at Grand Isle. The construction work will be very extensive on account of the character of the territory to be traversed, which will require a large amount of trestle and fill, including a 12-mile pile trestle from Bayou St. Denis to Grand Isle. It is stated that offers have been made to underwrite sufficient bonds to build the line. Capital stock, $1,000,000. Incorporators: James W. Porch, Arsene Parriliat, William F. Pinckard, John H. Menge, Honore Dugas, J. W. T Stephens, R. McWilliams, W. S. Fill, L. H. Marrero, Jr., and others of New Orleans. J. W. T. Stephens, 303 Board of Trade building, is chief engineer.

West Chester & Wilmington Electric Railway, West Chester, Pa.—Incorporated in Pennsylvania to build an electric railway from West Chester, Pa., to the Delaware state line, where it will connect with the Delaware section of the road. The capital stock is $54,000. Thomas E. O'Connell, West Chester, is president. (Noted December 28, 1907.)

Western Illinois & Iowa Railroad.—Incorporated in Illinois to construct an interurban railway in Hancock county, Illinois. Capital stock, $2,500,000. Incorporators: Paul A. Neuffer, Harry H. Phillips, James E. Hanronic, Charles J. Horn and Rollo M. Cole, all of Chicago.

TRACK AND ROADWAY.

Austin & Lockhart Interurban Railway, Austin, Tex.—Announcement is made that the fifth survey for this proposed interurban line is being made and that in all probability the road will be built this year. The company was incorporated last July by eastern capitalists with a capital stock of $400,000. (Noted July 27, 1907.)

Central Railway, Clinton, Ia.—Thomas J. Wilcox, president of this company, writes that the entire survey for the proposed electric line from Clinton to Dubuque, Ia., 87 miles, has been completed. The maximum grade is 1.5 per cent, maximum curvature, 4 degrees. The road will be standard gauge, laid with 70-pound rails, and will carry both passengers and freight. After the contracts have been closed, which will be some time during the coming summer, work will be started on the construction. B. Franklin of Franklin & Clark, Philadelphia, Pa., is chief engineer. (Noted December 28, 1907.)

Chicago Lake Shore & South Bend Railway, South Bend, Ind.—Rapid progress is being made on the line from South Bend, Ind., to Kensington, Ill. Beginning 11_2 miles out of South Bend the track is laid and ballasted for 22 miles. Track is also laid for 8 miles east of Michigan City and for 12 miles west to the Lake Shore & Michigan Southern Railway crossing, near Dune Park. All of the grading is completed between Dune Park and South Bend, except for one mile. From Dune Park to East Chicago grading is completed, except for $^3_4$ mile. All but seven miles of the track between Dune Park and Hammond has been laid. Seventy-pound T-rails and white oak ties are used. The 45-foot poles used were creosoted by the Southern Creosoting Company of Louisiana. The electrical equipment is furnished by the Westinghouse Electric & Manufacturing Company and cars have been ordered from the Niles Car & Manufacturing Company. J. W. S Reigle is chief engineer. (Noted January 18.)

Chicago & Southern Traction Company, Harvey, Ill.—Matthew Slush, president of this company, which recently opened its extension from Harvey to Kankakee, Ill., announces that the next move will be to extend the line from Kankakee to Lafayette, Ind., 55 miles.

Columbus Delaware & Marion Railway, Columbus, O.—It is now hoped to have the extension from Marion to Bucyrus, O., ready for operation by April 1. There are two short stretches of grading to be completed, aggregating less than a mile, and nine miles of track, about half the distance, have been laid. The line will be supplied with current from the company's power house at Stratford by a 20,000-volt transmission line leading to a substation at Marion. A second substation will be located at a point 11 miles from Marion. The current on the trolley will be 600-volt direct-current, as on the present main line. George Whysall of Marion is general manager. (Noted December 7, 1907.)

Evansville & Southern Indiana Traction Company, Evansville, Ind.—The work of grading the Patoka extension of this company's line was completed as far as Patoka on January 23. The whole line with the exception of the bridge across the Patoka river near Patoka is now ready for tracklaying. (Noted December 28, 1907.)

Ft. Worth Weatherford & Mineral Wells Interurban Railway, Ft. Worth, Tex.—It is stated that a formal offer for the construction of this proposed road will soon be made by the firm of Suderman & Dolson, Galveston, Tex. A representative of the firm already has made a tour of inspection of the route between these points and in the cities of Weatherford and Mineral Wells, and it is said that a bond sufficient to guarantee the building of the road will be given, provided the proposition is acted upon favorably by the three cities. C. S. Young is chief engineer. (Noted December 7, 1907.)

Franklin & Towamensing Street Railway, Slatington, Pa.—This company has recently opened an office at Slatington, Pa., and has engaged I. W. Cramp, Harrisburg, Pa., as engineer. He will at once begin the preliminary surveys and it is expected that a portion of the road will be completed and in operation by the end of the year. It will connect Slatington and Lehighton by way of Palmerton and Bowman's. Several Allentown, Pa., capitalists are interested. (Noted August 3, 1907.)

Hamilton Radial Electric Railway, Hamilton, Ont.—Permission from the Canadian government is being sought by this company for the construction of an electric line from Brantford to Windsor, Ont., or a point near that city. William C. Hawkins, general manager, Hamilton, Ont.

Little Rock & Pine Bluff Traction Company, Little Rock, Ark.—It is stated that the stockholders of this company have arranged for a reorganization of the company and will push the work of construction between Little Rock and Pine Bluff. Contracts for the grading have been let and considerable progress on the work already has been made. (Noted December 21, 1907.)

Los Angeles Pacific Railway, Los Angeles, Cal.—This company has commenced work on an extension from Santa Monica avenue to Toluca, Cal. T. R. Gabel, general manager, Los Angeles.

Macon Railway & Light Company, Macon, Ga.—It is stated that this company is planning two extensions for the coming year—one from Bellevue to the Idle Hour stock farm and another to the Outing Club. W. J. Massee, president, Macon, Ga.

Massillon Wooster & Mansfield Traction Company, Cleveland, O.—The contract for the construction of this electric line from Massillon west to Mansfield, O., has been awarded to the Northern Engineering & Construction Company, Cleveland, O. Four miles of grading has been completed between Smithville and Madisonburg. The road will be about 50 miles long and will serve the towns of Dalton, Orrville, Smithville, Madisonburg, Wooster, Reedsburg, Jeromeville and Hayesville. G. A. Bartholomew, chief engineer, 1423 Williamson building, Cleveland. (Noted August 24, 1907.)

Ocean Shore Railway, San Francisco, Cal.—This road has completed its line from Santa Cruz to the new town of Folger, a distance of 20 miles, and the work of extending the line is progressing steadily. Cars are in regular operation from San Francisco to the San Pedro valley. J. Downey Harvey, president and general manager, San Francisco. (Noted December 14, 1907.)

Oklahoma & Golden City Railway.—Announcement is made that the preliminaries have been arranged for the construction of this proposed electric railway from Pawhuska, Okla., to Jefferson City, Mo., and that active construction work will be started in the spring. The line will serve the intermediate towns of Joplin and Golden City and will have a branch to Springfield. W. S. Pope, Jefferson City, Mo., president; E. M. Dempsey, Pawhuska, Okla., vice-president; O. E. Wheelock, Kansas City, Mo., secretary.

Ontario West Shore Electric Railway, Goderich, Ont.—This company will apply at the next session of the Ontario legislature for an act empowering it to extend its proposed railway from Grand Bend, Stephen, through Usborne, southeasterly through Blanshard and Biddulph, thence southerly and westerly through West Nissouri or London township to London city; and to construct a branch line from Usborne or Blanshard in an easterly direction to St. Mary's, thence easterly through Downie to Stratford; to extend the time for payment of 15 per cent of the capital stock to May 14, 1909, and to extend the time for the completion of the railway to 1912; to approve the by-laws whereby the towns of Goderich, Kincardine, Ashfield, Huron and Colborne guarantee bonds to the extent of $400,000, and agreements respecting the company's right to build and operate its railway on certain streets in those towns. M. G. Cameron, Goderich, is interested. (Noted January 4.)

Pacific Electric Railway, Los Angeles, Cal.—This company is installing a complete system of interlocking and derailing switches and semaphores at two of the railroad crossings on its Long Beach line at a cost of about $40,000.

Pasadena, Cal.—Horace M. Dobbins of Pasadena is said to be at the head of a company which has been organized with a capital stock of $5,000,000 for the construction of an electric railway between Pasadena and Los Angeles. As proposed it will be practically an air line, reducing the distance by the existing lines by nearly three miles. It is stated that the third-rail system will be adopted and that all grade crossings will be avoided. It is also planned to enter the business district of Los Angeles by a subway and to utilize the old "cycleway" right of way between the two cities. The cost for constructing the road is estimated at $2,500,000.

Pueblo & Arkansas Valley Electric Railway, Pueblo, Colo.—It is announced that this company is now planning the extension of its interurban line from the proposed terminus at Rocky Ford west as far as Canyon City and south to Trinidad. This road will serve the entire Arkansas valley, including Pueblo, Otero and Fremont counties, and is backed by Kansas City capitalists, among whom are M. Douthitt, E. B. Chapze, M. J. Verner and Lester Wolf. M. G. Saunders, Pueblo, Colo., also is interested. (Noted December 21, 1907.)

Putnam & Westchester Traction Company, Peekskill, N. Y.—It is announced that Francis A. Stratton, president of the Peekskill Lighting & Railroad Company, Peekskill, N. Y., has purchased the Putnam & Westchester Traction line and

will operate it as a part of an interurban system which he proposes to build in that section of New York. An extension from Ossining to Pleasantville, White Plains and Mt. Vernon is said to be planned in this connection

Toledo Fostoria & Findlay Railway, Fostoria, O.—The 16-mile extension from Pemberville to Toledo has been completed to the Toledo city limits, with the exception of two short stretches near railroad crossings. F. W Adams, vice-president and general manager. (Noted October 19, 1907.)

Twin City & Lake Superior Railway, Minneapolis, Minn.—E. W. Farnham, president of this company, which is building a 129-mile third-rail electric line from Minneapolis to Duluth, Minn., writes that surveys have been completed for the entire distance. Since July 1, 1907, grading has been finished from the Belt Line in Minneapolis to Sunrise, Minn., on the St. Croix river, $38\frac{1}{2}$ miles. Work on grading the remainder of the distance will be started early in the spring. The road will be double-track and will be laid with 70-pound A. S. C. E. section rails. Ninety-six per cent of the route will be on tangents; maximum curve, 2 per cent, maximum grade, 0.6 per cent. J. H. Thomas, Railway building, Minneapolis, is chief engineer. The officers are: E. W. Farnham, president; W. H. Crossland, vice-president; F. B. Kidder, treasurer. Headquarters, Railway building, Minneapolis, Minn.

Warsaw, N. Y.—The project for an electric railway from Warsaw to Rochester, N. Y., is being revived by the promoters who have applied for franchise privileges on Main street in Warsaw and for permission to cross county roads. A hearing has been set for February 15. It is said that construction will be started as soon as the bonds have been sold.

Winona Interurban Railway, Winona Lake, Ind.—This company has awarded a contract to the Central States Bridge Company of Indianapolis for the construction of a bridge over the Pennsylvania Company's line on the Peru division of the interurban west of Warsaw, Ind. The Pennsylvania Company will bear part of the expense.

POWER HOUSES AND SUBSTATIONS.

Chicago & Joliet Electric Railway, Joliet, Ill.—It is stated that this company intends to erect a new $5,000,000 power station, to be located on the line about four miles from the Chicago terminal. The company has recently installed a 500-kilowatt motor-generator set, consisting of a three-phase 2,300-volt induction motor and an interpole generator at its Joliet substation and it is planned to increase the capacities of its Lemont and Summit substations by the addition of 500-kilowatt and 250-kilowatt machines. These installations were considered necessary by reason of the anticipated heavy travel to Dellwood Park near Joliet during the coming season. J. R. Blackhall, general manager, Joliet, Ill.

East Shore & Suburban Railway, Richmond, Cal.—This company recently purchased from the General Electric Company one 500-kilowatt motor generator complete with switchboards, and three 200-kilowatt transformers, 10,000 to 440 volts. W. S. Rheem, general manager, Oakland, Cal.

Tacoma, Wash.—It is reported that Stone & Webster of Boston, Mass., are preparing to build a large hydro-electric power plant at Lake Tapps, 10 miles from Tacoma, Wash., and for that purpose have acquired the Seattle-Tacoma Power Company, which owns the Snoqualmie Falls plant and also controls the water rights on Lake Tapps and the White river. According to the report the waters of the White river are to be diverted and carried by a canal to Lake Tapps. From the lake another canal will take the water to an 1,100-foot bluff, at the foot of which the plant is to be erected. The power is to be used for the Seattle and Tacoma lines and for the additional lines which Stone & Webster propose to build in that vicinity.

Torrington & Winchester Street Railway, Burrville, Conn.—We are officially advised that the note published in the Electric Railway Review of January 18, page 96, to the effect that this company proposed to abandon its present power house at Burrville and to build a new one at Torrington, Conn., is incorrect and that no such plans are contemplated.

Utah Light & Railway Company, Salt Lake City, Utah.—It is stated that this company will probably begin the construction early in the spring of its proposed 2,000-horsepower power plant at Devil's Gate on the Weber river, in Weber canyon, about 18 miles from Ogden, Utah. With the extension of the street railway lines in Salt Lake and in Ogden more power will be required and it is to meet this necessity that the new power plant will be erected. It will cost from $200,000 to $300,000 and when completed the company will have about 15,000 horsepower at its disposal.

Personal Mention

Mr. William Dudley Dwyer, Superior, Wis., has been appointed attorney for the Twin City Rapid Transit Company at Minneapolis, effective at once.

Mr. F. C. Dolan, heretofore manager of the Pittsfield Electric Street Railway at Pittsfield, Mass., has been elected president of the company, succeeding the late Joseph Tucker.

Mr. George S. Rankin has been appointed general manager of the Yakima Valley Transportation Company, which has just completed and placed in operation a street railway line in North Yakima, Wash.

The position of supervisor of inspectors of the Brooklyn Rapid Transit Company has been abolished and Mr. J. M. Stoddard, who had held that position heretofore, has been transferred to other duties.

Mr. Charles W. Smith has resigned as treasurer of the subsidiary companies of the Boston & Suburban Electric Companies preliminary to starting on an extended trip abroad. He will continue, however, as trustee of the holding company. Mr. E. M. Richards will succeed him as treasurer of the subsidiary companies.

Mr. Arthur H. Mann has been appointed general master mechanic of the Michigan United Railways in charge of the Kalamazoo, Battle Creek and Albion shops of the company, with headquarters at Albion, Mich. Mr. Mann formerly was master mechanic of the Evansville & Southern Indiana Traction lines at Evansville, Ind.

Mr. Edwin W. Robertson of Columbia, S. C., has resigned as president and treasurer of the Anderson (S. C.) Traction Company and Mr. William Elliott, Jr., has resigned as manager. Both men have held office since April, 1907. Mr. Robert E. Ligon of Anderson has been elected acting president, treasurer and general manager.

Mr. Lisle Bennion has been appointed acting general manager of the Illinois Light & Traction Company at Streator, Ill., succeeding Mr. R. W. Harris, who recently resigned to become general manager of the Joplin & Pittsburg Railway at Pittsburg, Kan., as announced in a previous issue. Mr. Bennion formerly was assistant to Mr. Harris.

Effective on January 25 the elevated lines of the Brooklyn Rapid Transit Company will be operated in three divisions, which will be known as the southern, eastern and bridge divisions. In this connection the following appointments have been announced: Mr. F. L. McCotter to be assistant trainmaster, eastern division; Mr. J. V. Byrne, to be trainmaster, bridge division; Mr. T. F. Blowitt to be trainmaster, southern division; Mr. J. T. Lavollo to be assistant trainmaster, southern division; Mr. F. H. Hammond to be assistant trainmaster, bridge division; Mr. H. Ahorn to be general yardmaster, eastern division.

Mr. Thomas K. Glenn has resigned as vice-president, secretary and manager of railways of the Georgia Railway & Electric Company, Atlanta, Ga., to become president of the Atlanta Steel Company. Mr. G. W. Brine, heretofore vice-president, treasurer and manager of the electrical department, has been appointed general manager. Mr. W. H. Glenn, superintendent of maintenance of way, has been appointed manager of railways. Mr. C. A. Smith, assistant superintendent of maintenance of way, has been appointed superintendent of maintenance of way. Mr. Thomas K. Glenn has been connected with the Georgia Railway & Electric Company and its predecessors since 1891. He was born in Vernon, Miss., about 39 years ago and was educated in public and private schools in Marietta and Atlanta, Ga. He entered the service of the Atlanta Consolidated Street Railway in 1891 as stenographer. In a short time he was appointed claim agent and he was soon after advanced to the position of secretary and treasurer. In 1898 he was elected vice-president, which position he retained when the name of the company was changed to the Atlanta Railway & Power Company. In 1901 the company was absorbed by the Atlanta Rapid Transit Company and reorganized as the Georgia Railway & Electric Company. Mr. Glenn was made vice-president and secretary and was also placed in charge of the claim department. In March, 1903, he was appointed manager of the railway department to succeed Mr. D. A. Belden. Mr. W. H. Glenn became connected with the Atlanta street railway lines at the same time as his brother and has had a thorough experience in nearly every department of the business. A graduate of the Georgia School of Technology, he entered the service of the Atlanta Consolidated Street Railway as a rodman, at the time the horse cars were

being replaced by electricity. Later he was placed in charge of the motor repairing department and two years afterward he was appointed assistant superintendent and purchasing agent. In 1898 he was placed in charge of the construction department, which position he held until the organization of the Georgia Railway & Electric Company, when he was appointed superintendent of maintenance of way. Mr. C. A. Smith, who succeeds Mr. W. H. Glenn, has held his present position for about two years.

Mr. John Millard Roach, who was elected president of the Chicago Railways Company, the new company that has taken over the properties of the Chicago Union Traction Company, at a meeting of the directors on January 29, has been connected with the street railways of Chicago for over a quarter of a century. For the past seven years he has held the active management of the entire street railway system of North and West Chicago, aggregating about 500 miles of track. Mr. Roach was born at Lowell, O., on January 30, 1851, and received an academic education at Beverly and Athens, O. He has been connected with the street railways of Chicago since 1872, when he entered the service of the North Chicago Street Railroad as conductor. He was later appointed cashier and still later purchasing agent, as well as serving in various other positions during successive changes in the management. In 1887 he was appointed assistant superintendent; in 1890 superintendent; in 1893 second vice-president and general manager. In 1897 he was also appointed general manager of the West Chicago Street Railroad and consequently had jurisdiction over the entire Yerkes system of street railways. In 1897 he was also elected president of the Cicero & Proviso Street Railway and the Suburban Railroad. On July 1, 1899, when the Chicago Union Traction Company assumed control of the North Chicago and West Chicago lines, he was elected vice-president and general manager. On May 17, 1900, when the Chicago Consolidated Traction Company was purchased by the Chicago Union Traction Company, he was elected president and general manager, succeeding Charles T. Yerkes. On May 29, 1900, he was elected president of the Chicago Union Traction Company, in addition to his duties as general manager, succeeding Jesse Spalding. During the year 1900 he was president of the American Street Railway Association.

John Millard Roach.

Obituary.

George E. Hoppie, at one time president of the Atlanta, Ga., street railway company, died at his home in New York City on January 26, aged 51 years.

M. J. Blondell, formerly master car builder and later superintendent of the United Railways & Electric Company, Baltimore, Md., died recently after several months' illness.

Chilean Railway Electrification Proposed.

Consul Alfred A. Winslow of Valparaiso reports that the Chilean government has commissioned an American electrical engineer to study the feasibility of changing the first and second sections of the state railways for the use of electrical instead of steam power. The consul adds:

"The engineer has left for New York, where he goes after a careful study of the conditions here. It seems that the project might be very practicable, as there are several good streams crossed by the railway lines that have their sources in the regions of perpetual snow along the Cordilleras that must have ample fall for limitless power possibilities. The first section connects Valparaiso with Santiago and is about 100 miles long, and the second section extends from Santiago to Concepcion, and is about 350 miles in length. Double track is being laid on the first section. At present the coal bills for the state railways are heavy, since a large proportion of the coal used is imported at a high cost.

Financial News

American Light & Traction Company, New York.—Gross earnings of this company in 1907 were $2,463,158, as compared with $2,263,735 in the previous year. Operating expenses were $36,563, as compared with $48,000. Net earnings were $2,426,595, as compared with $2,215,735. Dividends aggregating $1,242,912 were paid last year against $1,173,969 the previous year. From the balance remaining after the payment of dividends $681,000 was set aside in 1907 as a reconstruction reserve, leaving a surplus of $502,683; in 1906 $680,500 was set aside in this way, leaving a surplus of $361,266.

Chicago City Railway.—An extra dividend of 2¼ per cent has been declared upon the capital stock, payable on February 10 to stockholders of record at the close of business on February 4. This dividend is paid from the percentages allowed under the ordinance for profit on construction.

Interborough-Metropolitan Company, New York.—At the annual meeting of shareholders on January 21 August Belmont, Jr., was elected a director to fill a vacancy in the board. The other directors were re-elected.

Louisville (Ky.) Railway Company.—Oscar Fenley, president of the National Bank of Kentucky, Louisville, has been elected a director of the Louisville Traction Company and the Louisville Railway Company to fill the vacancies left by the death of J. W. Gaulbert.

Meyersdale & Salisbury Street Railway.—On application of R. W. Marshall & Co. of New York the South Side Trust Company of Pittsburg was appointed receiver for this company on January 22.

Milwaukee Electric Railway & Light Company and Milwaukee Light Heat & Traction Company.—At the annual meetings of shareholders the directors were re-elected.

New York City Railway.—Judge Lacombe of the United States circuit court of New York has granted authority to the receivers for the New York City Railway to sue the Metropolitan Securities Company and certain individuals who were directors of the latter company in 1902 for $2,797,200. The suit is for the recovery of money which it is alleged was not paid under an agreement executed in February, 1902, providing for the payment of $23,000,000. The former directors of the Metropolitan Securities Company who were named are: Thomas P. Fowler, Paul D. Cravath, Edward J. Berwind, George G. Haven, Herbert H. Vreeland, Edward W. Sayre, Mortimer L. Schiff, Thomas F. Ryan, Peter A. B. Widener, Thomas Dolan and John D. Crimmins. In a memorandum issued by Judge Lacombe attention is called to the fact that the same charges of liability were made before the New York railroad commission in 1906 and were dismissed. He states that the defendants deny liability and allege that a proper accounting would bear out their contention. In a statement issued by Cravath, Henderson & De Gersdorff, attorneys for the defendants, it is stated: "The defendants are confident there can be no personal recovery against the directors, and that the suit involves only an adjustment of accounts between the two corporations."

Unicn Railway, New York.—A receiver has been appointed for another subsidiary company of this railway, which is controlled by the New York City Railway. J. Addison Young was appointed receiver for the Tarrytown White Plains & Mamaroneck Railway of White Plains, N. Y., by Justice Mills of the New York state supreme court on January 21. Mr. Young is also receiver for the Westchester Electric Railroad, Mt. Vernon, N. Y. John H. Calhoun, superintendent of the Tarrytown White Plains & Mamaroneck road, testified that a report of accountants showed that in the last year the company lost $43,769.37.

ELECTRIC RAILWAY EARNINGS.

Aurora Elgin & Chicago Railroad.

December—	1907.	1906.
Gross receipts	$109,595.86	$100,547.30
Operating expenses	62,297.76	56,943.04
Net earnings	47,298.10	43,604.26
Fixed charges	28,440.39	26,186.10
Surplus	18,857.71	17,418.16

Houghton County Street Railway, Houghton, Mich.

November—	1907.	1906.
Gross earnings	$19,816.28	$18,545.46
Expenses and taxes	13,210.52	11,993.78
Net earnings	6,605.76	6,551.68
Interest charges	3,926.08	3,907.08
Balance	2,679.68	2,644.60

Manufactures and Supplies

ROLLING STOCK.

Cumberland Valley Railroad has placed an order for three double-truck cars.

Indiana County Traction Company, Indiana, Pa., has ordered two double-truck cars from The J. G. Brill Company.

Illinois Central Electric Railway, Canton, Ill., has ordered two double-truck 30-foot semi-steel semi-convertible cars from the Danville Car Company. These cars will have a smoking compartment and will be equipped with the Anderson-Smith headlight. They will be 42 feet long over all.

Northwestern Pacific Railroad, San Francisco, Cal., as reported in the Electric Railway Review of December 21, has placed an order with the St. Louis Car Company for two combination passenger and baggage cars, two motor passenger cars and eight passenger cars to be used as trailers. All of these cars are equipped to operate in train service. The specifications include the following details:

Two Passenger and Baggage Cars.

Weight, complete....64,000 lb.	Seating capacity ....36 passengers
Length, of body.....40 ft. 8 in.	
Of platforms ...4 ft. 8½ in.	Width, inside .....8 ft. 8½ in.
Over all .....50 ft. 1 in.	Over all .....9 ft. 11½ in.
Height, inside .....8 ft. 9 in.	Body .....Wood
Sill to roof ....10 ft. 2½ in.	Underframe .....Wood
Track to roof...13 ft. 8½ in.	

Two Motor Passenger Cars.

Seating capacity ....66 passengers	Length, of body....50 ft. 6 in.
	Of platforms .....3 ft. 2 in.
Height, inside .....8 ft. 9 in.	Over all .....56 ft. 10 in.
Sill to roof ....10 ft. 2½ in.	Width, inside ....8 ft. 8½ in.
Track to roof..13 ft. 8½ in.	Over all .....9 ft. 11½ in.
Body .....Wood	Weight, complete ...59,000 lb.
Underframe .....Wood	

Eight Passenger Trailers.

Seating capacity ....66 passengers	Height, inside .....8 ft. 9 in.
	Sill to roof .....10 ft. 2½ in.
Length, of body....50 ft. 6 in.	Track to roof ..13 ft. 8½ in.
Of platforms .....3 ft. 2 in.	Body .....Wood
Over all .....56 ft. 10 in.	Underframe .....Wood
Width, inside .....8 ft. 8½ in.	Weight, complete ...45,000 lb.
Over all .....9 ft. 11½ in.	

Special Equipment.

Air brakes .....Westinghouse, "AMR" schedule	Hand brakes ..St. Louis type
	Headlights .....St. Louis arc
Control system ....Sprague-GE type "M"	Markers .....Peter Gray
	Motors 2 GE-66
Curtain fixtures ....Curtain Supply Co.	Seats.....Hale & Kilburn Co.
	Trucks—
Curtain material...Pantasote	Motor cars ....St. Louis Car Co.'s No. 32 Hedley
Door fastenings ....Adams & Westlake	Trailers ..... St. Louis Car Co.'s No. 48
Door check .....Blount	Varnish..Valentine or Hueter
Gongs .....New Departure	

SHOPS AND BUILDINGS.

Illinois Traction System, Champaign, Ill.—L. E. Fischer, general manager, Danville, Ill., writes that this company has arranged by lease for a large terminal site at Springfield, but on account of the stringency in the money market it will be impossible to proceed with the plan of construction at the present time.

TRADE NOTES.

Pressed Steel Car Company, Pittsburg, Pa., declared on January 22 a quarterly dividend of 1¾ per cent on the preferred stock, payable February 26 to stockholders of record February 5.

Dossert & Co., 242 West Forty-first street, New York, report the receipt of an order for 500 cable taps for No. 0000 stranded cable from the Chicago City Railway for use on the new construction work.

The J. G. Brill Company, Philadelphia, Pa., has declared the regular quarterly dividends of 1¾ per cent on the preferred stock, payable February 1 to stock registered January 28, and 1 per cent on the common stock payable March 14 to stock of record March 12.

Allis-Chalmers Company, Milwaukee, Wis., states that the new type OB governor, recently brought out by it, which attracted a great deal of attention at the American Street and Interurban Railway Association's convention held in Atlantic City, is being installed on many of the principal traction lines of the country, including the Manhattan Elevated Railway, Milwaukee Northern Railway, Indianapolis Crawfordsville & Western Railway, Connecticut Companies, Massachusetts Electric Company and others.

Freeman & Sons Manufacturing Company, Racine, Wis., has recently received an order from the West Penn Railways Company, Connellsville, Pa., for ten 350-horsepower Bonus-Freeman water-tube boilers. Two batteries of two boilers have been installed and the balance are now being installed.

Power Specialty Company, New York, states that the Foster superheater is rapidly finding its way into favor in Canada. The company's Montreal office, in the Board of Trade building, is in charge of Laurie & Lamb, consulting engineers, and largely through their efforts 12,670 horsepower of superheaters have been installed in Canada within the last 2½ years.

Stuart-Howland Company, Boston, Mass., has advanced Willard L. Lyall from the position of purchasing agent to that of manager of sales in the street railway department. The company has recently placed several valuable agencies and is preparing to push the street railway department with great activity. It reports business as fairly active and the future brightening.

Stewart Hartshorn Company, East Newark, N. J., manufacturer of spring shade rollers, has installed a gas producer plant, and is now using gas under all its tempering furnaces. The company reports that the result is a perfect control of heat, which is so important in getting an even temper on all its spring wire. Coke firing did not produce as good results as are now possible.

Louis McFarland, 4741 Butler street, Pittsburg Pa., has secured a patent on an improved steel rail and tie, in which the rail is rolled with a projecting flange or tongue at the center of the base. This projection is square in section, the height and width being equal to about one-seventh of the width of the rail base, and the tie is provided with a corresponding recess to receive the tongue of the rail base.

American Locomotive Company, 111 Broadway, New York City, on December 19 declared a dividend of 1¼ per cent on the common capital stock, payable February 26 to stockholders of record February 6. About February 1 it is the intention of this company to close its plant at Providence. This is merely the carrying out of plans decided upon several years ago, but which were not executed at that time, owing to the enormous amount of business.

S-E. Missouri Cypress Company, Campbell, Mo., reports that prospects for business in cypress poles and ties are fair and indicate that quite a number of former users of cypress intend to continue its use in construction work this coming summer. This company is one of the oldest engaged in the production of poles and piling, and even during the late money stringency its volume of business was very nearly normal, although prices had fallen.

Lindsley Brothers Company, Spokane, Wash., producer and shipper of western cedar poles and manufacturer of red fir crossarms, states that no poles have been produced this winter on account of the late financial stringency. The company is fortunate in having its own stumpage, and therefore can always keep its yards completely stocked. A concentrating yard has been established at Spokane to enable the company to get cars promptly. The crossarms plant is operated under the name of the Barnes-Lindsley Manufacturing Company.

Lumen Bearing Company, Buffalo, N. Y., announces that its interests on the Pacific coast are now looked after by Charles C. Moore & Co., Incorporated, engineer, of San Francisco, Cal., with branch offices in Seattle, Los Angeles and Salt Lake City. In Canada the agency is in the hands of J. A. Dawson & Co. of Montreal, with a branch office in Winnipeg. With five salesmen traveling from the Buffalo office, the Lumen company feels that the electric railway field is thoroughly covered, as is evidenced by its rapidly growing business.

William W. Power has recently been appointed manager of the electrical department of the Boston, Mass., branch of the H. W. Johns-Manville Company, New York. Mr. Power was formerly district manager of the Allis-Chalmers Company's Philadelphia office, and previous to that he was connected with the Christensen Engineering Company as special representative throughout the New England states. When that company was reorganized and made the National Electric Company Mr. Power continued with the latter concern until he became associated with the Allis-Chalmers Company. Mr

Power is well and favorably known in the New England states and his wide experience in the electrical field, combined with a most pleasing personality, will assist him in his new position in charge of the electrical business of the H. W. Johns-Manville Company throughout New England.

ADVERTISING LITERATURE.

Wickes Brothers, Saginaw, Mich.—The January stock list of boilers, engines, dynamos, motors and machinery is at hand.

Weber Gas Engine Company, Kansas City, Mo.—Brochure No. 55 illustrates and describes heavy duty gas power plants.

John Simmons Company, 102-110 Centre Street, New York, N. Y.—A recent leaflet illustrates and describes the Rothschild inverted blow-off cock.

Standard Steel Works, Philadelphia, Pa.—A catalogue descriptive of springs of various types for railway and electric traction service has just been issued. A large number of interesting illustrations are included, consisting of exterior and interior views of the works, as well as of standard types of springs.

Eastern Granite Roofing Company, 1 Hudson Street, New York, N. Y.—The advantages of perfected Granite roofing are set forth in a 64-page booklet recently issued. Attention is directed to the fact that 23 years' use has demonstrated the special adaptability of Granite roofing for railway buildings. A list is shown of 10 such buildings, having a total area of 2,020,700 square feet of Granite roofing. The booklet has a large number of illustrations showing the roofing on a great variety of buildings throughout America.

Chandler Brothers & Co., Philadelphia, Pa.—A diary for 1908 contains information concerning the leading bond and stock issues, including the securities of electric railways, handled in the Philadelphia market. There are also published the principal facts concerning the securities of the Philadelphia Rapid Transit Company, the Indianapolis Traction & Terminal Company, the Indiana Union Traction Company, the Ft. Wayne & Wabash Valley Traction Company, the Louisville (Ky.) Traction Company, the Lexington & Interurban Railways Company and the Norfolk & Portsmouth Traction Company. Other information relating to quotations of securities, interest returns, etc., is given.

THE COST OF HOT WATER HEATING.

Some interesting data regarding the cost of heating suburban cars by hot water have been furnished by the Twin City Rapid Transit Company of Minneapolis, which has been using on all of its standard cars the "Mighty Midget" heater, manufactured by the William C. Baker Heating & Supply Company of New York. During the last winter the heaters on this road were in operation 164 days, during many of which the thermometer stood between zero and 25 degrees below, and the company found no difficulty in heating its cars and keeping them comfortable. The cost of coal to operate this heater was 28 cents per car per day, the best grade of anthracite being used. This is on the basis of coal at $7.75 per ton, f. o. b. cars at Minneapolis. The company has been using the "Mighty Midget" heater on its cars for about 15 years.

IMPROVEMENTS IN KINNEAR DOORS.

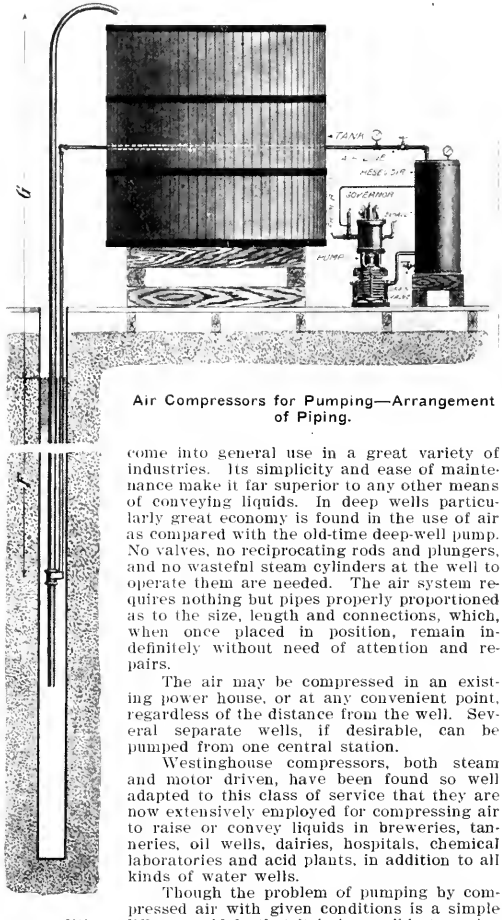
Important improvements have recently been made in the well-known Kinnear steel rolling door for car houses, manufactured by the Kinnear Manufacturing Company of Columbus, O., in the new construction for the operation of two or more steel rolling doors in a group by means of an electric motor. It is claimed that this system now affords the best, most efficient and reliable means of closure for car house entrances, and that it is at the same time the most flexible. By means of an operating box at the side of each door, any door may be operated independently of all others, by motor, or it may be operated by hand crank if necessary or desirable.

The direction of travel is determined automatically and the door may be started from any position by merely throwing over an operating lever. When the end of the travel is reached the door is mechanically disengaged from the motor shaft, the circuit is broken and the motor stopped, and the lever returned to the neutral position. To operate by hand the lever is merely thrown in the opposite direction and the door operated by the hand crank which is provided.

Only approximately 10 seconds is required for the motor operation, so it will be seen that such a construction is of very great value, not only for car houses, but also for shops, where cars are run in and out frequently, and particularly in cold climates, where the shop must be heated and where doors cannot be left open for any great length of time. The system is already in use on several car houses with the greatest success.

AIR COMPRESSORS FOR PUMPING.

The advantages of employing compressed air for pumping water, oil and other liquids from wells, vats and tanks, are so pronounced that within the last few years this system has



Air Compressors for Pumping—Arrangement of Piping.

come into general use in a great variety of industries. Its simplicity and ease of maintenance make it far superior to any other means of conveying liquids. In deep wells particularly great economy is found in the use of air as compared with the old-time deep-well pump. No valves, no reciprocating rods and plungers, and no wasteful steam cylinders at the well to operate them are needed. The air system requires nothing but pipes properly proportioned as to the size, length and connections, which, when once placed in position, remain indefinitely without need of attention and repairs.

The air may be compressed in an existing power house, or at any convenient point, regardless of the distance from the well. Several separate wells, if desirable, can be pumped from one central station.

Westinghouse compressors, both steam and motor driven, have been found so well adapted to this class of service that they are now extensively employed for compressing air to raise or convey liquids in breweries, tanneries, oil wells, dairies, hospitals, chemical laboratories and acid plants, in addition to all kinds of water wells.

Though the problem of pumping by compressed air with given conditions is a simple one, conditions differ so widely that it is impossible to arrive at a satisfactory solution by mathematical analysis. Results of actual tests are necessary to form a correct basis of figuring. Realizing this the Westinghouse Air Brake Company has lately completed a series of nearly 2,000 tests covering a range of from 350 to 400 different conditions of deep-well pumping, to obtain data concerning water delivered, air consumed and the best proportion and arrangement of piping and apparatus. The tests were made with a well driven on the premises of the Westinghouse Air Brake Company specially fitted up for experimental work. The results place the manufacturers in a position to be of great assistance to those desiring to install compressors for direct air pressure pumping.

The accompanying illustration shows the simple arrangement of piping used when the inside diameter of the well casing permits a discharge pipe and an air pipe, both of suitable size, to be placed side by side in the casing.

Much additional information is given in a booklet (No. 9006) published by the Westinghouse Air Brake Company, devoted entirely to the subject of pumping liquids by compressed air.

Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

Master mechanic wants position with interurban city road; medium-sized preferred. Wide and thorough experience in all branches; can also do armature winding and switchboard work. Address "No. 542," care Electric Railway Review, Chicago.

Position as superintendent of city or interurban line wanted by a man of 15 years' experience in both construction and operation. Best of references as to ability and habits. Open for engagement after February 1. Address "No. 541," care Electric Railway Review, Chicago.

Wanted—Position with interurban road by an engineer having eight years' experience in power station and general railway design and construction work. Age 33; best references furnished. Prefer position with road now under construction. Address "No. 534," care of Electric Railway Review, Chicago.

Position of chief motorman or instructor by a first-class competent man who has had 12 years' experience in that line. Thoroughly understands economy in regard to use of power and care of rolling stock; familiar with quadruple equipments and air brakes; highest references. Address "Chief Motorman," care of Electric Railway Review, Chicago.

Position wanted—The manager of a large railway, lighting and gas plant must make a change in his position owing to an unfavorable climate. Has held managerial positions for 10 years and is thoroughly familiar with the construction, organization and operation of electric railways. Correspondence solicited. Exceptional references. Address "No. 539," care of Electric Railway Review, Chicago.

Position Wanted—Have had wide experience in all kinds of street railway work, estimating, specifications, superintending and directing, overhead, underground and power station construction. Have for three years been superintendent of lines for large Massachusetts railway company. Technical education. Nine years' experience. Age 30 years. Wide acquaintance. Best of references. Address "No. 533," care of Electric Railway Review, Chicago.

POSITIONS WANTED.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Position wanted by first-class engineer and machinist with 16 years' practical experience with compound Corliss engines, Allis-Chalmers and Westinghouse steam turbines, surface condensers, A. C. and D. C. electrical apparatus. Age 35. A1 references. Address "No. 532," care of Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

An engineer, experienced in the handling and organizing of station crews, with 10 years' experience as chief engineer in both construction and operation, as well as reconstructing old ones on a modern basis. All voltages up to 15,000, both railway and lights. Salary or per cent, depends on results. I am looking for a reputation as well as salary. Address "No. 536," care of Electric Railway Review, Chicago.

POSITIONS OPEN.

Superintendents, engineers, draftsmen, street railway, electrical, mechanical. Positions open. Write for free list and information, HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

POSITIONS OPEN.

Wanted—By a large street railway and lighting company, having 14 storerooms, a thoroughly experienced man, capable of taking inventories. Permanent position. Must be able to furnish best of references as to character and ability. Address "No. 538," care of Electric Railway Review, Chicago.

Master mechanic for a property having 150 to 200 cars. Must be experienced, practical and able to run shop on economical basis. Opportunity for good man to make a record. Prefer someone from middle west. Salary $125 to $150. Address "No. 537," care Electric Railway Review, Chicago.

Young man wanted to begin work at once as assistant claim agent by a large interurban system in western Pennsylvania. Man of some experience preferred. Must be able to look after office work satisfactorily, as well as to make investigations and adjustments. Address "No. 540," care Electric Railway Review, Chicago.

BOOKS AND PUBLICATIONS.

Ask us about any book on electric railway and allied subjects. We publish some and sell all that are in print. The Wilson Company, 160 Harrison Street, Chicago.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 530," care of Electric Railway Review, Chicago.

Copies of the Street Railway Review of March and April, 1904, in good condition for binding are wanted. State price sent postpaid. Address "No. 543," care Electric Railway Review, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

MISCELLANEOUS WANTS.

Want to buy second-hand equipment, machinery or material? A card inserted in the Electric Railway Review, stating just what you want, will bring immediate response. The cost is small—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Send orders to Electric Railway Review, 160 Harrison St., Chicago.

What have you to sell in the way of second-hand equipment, machinery or material? Buyers read the "For Sale" cards on the following page and there is the place to tell your story. "For Sale" cards are inexpensive—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Special rates on contracts for 100 inches or more to be used within one year. Now is the time to send your order to Electric Railway Review, 160 Harrison St., Chicago.

BOOKS AND PUBLICATIONS.

Copies of the Street Railway Review of January and February, 1906, are wanted. Name condition and price. Address "No. 535," care of Electric Railway Review, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

Interstate commerce national legislation to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts expunged from, and the parts added to, the interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

If You Have a Position for a High Grade Man

The Boss and the Job.

It has been our pleasure to visit in the course of our work many railway properties. Usually such visits are made in the company of a mechanical or operating superintendent. On a recent visit of this sort we were impressed with the respectful attitude of the trainmen toward their superintendent. It was at once apparent that the "boys" on this road (and a large one, too) would "stand by the boss" in any emergency. Continued questioning of the modest superintendent was rewarded by an expression from him which, briefly put, was to the effect that having "risen from the ranks" he knew the usual feeling of men toward the head of a department and so made it a rule to know all the men by their first names and always greet them with a cheerful word. This practice had made his organization a close-knit one, in which all the employes were friends of their superior rather than merely job holders ready to revolt at any slight excuse. There is a lesson in this for all of us.

Economy in Catenary Construction.

It is interesting to note that the catenary overhead work on the Syracuse Lake Shore & Northern Railroad, which is described on another page of this issue of the Electric Railway Review, though built for single-phase operation, is at present used for direct current and that the direct-current system may be used permanently. When it is also appreciated that the cost of this construction as compared with the company's standard suspension overhead with 35-foot poles, 8-inch tops, at both sides of the track, spaced 85 feet apart, is approximately only $800 per mile greater and when consideration is taken of the permanence and operating economy of the catenary construction as compared with construction using wooden poles, some idea of the real economy possible in catenary construction may be had. Heretofore 300-foot spans for single catenary work have scarcely been thought feasible, and it will be interesting to note the way in which the work on the Syracuse Lake Shore & Northern, which now gives every evidence of proving satisfactory in every way, will stand up under the severe tests of continued operation.

Improved Bracket Construction.

An interesting method of supporting trolley wires, as developed by P. J. Pringle, electrical engineer for the Borough-on-Trent (England) tramway system, is described by the Electrical Review. This method consists in attaching a short span of steel cable to the trolley wire by means of soldered ears. The spans are about 10 feet long and take up part of the tensile stress on the trolley wire. The cable is supported by a bracket of ordinary construction and is passed over a reel-shaped earthenware insulator, the working conductor passing under the support. The wire is thus supported from two points instead of one, a straighter run under the support is secured and the wire is free to move vertically, laterally and even longitudinally, since the cable can slip along over the insulator. The idea of the arrangement is to avoid the hammer blow of the trolley wheel which, with the span construction, occurs at every support; even when a short span of wire is interposed between the bracket and the hanger the severity of the blow is only modified. The method thus possesses much of the advantage of the catenary system of suspension without the complicated and expensive overhead construction.

Increased Expenses of an Elevated Road.

The reasons for the increased operating expenses of the South Side Elevated Railroad of Chicago in 1907, outside of the natural enhancement due to growth in traffic, were explained by Charles V. Weston, the president, in his annual report to shareholders, of which an abstract was published in the Electric Railway Review of February 1, page 142. The cost of conducting transportation was 32.2 per cent of gross earnings last year, as compared with 29.9 per cent in 1906. The total expended by this department in 1907 was $677,482, an increase of $142,537 over the previous year. Mr. Weston said that this increase was due in part to the desire to furnish good service on the new branches to compete with the improved service on the surface lines serving the same territory. Old personal injury claims amounting to $9,000 were paid. General taxes increased $7,698 and the city tax on cars was $3,832 on account of a larger number of cars. The additional cars and structures required an increased payment of $2,047 for insurance. The loop expenses increased $26,667 on account of additional passengers and $8,582 on account of operating expenses, presumably some maintenance expenditures, for which the South Side Elevated road was responsible to the extent of $8,582. Included in the larger expenses for maintenance of way and structures were $8,075 for remodeling the old Congress street station and tracks, now used as a terminal for express trains, and $6,381 for maintenance of the structure at various points.

Ventilating Street Cars.

The problem of providing any special means for ventilating cars is one which has not generally been encountered by managers of street railway companies. It has consequently not been given sufficient study or attention to develop a scheme which has been shown to offer a satisfactory solution, or even to show that a special or unusual system of ventilation is necessary at all for ordinary street car use. The need for careful ventilation of the coaches of steam or electric interurban roads can readily be understood from the fact that such coaches are not so frequently opened in transit. Approved and sometimes costly methods have been adopted on these railway and interurban lines and little difficulty now arises in securing ventilators. The street railway companies have disregarded the subject as one which does not require special treatment and it is doubtful indeed if their position is not a correct one. Where ordinary hinged windows are placed in the monitor decks and the doors are being constantly opened and closed it seems reasonable to assume that enough fresh air will be admitted to provide ample ventilation for the comfort and health of the passengers. The Detroit United Railway, however, has been compelled by municipal legislation to give more serious consideration to this subject and is now conducting a series of

experiments by making chemical analyses of air samples collected in a number of cars, each one of which is equipped with a different kind of ventilator. The results of these tests will be watched as a matter of interest by street railway officials and others. Tests made several years since by this company show that the need for special means of ventilation is not as great as would seem from the demands made in the ordinance passed at that time by the common council of Detroit and from which it appears that too much stress is being laid on a minor detail when it is probably true that questions of more importance should receive attention from the municipal body. It is such little annoyances that sometimes entail a useless and unwarranted expenditure of time and money and show the utter incapability of the average municipal government to direct the affairs of corporations in a spirit of accomplishing reform when they are entirely ignorant of conditions or of the needs of such companies.

BOSTON ELEVATED RAILWAY AND BROOKLYN RAPID TRANSIT COMPANY OPERATIONS.

Comparison of the results of operation of two electric railways is frequently misleading and disappointing because the published reports usually do not contain information in sufficient detail to make it certain that the comparative figures developed are accurate. But the details in the annual pamphlet reports of the Boston Elevated Railway and the Brooklyn Rapid Transit Company and the similarity between their mileage and earnings justify such comparative analysis of the figures as is possible.

In this article the figures for the Boston Elevated Railway are as of September 30, 1907, or for the fiscal year ended that date. The figures of the Brooklyn Rapid Transit Company are as of June 30, 1907, or for the fiscal year ended that date. The Boston railway operated 462 miles of track, of which 446 miles were used for surface cars and 16 miles for elevated cars; the elevated track mileage is 3.5 per cent of the total. The Brooklyn Rapid Transit system operated a total of 578 miles of track, of which 70 miles, or 12.1 per cent, comprised the elevated lines and 508 miles were surface tracks.

The main results of operation of the two companies were as follows:

	Boston Elevated Railway.	Brooklyn Rapid Transit Company.
Miles of track	462	579
Gross passenger earnings	$13,546,779	$18,443,983
Other earnings from operation	406,187	937,604
Total earnings from operation	$13,952,966	$19,381,587
Operating expenses	9,647,145	11,465,705
Net earnings from operation	$ 4,305,821	$ 7,915,882
Other income	58,201	555,166
Net income from operation	$ 4,364,022	$ 8,471,048
Taxes, interest and rentals	3,432,744	6,026,387
Balance	$ 931,278	$ 2,444,661
Special appropriations	100,000	442,063
Balance	$ 831,278	$ 2,002,598
Dividends	798,000	.....
Surplus	$ 33,278	$ 2,002,598

From these figures it may be computed that the gross earnings from operation of the Boston Elevated Railway per mile of track were $30,201, while those of the Brooklyn company were $33,474 per mile of track. Operating expenses of the Boston company were larger per mile of track than those of the Brooklyn company. The figures averaged as follows: Boston, $20,881; Brooklyn, $19,803. The operating ratio of the Boston railway was 69.1 per cent, as compared with 59.16 per cent on the Brooklyn road. The result of the larger proportion of gross earnings used in operating expenses by the Boston Elevated Railway is shown in reduction of the net earnings from operation to the per mile basis, as follows: Boston Elevated Railway, $9,320; Brooklyn Rapid Transit Company, $13,671. The taxes, interest and rentals of the Boston railway averaged $7,430 per mile, against $10,408 for the Brooklyn system. As the taxes charged by the two companies during the year were not widely apart, $966,975 for the Boston road and $893,782 for the Brooklyn property, the discrepancy is due to the much higher capital cost and rentals of the Brooklyn line.

In computing car-mile results of these two companies we have disregarded the mileage of the United States mail cars as reported by the Boston Elevated Railway, and have taken only the total revenue elevated and surface passenger car mileage for the reason that the Brooklyn Rapid Transit Company gives in its report only passenger car mileage. Figured on this basis the car-mile results follow:

	Boston Elevated Railway.	Brooklyn Rapid Transit Company.
Passenger car-miles	51,830,188	68,273,181
Car-mile results, cents—		
Passenger earnings	26.14	27.02
Total earnings from operation	26.92	28.39
Operating expenses	18.61	16.79
Net earnings from operation	8.31	11.60

These figures show the larger car-mile passenger and gross earnings of the Brooklyn system and the larger operating expenses of the Boston road, with the resultant material difference in net earnings from operation per car-mile.

We have divided the operating expenses per car-mile into the general accounts shown by each road under operating expenses; but this comparison is rather unsatisfactory because the classification presented by the Brooklyn company in its report renders impossible a distribution of its expenses into the general accounts followed by the Boston Elevated Railway. The Boston company devoted to maintenance accounts 4 cents per car-mile out of a total of 18.61 cents required for operating expenses. The Brooklyn company shows an expenditure on maintenance accounts of 3.89 cents per car-mile out of a total applied to operating expenses of 16.79 cents. Following are the figures:

Operating expenses per car-mile—cents.	Boston Elevated Railway.	Brooklyn Rapid Transit Company.
General expenses	1.90	0.94
Maintenance of way and structures	2.05	1.27
Maintenance of equipment	1.95	2.62
Transportation expenses	12.71	9.44
Damages and legal expenses	.....	1.65
Freight, mail and express expenses	.....	0.34
American Railway Traffic Co. expenses	.....	0.53
Total operating expenses	18.61	16.79

The maintenance of way expenditures averaged $2,296 per mile of track for the Boston Elevated Railway and $1,485 for the Brooklyn company. The density of traffic is much greater on the Brooklyn system than on the Boston railway. The number of revenue passengers per mile of track on the Boston road was 586,764. It is not possible to state with accuracy the number of revenue passengers, and hence the density of revenue passenger traffic on the Brooklyn system for the reason that the report mentions only the total passenger traffic, 511,839,437. It is stated, however, that the number of transfer passengers was 41.2 per cent greater last year than in the previous year; and in the annual report for the previous year, ended June 30, 1906, the total number of transfers collected was stated. Figuring from this data the number of transfers collected last year as 136,194,903, there would be left 375,644,534, which, if assumed to be the number of net paid passengers during the year, would average 648,781 revenue passengers per mile of track.

ANNUAL REPORTS.

Metropolitan West Side Elevated Railway.

Operating expenses of the Metropolitan West Side Elevated Railway of Chicago required 50.11 per cent of gross earnings in 1907 as compared with 48.92 per cent in 1906. The figures of earnings for two years follow:

	1907.	1906.	Increase.
Gross earnings	$2,878,588	$2,627,901	$240,687
Operating expenses	1,443,498	1,290,358	153,140
Net earnings	$1,435,090	$1,347,543	$ 87,547
Other income	6,819	16,665	*9,846
Total income	$1,441,909	$1,364,208	$ 77,701
Taxes, interest and charges	1,050,124	984,938	65,186
Surplus	$ 391,785	$ 379,270	$ 12,515

*Decrease.

Passenger earnings contributed $2,778,597 of the total gross revenue in 1907 and advertising earnings amounted to $62,240. On maintenance of way and structures there was expended $115,714 and on maintenance of equipment $194,724.

H. G. Hetzler, the president, refers in the report to the opening of the extension of the Douglas park line. Owing to reductions in forces at industrial plants the traffic from this extension was not as large as anticipated, but it met operating expenses and fixed charges. With the reopening of industries and the revival of good business conditions an increasing volume of business is expected from this extension.

Mr. Hetzler speaks of the increased cost of transportation as a result of the higher cost of power, labor and material. The cost of conducting transportation was $937,293 in 1907, an increase of $165,954 over 1906. The increase in gross passenger earnings was $233,461.

Lake Shore Electric Railway.

Gross earnings of the Lake Shore Electric Railway of Cleveland, O., in 1907 gained $52,440 over 1906, but operating expenses and taxes increased $45,301, and net earnings therefore increased but $7,139. The principal results of operation in the two years, and the changes, follow:

	1907.	1906.	Increase.
Gross earnings	$913,160	$860,720	$52,440
Operating expenses and taxes	521,559	476,258	45,301
Net earnings	$391,601	$384,462	$ 7,139
Other income	25,000	6,250	18,750
Total income	$416,601	$390,712	$25,889
Charges	294,072	254,198	39,874
Surplus	$122,529	$136,514	*$13,985

*Decrease.

The passenger traffic contributed $839,237 of the gross revenue in 1907. Among the other sources of gross revenue were the following: Chartered cars, $5,003; freight, $45,412; mail, $2,179; milk, $1,795; advertising, $2,490; and car mileage, $10,177. The earnings per mile of track on the completed divisions extended from $7,442 on the Cleveland division to $3,342 on the Sandusky-Norwalk division. Other statistics follow:

	1907.	1906.	Increase.
Operating expenses and taxes—per cent of gross earnings	57.11	55.33	1.78
Car-miles	3,392,735	3,355,661	37,074
Gross earnings per car-mile—cents	26.91	25.65	1.26
Operating expenses and taxes per car-mile—cents	15.37	14.19	1.18
Net earnings per car-mile—cents	11.54	11.46	0.08
Passengers carried	4,904,505	4,758,838	145,667
Gross earnings per mile of track	$5,854	$5,733	$121

E. W. Moore, the president, states that "practically all the switches on the interurban divisions of the road were equipped with electric switch lights," and that "in order to insure greater safety on account of the high speed of our limited trains, almost all of the sidings were made single-end and the spring switches changed to rigid switches."

Cleveland Painesville & Eastern Railroad.

Operating expenses and taxes of the Cleveland Painesville & Eastern Railroad of Cleveland, O., required 53.5 per cent of gross earnings in 1907 as compared with 53.1 per cent in the previous year. The earnings for the two years compare as follows:

	1907.	1906.	Increase.
Gross earnings	$296,318	$271,100	$25,218
Operating expenses and taxes	157,197	143,993	13,204
Net earnings	$139,121	$127,107	$12,014
Charges	86,552	83,939	2,613
Surplus	$ 52,569	$ 43,168	$ 9,401

Passenger travel contributed $259,187 of the gross revenue in 1907. Other items which entered into the total gross earnings as shown were $3,711 from chartered cars, $12,629 from express, $5,926 from milk, $639 from car mileage, $227 from mail and $5,000 from track rental.

E. W. Moore, the president, states that hot water heaters have been installed in 10 cars to take the place of electric heaters. A second telephone line was built from Painesville to Willoughby to connect with the Cleveland Painesville & Ashtabula Railroad line to Ashtabula, so that all cars can now be dispatched from the Willoughby office.

Car-mile and passenger statistics compare as follows:

	1907.	1906.	Increase.
Total passengers carried	2,110,215	1,984,877	125,338
Gross earnings per passenger—cts.	12.46	11.97	0.49
Total number car-miles	954,003	910,793	43,210
Gross earnings per car-mile—cts.	30.54	29.76	0.78
Operating expenses and taxes per car-mile—cents	16.48	15.81	0.67
Net earnings per car-mile—cents	14.06	13.95	0.11

Northern Ohio Traction & Light Company.

From the surplus remaining after the payment of dividends in the year 1907 the Northern Ohio Traction & Light Company of Akron, O., charged off on account of depreciation $100,000. The operating expenses and taxes absorbed 57.4 per cent of gross earnings in 1907 as compared with 59.1 per cent in 1906. The results of operations for the last three years compare as follows:

	1907.	1906.	1905.
Gross earnings	$1,909,061	$1,703,340	$963,187
Operating expenses and taxes	1,095,755	1,006,842	516,390
Net earnings	$ 813,306	$ 696,498	$446,797
Interest	513,242	483,174	276,744
Net divisible income	$ 300,064	$ 213,324	$170,053
Dividends	158,778	113,527	.....
Surplus	$ 141,286	$ 99,797	$170,053

Of the gross earnings of last year $1,645,864 was received from passenger traffic, $137,921 from light and power, $4,228 from car mileage and $43,299 from freight. The company is now operating Lakeside park in Akron and Meyers' Lake park in Canton and also the theaters maintained in connection therewith. Gross earnings from the parks were $68,161 and net earnings were $22,129. H. A. Everett, the president, states that this account has been credited monthly with 2 per cent of the gross earnings and the surplus in the account at the end of the year was $21,800.

Of the operating expenses and taxes for 1907, shown in the foregoing table, $95,820 was devoted to maintenance of way and structures and $155,945 to maintenance of equipment, a total of $251,765, while power plant operation required $251,212 and conducting transportation $354,092. The balance

sheet shows reserves of $100,000 for depreciation and $21,800 for injuries and damages.

Mr. Everett says: "We feel, notwithstanding a falling off in general business, that both the gross and net earnings of the company for the coming year will show an increase and that requirements for capital account will be comparatively small."

CITY OF SHREVEPORT, LA., DENIED RIGHT TO ENFORCE TRANSFER SYSTEM.

We have received from L. M. Levinson, secretary and manager of the Shreveport (La.) Traction Company, a copy of the opinion of A. J. Murff, judge of the first judicial district court, parish of Caddo, regarding the transfer litigation in that city. In his opinion Judge Murff says:

This is an injunction suit brought by the Shreveport Traction Company against the city of Shreveport et al., enjoining them from the enforcement of an ordinance passed by the city council on August 11, 1907, requiring transfers to be given, without additional fare, by the various lines in the city, and imposing a fine and penalty for the failure or refusal to do so.

The undisputed facts are as follows: On September 7, 1897, the city council of Shreveport granted to the company the right to build and operate a street railway along certain streets. One of the terms and conditions was "that five cents shall be the fare on each belt, and for school children three cents, with the privilege of transfer in going to and from school."

Subsequent ordinances were granted, with similar terms as to fares. The decision continues:

These franchises were accepted by the traction company, which at great expense has built and has been operating its railway ever since. There is no complaint that the lines have not lived up to the terms and conditions of the grants.

On August 11, 1907, the city council, feeling that it had the right and power, notwithstanding its grant to the traction company, with its terms and conditions as fixed therein, to change the terms relating to fares and reduce the same, passed an ordinance requiring the different lines to give transfers from one to the other, without additional fare, thereby reducing indefinitely the fare fixed and agreed upon in the original contract or franchise, and making it a penal offense to refuse these transfers.

The traction company brought this suit, coupled with an injunction, asking that the ordinance be declared illegal, null, void and unconstitutional and that the writ of injunction be perpetuated. The plaintiff sets up several reasons why the ordinance should be declared null and void, but under our construction of the case it is only necessary to consider one, which is that: "Because the said ordinances confirming said grants and franchises as to their several provisions constitute and form valid contracts between the city and plaintiff, and that the ordinance of August 11, 1907, seeks to impair the obligations of said contracts, contrary to and in violation of Section 10 of Article 1 of the constitution of the United States, and Article 166 of the constitution of the state of Louisiana."

The sole question to be decided is one of law and that is this: Can a municipal corporation, after it has entered into a solemn obligation with an individual or a corporation, under certain named material terms and conditions, change those terms or conditions, and thereby impose additional burdens, without the consent of the individual or corporation with whom it contracted?

No one for a moment could hold such a doctrine, and the defendant city does not so contend, but it does contend that a municipal corporation, without special authority, cannot grant away certain rights and any contract or franchise wherein it attempts to do so is null and void and not binding on the municipality.

It is clear that the city council of a municipal corporation cannot barter away the rights of said corporation unless it has the power to do so. The question then is, had the city council of Shreveport the right to enter into these various contracts with the traction company, whereby the rate of fare was fixed and agreed upon for a number of years? To decide this we must first decide what are its powers.

Among the declared objects for which the corporation of the city of Shreveport was created were to regulate, control and improve its streets, and regulate and control the government of carts, drays, wagons, passengers and street cars which run in the streets and within the limit of the city.

The right to fix fares, in granting a franchise to an individual or corporation, is one of the most important powers incident to the right to regulate the streets and traffic thereon, and it cannot be denied that such a power is fairly implied and necessarily a part of its express authority. The fixing of fares is a matter of grave importance, both to the city and the railway company, and to hold that this important right and power was not intended to be granted, to be exercised as in its discretion it thought best, would be contrary to all principles of law and judicial conclusions.

Having deliberately made and invoked the conditions upon which the franchise was granted when the city considered them essential to its protection and the preservation of its rights under the contract with the traction company, it would be bad faith and contrary to every principle of law to let it now deny the validity thereof, when it thinks its interest will be benefited thereby.

Upon decisions and our conception of the law, we must hold that although the city council may have acted unwisely, it had the power to grant these franchises, fixing the conditions, rate of fare and term of franchise; that having so fixed them and the traction company having accepted them, they became irrevocable contracts that are binding on both parties and cannot be revoked, directly or indirectly, or burdened with additional charges without the consent of both parties.

For these reasons it is ordered and adjudged that the ordinance of the city council of the city of Shreveport, passed on August 11, 1907, be and the same is declared null and void and of no effect in so far as it may affect the traction company herein acting under the franchises granted prior thereto. It is further ordered that the injunction be perpetuated and the defendant pay all costs of the suit.

Communications

ON CAR WHEELS.

To the Editors:

The absence of definite data on which railway managers may predicate judgment has led to many experiments the result of which has proved more or less surprising. I know of an instance where steel wheels have been used on an interurban railway with the following results:

First cost per pair	$56
Cost for removing, turning and replacing three times	35
Total cost	$91
Total mileage	132,000

Motors were provided, power supplied and schedules arranged predicated on the original diameter of these wheels. With each turning these above calculations were upset, because of the diminishing diameter of the wheel. After the third turning the motor case was brought into dangerous proximity to the pavement in cities.

It is conceded that the added factor of safety, the comparison being with cast wheels, is to be duly credited; but so conceding, do not the facts here stated suggest to the manufacturer of steel wheels and to railway managers that a problem is here present? Will any one support a suggestion that wheel manufacturers must produce a steel wheel and supply it to railways at a cost that will permit the railways to scrap it after the first tire wear, abandoning the idea that it is practicable to turn and return the tires, according to present practice?

Of course, we are all afflicted to a degree with "commercial instinct," but I submit that it may be best satisfied by making it possible for the user to obtain the desired article at a permissible cost.

Perhaps there are others who have had "experience." I therefore leave the question for their consideration, assuring you that I remain most sincerely somewhat

A. GROUCH.

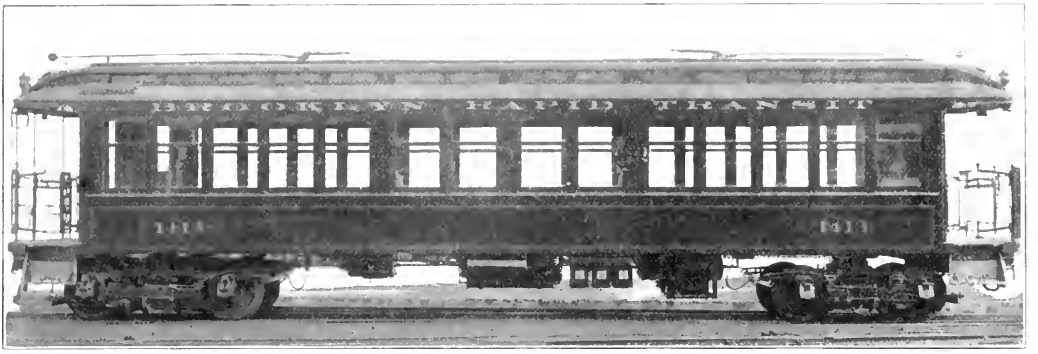
January 31, 1908.

A French water tube boiler built by Grille & Co. of Paris recently evaporated on official test 72 pounds of water per square foot of heating surface. The boiler consists of a horizontal steam drum and water leg with tubes of U-shape, the upper leg of the tubes discharging into the steam space of the boiler.

ELEVATED CARS FOR THE BROOKLYN RAPID TRANSIT COMPANY.

The Brooklyn Rapid Transit Company is now placing in service at the rate of one car a day the first consignment of the 100 elevated cars, orders for which were placed about March 1, 1907, with the Jewett Car Company and the Laconia Car Company, each building 50.

The cars are of the double-end, straight side, semi-convertible type which is standard on this road and are designed to meet their particular service and traffic conditions. The underframes are of pressed steel and the side frames are of wood, reinforced with steel channels and plates.



New Elevated Cars for Brooklyn Rapid Transit Company—Side View of Standard Car.

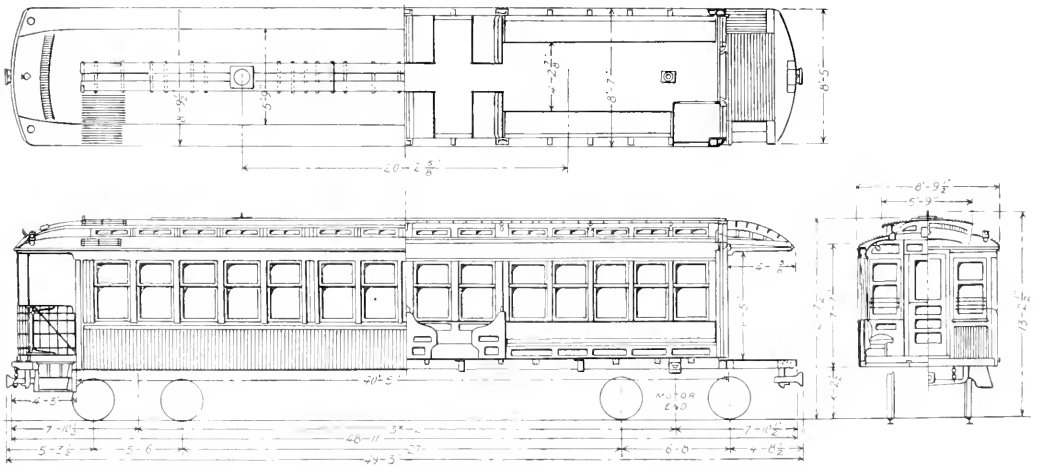
Dimensions.

The general dimensions of the cars are as follows:

Length over platform	48 ft. 11 in.
Length over end sheathing	40 ft. 5 in.
Length between centers of trucks	33 ft. 2 in.

The motor trucks were built by the American Locomotive Company and have a wheel base of 6 feet 8 inches and 31-inch Schoen rolled steel wheels. Each truck, including contact shoes and gears, weighs 12,700 pounds. The trailer trucks have a wheel base of 5 feet 6 inches and 31-inch Schoen rolled steel wheels and weigh complete with contact shoes 9,200 pounds. The trailer trucks were built by the St. Louis Car Company from designs furnished by the Brooklyn Rapid Transit Company. Each set of motor trucks is equipped with two Westinghouse type 300, 200-horsepower motors, geared to the ratio of 19 to 64, and operated by Westinghouse controllers of the 251-I-3 U. S. G. type. The brake equipment includes a New York air brake with 12-inch cylinder style S, triple valve and a 28-inch cubic foot B-B-4 National compressor, controlled by a Westinghouse type L governor. The air brake system is automatic, with graduated release on the first car of the train only.

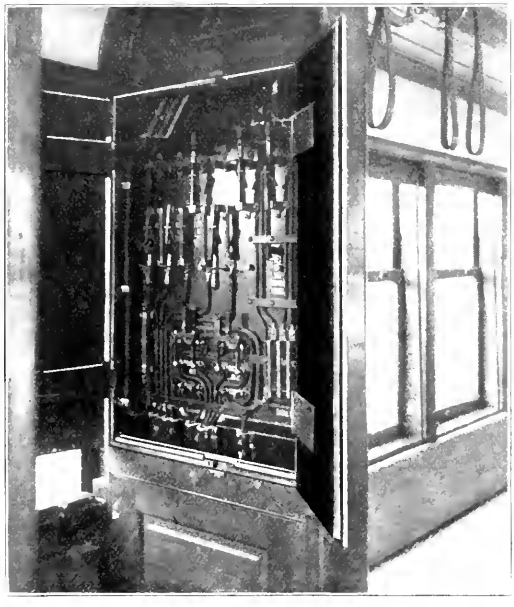
The motors on these cars are of the interpole type made by the Westinghouse Electric & Manufacturing Company. They operate safely on a fluctuating voltage having a temporary maximum of 800 volts. The continuous rating of the motor will be 150 amperes at 300 volts with perforated covers and 175 amperes with all covers off. The motor has a rating of 200 horsepower at 550 volts. The weight of the gear case



New Elevated Cars for Brooklyn Rapid Transit Company—Floor Plan and Side and End Elevation.

Length center of truck to end of platform	7 ft. 10½ in.
Length end of body to end of platform	1 ft. 3 in.
Width over sills	8 ft. 6 in.
Width over sheathing	8 ft. 7 in.
Width over drip rail	8 ft. 9½ in.
Height, bottom of sill to top of roof	9 ft. 2 in.
Height, rail to bottom of sill	3 ft. 2½ in.
Height, rail to top of roof	12 ft. 4½ in.

is 550 pounds and of the armature 2,000 pounds. The total weight of the motor complete is 6,000 pounds. There are four main pole pieces built up of soft steel punchings and riveted together between wrought iron end plates. The interpole coil is wound with copper strap, insulated by asbestos and taped fabrics the same as the standard field coils. The armature coil is built up of soft steel punchings assembled on a spider, the commutator also being pressed on this spider. The rear end bell or coil support is detachable, being solidly bolted to the spider. The commutator bars are made from hard drawn copper, clamped between two cast steel retaining rings. The back of the commutator is thoroughly sealed against carbon and copper dust, and all parts of the commutator are interchangeable. The oil pockets are unusually large and provide for waste lubrication. A separate oil reservoir allows the fresh oil to be fed and filtered up through the waste to the bearings. The axle bearings are $13\frac{1}{4}$ inches long and $6\frac{1}{2}$ inches in diameter. The gear has 64 teeth, $2\frac{1}{2}$-



New Elevated Cars for Brooklyn Rapid Transit Company—Switchboard in Rear of Motorman's Cab.

inch pitch and $5\frac{1}{4}$-inch face. The pinion has 19 teeth and is made from special high-grade steel.

The right-hand corner in each end of the car contains the motorman's cab, equipped with the usual master switch, air gauge and brake valve. A motorman's cab is formed by a hinged door, which in one position encases the master switch and brake valve and at about 90 degrees engages with the arched posts of the car. In the cab at the trailer end of the car an extension has been provided for in which is built the switchboard controlling the lighting, heating and power circuits. The sides and back of the closet containing the switchboard are encased in steel plate having steel swinging doors, which protection provides at all times against ignition from an electric spark. A removable switch box is built into the hood at the trailer end of the car. A fire extinguisher and support are fastened on the rear partition of the cab at the motor end of the car.

The interior finish is of natural color cherry, with plain inlaid lines and such molding and fittings as are necessary for structural purposes. All door, sash and ventilation fixtures, hinges and other fittings are finished in polished bronze.

Eight cross seats are located in the center of the car and longitudinal seats extend from the cross seats to the end in two diagonal corners and from cross seats to the cabs in two diagonally opposite corners. The seats are canvas lined, covered with rattan, and are the product of the Hale & Kilburn Manufacturing Company. Each car has a seating capacity of 54 and a standing capacity of 85, making a total carrying capacity of 139.

Weight.

The total weight of the car body completely equipped is 71,755 pounds, 43,325 pounds of which is carried by the motor

New Elevated Cars for Brooklyn Rapid Transit Company—Side View of Motor Truck.

trucks and 28,430 pounds by the trailer trucks. The distribution of the weight is given in the following table:

Car body complete with foundation brake rigging	27,080 lb.
Motor truck with contact shoes and gears	12,700 lb.
Trailer truck with contact shoes	9,200 lb.
Two motors complete with gear cases	12,260 lb.
Control apparatus	2,628 lb.
Brake apparatus	2,197 lb.
Switches, switchboard, headlights and heaters	552 lb.
Wiring, conduits, piping, hangers, transits and sheathing under car	5,138 lb.

In specifying the details and arrangements of this type

New Elevated Cars for Brooklyn Rapid Transit Company—Interior View.

of car the company has tried to adopt a type of rolling stock suitable to the service required. To this end both the interior and exterior finish have necessarily been made plain. Very careful attention was given to the quality of the material, both wood and metal, which constitutes an economical and thoroughly efficient structure. The wood used in the framing and car body was of southern long-leaf yellow pine, maple, white ash and cherry, each variety being covered by specifica-

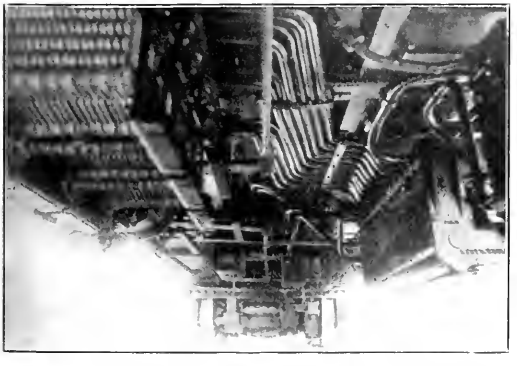
tions that should insure a durable car, ordinarily requiring few repairs. The wrought iron used shows, when tested in specimens of uniform sectional area of at least one-half square inch for a distance of 10 inches, an ultimate strength of 50,000 pounds to the square inch and stretches at least 10 per cent in 8 inches, with an elastic limit of at least 25,000 pounds per square inch. Similar specimens taken from plates, angles or shaped iron have an ultimate strength of 48,000 pounds per square inch and an elongation of 15 per cent in 8 inches. The malleable iron and steel castings used in the cars have been thoroughly tested in a similar manner.

Body Construction.

For the flooring southern pine 1¼ inches thick with 3½-inch face running lengthwise of the car has been used, each

New Elevated Cars for Brooklyn Rapid Transit Company—Exterior of 200-Horsepower Motor.

board being secured to each timber with two 2½-inch No. 14 screws, which are sunk and covered with putty. The floor space between the seats is covered with ⅝ by ⅝ inch beveled maple strips. The side posts and end framing are



New Elevated Cars for Brooklyn Rapid Transit Company—View of Apparatus on Under Side of Car.

of thoroughly seasoned kiln-dried straight-grained white ash. Each single post consists of two sections with a ½-inch tie rod grooved between, running from top of plate to bottom of sill angle, and each double post consists of two sections of 1¼ by 4½ inch ash, with an 8-inch channel framed between the bottom of the channel being securely riveted to the pressed steel side sill, while the top is turned over and bolted to the bottom of the plate. A 9 by ¼ inch steel plate riveted to the pressed steel side frame is built into each corner post. The car sheathing is of whitewood, ½ inch thick and 2½ inches wide, glued and blind nailed to sills.

The roof is of the monitor type, with framing of ash, with the exception of the clearstory sill and plate, which are each of yellow pine in one piece. Steel carlines, ⅝ by 1½ inches, run across the car from plate to plate on every post and are secured by ½-inch bolts. The shape of the carlines varies from the center to the end of the car, giving the roof an initial camber upwards in the middle and the plate rail and letter board an initial camber inwards in the middle. The roof is covered with whitewood, ⅝ by 2½ inches, and then covered with No. 6 cotton duck canvas.

The cars are arranged to operate from both ends and on either side. Four platform gates of the Pitt type are installed on each car.

The cars are heated by electric panel heaters known as type 146 X, manufactured by the Consolidated Car-Heating Company. The main body of the car is heated by 18 heaters and one smaller in size in each of the motorman's cabs, the latter being specially designed by the road. The markers are the standard 4-sided electrically lighted type, manufactured by the Dayton Manufacturing Company.

The 100 surface cars which the Brooklyn Rapid Transit put into service last fall were described in the Electric Railway Review of October 26, 1907.

MAKING THE WHEELS GO.

In an informal address delivered before the students of Purdue University on January 27, 1908, by Prof. H. H. Norris, Sibley College, Cornell University, some especially pointed remarks were made which undoubtedly are of as much value to engineers in actual service as to technical college students. A summary of these remarks follows:

Which Would You Rather Be?

Technical graduates (and others) divide themselves more or less automatically into two classes: wage earners, salaried employes.

The first puts his skill, the second himself, into his work.

The first is paid for his labor, the second for his interest.

The first is paid for overtime—there is no overtime for the second.

The pay of the first is regulated by the unions. The second is (theoretically) paid a reasonable living salary, consistent with the expenses to which his position subjects him.

Good work on the part of wage earners is usually recognized, as the results are evident. It is not always so in the other case, as the true leader loses himself in his work.

How to Make the Wheels Go.

Osborne's maxims for leaders: (1) Allow nothing to be everybody's business. (2) Make everything somebody's business. (3) Let no one interfere with another's responsibility. (4) Put in force a clear and simple system, but (5) Avoid red tape.

Can You Do Them?

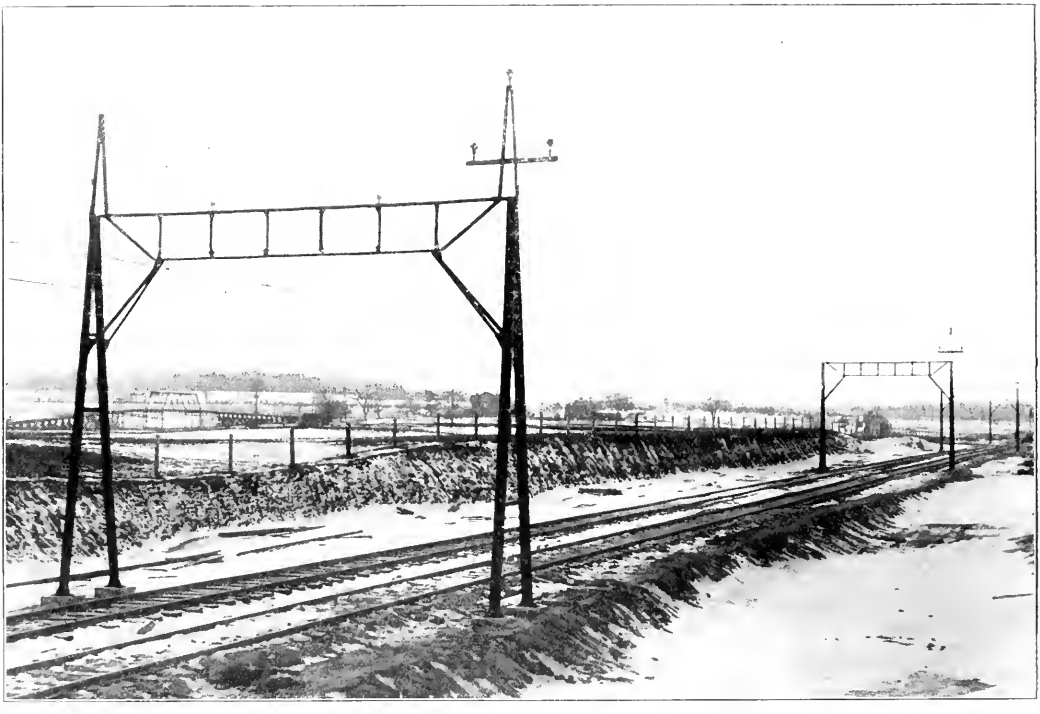
Things some technical graduates cannot do:
Answer a business letter by return mail.
Write a clear brief report or letter.
Defend their own opinions.
Reason from premises to a conclusion.
Realize the obligation involved in a contract.
Inspire others to their best efforts.

Concluding an article on the Valtellina electric railroad in Italy, in the Electric Trunk Line Age, J. M. Graham, vice-president of the Erie Railroad, says: "Technically, the electrical equipment of the Valtellina line demonstrates beyond the shadow of a doubt that the three-phase system is admirably adapted to the longest distances and the most severe traffic conditions that can be found in practice. Indeed, it possesses advantages which seem to make it better suited for real heavy trunk-line work than any other system. Commercially—and I consider commercial practicability the more important consideration for the railroad man—my inspection of the three-phase system here briefly described leads me to the conviction that, wherever the traffic is dense enough electric traction will not only materially decrease the operating cost per ton-mile, but it will accomplish this end, either with a material decrease in the motive power equipment, or it will handle as much as 50 per cent more traffic than could be handled under the most favorable conditions of steam operation."

CATENARY CONSTRUCTION ON THE SYRACUSE LAKE SHORE & NORTHERN RAILROAD.

The Syracuse Lake Shore & Northern Railroad on January 25 placed a 4½-mile stretch of catenary construction designed for single-phase current at 6,600 volts in operation, using direct current at 550 volts.

The road is at present about 12 miles long and cars are operated on a half-hour schedule from Syracuse to Baldwinsville, N. Y. As originally built the line was single track, following a circuitous route. When in September, 1905, the property was acquired by the present interests, the work of entirely rebuilding the road was undertaken, and this has included a second track, much of which has already been completed, as well as the relocation of the portion now equipped with catenary trolley construction. The road is to be extended from Baldwinsville, through Phoenix and Fulton to Oswego, making a line about 30 miles long. Much of the distance from Baldwinsville to Fulton is already graded.



Syracuse Lake Shore & Northern Railroad—Catenary Trolley Construction and Power Transmission Line.

Catenary Bridges.

The catenary work, as previously stated, is designed for single-phase at 6,600 volts, but owing to the facts that but a small portion of the proposed work has thus far been completed and that the rolling stock is built for direct current, the road is being operated under the alternating-current-direct-current system. As will be seen from the accompanying engravings a single messenger cable is used with steel bridge construction. The bridges are located 300 feet apart on tangent and have a span of 30 feet, the track being laid on 12-foot centers. The bents for the bridges are built of two 8-inch channel members, spaced 6 feet apart at the base, converging to 8 inches at the top and supported on concrete pedestals 20 inches square and of varying depth according to the nature of the ground. The trusses have 8-inch channel top chords and 6-inch channel bottom chords set flanges down, the diagonal members being ⅝-inch rods and the struts 2½ by 2½ by ¼ inch angles. The struts are flattened and bent over at the ends and riveted to the channels. Malleable iron pins for the porcelain insulators carrying the messenger cable are bolted to the top chord of the truss.

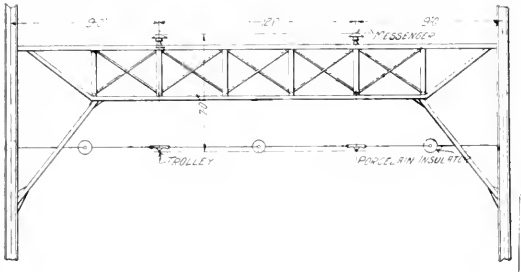
The messenger cable is $\frac{7}{16}$-inch galvanized cable, furnished by the John S. Roebling's Sons Company and No. 0000 grooved copper wire, furnished by the same company, is used for the trolley wire. The trolley hangers are galvanized steel rods ⅝ inch in diameter, spaced 10 feet centers. These hangers are of the Ohio Brass Company's standard type, attached to the messenger cable with a sister hook, through the base of which the rod is threaded and drawn up tight against the messenger cable. The trolley wire is secured to the hanger by mechanical ears.

The catenary is strung for a net sag of 6 feet 6 inches at 100 degrees F. At 20 degrees F. the sag is about 5 feet 6 inches and the trolley is 12 inches higher at the center of the span than under the bridges, the height from rail to trolley being 18 feet. The bridge construction is designed for a wind pressure of 8 pounds per square foot on the trolley and messenger cables when covered with ½ inch of ice. A somewhat lower load is assumed on the high-tension wires, which are No. 2 copper. Under the assumed wind and ice load the unit strain on the bridge is 22,500 pounds per square inch, reduced for the compression members of the bridge, which is computed as a braced portal.

At each bridge there is a steady strain attachment applied to the trolley in the manner indicated by an accompanying plan, the Ohio Brass Company's 8-inch wheel type insulators

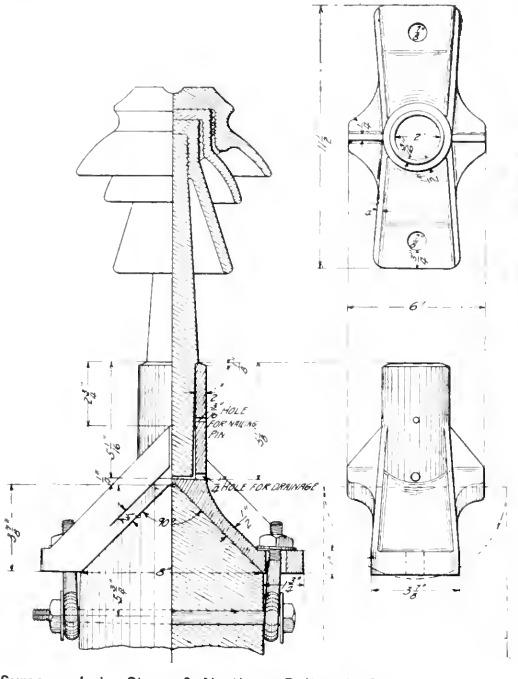
being used. The messenger cable is dead-ended on an equalizer attached to a pair of these insulators, which are in turn connected by short cable loops secured to the anchor bridge. Temporarily the dead-end bridges are the same as the other bridges along the line with the addition of a second channel top chord set at right angles to the other channel chords and to which the catenary dead end is bolted.

During the 10 days the catenary work has been in service



Syracuse Lake Shore & Northern Railroad—Plan of Steady Attachment at Catenary Bridges.

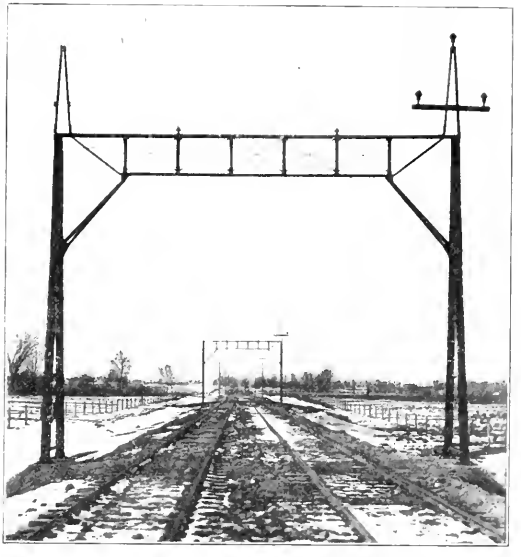
there have been temperature changes of 50 degrees and wind velocities of 45 miles per hour. These conditions have appeared to make no difference in operation, even before the



Syracuse Lake Shore & Northern Railroad—Standard Socket for Pole-Top High-Tension Line.

steady strains were installed, and the lateral stiffness has been such at all times that very little deflection or rolling can be noticed under the action of the wheel trolley with a tension of about 25 pounds.

As will be seen from the engraving the construction is comparatively simple, and though in operation for but a short time has been very satisfactory, there having been no trouble from trolley wheels jumping the trolley wire. The construction also gives to the motorman all along his range of vision a clear view of both sides of the right of way, and it is believed will be permanent and much more satisfactory than a catenary bracket construction using wood poles. In this connection it is interesting to note that as compared with the standard span construction for double track using 35-foot cedar poles 8 inches in diameter at the top and spaced 85 feet apart the cost for the catenary construction of the type described has been but $800 per mile greater. The catenary work was designed by the Archbold-Brady Company of Syracuse. This company also designed and furnished the steel catenary bridges and designed such special work as was required, all of which was subject to the approval of Thomas H. Mather, chief engineer of the Syracuse Lake Shore & Northern. All catenary clips, hangers and insulators were furnished by the Ohio Brass Company. The work of erection



Syracuse Lake Shore & Northern Railroad—Partially Completed Catenary Trolley Construction and Power Transmission Line.

was done under the immediate direction of L. J. Myers, superintendent of construction of the road.

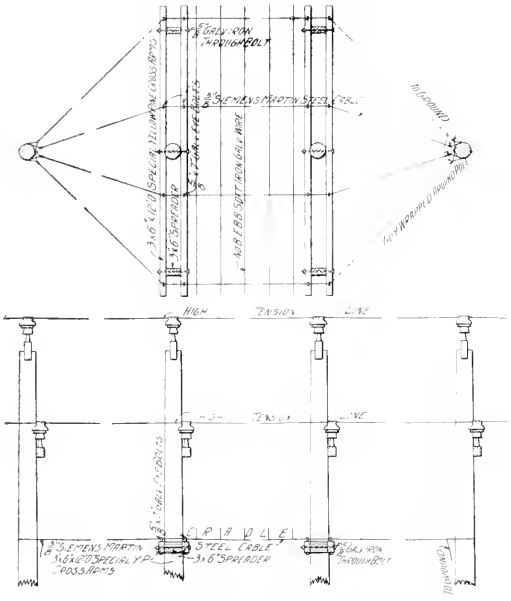
Power Transmission Lines.

The three-phase power transmission line is carried on an A-frame on the catenary bridges throughout the length of the catenary construction, power being obtained from an auto-transformer station of the Niagara Lockport & Ontario Power Company, located on the outskirts of Baldwinsville, which delivers current at 22,000 volts. On the portion of the line between Syracuse and Long Branch, which has the standard suspension overhead work with wooden poles at the side of the right of way, the transmission line is carried on the pole tops. A special bracket designed for the insulator pin immediately on the top of the pole and shown in an accompanying engraving is used with a 6-foot crossarm below. The power transmission line runs to the power house of the Syracuse Lake Shore & Northern at Nine-Mile creek, about 4½ miles from Syracuse, where the current is at present stepped down to 402 volts and a 500-kilowatt rotary converter used to furnish the necessary direct current for present operation. The company also has here its two engine-driven generators, used

heretofore as reserve for emergency. The new equipment was all furnished by the Westinghouse Electric & Manufacturing Company. The switchboard equipment includes integrating and recording wattmeter automatic synchronizer and all the essential apparatus for the operation of the power equipment.

Roadbed.

The double-track roadbed is at present on cinder fill, cinders being obtained in large quantities from the Solvay Process Company. When these become thoroughly packed



Syracuse Lake Shore & Northern Railroad—Cradle Construction for Protection of Steam Railroad Crossing and Power Transmission Line.

they afford a good subconstruction for crushed rock ballast. The rails are 70-pound sections. They are bonded with Chase-Shawmut soldered bonds.

CAUTIONS TO BE OBSERVED IN LAYING OFF BOILERS AND BOILER CLEANING.

In view of the accidents which are reported from time to time due to the bad methods adopted in preparing to clean boilers, and in the actual work of carrying out such operations, it may be worth while to give a few general hints as to the way in which to treat a boiler when it is proposed to lay it off for any time. The general conception as to how to treat a boiler when it is to be laid off for any length of time is to empty all or part of the water, and to leave the boiler standing with the fire-doors in any position in which they may happen to be placed at the time. It does not matter to the intelligences of those in charge of such installations as to whether the doors are open or shut, or whether there is any water or none in the boiler. No trouble is even taken to ascertain whether the boiler is under heavy pressure or not.

The correct procedure should be as follows: Do not attempt to blow the boiler down at all, but let it cool down until the pressure gauge stands at zero. When this is the case, in order to make sure that the gauge is not deceiving the operator, open the gauge-glass cock, or any other convenient opening, to make sure that there is no pressure in the boiler. Then, when this is certain, but not before, take off the top manhole cover and pump water into the boiler until it is full right up flush with the manhole flange rim. It should be carefully seen that all the flue doors are shut in order to prevent air circulating through the tubes, etc., of the boilers. Shut as far as possible all openings in the front of the boiler. The advisability of this is apparent when it is remembered that the variations of temperature, especially in a boiler house which shuts down all night, or in an open-fronted boiler house, are enough to cause a considerable amount of condensation on the exterior of the tubes and drums of a standing boiler. Cases have come within the experience of the writer where, with boilers standing exposed to all sorts of temperature variations, it has been possible after two months to take flakes of rust of considerable size off the outside of the tubes.

The folly of attempting to remove the manhole cover when there is any pressure at all in the boiler is illustrated by the two cases of fatality arising through foolishness of this sort which were reported in the technical press a short time ago. One case was at Cambridge, where two men started to take off the cover of a boiler for cleaning purposes with the idea that there was no steam in the boiler because the pressure gauge stood at zero. They took out all the bolts and then proceeded to force off the cover, with the result that a rush of steam occurred, which scalded one of the men to death. Another case, an American one, was that of two men who started to take off the cover of a large vessel no less than 5 feet in diameter and 40 feet in length, under the impression that no steam was in it, whereas the pressure had not been relieved. After a number of the bolts had been removed, the head was suddenly blown off, with the result that the two men were killed.

If the boiler is to stand idle for any length of time it is not advisable to leave it empty. However carefully it may be dried and sealed up, there is always a risk of dampness, either from the atmosphere or due to water being left in some part of the boiler, whereas if the boiler is pumped full there is no risk of any part of the surface being exposed to the air.

In boiler cleaning a very useful method, if there is much scale in a boiler, particularly in one of the Babcock type, where there are a large number of small tubes, is to put about one hundredweight of soda ash into the boiler and fill it right up with water. Then keep a very small fire in the grate for about 48 hours in order to keep the water just boiling; the top manhole cover should be left off in order to prevent steam pressure being generated, and immediately after this boiling process is finished the water should be run off. This makes the scale far easier to remove. If the operation of scaling takes more than a day, in order to prevent the scale from getting hard again it is advisable to pump the water full up when the men knock off at night, provided that all the tube caps have not been removed. For this reason, if no other, it is advisable to take off the tube caps row by row as required, because if the boiler is once allowed to get thoroughly dry the scale hardens and the good effects of the soda boiling are lost.

While the boiler is down it is advisable to look out for signs of grease pitting—that is to say, corrosion of the boiler due to decomposition of the fatty compounds which make their way into the boiler with the feedwater, if this is derived in any way from engine exhausts. If there is any likelihood of grease getting into the feed in this way a useful thing is to paint the inside of the steam-drum along the sides and ends to a depth of about 4 inches below the normal water level with Portland cement. Only a very thin coat is necessary. This will entirely prevent grease pitting.

Some experts are believers in the idea that boilers, when laid off, should be kept dry. In the case of large-diameter drum boilers, coke fires have been kept alight in the interior of the boiler in order to drive off any moisture, but in the writer's opinion by far the best way in every case, provided the feedwater is pure and free from acid, is to pump up as full as possible and carefully seal all outlets of escape for the water. Corrosion only occurs where iron and steel surfaces are subjected alternately to the action of air and water.—Electrical Engineer, London.

Effect of 2-Cent Fare Laws.

The following have written letters to the Electric Railway Review in response to our request concerning the effect of 2-cents-per-mile fare laws upon traffic:

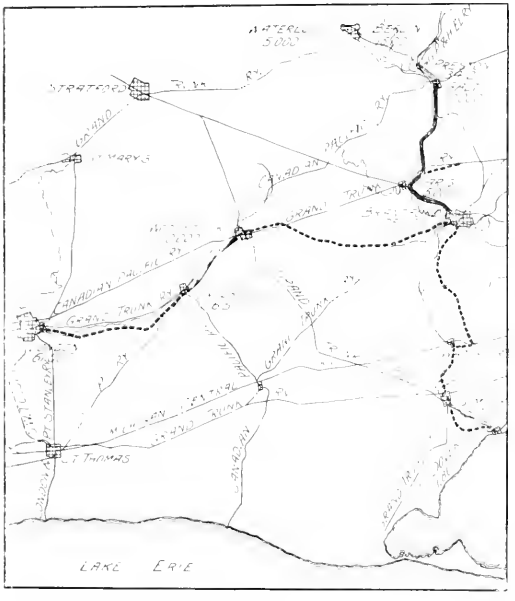
E. B. Lincoln, general manager Muncie & Portland Traction Company, Portland, Ind.: "We have not noticed any decreases in our traffic up to this time on account of the 2-cent fare law."

J. C. Lugar, general manager Philadelphia & Easton Electric Railway, Doylestown, Pa.: "Two-cents-per-mile fares of steam railways have had no effect upon our traffic. I do not think the decreases in steam railway fares will cause any changes in the fares of interurban electric railways."

THE GRAND VALLEY RAILWAY.

The present Grand Valley Railway is a road with 26 miles of track extending from Brantford, Ont., north through the town of Paris and the village of Glen Morris to Galt, Ont., a town of approximately 10,000 population, where it connects with the Galt Preston & Hespeler Street Railway, an electric line reaching the towns comprising its name and Berlin. Until recently it has been controlled by the same interests as the Brantford Street Railway and the Woodstock Thames Valley & Ingersoll Electric Railway, the former a city line exclusively with about eight miles of track, and the latter an interurban line, 12 miles long, connecting Woodstock and Ingersoll, Ont. Woodstock is located about 25 miles west of Brantford.

Within the past four months new interests, headed by Murray A. Verner, president, have acquired the three properties and propose to rehabilitate the three existing lines and



Map of Operating and Proposed Lines of the Grand Valley Railway.

create a system aggregating 132 miles of track. The Dominion charter of the Grand Valley Railway gives them broad powers to build and operate steamship lines on the Great Lakes, as well as telegraph and telephone lines and other utilities.

The principal extension will be from Brantford south to Port Dover, a town of 1,800 inhabitants, on Lake Erie, and will pass through the villages of Mt. Pleasant, Boston and Bloomsburg and the towns of Waterford and Simcoe, located in a rich fruit belt. Port Dover, though not a large port of entry, is said to have one of the few harbors on Lake Erie which can be entered by a vessel in a storm and it is believed that its location will result in material development of the surrounding country and a large freight and express business when the new line, 34.5 miles long, is completed.

The other extensions comprise links connecting Brantford and Woodstock, and Ingersoll and London, Ont., thus completing a line 55 miles long from Brantford to London, and a 6-mile spur from the Galt-Brantford line to St. George. The extensions are shown in detail in an accompanying map, the existing properties appearing as solid lines and the extensions as dotted lines. The existing steam lines of the Grand Trunk, Michigan Central, Canadian Pacific and Toronto Hamilton & Buffalo railroads are also shown, together with the population, according to the latest census, of the villages on the lines and in the nearby surrounding country.

The existing properties, which, under the previous management, in addition to being poorly constructed, were allowed to become badly run-down, it is proposed to entirely rebuild and relay with new 80-pound steel. The Colborne street line of the Brantford Street Railway is to be double-tracked and seven additional miles of track laid in Brantford, giving a loop through the city for interurban cars and several new city lines. The interurban line from Brantford to Port Dover is to be built with a maximum grade of 1.3 per cent and the line from Brantford to Woodstock, as well as the St. George extension, will have grades not exceeding 2 per cent. Contracts for grading, masonry and timber work have been awarded to Joseph Gianini, Pittsburg, Pa., and it is expected that contracts for rails, bridge work and electrical equipment will be let in the spring, when construction work will be commenced.

The decision as to the electrical system to be adopted and as to whether the company will build its own power house or purchase power depends much upon the elections now being held in Ontario to determine whether the government shall have the right to construct power transmission lines from Niagara Falls and sell power for lighting and other purposes to municipalities and corporations. Should the government obtain the necessary approval of the people power will doubtless be obtained from the line which will be built in lower Ontario. On the other hand a transmission line from Niagara Falls for the exclusive use of the Grand Valley Railway Company or a power plant built by the company at Brantford or some other point would be considered. The single-phase system is favorably looked upon for the electrical equipment because of the mileage of the projected lines.

A tabular statement of the projected work is as follows:

	Miles.	
Lines to be Rebuilt.		
Brantford Street Railway	8.0	
Grand Valley Railway	22.0	
Woodstock Thames Valley & Ingersoll Railway	12.0	
		42.0
New Lines.		
Brantford Street Railway	7.0	
St. George extension	6.0	
Brantford to Port Dover	34.5	
Brantford to Woodstock	25.0	
Ingersoll to London	18.0	
		90.5
Total		132.5

The interurban lines, as at present laid out, will be practically all upon private right of way. Crossings with steam lines, of which seven are shown, are to be below the grade of the steam line, with the exception of one on the outskirts of Brantford. A steel trestle about 1,200 feet long will be required on the Port Dover extension and at the Simcoe crossing of the Grand Trunk 45,000 yards of earth will have to be moved and the Grand Trunk tracks raised to obtain the crossing by the steam road overhead.

The chief engineer of the Grand Valley Railway is William P. Kellett, to whom we are indebted for the accompanying map and for information in regard to the company's plans.

It is reported that the Cleveland Electric Railway is having a car of the pay-as-you-enter type constructed for experimental use on its lines and that if it proves as successful in Cleveland as in other cities the company may order a number of the cars. George L. Radcliffe, superintendent, has spent some time in Buffalo observing the operation of the new pay-as-you-enter cars recently placed in service by the International Railway.

NEW CARS FOR THE AURORA ELGIN & CHICAGO RAILROAD.

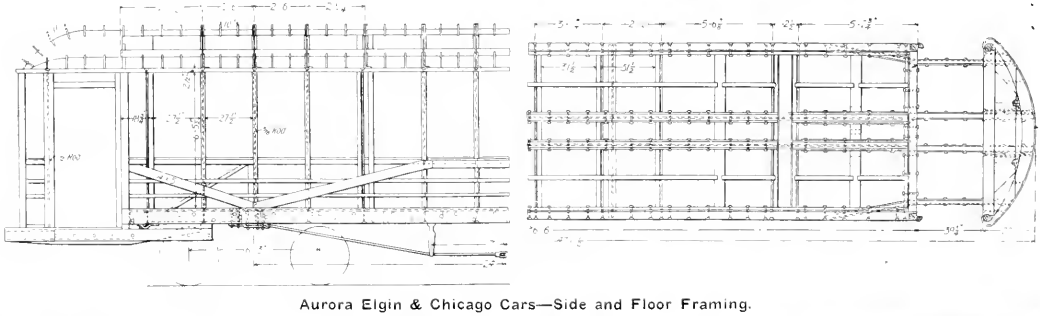
Illustrations are presented herewith of one of two passenger motor cars which were recently furnished for the Fox River division of the Aurora Elgin & Chicago Railroad by the McGuire-Cummings Manufacturing Company, Chicago, Ill. Three more cars of the same type are now being built for this road.

The principal dimensions are: Length over all, 47 feet 10 inches; length over corner posts, 36 feet 6 inches; width over side sills, 8 feet 5 inches; width over all, 8 feet 9 inches; height from bottom of sill to top of roof, 9 feet 5 inches.

The general appearance of the car and the details of the floor and side framing will be noted from the accompanying engravings. The interior of the car is divided by a partition and a single sliding door into main passenger and smoking compartments, the smoking compartment seating 16 persons and the main compartment 34. A toilet room with dry hopper is placed in the rear left-hand corner of the main compartment. The water cooler is located in the toilet room partition. The interior finish is of white quarter-sawed oak with a light finish. The ceiling and deck linings are of birds-eye maple.

The side sills are ⅝ by 8 inch steel plates, faced outside with 4½ by 8 inch yellow pine, and inside with 1¾ by 6 inch yellow pine. The two center sills are 6-inch I-beams, filled on each side with 6 by 2½ inch yellow pine. The two intermediate sills are of 2½ by 1¾ inch long-leaf yellow pine. The cross sills are of 2½ by 6 inch yellow pine. The bolsters

Aurora Elgin & Chicago Cars—Interior of Passenger Compartment.



Aurora Elgin & Chicago Cars—Side and Floor Framing.

Aurora Elgin & Chicago Cars—Exterior View.

are of the M. C. B. built-up type, with the arch completely filled with oak. The body framing is of ash and the longitudinal rails and plates are of yellow pine.

The cars are mounted on McGuire-Cummings No. 10-A trucks with chilled wheels 33 inches in diameter. The wheel base is 6 feet 6 inches and the distance between truck centers is 24 feet. The equipment includes Hale & Kilburn walkover rattan seats and Pantasote curtains.

BOOK TABLE.

Experimental Electrical Engineering. By V. Karapetoff, Cornell University, Ithaca, N. Y. Published by John Wiley & Sons, New York, 1908. Book, 790 pp., $5\frac{3}{4}$ by 9 in., 538 figures. Price, cloth, $6.00, net.

This is a book of experiments. The author, who is a member of the instructing staff of Cornell University, has compiled in this work a very complete laboratory manual suited to the needs of students pursuing the last two years' courses in the higher technical colleges. Practically every phase of electrical engineering as it occurs in commercial design and practice is considered in this book.

The student, to carry on the 750 experiments, must have a working knowledge of physics. "The plan followed in each chapter is this: First, the particular class of machinery is described and the practical needs for certain arrangements and procedures of operation are given; then the object and the method of each particular experiment are described in detail and instructions given for the manner in which data should be taken. At the end of most experiments the requirements for the reports are stated so that the student will not omit to take all the necessary readings and dimensions while in the laboratory."

It will be remembered that the author in June, 1907, presented before the annual convention of the American Institute of Electrical Engineers at Niagara Falls, N. Y., a paper on "The Concentric Method of Teaching Electrical Engineering." This laboratory schedule is arranged complete in chapters so that the course may be pursued in the order laid out from cover to cover, or the instructor may arrange an irregular choice of subjects according to the concentric method of teaching proposed by Mr. Karapetoff.

Introduction to the Study of Electrical Engineering. By Henry H. Norris, M. E., professor of electrical engineering Sibley College, Cornell University, Ithaca, N. Y. Published by John Wiley & Sons, New York, 1907. Book, 404 pp., $5\frac{3}{4}$ by 9 in., 179 figures. Price, cloth, $2.50, net.

Professor Norris has in this, his latest book, given the engineering profession at large, and embryo engineers yet in college, a most valuable means of assistance. A serious omission would be made if attention were not called to the method by which the author presents to the reader or student his treatment of the subject of electrical engineering. In the preface we read: "Having defined electrical engineering as one of application, it is especially important that the student in approaching the subject should have personal knowledge of the things and phenomena involved before any reasons can be ascribed to them. Observation and memory must supply the raw material from which deductions are to be made. We must proceed from the familiar to the new and unknown. Hence the plan of this introductory work is to take the everyday experience of the student as the basis of a general survey of electrical applications. Everyone rides on electric cars, uses telephones and electric lights, and in other ways comes into more or less intimate contact with electrical phenomena. By combining with this experience the lessons taught by scientific research, a clear conception of electrical laws should result. These laws may then be used to explain the operation of the numerous devices used in electrical practice."

In laying the foundation for further analytical work, which is the purpose of this new book, Professor Norris describes in a clear and concise way a large number of electrical machines and devices as found in actual service. From these descriptions the reader or student is led to the theoretical and operating phases on which each machine depends for its operation. It may be of interest to mention briefly some of the subjects to which attention is devoted.

The earlier part of the book considers the electrical machinery and phenomena as encountered in every-day experience. Then follow chapters on the fundamental electrical and magnetic quantities, together with a description of the materials of electrical engineering. A discussion and descriptions of electric and magnetic circuits lead to chapters on the construction and operation of electric generators, transformers and power stations. Following a very thorough treatment of the power station, Professor Norris describes, illustrates and discusses electric motors and their application and electric lighting and heating. In the concluding two chapters he considers, for the benefit of the student, various measuring instruments and means for the electrical transmission of intelligence. The book concludes with a detail subject index comprising 46 pages.

EXECUTIVE COMMITTEE MEETINGS OF THE AMERICAN STREET AND INTERURBAN RAILWAY ASSOCIATIONS.

Important meetings of the executive committees of the American Street and Interurban Railway Association and the affiliated associations were held last week at the office of the association, 29 West Thirty-ninth street, New York City.

Transportation and Traffic Association.

On Thursday, January 30, a meeting was held for the purpose of organizing a fourth affiliated association, the American Street and Interurban Railway Transportation and Traffic Association. The organization of this association, together with an abstract of the constitution and by-laws and the names of the officers, was reported in the Electric Railway Review of February 1, page 143. President C. Loomis Allen, vice-president and general manager Utica & Mohawk Valley Railway, has appointed the following standing committees:

"Express and Freight Traffic"—H. H. Polk, president Interurban Railway, Des Moines, Ia.; W. S. Dimmock, manager Puget Sound Electric Railway, Tacoma, Wash.; A. L. Eastman, Utica, N. Y.; Charles M. Paxton, general manager Dayton & Troy Electric Railway, Dayton, O.; and J. H. Lathrop, general freight agent Spokane & Inland Empire Railroad, Spokane, Wash.

"Passenger Traffic"—H. J. Crowley, general manager American Railways Company, Philadelphia, Pa.; M. C. Brush, general manager Lexington & Boston Street Railway, Boston, Mass.; F. W. Coen, general manager Lake Shore Electric Railway, Cleveland, O.; E. F. Peck, general manager Schenectady Railway, Schenectady, N. Y.; and Franklin Woodman, general manager New Hampshire Electric Railways, Haverhill, Mass.

"Rules for City Operation"—(Two years): Duncan McDonald, manager Montreal Street Railway, Montreal, Canada; George R. Nagle, general manager Wheeling Traction Company, Wheeling, W. Va.; Robert S. Goff, vice-president and general manager Boston & Northern Street Railway, Boston, Mass. (One year): E. J. Ryon, superintendent of transportation Schenectady Railway, Schenectady, N. Y.; W. M. Weatherwax, superintendent of transportation Chicago City Railway, Chicago, Ill.; F. H. Lincoln, assistant general manager Philadelphia Rapid Transit Company, Philadelphia, Pa.

"Interurban Rules"—(Two years): J. N. Shannahan, second vice-president and general manager Washington Baltimore & Annapolis Electric Railway, Baltimore, Md.; J. E. Duffy, superintendent Syracuse Rapid Transit Company, Syracuse, N. Y.; F. D. Carpenter, general manager Western Ohio Railway, Lima, O. (One year): L. E. Fischer, vice-president and general manager Illinois Traction System, Danville, Ill.; Charles Currie, general manager Northern Ohio Traction & Light Company, Akron, O. (One to be appointed.)

American Association.

The regular midwinter meeting of the executive committee of the American association was held on Friday, January 31. Those present were: C. G. Goodrich, president; James F. Shaw, W. Caryl Ely, A. W. Brady, F. R. Henry, T. N. McCarter, C. S. Sergeant, F. G. Simmons, H. R. Goshorn, B. V. Swenson, secretary; C. Loomis Allen, H. M. Littell and H. H. Vreeland.

The secretary presented a report upon association matters covering the period since the executive committee meeting held directly after the last convention, and outlining the

work which is to be taken up during the ensuing year.

On January 30, 1908, the number of active members, street and interurban railway companies, was 244, and the number of associate members, individuals, was 184.

The estimated receipts for the year amount to $29,130 and the estimated total expenditures of the association, if it is to proceed along the lines already laid down, amount to $28,500.

As to the 1908 convention the secretary reported that invitations had been received from the Asbury Park Convention League and from the Atlantic City Hotel Men's Association; also invitations from the Denver City Tramway Company, the Denver Convention League, the mayor of Denver and the acting governor of Colorado to hold the 1908 convention at Denver. The time and the place of holding this convention were discussed at some length and it was finally decided to leave this matter in the hands of a committee with power to act, subject to the approval of the president. It is expected that this committee, in conjunction with a similar committee from the Manufacturers' association, will investigate this entire matter and make a report to the president some time before the first of April.

The organization of the American Street and Interurban Railway Transportation and Traffic Association was reported by C. Loomis Allen, president. The constitution and by-laws of the new association were ratified and the action of the organization committee in the formation of the new association was approved.

The programme was reported and, in accordance with the general scheme of having all the general work of the association performed by the various affiliated associations, the organization of the new Transportation and Traffic association will take over a large part of the work of the American association. The programme for the latter will provide for executive sessions, at which questions of public policy will be discussed. A tentative programme for the American association was submitted and approved.

Claim Agents' and Accountants' Associations.

Meetings of the executive committees of the Claim Agents' and Accountants' associations were held on Thursday, January 30, for the purpose of deciding on a programme for the 1908 convention, announcements of which will be made at a later date.

Engineering Association.

Meetings of the executive committee of the Engineering association were held on January 30 and February 1. Those present were Messrs. F. G. Simmons, Paul Winsor, F. H. Lincoln, W. H. Evans, J. W. Corning and E. O. Ackerman of the executive committee; Past President H. H. Adams; H. W. Blake, Street Railway Journal; C. B. Fairchild, Jr., Electric Traction Weekly; and L. E. Gould, Electric Railway Review.

After giving a résumé of an informal meeting of the executive committee at Atlantic City, President Simmons stated that the object of this meeting was to outline the work of the various committees for the ensuing year. The "Standardization" committee was instructed to continue with the work agreed on last year and in addition to take up the following group of subjects and any other subjects which it might think it advisable to consider, one of which was the question of specification for axles:

1. Standard height of couplers for city cars.
2. Standard height of couplers for interurban cars.
3. Standard automatic couplers for interurban cars and radial draft rigging.
4. Standard height of platforms.
5. Standard height of car steps.
6. Bumpers.

A committee of five on "Economical Maintenance" was appointed and instructed to consider the question of what is the most economical method of maintenance, whether taking into consideration the present only or looking into the future.

The committee on control was instructed to continue the present line of work and in addition to consider the question of the proper method of controlling the rate of acceleration.

A committee of five on "Power Generation" was appointed with instructions to consider the question of boiler room instruments, such as CO_2 recorders, draft gauges, etc., and also to take up and report on the practical operation of steam turbine plants.

A committee of five on "Power Distribution" was appointed and was instructed to take up and report on modern methods of overhead construction, with particular reference to the catenary type.

The committee on "Maintenance and Inspection of Electrical Equipment" was instructed to continue its work, amplifying on one or more of the subjects started last year and to take up the question of tests for materials and supplies.

The committee on "Way Matters" was instructed to continue the work of last year and to consider especially the question of the application of bonds, the quality of rails and rail corrugations and such other matters as might in its opinion be advisable.

The committee on "Operating and Storage Car House Designs and Rules for the Construction of Car Houses," yet to be appointed, will be instructed to continue the work originally laid out for it, get out its report and in addition take up and report on rules for the construction of car houses already presented by the main association.

The committee on "Car and Car House Wiring" was instructed to take up in addition to its usual work the question of methods of car and car house lighting.

The committees on "Car Wiring," "Standardization" and "Rules for the Construction of Storage and Car Houses" were turned over to the Engineering association by the American association.

The secretary was instructed to have prepared for distribution drafts of proposed amendments to the constitution and by-laws, providing for the election of an honorary secretary, making the past presidents members of the executive committee and changing the method of amending the by-laws. A discussion was held on the advisability of having all papers in the hands of the secretary 60 days in advance of the convention and dispensing with the reading of reports on the floor of the convention. A suggestion was also made that one day be set aside at the convention for the examination of exhibits.

Banquet to Executive Committees.

On Friday evening, January 31, the executive committee of the Manufacturers' association gave a banquet to the members of the executive committees of the other associations at the Imperial hotel. About 60 were present. Joseph R. Ellicott, president of the Manufacturers' association, acted as toastmaster and addresses were made by James F. Shaw, Boston; H. H. Vreeland, New York; W. Caryl Ely, Buffalo; Frank Hedley and James H. McGraw, New York; C. S. Sergeant, Boston; John A. Beeler, Denver; Charles C. Peirce, Boston; and C. Loomis Allen, Utica. Important association matters and questions of public relations were discussed.

The Conventions for 1908.

At the meetings of the executive committees of both the American and the Manufacturers' associations much consideration was given to the place for holding the annual conventions of the street railway associations next fall. W. G. Evans, president, and John A. Beeler, vice-president and general manager, of the Denver City Tramway Company, were present to urge the claims of Denver as a convention city. That they did their work well was evidenced by the fact that everybody was talking Denver. One of the strong arguments in favor of taking the conventions of 1908 so far west is that the

American association has not as strong a representation from the Pacific coast and the mountain states in its membership as it should have. It is felt by many that if the meetings were held as far west as Denver the local interest aroused would tend to rectify this fault and that probably large accessions to the membership of the parent association would result.

The whole subject will be considered by committees representing both the American and the Manufacturers' associations. Those appointed by President Goodrich of the American association are: James F. Shaw, president Boston & Worcester Street Railway, Boston, Mass.; Arthur W. Brady, president Indiana Union Traction Company, Anderson, Ind., Frank R. Henry, auditor United Railways Company of St. Louis; and Bernard V. Swenson, secretary-treasurer American Street and Interurban Railway Association, New York. The Manufacturers' committee appointed, in addition to President Joseph R. Ellicott and Secretary George Keegan, consists of Messrs. James H. McGraw, Charles C. Peirce, Henry C. Evans, Arthur S. Partridge, Charles K. Knickerbocker and Hugh M. Wilson.

It is probable that this joint committee will in the near future visit Denver and other cities which may advance proposals for accommodating the conventions. The committee has authority to decide the questions referred to it.

VENTILATOR EXPERIMENTS ON THE DETROIT UNITED RAILWAY.

For the past several years experiments have been made at intervals by the board of health of the city of Detroit and the Detroit United Railway to determine upon the most satisfactory means or device for ventilating street cars and some interesting results are reported from these tests.

The cause which led to the carrying out of these experiments was the passage, in the fall of 1905, of an ordinance by the city of Detroit specifying certain requirements for ventilators which it was stated the railway company should adopt on and after November 1, 1905. The stipulations of this ordinance are given in the following extract:

It shall be unlawful for any street railway company to operate upon the streets or highways of the city of Detroit any cars (other than summer or open cars) which are not equipped with ventilators, which, irrespective of the position of doors or ordinary windows, will, of their own action, automatically cause a continuous interchange of the air in the cars. That is, such ventilators as will not only admit fresh air to the car, but also remove the vitiated air from the car. The ventilation shall not be effected by the admission of violent or dangerous drafts, but by the continuous and practically imperceptible process incapable of injuring or endangering the health of anyone. The ventilators used for the purpose shall be automatic and continuous in action, having no movable parts requiring adjustment by car operatives, or subject to being tampered with by passengers. Furthermore, owing to bad conditions of air known to exist in cars during storms, or periods of extreme low temperature, arising from the necessity of closing ordinary windows or transoms to protect passengers at such times, the ventilators used shall be so constructed as to be continuously operative and effective at such times, without admitting rain or snow through the ventilating air passages.

The ordinance further provided that for each day and for each and every car operated in violation of these requirements a separate and distinct offense would be committed, and that such offenses would be punishable by a fine of not more than $200 and costs.

The requirements of this ordinance could at that time be fulfilled only by the use of a certain patented ventilator. The unjust advantage thus given to a particular device caused the board of health, in connection with the railway company, to conduct experiments on the efficiency of the various devices as indicated by the number of parts of carbon dioxide per 1,000 parts of air found present in cars equipped with such devices under average operating conditions.

A summary of a report made by the board of health to the common council on February 13, 1906, giving results of a series of chemical tests, is as follows:

Ventilator.	Car.	Temperature.	Humidity.	Parts CO per 1,000
None	1121	72	57	20.5
End hinge ...	1121	69	47	13.4
Perry	1121	72	49	16.0
Royal	1106	73	61	28.5

In collecting the samples for these analyses care was taken to secure them under the same conditions as to number of passengers in the car at the time and at the same height above the floor, a height about equal to that of a person standing being considered the most reasonable.

Later tests also indicated the superiority of the "end hinge" ventilator over the other types tested.

The company, however, was not satisfied with these results and is now equipping a number of cars with various systems of ventilation upon which tests will be made at an early date. These will include the several patented ventilators, the "end hinge" type opening outward at the end nearest the rear of the car, so that a direct draft is not created, and operated either singly, in pairs or in multiple, the "center hinge" or type which revolves on an axis parallel with the center line of the car, and a new type, which is simply the use of a brass wire gauze placed over the open end window of the monitor deck, the rest of the monitor deck all around being kept closed by glass windows. It is thought that by this latter method a suction will result from the motion of the car which will cause the vitiated air which usually collects above a plane about five feet from the floor to be drawn out through the gauze-covered opening, drawing in at the same time fresh air from the outside through small openings near the floor.

AUSTRALASIAN TRAMWAY OFFICERS' ASSOCIATION.

At a meeting at Sydney, New South Wales, on November 7, 8 and 9, 1907, at which representatives of most of the tramway systems of Australia and New Zealand were present, the Australasian Tramway Officers' Association was organized. The objects of the association, as stated in the constitution adopted at the inaugural meeting, are as follows:

The acquisition of experimental, statistical and scientific knowledge relating to the construction and operation of tramways.

The diffusion of this knowledge among the members of the association, with the view of increasing the accommodation of passengers, improving the service and reducing the cost of operation.

The establishment and maintenance of a spirit of fraternity among the members of the association by social intercourse.

The encouragement of cordial and friendly relations between the tramway undertakings and the public.

The membership is to consist of the chief officers, principal assistants in charge of departments, the secretaries and accountants of Australasian tramways. Meetings are to be held annually and special meetings may be called by order of the executive committee. The next annual meeting will be held at Sydney on October 7, 1908. The following officers were elected: President, John Kneeshaw, traffic superintendent New South Wales Tramways, Sydney; vice-presidents, O. W. Brain, electrical engineer New South Wales Tramways, Sydney, and J. S. Badger, manager and chief engineer Brisbane Tramways, Queensland; secretary and treasurer, George McCoun, accountant electrical engineer's department New South Wales Tramways, Sydney.

With a view to the standardization of accounts a committee was appointed to secure information from the officers of various tramways in Australia as to their classification of accounts and to report at the next meeting. The following papers were read and discussed: "Thermit Welding in Relation to Tramways," by G. R. Cowdery, and "Brakes," by O. W. Brain.

EMBLEMS FOR THE UTICA & MOHAWK VALLEY, SYRACUSE RAPID TRANSIT AND ONEIDA RAILWAYS.

In November last the Utica & Mohawk Valley Railway of Utica, N. Y., the Syracuse (N. Y.) Rapid Transit Company and the Oneida (N. Y.) Railway announced that prizes would be given by each company for suitable emblems or trademarks for display on cars and stationery. The contests closed recently and the award of prizes has just been made. Over 250 designs were sent in. Following a suggestion made by B. A. Frankel of the Utica & Mohawk Valley Railway, who planned the competition, a large majority of the designs submitted contained something of historical significance. The Indian or some object used by the Indian was a favorite subject.

In the competition for the Utica & Mohawk Valley Railway emblem, William T. Schwarz, a student in Syracuse University, was the winner of the first prize, his design representing a stately Indian standing with outstretched hands, overlooking a valley through which a trolley car is passing. The second prize went to J. H. Kuehnling of Utica and the third to G. D. Evans of Utica.

The first prize in the competition for the Oneida Railway Company was awarded to Byron E. White, a civil engineer of Utica, whose design commended itself at once to the committee of judges because of its simplicity and appropriateness. The emblem designed by Mr. White is an inverted Indian arrow head with the name of the company appearing thereon. John Gargan of Syracuse took second prize with the design of a T-rail inclosed in an oval. John Lyth of Utica received the third prize.

Mrs. Margaret Landers Sanford of Clinton received the first prize for a design for the Syracuse Rapid Transit Company; Frederick W. Geisler of Madison, Wis., the second; and J. B. Chase of Syracuse the third. Mrs. Sanford's design is in the form of a medallion with an Indian head appearing on the shield.

In each case the first prize was $25, the second $15 and the third $5.00. The designs of Mr. Schwarz, Mr. White, Mr. Gargan and Mrs. Sanford are illustrated herewith. The contests were considered successful by the companies. The interest attracted by the competition and the number of designs submitted and the excellence of many of them justified the contests.

The awards of prizes were made by a committee of newspaper men, who did not know the names of the contestants. While no design has definitely been settled upon for any of the roads, it is probable that the inverted Indian arrow head will be adopted for all of the lines, the name being changed in each instance.

Emblems for the Utica & Mohawk Valley, Syracuse Rapid Transit and Oneida Railways.

MOTOR OMNIBUS TESTS.

United States Consul Frank W. Mahin of Nottingham, England, states that a year or two ago an intense discussion was carried on between the advocates of motor omnibuses and street cars as to their respective merits, the practical results of which he points out as follows:

"Reports from different parts of the country, notably London, where motor omnibuses have been used are adverse in several particulars. Their noise and odor and the alleged injury to the value of property on streets through which they ran were objections from the outset. Now we are told of declining values of motor omnibus shares, of companies tottering on the verge of bankruptcy, of vehicles being retired after patient trial for failing to maintain required standards, or being 'scrapped' for lack of a market.

"The city of Nottingham has experimented with three motor omnibuses for the past two years, traversing parts of the town not served by street cars, with the view of extending the service if results were satisfactory. The receipts have averaged 20½ cents per mile traveled, while the street cars averaged 25 cents per mile. The receipts of the three omnibuses were $1,263 less than the working expenses during the last corporation year, leaving nothing for depreciation or interest on capital. Against the street car receipts of 25 cents a mile were working expenses of 14½ cents a mile; the omnibus receipts of 20½ cents a mile were offset by working expenses somewhat larger—the official accounts do not state precisely how much."

REPAIRING A COMMUTATOR ON A SMALL ROAD.

BY J. L. SULLIVAN, MASTER MECHANIC ST. FRANCOIS COUNTY RAILWAY COMPANY.

The following is a statement of a repair experience with a 150-kilowatt 500-volt Western Electric generator. A grounded or short-circuited commutator on a generator armature in an isolated plant is a bad thing to deal with. Herewith is a sketch showing the method by which I reassembled such a commutator. It was necessary to take off all armature windings and knock down the commutator, as the mica commutator rings and segments had to be renewed, the whole task being done without the use of a lathe—something that is not to be had in this locality.

In order to carry out the work it was necessary to devise some scheme for setting up the commutator, and this I shall endeavor to explain with the aid of the accompanying sketches.

When ready to reassemble the commutator I put twelve ½-inch bolts through holes bored through a hardwood board shown in Figure 1. This was laid on the floor of the engine room with the boltheads underneath. I next placed a galvanized iron band of the same diameter as the inside diameter of the commutator, as shown in Figure 2. Then I placed around the outside another galvanized iron band of the same diameter as the outside diameter of the commutator, as in Figure 2. Then the commutator segments alternately—copper and mica—were stood on end between the two galvanized iron bands, placing the bottom ends so that they would rest on a ⅝-inch round iron ring laid on the board. When all the segments

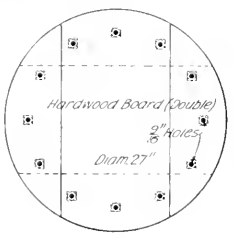


Figure 1.

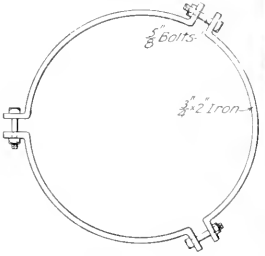

Figure 3.

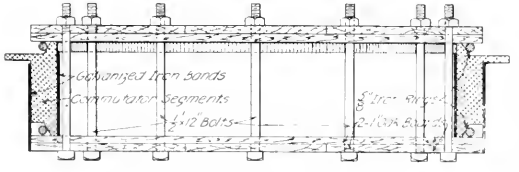


Repairing Commutators—Figure 2.

were in place another ⅝-inch iron ring, a mate to the first one, was placed on the top as shown. Next a second board frame, similar to frame shown in Figure 1, was placed on top of all and bolted.

When all parts were tight and it was safe to do so the outside galvanized iron band was removed by cutting it in two; then by tightening the bolts and slightly tapping the outside face of the commutator segments the commutator was drawn almost to its proper diameter. Next, six pieces were made of ¾ by 2 inch iron, to be used as two clamping rings (see Figure 3). These were put on the outside of the commutator; then by drawing up the clamp bolts tight enough to release the tension on the ⅝-inch iron rings, the twelve ½-inch bolts were withdrawn and the mica segments were all trimmed almost level inside with the copper segments of the commutator.

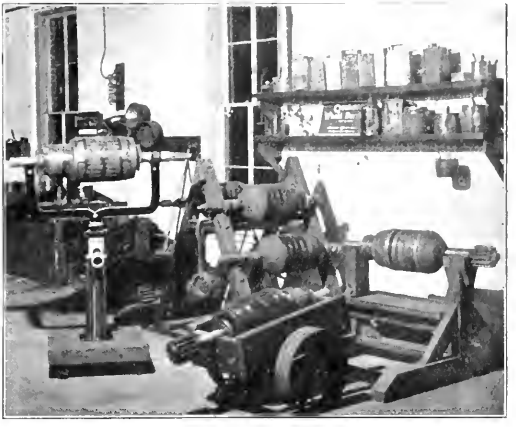
The commutator was then ready to be placed on the core or barrel, after setting the rear mica ring in place. When the commutator was placed in position on the core and the front ring adjusted and bolted it was seen, by gauging from the rocker arm while the machine was slowly revolved, that the commutator was only about $^1_8$ inch out of true.

My next step was to make all secure, and using a carborundum truing device fastened to the rocker arm, the commutator was made true.

The time required for this job was as follows: Knocking down the commutator, 13 days; rewinding and soldering, 8 days.

USEFUL ARMATURE STANDS.

The accompanying halftone engraving illustrates some of the interesting armature handling methods practiced in the shops of the Winona Railway & Light Company at Winona, Minn. In the foreground is an armature truck, the con-



Useful Armature Supports.

venience of which is readily apparent. To the right is an armature rack for winding or repairing purposes. In the center is shown an armature storage rack, which occupies a floor space of 3 feet 6 inches by 3 feet 3 inches. This rack will accommodate seven or nine armatures and its construction is such that it need not be placed against the wall. To the left is a pit jack for removing armatures from a car. By the use of this jack it is necessary only to swing down one side of the lower half of the motor frame, then pick the armature up with the jack from the lower half of the motor frame, and, after lowering the armature to clear the truck rigging, push out from under the car. The device consists principally of an old retired track jack mounted on a roller table and having a pair of Y-ended horns bolted to its head.

These devices, together with a number of other labor-saving tools used in the company shops, were designed and made by N. M. Argabrite, superintendent and master mechanic.

Edward P. Burch, electric railway engineer, is giving a course of lectures to the senior electrical engineering students at the University of Minnesota on "Electric Traction for Heavy Railway Service." These lectures supplement the regular course in electric railways by Professor Springer, and include the following subjects: "Introduction," "Advantages of Electric Traction," "Characteristics of Steam Locomotives," "Characteristics of Electric Locomotives," "Problems of Electrification," "Load Factor, Cost of Steam and Water Power," "Power Plants and Transmission Lines," "Plans of Complete Electrification," "Data Sheets."

STRIKE-BREAKING AT LOUISVILLE.

BY A STRIKE-BREAKER.

On November 26, 1907, the Louisville Railway Company succeeded in breaking a strike which had lasted for 12 days and during which time there was considerable rioting. This strike had been called by the union because the company had refused to reinstate several conductors who had earlier been discharged. During the entire period of the strike the writer acted as a motorman strike-breaker. The experiences related here have therefore been drawn from the personal observations of one who "rode the front end" during the trouble.

Before the strike was declared preparations were well under way to continue the operation of the cars with non-union men. Large numbers of men were obtained from lists of available men kept on file by Edwin L. Reed & Co., 185 Dearborn street, Chicago. To secure a large number of additional men required, advertisements were placed in the daily newspapers. These advertisements stated that experienced motormen were wanted for strike work out of town. Although both motormen and conductors were required, only motormen were advertised for in the papers.

Only a small percentage of the many men who applied for strike-breaking work were employed. At 4 o'clock each afternoon the men were checked off and told to report at the railroad station ready to leave town. Usually they were sent to Louisville in gangs of about one hundred. Special cars were provided for the trips. After the train was under way the men were sorted according to the car houses to which they were assigned and a leader was appointed to keep all the men for a particular car house together. It is an all-night ride from Chicago to Louisville and a second-class coach does not provide the most comfortable sleeping accommodations, however, there was very little complaint from the men, as they were apparently satisfied: the cars were warm and they knew that they would not be disturbed until morning.

As the men arrived in Louisville they were taken in special cars to the various car houses. They were instructed to stop before crossing all intersecting lines and to keep sober. The new men were then detailed to ride over the lines on which they would be placed so they might become more familiar with railway crossings and switches. It was not unusual for a new man to make the wrong turn and run his car on the wrong track.

During the strike the food given the men at the car houses was far better than many of them were accustomed to getting. On Thanksgiving day a turkey dinner was served.

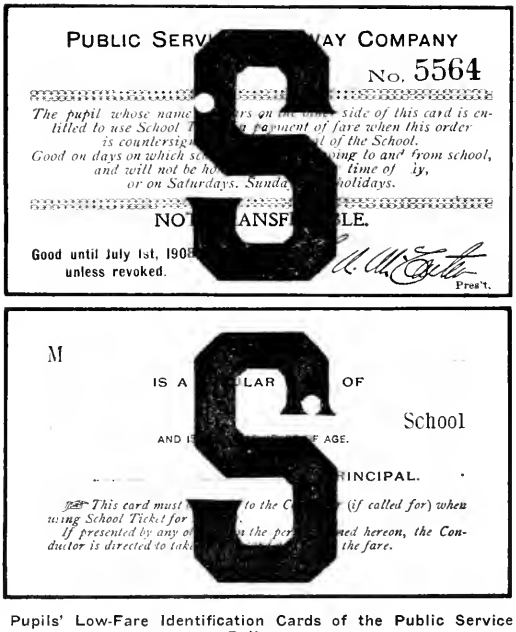
For the most part the men had to sleep in the cars. The Louisville cars all have cross seats and very comfortable bunks could be made by laying boards over the backs of the seats and spreading mattresses on the boards. A car would furnish sleeping accommodations for eight men. A little manipulation of the ventilators with the heaters full on would give a very comfortable temperature. All of the men were ordered to get up for the early breakfast and report to the captain for work. If there was no work to be done the orders were to get dinner at 10:30 and report again. Usually the men who had not worked in the morning would be detailed to make the relief runs while the regular men got their dinners. After supper at 4:30 p. m. the relief men made the runs until 8:30 p. m., at which time the cars were taken off. A few days before the strike-breakers were withdrawn the cars were operated until midnight on some of the lines.

During the strike the sympathy of the public was with the company. The strikers established a bus service on several routes, but the buses were not patronized to any extent, as the sympathy of the people was not great enough to make up for the high rates and the poor service given. Ribbon badges and cardboard signs bearing the legend, "I Will Walk," were worn to a considerable extent by sympathizers. The lack of public sympathy and the determined attitude on the part of the police were largely responsible for the small number of attacks on the cars during the strike. During the first few days many obstructions were placed on the track, but in only one instance was there a serious encounter with the strikers and their sympathizers. This occurred the day before the strike was declared off. In this encounter a policeman shot and seriously injured one of the strikers and several passengers were hurt in the riot. To protect the motormen on the lines where the cars were most likely to be attacked, screens of about one-half inch mesh were placed over the vestibule windows.

The principal factors that contributed to the success of the strike were the strong support of the public, the efficiency of the police, the fact that the company was prepared in advance, the efficiency of the men brought to Louisville by Mr. Reed, and his good generalship. Within a few hours of the time the strike was called a trainload of strike-breakers from Chicago had arrived at Louisville in charge of E. L. Reed and within 72 hours 80 per cent of the company's rolling stock was in operation.

PUPILS' LOW-FARE IDENTIFICATION CARDS OF THE PUBLIC SERVICE RAILWAY.

Identification cards are issued by the Public Service Railway Company of Newark, N. J., to school pupils who desire to take advantage of the 3-cent fares under the limited ar-



Pupils' Low-Fare Identification Cards of the Public Service Railway.

rangement established recently. In sending us a sample of the cards M. R. Boylan, general auditor of the company, writes that "the 3-cent fare rate is extended to scholars under 16 years of age, although exceptions to the age limit have been made to high school pupils in several cases. Transfers are issued on school tickets."

It is announced that the tunnels of the Hudson & Manhattan Railroad under the Hudson river from Hoboken, N. J., to Sixth avenue and Nineteenth street, New York, will be officially opened on February 25. President Roosevelt will touch a button to turn on the electric power.

News of the Week

Meeting of the Central Electric Accounting Conference.

The Central Electric Accounting Conference meeting, announced for February 11 at Lima, O., will be held at the Lima house. The meeting will be called to order at 11 a. m. by the chairman, M. W. Glover, auditor Ohio Electric Railway Cincinnati, O. As announced in the Electric Railway Review of last week, the subjects to be discussed are: The settlement of interline ticket and mileage balances, prepaid ticket orders and the handling and settlement of overcharge and loss and damage freight claims. All the accounting officers of electric railways in Ohio, Indiana, Illinois and Michigan are invited to be present.

Annual Dinner, American Institute of Electrical Engineers.

The annual dinner of the American Institute of Electrical Engineers will be held at the Waldorf-Astoria, Thirty-fourth street and Fifth avenue, New York City, on the evening of Wednesday, February 19. Carrying out the idea established upon former occasions, the feature of the dinner this year will be the tribute rendered by the speakers to the relation of the electrical engineer with public service corporations. The occasion will be designated as the "Public Service Dinner," and among the speakers who have promised responses to toasts are many men prominently identified with public service utilities, either as members of commissions or as operating heads of large utilities organizations. The dinner committee is composed of Robert T. Lozier, chairman; A. A. Gray, Frederick C. Bates and George H. Guy.

Accident Bulletin of the Indiana Commission.

Accident Bulletin No. 2 of the Indiana railroad commission for the last quarter of 1907 has just been issued. The report states that during the quarter 14 persons were killed and 70 injured on the interurban lines of the state, as compared with 8 killed and 34 injured during the preceding quarter. A derailment on the line of the Indiana Union Traction Company at Indianapolis on November 7, causing one death and 23 injuries, and a derailment on the line of the Indianapolis & Cincinnati Traction Company at Acton on December 12, causing one death and four injuries, partly account for the increase. Of the 99 persons killed by both steam and interurban roads during the quarter 38 were trespassers and 28 were travelers on highway crossings. Eight of the casualties on the interurban roads were to employes.

The commission states that drastic legislation is necessary to keep trespassers off railway tracks and it is its purpose to recommend in its next report to the governor practical measures to abate this fatal nuisance. In regard to crossing accidents the commission says that the responsibility is divided between the public and the companies and that it expects to recommend to the people a provision for some proper division of the expense of separating grades and to the railways the keeping of the highway crossings in perfect repair and the construction and repair of crossing signs.

Progress of the Cleveland Negotiations.

An important step was taken last week in the work of determining a valuation of the Cleveland Electric Railway property, as a basis for a lease to a holding company, when Mayor Johnson, representing the city, and F. H. Goff, representing the company, agreed upon a valuation of $5,521,000 for the track and pavement. This question has been one of the most fruitful sources of contention throughout the course of the negotiations and the final agreement was reached only by a compromise. C. H. Clark and Robert Hoffman, the two engineers appointed as appraisers of the track value, representing the company and the city, respectively, each submitted two reports based on allowances of 4 per cent and 8 per cent for depreciation. Under the 8 per cent rule Mr. Clark reported a valuation of $4,047,000 and Mr. Hoffman of $3,899,000. Under the 4 per cent rule the figures were $3,837,000 and $3,737,000. After some discussion it was decided to compromise on $3,736,000. The paving estimates were made by Mr. Goff and Mr. Johnson, the figures submitted being $1,814,000 and $1,651,000. It was decided to split the difference, making $1,732,000. Later $11,000 was deducted for paving done by the city.

Horace E. Andrews, president of the Cleveland Electric Railway, and A. B. du Pont, president of the Municipal Traction Company, have reported an agreed schedule of miscellaneous items amounting to $529,000. This, however, is not completed and it is estimated that it will be balanced by current liabilities. At a meeting on Monday of this week Mr. Andrews and Mr. du Pont reported an agreed estimate of $121,915 for the value of the shops, shop tools and shop stores. This is $80,000 more than Mr. du Pont's estimate of last spring.

At the Monday meeting Mr. Goff submitted a new estimate for overhead charges and financing of $2,967,687. The mayor's estimate is $930,783.

The schedules of physical property now remaining to be decided upon are: Auditor's stores, miscellaneous items and overhead charges. The amount of the physical property already agreed upon, including the items published in last week's issue of the Electric Railway Review, page 119, now approximates $14,000,000.

Policemen and street railway men have been employed to count the number of passengers boarding the cars outside of the city limits, as a basis for calculating the value of the franchises.

On Monday night the city council extended the Woodland avenue and other west side franchises for 30 days from February 10, the date on which the city claims they expire. The company claims they do not expire until 1910.

The Forest City Railway has begun operating a new 3-cent fare line, extending from West Seventy-third street and Lorain avenue to East Ninth street and Superior avenue.

Legislation Affecting Electric Railways.

Maryland.—A bill has been introduced into the legislature providing for the appointment by the mayor of Baltimore of a "superintendent of street railways in Baltimore City," who shall verify reports made to the city by street railway companies in regard to their gross receipts with a view to ascertaining the amount due the city and shall have the power to examine all books of the companies, to take testimony of all persons required and to compel the production of all papers necessary. He is to make quarterly reports to the mayor and the city council and to make such suggestions for the regulation and improvement of the street railway service as he may see fit.—A bill introduced in the house aims to prevent overcrowding of street cars in Baltimore by requiring the inspector of buildings to inspect all cars with a view to determining their seating capacity and to issue a certificate for each car specifying the number of passengers that may be carried without overcrowding. When the specified number of passengers shall have boarded a car a sign shall be displayed stating that the car is full and no additional passengers may be allowed to get on.

Ohio.—Representative Carl Shuler has introduced a bill for the regulation of public service companies, placing the control of all public and quasi-public corporations in the hands of a state commission, to be appointed by the governor. The commission is to consist of five members, each appointed for a term of five years, at a salary of $10,000 a year. The bill is in many respects similar to the public service bill passed at the last session of the Wisconsin legislature. One of the principal provisions is that instead of franchises being granted for a definite length of time, only indeterminate permits sball be given, which shall run for such length of time as the corporation conforms to the rules or orders of the commission and to the enactments of the city or village councils. The bill provides that every public utility company shall furnish adequate service and facilities subject to the orders of the commission. The commission shall have power to investigate and ascertain the value of all property of the companies and to compel all public utility companies to keep uniform accounts, open to the inspection of the commission. The commission is to have power to require each company to make such provision for depreciation as shall be determined by the commission. All information in the possession of the commission is to be open to the public at all times. The commission shall investigate any complaint made against a public utility company by any 25 persons, and shall have power to order such changes in the rates or service as it may deem necessary. The companies may make similar complaint to the commission if its orders are deemed unreasonable, and its orders and regulations are subject to court review upon application to the common pleas court, notice to the commission and a public hearing. No injunctions shall be issued suspending any order of the commission except after such application and hearing. The public utility corporations are practically granted a monopoly in municipalities which they serve by a provision that no license or franchise can be granted in a municipality where there is in operation a public utility engaged in a similar service, without first securing from the commission a declaration after a public hearing that there is a reasonable necessity therefor. Municipalities shall have the power to issue bonds to require or construct a public utility upon the assent of a majority of those voting on the question, provided that majority is equal to 60 per cent of the vote cast at the last regular election. The bill also gives the commission power to regulate the issue of stocks and bonds.—Representative Stockwell has introduced a bill pro-

viding that whenever a new street railway company secures a franchise over a line previously occupied by another company whose franchise has expired, it may appropriate the poles, tracks and wires used by the old company. The bill is in the interest of the Forest City Railway of Cleveland.—The senate on January 30 defeated by a vote of 20 to 15 the bill introduced by Senator Howe which provided for the appointment of a state franchise and tax commission to value for taxation the property of public service corporations. This is the bill which was condemned in a circular letter issued by F. D. Carpenter, president of the Central Electric Railway Association, which was abstracted in last week's issue of the Electric Railway Review, page 148.

Virginia.—A joint resolution has been presented in the senate to provide for the segregation of the property of public service corporations for purposes of state taxation and the segregation of all other kinds of property for purposes of local taxation.

Engineers' Club of Philadelphia.—The Engineers' Club of Philadelphia has removed its headquarters from 1122 Girard street to 1317 Spruce street, Philadelphia.

Ordered to Equip Cars with Vestibules.—The Connecticut railroad commission has issued an order to the Connecticut Company, operating the street railways of Middletown, Conn., requiring that all cars operated in that city during the months of December, January, February and March shall be equipped with vestibules. The order is effective on December 1, 1908.

New York Electrical Show.—It is announced that the second annual New York electrical show will be held at Madison Square Garden, October 3 to 14, 1908. Sixty per cent of the floor space was allotted to exhibitors before the close of the 1907 show. The officers in charge of the exhibition are: President, George F. Parker; secretary, Dudley Farrand; treasurer, Walter Neumuller.

Chicago Cold Car Suits Dismissed.—Corporation Counsel Brundage of Chicago has ordered dismissed about 60 cases brought by the city last year against the street railway companies for operating cars insufficiently heated. The suits were instituted by M. F. Doty, former city superintendent of transportation, and were pending before the Illinois supreme court. Mr. Brundage said that the companies are now meeting all requirements of the city ordinance and that the suits are therefore unnecessary.

Indiana Conference on Operating Rules Postponed.—The conference which was to have been held by the Indiana railroad commission with the managers, superintendents and dispatchers of the various interurban roads in the state on February 10 at Indianapolis has been postponed until February 18. The conference is for the purpose of arriving at a uniform system of operating interurban trains and to urge the managements of the roads to adopt uniform and improved rules governing their trainmen and to urge the necessity for the observance of the rules.

Extension of Chicago Elevated Platforms Opposed.—The Chicago real estate board on February 6 passed resolutions condemning the plan of the Chicago elevated roads to lengthen the loop platforms so as to accommodate two trains at once, on the ground that any such extension would give only temporary relief from congestion, would be unsightly and would irreparably damage abutting property. The resolutions favored the plan proposed by Bion J. Arnold for a through routing of a portion of the elevated trains. A large number of owners of property in the streets served by the loop have signed a petition favoring the extension of the platforms.

American Institute of Electrical Engineers.—At a meeting of the Worcester Polytechnic branch of the American Institute of Electrical Engineers, held on January 31 at Worcester, Mass., W. F. Foster, engineering assistant to the general manager of the Union Switch & Signal Company, gave an illustrated talk on "Railway Signaling," describing the various types of sygnal systems now generally used.—A meeting of the Armour Institute of Technology branch was held in Chicago on February 6. M. Gilmore presented a paper on "Train Lighting Systems." On February 13 a special meeting will be devoted to a discussion of the subject of "The Value of an Engineering Education." At the meeting on February 20 T. W. Simpson will present a paper on "Heavy Electric Railway Practice."—At a meeting of the Pittsburg section on February 5 papers on subjects connected with the use of varnished insulating cloth were presented by Henry W. Fisher, A. B. Reynders and G. A. Jacobs.—The fifth regular meeting of the Columbus branch was held on February 5. George Loring of the American Electric Lamp Association presented a paper on "The Manufacture and Performance of Large Carbon and Metal Filament Lamps."

Traffic and Transportation

Chicago Elevated Road Traffic.

The South Side Elevated Railroad of Chicago carried a daily average of 112,707 passengers in January, an increase of 20,296, or 21.96 per cent, over January, 1907.

The Northwestern Elevated Railroad carried an average of 100,392 passengers daily, an increase of 11,760, or 13.27 per cent.

The Metropolitan West Side Elevated Railway carried an average of 141,564 passengers daily, a decrease of 8,601, or 5.73 per cent.

Reduced Rate Between Toledo and Cleveland.

In response to our request F. W. Coen, general manager of the Lake Shore Electric Railway, Norwalk, O., has written us as follows concerning the 30-day excursion rate between Cleveland and Toledo: "On January 8 we established a 30-day excursion rate between Cleveland and Toledo on the following basis: Single fare $1.50, reduced from $1.75; round-trip fare $2.75, reduced from $3.15. This reduction has stimulated traffic somewhat, but the experiment has been carried on for such a short period of time that we are unable thus far to determine what the result will be."

Chairmanship of Central Electric Traffic Association.

We have been asked to direct further attention to the fact that a competent man is desired for the chairmanship of the Central Electric Traffic Association. As was announced in the account of the formation of the traffic association, published in the Electric Railway Review of January 25, 1908, it was decided to elect one man to the office of chairman of this association and secretary and treasurer of the Central Electric Railway Association. A committee was appointed to assist in the selection of an individual thoroughly posted in freight and passenger tariffs. Applications for the position should be made to F. D. Carpenter, president of the Central Electric Railway Association, Lima, O.

Traffic on United Railways of St. Louis.

During the year 1907 313,945,149 passengers were carried by the United Railways of St. Louis, of whom 91,797,561, or 29.24 per cent, rode on transfers. The cars traveled 38,447,977 miles. The figures show an average of 8.17 passengers on each trip. In 1907 the roads transported 22,422,363 more passengers than in 1906. The gross revenue from fares was $10,659,037, an increase of 5.36 per cent. The average fare on all the lines was 3.38 cents. On some lines the average fare was considerably below 3 cents, and on one line it was 2.2 cents a ride. On one line 56.01 per cent of the passengers traveled on transfers, and on nine other lines the transfer traffic reached from 40.99 to 54.11 per cent of the total.

The number of passengers per car-mile on the various lines was as follows: Hamilton, 4.66; Page, 8.02; Taylor, 9.89; Vandeventer, 9.88; Chouteau, 4.42; Compton, 9.32; Park, 10.39; Tiffany, 7.25; Clayton, 1.78; Delmar-Clayton, 4.65; Midland, 4.33; Cherokee, 6.95; Tower Grove, 6.09; Grand, 12.59; Cass, 8.44; Easton, 9.83; Lee, 7.63; Marcus, 5.17; Spring, 5.64; Bellefontaine, 6.82; Eighteenth, 9.84; Jefferson, 14; Laclede, 11.99; Market, 8.14; Olive, 9.58; Broadway, 7.76; Fourth, 9.61; Seventh, 5.26; Manchester, 6.35; Hodiamont, 7.38; Union, 4.63; Sarah, 8.48; and suburban county lines, 3.19.

Safeguarding Children in Boston.

The Boston Elevated Railway is publishing in the Boston newspapers an advertisement addressed "To parents and others having the care or custody of children," which says:

"Safety of operation is the paramount aim of the management of this company in its efforts to make the service on its system satisfactory. A large portion of the accidents that occur, especially those to children, are due to causes such as jumping on cars to 'catch' a ride, running in front of cars, putting things on the rail, and the like, causes which the company and its employes cannot control.

"At best every moving vehicle, whether carriage, wagon, automobile or street car, is a source of possible injury to careless users of the highway. Parents and others concerned should require their children not only not to 'catch' rides, etc., but to avoid roadways in which there is evident danger from passing street cars.

"The company is unsparing in its expenditures and unceasing in its efforts to promote the safety of its patrons and of others using the streets where its cars are run, but it cannot control the actions of children and of other persons using

these streets. This can be done only by individuals. The company points ont the danger and appeals to the public for co-operation in protecting the lives and persons of those whose tender years and lack of judgment render them but partly capable of caring for themselves."

Hearing on Chicago Elevated Loop Situation.

The committee on local transportation of the city council of Chicago met on February 6 to consider the congestion on the union loop. Representatives of the various elevated railways were present and submitted suggestions for the improvement of conditions.

Howard G. Hetzler, president of the Metropolitan West Side Elevated Railway, said that the only trouble experienced on the loop was during rush hours. He attributed the trouble to short trackage on the loop, short platforms, delays at crossings and stations too close to junction points. If these difficulties were remedied and more stub-end terminals established there would be no further trouble, he thought.

Clarence A. Knight, president of the Chicago & Oak Park Elevated Railroad, stated that that company desires the right to operate a portion of its trains to its terminal in Market street, instead of being obliged to operate all trains to and around the loop.

Charles V. Weston, president of the South Side Elevated Railroad, urged the necessity of lengthening the platforms at each station on the loop so that they could accommodate two 6-car trains at the same time. He suggested that the loop be divided into four quarters by the building of interseeting lines, north and south and east and west, and that each elevated road be given one of these quarters for its individual use.

Mason B. Starring, president of the Northwestern Elevated Railroad, advocated the lengthening of the platforms of the loop stations and asked for the passage of an ordinance permitting the construction of a stub-end terminal in North Water street.

Local and Joint Freight Tariffs of Toledo Urban & Interurban Railroad.

We have received from Charles J. Laney, assistant general freight agent Toledo Urban & Interurban Railroad, Bowling Green, O., copies of the local and joint freight tariffs of that company. The tariffs have been filed with and accepted by the interstate commerce commission and the Ohio railroad commission as meeting their requirements. The rules governing the local freight tariff include the following:

"The charge for less than carload shipment will not be greater than the minimum carload charge for the same kind of freight.

"For information regarding carload shipments agents will communicate with the general freight department.

"In all cases where shipments are receipted for and accepted to points where no agent is installed the shipper must prepay charges and fully understand that said goods are received and receipted for solely at the owner's risk, and he should, for protection, notify consignee of the day and train on which shipment goes forward.

"No article of any description will be accepted on passenger cars for transportation. Agents will refer shippers to freight department or Pacific Express Company.

"Agents will carefully check all shipments unloaded at their station and will be responsible for all articles shown on the waybills unless conductor's attention is called to shortage or damage and his indorsement or signature secured on the billing. Conductors will check all shipments loaded at stations and will be responsible for all articles billed unless agent's attention is called to the shortage or damage and his indorsement or signature secured on the waybill. Agents will report at once any over, short, damaged, refused or unclaimed freight, and will be responsible for any loss occasioned by their failure to make these reports promptly.

"Carload shipments, handled as trailers, cannot be accepted for Toledo, O., over traction line. Such shipments are subject to the Toledo Railway & Terminal Company's switching charges."

The local tariff is governed by the official classification, with the following exceptions:

"Bread.—In baskets, 25 cents per basket. Return of empty basket, 5 cents each.

"Bicycles.—Not crated, taken at owner's risk, the same to be noted on shipping order over signature of shipper.

"Green Hides, Fertilizer, Bones or Other Commodities of an Injurious Odor.—Will not be accepted for transportation in merchandise cars.

"Household Goods.—Less than carload, accepted at double first-class rate when released to a valuation of $5.00 per 100 pounds, as provided in the official classification. When not so released, rate of three times first-class will apply. All shipments to be prepaid.

"Ice Cream.—In tubs, 25 cents each. Return of empty tubs, 10 cents each.

"Minimum Weights.—Terms of official classification will apply on carload shipments, subject to the loading capacity of the car.

"Pianos.—If not boxed taken at owner's risk, the same to be noted on shipping order over signature of shipper.

"Trunks.—If not crated or boxed taken at owner's risk, the same to be noted on shipping order over signature of shipper. Freight must be prepaid.

"Articles too long or bulky to be handled conveniently in merchandise cars must not be accepted. When shipments are offered, communicate with the general freight department for instructions."

The following roads are parties to the joint tariff of the Toledo Urban & Interurban road: Detroit Monroe & Toledo Short Line Railway, Dayton & Troy Electric Railway, Dayton Covington & Piqua Railway, Ft. Wayne & Wabash Valley Traction Company, Ft. Wayne & Springfield Railway, Ohio Electric Railway, Springfield Troy & Piqua Railway, Toledo & Indiana Railway, Toledo & Western Railroad, Toledo Port Clinton & Lakeside Railway, Western Ohio Railway.

The joint tariff is governed by the official classification, with the exception of green hides, etc., and household goods, as provided in the list of exceptions in the local tariff, stated in the foregoing, and with the following additional exceptions:

"Live Stock.—Will not be accepted for transportation to points on the Ohio Electric Railway or other lines with the Ohio Electric Railway as an intermediate carrier.

"Minimum Weights.—As per official classification, subject to loading capacity of car, on carload shipments."

Among the rules governing the joint tariff are the following:

"Class rates to points on the Ohio Electric Railway, ronted via Springfield Troy & Piqua Railway, will take an arbitrary of three cents per 100 pounds for transfer at Springfield, O., to be added to Springfield Troy & Piqua proportion of rate.

"Carload shipments can be handled only under special arrangements and subject to the restrictions in the various municipalities through which the lines mentioned in this tariff are operated. Carloads will be handled subject to all rates and conditions of this tariff when possible.

"This company will not accept shipments of freight in carloads or less destined to points on this road or connections, where freight must be prepaid, when shipments are consigned 'to order,' 'to order, notify,' or 'to notify.' Shipments for prepaid stations can only be accepted when they are straight consignments and all charges are prepaid.

"Freight may be accepted for prepay stations with the understanding that it is to be unloaded at owner's risk. Agents will give receipts accordingly.

"Articles too long or too bulky to be loaded conveniently in merchandise cars must not be accepted. When shipments are offered agents will communicate with general freight department for instructions.

"Articles rated lower than fourth-class rate will be handled at fourth-class rate to points where fifth and sixth class rates are not shown.

"Articles rated lower than fifth-class rate will be handled at fifth-class rate to points where sixth-class rates are not shown.

"C. O. D. shipments or shipments billed to the order of ....., notify ..... cannot be accepted to points on the Ohio Electric Railway."

Through Routes in Chicago.—Some of the through routes for which provision is made under the Chicago City Railway and the Chicago Railways Company ordinances have been established.

Mail Service on Illinois Traction System.—The Illinois Traction Company has established a mail service between Peoria and Bloomington. One car will leave each of these points at 7 o'clock every morning.

Fares to Coney Island.—In a letter to Chairman Wainwright of the New York assembly committee on "Railroads" the public service commission, first district, asserts that it has jurisdiction over the fares to Coney Island.

Bill for Universal Transfers in District of Columbia.—A subcommittee of the "District" committee of the house of representatives has drafted a bill providing for universal transfers in the District of Columbia. The bill provides that the transfers shall be issued good over all lines for one cash fare of five cents, but the companies must continue to sell six tickets, each good for a fare and transfer, for 25 cents. The bill provides for a penalty of $25 if a transfer is refused by a company, and for a fine of not more than $100 for any officer or agent who shall violate any of the provisions of the act. Provision is also made for fines for the unauthorized use of transfers.

Construction News

FRANCHISES.

Redlands, Cal.—George H. Dunn and Charles S. Chesnut have been granted an extension of three months to the franchise which they hold for the construction of an electric railway on Colton avenue, Sixth street, State street, Citrus avenue, East Highland avenue and Reservoir street in Redlands. The franchise expired on February 6.

San Diego, Cal.—A right of way franchise has been granted to F. W. Peterson for the construction and operation of an electric railway, sidings, bridges and switches at South San Diego. He has from 4 to 18 months in which to build the road.

San Francisco, Cal.—The board of election commissioners at a recent meeting considered the petition of John J. Egan that his application for a franchise for 242 miles of street railway be placed on the ballot at the next election. It was found that no subjects except bond issues could be considered at such an election and that the proposition must be held over until the November election. Mr. Egan says he represents eastern capitalists, who propose to build an extensive system of subway and surface lines in competition with the United Railways.

Shelbyville, Ind.—The Capital Circuit Traction Company, which secured a franchise some months ago to use the streets of Shelbyville for the operation of its interurban cars, has applied to the council for an extension of time in which to start work on the line. February 20 was specified in the franchise as the date on which construction was to be begun. The object of the company is to encircle Indianapolis with a belt line serving the county seats in the seven adjacent counties. (Noted July 20, 1907.)

RECENT INCORPORATIONS.

Cincinnati Madison & Western Traction Company.—Incorporated in Indiana to build a number of short lines radiating from Scottsburg to surrounding cities and towns in Indiana and Ohio. These new lines will be built as extensions of the Indianapolis & Louisville Traction Company's line from Seymour to Jeffersonville, now in operation. The different routes as outlined in the articles of incorporation are as follows: From Scottsburg through Scott and Jefferson counties to Madison, and thence in a northeasterly direction through Switzerland, Ohio, Ripley and Dearborn counties in Indiana to Cincinnati; also in a westerly direction from Scottsburg through Salem in Washington county and through Paoli to West Baden and French Lick; also northwesterly from Scottsburg to Bedford, Ind. It is announced that construction work will be started in the spring. Capital stock, $50,000. Incorporators: J. E. Greeley, Louisville, Ky.; S. D. Miller, Maurice Cahill, G. B. Gaston and G. N. Owen, Indianapolis, Ind.

Mississippi Valley Interurban Railway.—Incorporated in Illinois to construct an interurban railroad from Springfield to Quincy, Ill., by way of Petersburg, Virginia, Rushville and Mt. Sterling; from Mt. Sterling to Hillsboro, Ill., by way of Pittsfield, Hardin, Jerseyville, Winchester and Jacksonville; from Hillsboro to Greenville and Shelbyville through Owanoo and Vandalia, and from Greenville to Carlisle, Nashville, Pinckneyville and Murphysboro, Ill. Headquarters, Springfield. Incorporators: James H. Ward, Butler; George E. Watson, Hillsboro; H. R. Lakin, Rochester; John F. Melick and F. A. Melick, Springfield, Ill. It is stated that the new corporation will acquire control of the Sangamon Valley Railway, which proposes to build from Springfield, Ill., to Hillsboro, 53 miles, and of which road J. E. Melick of Springfield is president.

Texas Union Traction Company, Clarksville, Tex.—Incorporated in Texas to build an electric railway between the cities of Texarkana and Sherman, a distance of 154 miles; between the cities of Paris and Ennis, 124 miles; between the cities of Texarkana and Ft. Worth, 215 miles; between the cities of Paris and Cleburne, 155 miles, and for extensions and spurs leading out from points on the main line to inland towns, estimated distance from 5 to 20 miles from the main line. Incorporators: C. P. Moore and John T. Upchurch of Longfellow, Pecos county, and A. A. St. John of El Paso, Tex.

TRACK AND ROADWAY.

Americus Railway & Light Company, Americus, Ga.—Orders for machinery and electrical equipment for this proposed 5-mile street railway have been placed and work on the line will be started at once. The company is capitalized at $250,000 and has deposited a guarantee bond with the city for $25,000. A 20-year lighting contract also is included in the franchise under which the road will operate. A. N. Walker, president. (Noted January 4.)

Ardmore Traction Company, Ardmore, Okla.—Rapid progress is reported on this company's line in Ardmore and extending north to a park, and it is announced that 7½ miles of track will be completed and in operation by next June. J. F. Robison, general manager, Ardmore. (Noted December 14, 1907.)

Argenta Railway, Argenta, Ark.—Announcement is made that this company has let the contract for the construction of its electric line in Argenta to the Electric Construction Company, Little Rock, Ark. It is stated that the overhead work will be started within a few days and the line completed within 90 days.

Athens, La.—The Athens Progressive League, recently organized, has appointed a committee to solicit for the construction of an electric railway from McNeill, Ark., by way of Athens to Natchitoches, La.; also for another line from Shreveport by way of Minden to Athens. E. A. Watson, president; A. G. Pace, vice-president; Carl Campana, secretary-treasurer; S. J. Crump, assistant secretary.

Boise Valley Railway, Boise, Idaho.—Announcement is made that the lines of this company from Boise to South Boise, from Boise to the fair grounds and the cemetery and from Boise to Ustick and Onwiler will henceforth be operated by the railway company and not the Boise Valley Construction Company, as heretofore, the property recently having been turned over to the former company.

Burlington-Bonaparte Interurban Railway, Burlington, Ia.—E. E. Egan, secretary, writes that all surveys have been completed for this electric line, which will connect Burlington and Bonaparte, Ia., a distance of 40 miles, serving the intermediate towns of Augusta, Denmark and West Point, with a branch from Denmark to Ft. Madison, Ia. Power for operating the line will be secured from the Des Moines river at Bonaparte. The Wallace-Coates Engineering Company, Ellsworth building, Chicago, made the surveys and is now engaged in preparing plats and profiles for the report.

Centralia & Chehalis Railway & Power Company.—Announcement is made that this company, which will build an interurban line between Chehalis and Centralia, Wash., has purchased a 10-mile interurban line in southern California, including the power station, rolling stock equipment and rails, all of which will be moved and used in the construction of the line in Washington. F. W. Boyne, a Los Angeles promoter and capitalist, built the southern road at a cost of $180,000, but on account of financial reasons its operation was discontinued after the first three days and last week it was sold to the Centralia & Chehalis company. Six passenger cars, 20 freight cars, a fully equipped power plant and nearly 10 miles of 60-pound steel rails will be shipped to the new line as soon as possible and it is planned to have it completed and in operation inside of a year. B. J. Weeks, Tacoma, Wash., is general manager.

Connecticut Company, New Haven, Conn.—The state board of railroad commissioners has granted this company permission to take by condemnation proceedings the necessary land for a right of way over which to construct and operate its proposed line in Middlebury, Conn. The company intends to build an electric line from Waterbury to Middlebury and Woodbury, Conn. W. P. Bristol, general manager, New Haven, Conn.

Denver & Interurban Railway, Denver, Colo.—Grading on this company's 44-mile interurban line from Denver to Boulder, Colo., is practically completed and it is expected that the line will be ready for operation by June 1 next. Its 7-mile extension to Ft. Collins was placed in operation on December 28, 1907, together with the four miles of city track in Ft. Collins. H. W. Cowan, chief engineer, Denver, Colo. (Noted January 4, 1908.)

Des Moines, Ia.—A. Anderson, an engineer of Lake City, Ia., has applied to the Commercial Club of this city for support in promoting an electric railway between Des Moines and Lake City and probably extending into northwestern Iowa. He states that $100,000 has been pledged toward its construction and asks the aid of the club in arranging for terminals in Des Moines. He proposes to build the line by stock and bond subscriptions.

Eunice Lafayette & Abbeyville Railroad, Eunice, La.—It is announced that this company will start construction work on its proposed 55-mile line some time in May. The road will

connect Eunice and Abbeyville by way of Lafayette, Church Point and Maurice, La. The motive power has not been decided upon. Capital stock, $1,000,000. James J. Lewis, president; George A. Clark, vice-president, Eunice, La.; C. D. Caffery, secretary and treasurer, Lafayette.

Ft. Wayne & Springfield Railway, Decatur, Ind.—Contracts for the construction of a branch line from Decatur to Berne, Ind., and a concrete bridge probably will be let during the next six months by this company. W. H. Fledderjohann, general manager, Decatur, Ind. (Noted November 16, 1907.)

Frankfort Delphi & Northern Traction Company, Frankfort, Ind.—It is stated that the early completion from Frankfort to Delphi, Ind., of this proposed interurban road is practically assured. A bond issue of $700,000 has been made and the entire right of way between the two cities secured. This follows the old Rossville gravel road through Edna Mills, Prymont and on to Delphi, 27 miles. It is stated that a dam will be built at Prymont for the generation of power to operate the system, as well as for commercial purposes. A franchise for 25 years has been secured in Monticello, Ind. W. Cohee, Frankfort, Ind., is treasurer. (Noted December 21, 1907.)

Grand Rapids Electric Railway, Grand Rapids, Mich.—At a recent meeting of stockholders it was voted to increase the capital stock from $2,000,000 to $15,000,000 and to construct a road from Grand Haven by way of Grand Rapids to Alpena and Bay City; also from Grand Rapids to Kalamazoo, Battle Creek, Coldwater and other towns in the southern part of Michigan. This will be a part of a 500-mile system of electric lines radiating from Grand Rapids and extending into Ohio. J. W. Boynton, president and general manager, Grand Rapids, Mich. (Noted May 11, 1907.)

Grayson Electric Corporation, Christiansburg, Va.—The Vaughan Construction Company has recently purchased the lighting system of Christiansburg and Cambria, Va., together with the Grayson Electric Corporation, which furnishes power for the lighting systems. Under the name of the electric company it is proposed to build an electric railway connecting the two towns, a distance of about 2¼ miles. It is proposed to begin work in the spring. J. L. Vaughan, president.

Hopkinton, R. I.—A bill recently was presented to the Rhode Island senate providing for the construction of an electric railway between Westerly and Ashaway. Land may be acquired by condemnation proceedings if necessary and the company may manufacture and sell electricity for light, power and heat. No plan was offered showing the proposed route. The company must, however, cross steam roads either above or below grade, and the consent of the town councils must be secured before construction work may be started. Capital stock, $100,000. Leverett A. Briggs, William J. Battey, Alexander B. Briggs, Frank Hill and John W. Sweeney are named in the bill as incorporators. Senator Cole, Hopkinton, R. I., presented the application to the senate.

Idaho Oregon & Washington Electric Railway.—A meeting of citizens has been called by the mayor of Pomeroy, Wash., to consider the proposition of Frank McKean, trustee of this company, relative to the construction of an electric railway connecting Pomeroy, Asotin and Anatone, Wash. According to surveys now being made the proposed route lies up the Pataha creek six miles, thence across the Lewiston flat to the McGuire gulch, and down the gulch to Asotin. It was originally planned to connect with Lewiston, Idaho, but owing to the expense of bridging the Snake river and other complications, the idea is said to have been abandoned. The company requires about 20 per cent of the cost of the road to be subscribed by local capital.

Indianapolis Huntington Columbia City & Northwestern Railway, Syracuse, Ind.—This company, which has been in the hands of William L. Self, Syracuse, Ind., as receiver, was sold by order of the superior court of Marion county at Warsaw, Ind., on February 1 to Melvin A. Peoples, Chicago, for two-thirds of the appraised value, the minimum price. This company has built five miles of track from Syracuse to Vawter's Park and has about five miles additional graded toward Goshen, Ind. The entire project contemplated connection of Goshen and Huntington by way of Syracuse, Wawasee Lake and Columbia City. Mr. Peoples is acting in connection with Burns & Co., Isabella building, Chicago, who contemplate reconstruction and extension of the road in accordance with the original plan.

Interurban Railway, Des Moines, Ia.—It is reported that an extension from Woodward to Ogden, Ia., is contemplated.

Kenora, Ont.—The taxpayers of this city are said to have voted in favor of the construction of a municipal street railway. D. H. Currie is city clerk.

Mt. McKay & Kakabeka Falls Electric Railway.—This company has applied for permission to cross the tracks of the Canadian Pacific, the Grand Trunk and the Canadian Northern railways with its proposed electric line between Port Arthur and Ft. William. A hearing before the dominion board of railway commissioners is in progress at Ft. William.

North Yakima, Wash.—At a meeting held last week at Zillah, Wash., for the purpose of organizing a company to build an electric railway from North Yakima to Granger, Wash., by way of Parker and Zillah, 32 miles, a committee was appointed to confer with the officials of the Yakima Valley Transportation Company to ascertain if that company would undertake the construction of its line to Granger. If this is not done it is stated that the new company at once will proceed with the building of the proposed line. W. N. Granger, H. H. Lombard, J. H. Thomas, A. P. Wilcox, F. G. Page, George P. Eaton and C. H. Putnam of the Yakima country are interested.

Omaha & Council Bluffs Street Railway, Omaha, Neb.—President G. W. Wattles has announced that the company proposes to complete this year the extensions which have been promised, namely, the extension of the South Tenth street line to Riverview park and the Twenty-fourth street line from Leavenworth to Cuming street, but that until the market for securities improves it will be impossible for the company to engage in any extensive building.

Ottawa (Ont.) Electric Railway.—It is stated that this company will proceed early in the spring with the extension of its line in accordance with the by-law passed by the city council of Ottawa last fall. The extension will reach the Experimental Farm by way of Preston street. All of the special work, such as curves, switches, etc., has been ordered and some of it is already on the ground. The road will intersect the Grand Trunk Railway's main and branch lines, which cross Preston street at two different places. A. Ahearn, president, Ottawa, Can.

Pittsburg, Pa.—It is reported that Thomas Fitzgerald of Baltimore, Md., is interested in a new company which is being organized to build an electric railway from Clarksburg, W. Va., to Pittsburg, Pa. Mr. Fitzgerald is said to be in New York concluding financial arrangements for its construction and engineers are now engaged in making surveys for the route. The line will be equipped for freight as well as passenger service and work will be started early in the spring.

Quincy, Cal.—J. O. Moncur is said to be interested in a proposed railway from Quincy to the Hartwell ranch on the Western Pacific Railway, about three miles, the line to be operated either by steam or electricity. Local capital to the extent of $13,000 is said to have been subscribed. (Noted December 21, 1907.)

Redlands Central Railway, Redlands, Cal.—Announcement is made that this line is now completed and ready for operation in the city of Redlands. The last of the tracklaying was completed at the corner of Orange street and Citrus avenue, where the line intersects that of the San Bernardino Traction Company on January 29 and service was to be started on February 1. Surveys have been made for the extension of the road out on Brookside avenue to Riverside, and it is expected that as soon as the city line is in regular operation work on the extension to Riverside will be started, thus affording direct connection between Redlands and Riverside by an electric railway. A. G. Hubbard is president; J. H. Fisher, vice-president and general manager; F. E. Sanford, secretary; C. S. McWhorter, treasurer. (Noted October 5, 1907.)

St. Joseph Valley Traction Company, Elkhart, Ind.—It has been decided to delay building the proposed extension of this line from Middlebury to Elkhart, Ind., until the necessary bonds can be floated. The road extends from Angola to Middlebury and at present is operated by steam locomotives, although eventually it will be an electric line, as originally planned. At one time a gasoline-electric motor car was used in connection with the locomotives, but since this was burned some time ago steam has been used exclusively. H. E. Bucklen, general manager, Chicago, Ill. (Noted November 30, 1907.)

Shrewsbury, Pa.—At a meeting held in this city on February 3, which was attended by residents of Glen Rock, Loganville and Paradise, Pa., a company was formed to construct an electric railway from Shrewsbury to York. Temporary officers were elected as follows: President, D. E. Gooding, Loganville; vice-presidents, Charles Williams, Paradise, and C. B. Smith, Shrewsbury; secretary, John H. Keller; corresponding secretary, W. G. Allen, both of Shrewsbury; treasurer, Jacob L. Myer, Glen Rock. The following executive

committee was appointed to carry on the preliminary work: W. G. Allen, William Able and J. H. Keller, Shrewsbury; D. E. Gooding, Frank J. Beck, J. W. Bailey and Samuel Hartman, Loganville; George M. Leader and Charles A. Williams, Paradise; Jacob L. Myer and B. F. Seitz, Glen Rock; G. F. Miller, New Freedom.

Stratford, Ont.—The municipality of Stratford, Ont., is said to be considering the construction of an electric street railway in that city. The Ontario West Shore Electric Railway, which has a charter to build an interurban road from Goderich to Kincardine, Ont., has applied for permission to continue the line to St. Joseph and Stratford and it is stated that if this is done the city of Stratford proposes to allow it to operate in the city provided that control of the tracks within the city limits is vested in the municipality.

Terre Haute Indianapolis & Eastern Traction Company, Terre Haute, Ind.—It is announced that this company expects to spend about $75,000 for improvements on its Terre Haute lines within the next few months. T. F. Grover, general manager, Terre Haute.

Washington Frederick & Gettysburg Railway, Frederick, Md.—This company has ordered a survey for a further extension of its line from Lewiston to Rocky Ridge, Md. The road eventually will be built to Thurmont and Emmitsburg. D. C. Kemp, president and general manager, Frederick, Md.

Windsorville & East Hartford Street Railway.—It is stated that this company is concluding arrangements for the necessary capital to construct its proposed electric line in East Windsor, South Windsor and East Hartford, Conn. The company was organized with a capital stock of $500,000, a part of which will be raised by subscriptions.

Winona Interurban Railway, Winona Lake, Ind.—The sales of stock for the Warsaw and Wabash extension of the Winona Interurban Railway are said to have been far above the expectation of the promoters, who now announce that by the time the Winona assembly opens next August through cars will be running between Winona Lake and Indianapolis, Ind. Graders are at work on the Warsaw and Peru extension of the road and it is planned to have cars running between the two cities within the next five months. S. C. Dickey, general manager, Winona Lake, Ind. (Noted January 25.)

Woodstock Marengo Genoa & Sycamore Electric Railway.—This company expects to begin grading some time in May on its proposed electric line which will extend southwest from Woodstock, by way of Marengo and Genoa, to Sycamore, Ill., 38 miles. The company was incorporated last November, with headquarters at Chicago, Ill. It is now ready to receive bids for material and for building the line. Charles A. Spenny, secretary, Chicago, Ill. (Noted November 9, 1907.)

POWER HOUSES AND SUBSTATIONS.

Chambersburg Greencastle & Waynesboro Street Railway, Waynesboro, Pa.—It is stated that this company will increase the capacity of its Waynesboro power station in order to care for the additional load which will be required when its extension from Greencastle to Chambersburg has been completed. J. MacWolff, general manager, Waynesboro, Pa.

New Jersey & Pennsylvania Traction Company, Trenton, N. J.—This company has purchased a 1,500-horsepower engine for use in its power station at Yardley, Pa. It is stated that the plant will be enlarged and improved. John G. Honecker, general manager, Trenton, N. J.

Northern Texas Traction Company, Ft. Worth, Tex.—The power station equipment for which this company let contracts last fall will be installed in the Handley station in the near future. The approximate cost of the new machinery will be about $150,000. It consists of a 1,500-horsepower engine, two boilers and a new 1,500-horsepower electric generator, together with the auxiliary pumps, condensers, etc. H. T. Edgar, vice-president and manager, Ft. Worth. (Noted November 23, 1907.)

Terre Haute Indianapolis & Eastern Traction Company, Terre Haute, Ind.—It is stated that this company will enlarge its Water street power station by the installation of a 500-kilowatt generator. T. F. Grover, general manager, Terre Haute.

Virginia Passenger & Power Company, Richmond, Va.—This company has awarded a contract to James Leffel & Co. for two 56-inch Samson turbines, direct connected to Allis-Chalmers alternators. This is part of the new equipment which was recently authorized by the federal court at an approximate cost of $250,000. S. W. Huff, general manager, Richmond, Va. (Noted December 21, 1907.)

Personal Mention

Mr. Harry S. Calvert, Etna, Pa., has been appointed secretary of the new Pennsylvania state railroad commission.

Mr. Gurdon W. Wattles, president of the Omaha & Council Bluffs Street Railway, will start next week for Los Angeles, Cal., and will soon leave for a four months' trip around the world.

Mr. Charles Hamilton, division superintendent of the Cincinnati Northern Traction Company, has been appointed superintendent of the Hamilton city lines, succeeding Mr. A. E. Rehner, resigned.

At a meeting of the directors of the Anderson (S. C.) Traction Company on January 30 Mr. Robert E. Ligon was elected president and general manager to succeed Mr. Edwin W. Robertson and Mr. William Elliott, resigned.

Mr. Guy E. Tripp, vice-president of Stone & Webster, Boston, Mass., and Mr. H. F. Grant, general manager of the Seattle Electric Company, recently made a trip of inspection of the Stone & Webster properties in Washington.

Mr. A. R. Moore has resigned as president and manager of the Escanaba Electric Street Railway, Escanaba, Mich., and will be succeeded by Mr. John K. Stack, treasurer of the company. Mr. Moore will continue as a director of the company.

Mr. Henry Rohwer, formerly consulting engineer of the Missouri Pacific Railway, has been appointed consulting and supervising engineer for the Joplin & Pittsburg Railway of Pittsburg, Kan., and other lines promoted by J. J. Heim of Kansas City.

Mr. George R. Scarrett has resigned as roadmaster of the Berkshire Street Railway, Pittsfield, Mass., and the Bennington & North Adams Street Railway, Hoosick Falls, N. Y., effective on February 1. Mr. Scarrett has been connected with these roads since they first were placed in operation about six years ago.

Mr. Isaac S. Ruth, since 1901 superintendent of the Allentown & Reading Traction Company, Allentown, Pa., has resigned, effective on February 1. As foreman of construction for H. E. Ahrens & Co., Reading, Pa., Mr. Ruth built the road and on its completion in 1901 became superintendent. His present retirement is caused by ill health.

Mr. J. B. Hanna has resigned as president of the Chicago Lake Shore & South Bend Railway, now under construction from South Bend, Ind., to Chicago, Ill. It is announced that the Pomeroy-Mandelbaum-Wolf syndicate of Cleveland, which is interested in this and other electric railway properties in the central west, will complete and operate the new line.

Mr. F. W. Coen, who was recently appointed general manager of the Lake Shore Electric Railway and its subsidiary companies, as announced in our issue of November 23, 1907, has been elected vice-president of the company. Mr. John Witt was elected secretary and treasurer, succeeding Mr. Coen, who held this office prior to his appointment as general manager.

Mr. W. E. Kirkpatrick, heretofore secretary and treasurer of the Kansas City Railway & Light Company, Kansas City, Mo., has been elected vice-president and treasurer of the company. During the absence of Mr. Bernard Corrigan, president, who expects to take an extended vacation, Mr. Kirkpatrick will have active charge of the property. He has been succeeded as secretary by Mr. J. A. Harder, formerly auditor of the company.

Obituary.

James R. Ledyard, formerly superintendent of the Cincinnati Newport & Covington Light & Traction Company, Covington, O., died last week. Mr. Ledyard had been identified with street railway work for a number of years.

George Thomas Dunlop, for the past 12 years president of the Capital Traction Company, Washington, D. C., died at his home in Georgetown, Md., on February 5 of heart failure. He was a native of Maryland, having been born at Otterburn on March 25, 1845. When the Capital Traction Company was formed in 1895 by a special act of congress authorizing the merging of the Washington & Georgetown Railroad and the Rock Creek Railway of the District of Columbia, Mr. Dunlop was elected president of the new company and since that time had been in continuous service in this capacity.

Financial News

Boston Elevated Railway.—The remaining $2,300,000 of the $5,800,000 bonds authorized last year have been sold to R. L. Day & Co. of Boston. The rate of interest is 4½ per cent. It is stated that the sale of these securities will provide for the capital requirements of the company during the current year.

Boston Suburban Electric Companies, Newton, Mass.—The Norumbega Park Company, a subsidiary company, has filed with the Massachusetts secretary of state a statement of its financial condition as of September 30, 1907, which shows the following: Assets: Real estate, $152,678; material, $998; cash and debts receivable, $21,536; total, $175,212. Liabilities: Capital stock, $60,000; accounts payable, $10,755; floating debt, $103,500; surplus, $957; total, $175,212.

Capital Traction Company, Washington, D. C.—Gross earnings from operation in 1907 were $1,764,345, of which $1,760,209 was received from passengers, $1,254 from freight and $2,882 from mail. Operating expenses and taxes were $903,481, or 51.33 per cent of gross passenger earnings. Other income amounted to $22,163. Charges were $91,500 and dividends aggregating $720,000 were paid, leaving a surplus of $71,527. The total number of car-miles was 10,679,895. The passenger traffic was as follows: Passengers carried at 4⅛ cents, 32,431,576; passengers carried at 5 cents, 8,036,150; passengers carried on commutation tickets, 519,254; total revenue passengers, 40,987,980; transfer passengers, 15,311,445; total passengers, 56,299,425.

Chicago City Railway.—This company has sold $5,000,000 of 5 per cent bonds to the Illinois Trust and Savings bank, the Harris Trust and Savings bank and the First Trust and Savings bank of Chicago, making a total of $12,000,000 bonds outstanding.

Chicago & Milwaukee Electric Railroad.—The receivers have made a trip of inspection over the property, and it is expected that the issue of about $500,000 of receivers' certificates will be authorized in order to provide funds for the completion of the Milwaukee extension and for other purposes.

Chicago & Oak Park Elevated Railroad.—Gross earnings for the fiscal year ended June 30, 1907, were $892,569. Operating expenses were $527,180 and net earnings were $365,389. After the payment of interest, taxes and rentals, aggregating $429,334, the deficit was $63,945. In his report to the stockholders, Clarence A. Knight, president, states that it is desired to extend the road through the territory lying west of Oak Park.

Chicago Railways Company.—The Harris Trust and Savings bank of Chicago and the National City bank of New York have agreed to purchase $12,000,000 of first mortgage bonds. The bonds are issued to provide funds for the rehabilitation of the properties.

Citizens' Electric Company, Eureka Springs, Ark.—On application of the Kansas City (Mo.) Trust and Fedelity Company as the holder of bonds, Henry C. Brent, vice-president of the trust and fidelity company, has been appointed receiver of the Citizens' Electric Company.

Columbus (O.) Railway & Light Company.—Earnings in 1907 were as follows: Gross earnings, $2,238,546; expenses, $1,153,878; net earnings, $1,084,668; other income, $17,972; total income, $1,102,640; interest and dividends, $854,057; surplus, $248,583; renewals and depreciation, $57,002; surplus, $191,581; dividends, $75,000.

Detroit United Railway.—At the annual meeting of stockholders on February 4 Charles M. Swift of Detroit and J. M. Wilson of Montreal were elected directors to succeed C. W. Wason of Cleveland and H. S. Holt of Montreal. Gross earnings in 1907 were $7,073,245.56, an increase of $1,010,063.02 over 1906. Operating expenses and taxes were $4,465,043.84, increase $746,422.30; net earnings from operation $2,608,201.72, increase $263,640.72; other income $60,505.25, increase $1,747.52; gross income less operating expenses $2,668,706.97, increase $265,388.24; interest charges $1,554,248.65, increase $310,975.27; dividends $343,750, decrease $281,250; charged off for depreciation $276,000, increase $26,000; total deductions $2,173,998.65, increase $55,725.27; surplus income $494,708.32, increase $209,662.97. It is announced that $750,000 bonds will be sold.

Georgia Railway & Electric Company, Atlanta, Ga.—At the annual meeting of shareholders Charles F. Ayer of Boston was elected a director. Gross earnings in 1907 were $2,658,872.70.

Holyoke (Mass.) Street Railway.—The annual report for the fiscal year ended September 30, 1907, shows the following: Gross earnings from operation, $411,637.17; operating expenses, $300,325.36; net earnings from operation, $111,332.11; miscellaneous income, $8,912.95; gross income above operating expenses, $150,245.06; charges upon income during year interest on loans and funded debt, $31,091.67; taxes, $38,218.57; rental of railways, $8,250; Mountain park expenses over receipts, $202.80; total charges, $77,766.01; net divisible income, $72,479.02; dividends, $64,000; surplus for year, $8,179.02. Car-miles run for year, 1,758,528; persons employed, 283; number cars, 120; miles of track, 68.733.

Hudson Companies, New York.—Notes aggregating $15,000,000, maturing in two years, and bearing 6 per cent interest, have been issued. The notes are secured by deposit as collateral of $22,500,000 of 4½ per cent convertible bonds of the Hudson & Manhattan Railroad. The notes are offered at par and interest by Harvey Fisk & Sons, New York. W. G. Oakman, the president, states that the directors decided to issue short-term notes because of their unwillingness to sell any of the treasury assets under present conditions. The proceeds will be used to continue the work of construction.

Indianapolis Huntington Columbia City & Northwestern Traction Company, Indianapolis, Ind.—The property of this company was sold at foreclosure on February 1 at Warsaw, Ind., for $6,500.

Interborough Rapid Transit Company, New York.—It is proposed to issue $50,000,000 of 4½ per cent first mortgage bonds, of which $15,000,000 will be used to retire $15,000,000 notes due on May 1 and $10,000,000 will be used for the retirement of $10,000,000 notes due on May 1, 1910. The remainder will be reserved for extensions and improvements.

Interurban Railway & Terminal Company, Cincinnati, O.—A trust deed has been filed to the Cincinnati Trust Company, as trustee, to secure an issue of $1,650,000 of 5 per cent 20-year bonds, dated January 1, 1908.

Kansas City (Mo.) Railway & Light Company.—Kuhn, Loeb & Co. and Blair & Co. of New York offer for sale $4,125,000 of 6 per cent 5-year convertible notes of this company at 96 and interest, netting about 7 per cent on the investment. The notes, Series A, are part of an issue of $5,500,000 notes secured by pledge with the New York Trust Company, as trustee, of at least $5,500,000 notes of the Metropolitan Street Railway of Kansas City, $1,000,000 notes of the Kansas City Electric Light Company, $2,695,000 Kansas City Railway & Light Company common stock, $2,977,900 Kansas City Railway & Light Company preferred stock, and of such securities of the subsidiary companies of the Kansas City Railway & Light Company as are pledged under the indenture of May 15, 1903, securing the first lien refunding bonds, subject to the prior lien of said indenture. The remaining $1,375,000 of 6 per cent notes are known as notes of Series B, and are non-convertible. Each of these Series A notes is convertible at the option of the holder, on and after September 1, 1908, into six and one-half shares of the common stock and seven shares of the preferred stock of the company. The notes are redeemable at the option of the company at par and interest on eight weeks' notice upon any interest date, beginning March 1, 1909. If called for redemption, the provision for conversion shall cease 20 days before the redemption date mentioned in the call. Such right to convert will also cease July 1, 1912, provided the railway company shall give notice to that effect by advertisement.

Milwaukee Electric Railway & Light Company.—Earnings in the last three years compare as follows:

	1907.	1906.	1905.
Gross earnings	$3,823,383	$3,523,438	$3,226,535
Operating expenses and taxes	2,204,124	1,945,993	1,745,055
Net earnings	$1,619,259	$1,577,445	$1,481,480
Other income	183,283	155,791	122,161
Total net income	$1,802,542	$1,733,236	$1,603,641
Depreciation reserve fund	382,338	352,344	322,653
Interest charges	572,864	509,765	414,771
Balance applicable for dividends	$ 847,340	$ 871,127	$ 866,217
Preferred dividends	270,000	270,000	270,000
Common dividends	540,000	540,000	400,000
Surplus	$ 37,340	$ 61,127	$ 196,217

Mt. Mansfield Electric Railroad, Stowe, Vt.—The sale of the property of this company to A. H. Soden of Boston for $22,500 has been confirmed by James L. Morton, judge of the United States circuit court at Montpelier, Vt.

New York City Railway.—Judge Lacombe of the United States circuit court, New York, has dismissed the suit brought by the receivers appointed by the New York state supreme court to secure possession of the railway property from the receivers appointed by the federal court. Judge Lacombe declared that the suit had been presented prematurely. The suit was dismissed without prejudice and the state receivers may renew it whenever they desire.

New York Philadelphia Company.—The Camden & Trenton Railway, Camden, N. J., and the Trenton & New Brunswick Railroad, Trenton, N. J., subsidiary companies, did not meet the interest due on their bonds on January 1. The interest due on November 1, 1907, on the first mortgage bonds of the Camden & Trenton road was not paid.

Ottawa (Ont.) Electric Railway.—Receipts for the year 1907 were $574,278.46, an increase over 1906 of $48,531.87. The net earnings of the year were $224,349.07. The passengers carried numbered 12,623,440, or 1,215,218 more than last year.

Philadelphia Company, Pittsburg.—Gross earnings in 1907 were $19,091,423, as compared with $18,223,537 in 1906. Operating expenses and taxes were $12,067,303, as compared with $11,107,967. Net earnings were $7,024,120, as compared with $7,115,570.

Third Avenue Railroad, New York.—Frederick W. Whitridge, receiver for this company, was appointed receiver also for the subsidiary Forty-second Street Manhattanville & St. Nicholas Avenue Railway and the Dry Dock East Broadway & Battery Railroad by Judge Lacombe of the United States circuit court, New York, on February 1. The receiver for the first-named subsidiary road was appointed on application of the Barber Asphalt Paving Company, which had a claim for $20,349.27. The American Hay Company held a claim against the second-named subsidiary road for $6,546.01.

Vincennes (Ind.) Traction & Light Company.—At the annual meeting of stockholders an issue of $100,000 of 6 per cent preferred stock was authorized. Gross earnings in 1907 were $55,023, as compared with $44,913; net earnings were $13,420. During the last year there were carried 1,162,210 passengers.

Washington (D. C.) Railway & Electric Company.—Gross earnings in 1907 were $1,265,616. Operating expenses and fixed charges were $1,149,584. Other income was $456,088. From the balance of $572,120 dividends aggregating $425,000 were paid and there was charged off $52,700 discount on $250,000 of consolidated mortgage 4 per cent bonds sold, leaving a surplus of $94,420.

ELECTRIC RAILWAY EARNINGS.

Duluth Street Railway.

December—	1907.	1906.
Total earnings	$73,091.64	$66,589.97
Operating expenses	45,291.81	41,620.94
Net earnings	27,799.83	24,969.03
Total deductions	22,042.62	16,726.78
Net income	5,757.21	8,242.25
January 1 to December 31—	1907.	1906.
Total earnings	$846,084.35	$768,874.77
Operating expenses	437,391.21	418,820.49
Net earnings	408,693.14	350,054.28
Taxes	32,681.81	26,071.97
Interest	185,000.00	185,000.00
Depreciation	84,053.00	50,820.00
Total deductions	301,734.81	261,891.97
Net income	106,958.33	88,162.31

Kansas City Railway & Light Company.

December—	1907.	1906.
Gross earnings	$512,666.17	$499,631.71
Operating expenses	261,196.70	244,102.84
Net earnings	251,469.47	255,528.87
Interest and taxes	152,178.88	147,891.69
Net income	99,290.59	107,637.18

Dividends Declared.

Boston Elevated Railway, 3 per cent.

Chicago City Railway, extra, 2¼ per cent.

Columbus (O.) Railway & Light Company, one-half of 1 per cent.

Connecticut Railway & Lighting Company, New Haven, Conn., common, assenting, 1 per cent; preferred, 1 per cent.

Ohio Traction Company, Cincinnati, O., preferred, quarterly, 1¼ per cent.

Manufactures and Supplies

ROLLING STOCK.

Chicago City Railway is building 12 work cars in its own shops.

Milwaukee Northern Railway is reported to be in the market for a number of cars.

Hudson Companies, New York City, are completing specifications for two construction cars.

Winnebago Traction Company, Oshkosh, Wis., is reported to be in the market for new car equipment.

Philadelphia & Western Railroad, Philadelphia, Pa., is in the market for two double-truck snow plows.

Rochester Syracuse & Eastern Railway, Syracuse, N. Y., is in the market for two double-truck interurban cars.

Erie Railroad is in the market for three electric cars for its Elmira single-phase division. Specifications are being prepared by Westinghouse, Church, Kerr & Co., New York City.

Alexander Arnois, engineer, Frankford, Pa., is asking prices on 50 all-steel double-truck closed passenger cars for electric traction service. All bids are to be submitted on or before February 14.

Denver & Interurban Railway, which was reported in the Electric Railway Review of January 11 to be in the market for 12 interurban cars, has placed the order with the St. Louis Car Company.

Georgia Railway & Electric Company, Atlanta, Ga., will build about 30 cars in its own shops during 1908. The company does not contemplate placing any orders for rolling stock with contract builders.

Russell Car & Snow-Plow Company, Ridgway, Pa., on February 1 shipped to the Montreal Street Railway one Size 3 Russell double-end, double-truck, right and left hand running snow plow with flanger. This car is especially adapted for interurban service.

Van Brunt Street & Erie Basin Railroad, Brooklyn, N. Y., which was reported in the Electric Railway Review of December 21 as being in the market for five single-truck open cars, has placed this order with The J. G. Brill Company.

Fargo & Moorehead Street Railway, Fargo, N. D., which was reported in the Electric Railway Review of November 30 to be in the market for one car, has placed the order with M. Mitshkun Company of Detroit, Mich. The car is a flat trailer and will be used to transport live stock from the railway yards to the state fair grounds. The body and underframe are of wood. It weighs 19,000 pounds, is 36 feet 6 inches long over all and 9 feet 4 inches wide over all.

Indiana Union Traction Company, Anderson, Ind., in two mysterious fires in its car houses at South Marion, Ind., lost two cars and suffered damage to a few more. The first fire occurred on February 2 and two cars were completely destroyed. The second fire occurred on February 3, when considerable damage was done to some of the rolling stock in the car houses before the flames were under control. No plausible origin for either fire has been discovered.

Mahoning & Shenango Railway & Light Company, New Castle, Pa., as previously reported in the Electric Railway Review, on October 26 placed an order with the G. C. Kuhlman Car Company for 10 closed vestibule single-truck cars. Delivery has been made. The details of the cars are as follows:

Wheel base ..... 7 ft.	Width, inside ..... 6 ft. 7 in.
Length of body ..... 20 ft.	Over all ..... 7 ft. 6 in.
Over vestibule .. 29 ft. 5 in.	Seating capacity .....
Over all ..... 31 ft. 3 in.	..... 26 passengers
Height, inside ..... 8 ft. 2 in.	Body ..... Wood
Sill to trolley base. 9 ft. 6 in.	Underframe ..... Composite
Track to trolley base.. 12 ft.	

Special Equipment.

Brakeshoes ..... Am. Brake Shoe & Fdry. Co.	Heating system. Consolidated
Control system. Westinghouse	Motors.. 2 Westinghouse 93A
Couplers ..... Brill	Safety tread ..... Mason
Curtain fixtures .... Curtain Supply Co.	Sanders ..... Co. standard
Curtain material .. Pantasote	Trolley poles and attachments ..... Nuttall
Fenders ..... Co. standard	Trucks ..... Brill 21E
Hand brakes ..... Peacock	Varnish ..... Hildreth
	Door device ..... Wallace

SHOPS AND BUILDINGS.

Hamilton (Ont.) Street Railway.—This company's car houses at the corner of Locke and Herkimer streets, Hamilton, were destroyed by fire on January 20. Four cars were burned. The loss is estimated at $30,000.

Indiana Union Traction Company, Anderson, Ind.—Property at Main and Seventeenth streets, Elwood, Ind., has been purchased and excavating for the foundation of the new station will be started as soon as the weather permits. According to the company's agreement with the city the building will cost $15,000.

Washington Baltimore & Annapolis Electric Railway, Washington, D. C.—E. D. Skipper & Co., Annapolis, Md., have been awarded the contract for the company's new terminal station at Annapolis.

TRADE NOTES.

Rossiter MacGovern & Co., Incorporated, 90 West street, New York, was placed in the hands of receivers on February 1.

Standard Paint Company, New York, has removed its office from Atlanta, Ga., to 506 Hibernian Bank building, New Orleans, La.

Daniel C. Stover, president of the Stover Motor Car Company and head of several other large industries bearing his name, died at his home in Freeport on January 23 at the age of 69 years.

Hicks Car & Locomotive Works has moved its general sales offices to 410 Fisher building, Chicago. The purchasing and accounting departments are at the company's works at Chicago Heights.

Improved Automatic Air Brake Company has closed an option on some brick buildings at Elwood, Ind., and may install a plant to manufacture patented automatic air brakes. Charles St. Clair and James Shoemaker of Indianapolis, Ind., are interested.

S. R. Shepherd, until December 31, 1907, secretary and treasurer of the Walter A. Zelnicker Supply Company, St. Louis, Mo., has accepted the presidency of the Indiana Malleable Casting Corporation, a new concern located at Washington, Ind.

Robert W. Hunt & Co., Chicago, have established their St. Louis office, which is in charge of C. W. Gennet, Jr., as previously noted in the Electric Railway Review, at 1445 Syndicate Trust building. They have arranged to locate their chemical and cement laboratory in the same building.

Electric Cable Company, 17 Battery place, New York, has received a large order from the Harlan & Hollingsworth Corporation, Wilmington, Del., for its anti-corrosive compound, Voltax. The company states the order was placed after tests lasting over nine months had been made.

W. S. Barstow & Co., New York and Portland, Ore., have appointed W. S. Turner manager of their Portland office. Mr. Turner, who is a graduate of Kent College and Cornell University, has had experience all over this country and in New Zealand. He was formerly a member of the firm of Woodbridge & Turner.

Kalamazoo Railway Supply Company, Kalamazoo, Mich., reports that the demand for the Root railway spring scrapers and fenders is constantly increasing. The scraper is now used by over 250 street and interurban railways, and several orders for next winter have been received, calling for delivery during the summer months.

Goldschmidt Thermit Company, New York, has just completed quite an extensive piece of rail welding for the Los Angeles-Pacific Company of Los Angeles, Cal. The Goldschmidt company's San Francisco office reports the receipt of a letter from the general manager of the railway in which he expresses his satisfaction with the work.

New Doty Manufacturing Company, Janesville, Wis., is building four punching and shearing machines for the St. Louis Car Company, St. Louis, Mo. Three of these machines will weigh about 35,000 pounds each and the other one about 40,000 pounds. The company is also building two 25,000-pound punching and shearing machines for the government to be installed at the Brooklyn navy yard.

Massachusetts Chemical Company, Walpole, Mass., corrects the trade note which appeared in the Electric Railway Review of January 25, in which it was stated that a weekly or semi-weekly bath of Armalac would save hundreds of dollars in rewinding expense on armatures, and that this was an adopted practice on some large systems. Instead of weekly or semi-weekly this sentence should have read yearly or semi-yearly.

A. T. Le Baron has joined forces with C. A. Ralston, under the firm name of Ralston & Le Baron, with offices at 702 Fisher building, Chicago. They will deal in locomotives, cars and contractors' equipment, and are agents for the Russell Car & Snow-Plow Company, Ridgway, Pa. Mr. Le Baron for two years past has been in charge of southern territory for the Fitz-Hugh, Luther Company, Chicago, with headquarters at New Orleans, La.

J. W. Duntley, president of the Chicago Pneumatic Tool Company, Chicago, on February 4 sailed from New York for a four or five weeks' business trip to Europe. Before leaving Mr. Duntley stated that while the volume of business transacted by the American company was not, of course, satisfactory, at the same time January had shown considerable improvement over the month of December. Mr. Duntley has gone to Europe to close up several important matters there.

Blake Signal & Manufacturing Company, Boston, Mass., states that prospects for business for the Blake signal are brighter than ever. The first installation of these signals was made on the Boston & Worcester Railroad, four and one-half years ago, and the company reports that they have always and are at present giving as good service as when first installed. Over 800 miles of interurban road are equipped with the Blake signals. The company states that some of the foremost railroad signal engineers, who have thoroughly investigated the installations, pronounce the Blake system in many respects ahead of the best steam railway practice of today.

Arthur B. Shepard, who gave up his position as manager of the General Electric Company's Cleveland office last July to devote his time to completing the Toledo & Chicago Interurban Railway, of which he was president, has now resigned that position in order to go into the selling business again, with offices in the New England building, Cleveland. He will represent in northern Ohio the Wagner Electric Manufacturing Company of St. Louis, the Electric Machinery Company of Minneapolis, Broderick & Bascom Rope Company of St. Louis and the Asbestos Protected Metal Roofing Company. Mr. Shepard remains as director in the Toledo & Chicago Interurban Railway.

Daniel Shafer, for many years one of the best known salesmen and engineers in the south, succumbed to a sudden attack of pneumonia at the Nashville hotel, Nashville, Tenn., on January 24. Mr. Shafer, who was 47 years of age at his death, had been associated for the past three years with the Allis-Chalmers Company of Milwaukee, being attached during a portion of that time to the pumping engine department, and for the past year as sales engineer of the steam turbine department. For five years previous to taking his position with the Milwaukee company he was associated with the Hooven-Owens-Rentschler Company of Hamilton, O., during which time he acted as its southern representative, and was well known throughout that section as an expert on the power equipment of cotton mills.

H. W. Nutt, who for the past year has represented Buell & Mitchell of New York in Boston, has been appointed district manager for the New England states by the General Fireproofing Company of Youngstown, O., and will have headquarters at 161 Devonshire street, Boston. Through his previous connections Mr. Nutt has a wide acquaintance among architects, contractors and engineers of the east. Mr. Nutt has been assistant general sales agent for the American Steel Hoop Company, secretary of the American Tube & Stamping Company of Bridgeport, Conn., and vice-president of the Superior Steel Company of Pittsburg. As district manager for the General Fireproofing Company his attention will be devoted largely to exploiting the materials for reinforcing concrete which are manufactured by this company, and particularly pin-connected girder frames and cold twisted lug bars.

ADVERTISING LITERATURE.

Westinghouse Electric & Manufacturing Company, Pittsburg, Pa.—Circular No. 1104, recently issued, is devoted to Westinghouse portable and precision meters. Fifty-four pages are required to describe and illustrate the various types.

Arnold Company, 181 La Salle Street, Chicago, Ill.—The latest postcard of an illustrated series shows the reinforced concrete storehouse and the locomotive repair shop under construction at Bogalusa, La., for the New Orleans Great Northern.

Milwaukee Locomotive Manufacturing Company, North Milwaukee, Wis.—Vanguard gasoline and alcohol locomotives, especially designed for switching service in industrial plants.

railway construction and passenger service, are illustrated and described in a recently issued catalogue.

George Callahan & Co., Santos Building, Front Street, New York, N. Y.—A recently issued booklet of valuable information is entitled "Leaky Roofs—How to Make Them Waterproof." It sets forth the advantages of Callahan's "Elastica" waterproof liquid coating for roofs of all materials.

Rockwell Engineering Company, 26 Cortlandt Street, New York, N. Y.—Bulletin No. 13 demonstrates the uses of Rockwell portable heaters for oil fuel in and about railway and other shops. Type H-901 is self-contained and for kerosene oil only. Type H-902 employs compressed air and burns crude or refined oil.

Allis-Chalmers Company, Milwaukee, Wis.—Bulletin No. 1040 is devoted to polyphase induction motors, two types of which are described. Type AN motors have a rotor with "squirrel cage" winding and are suitable for all classes of constant-speed service. Type AN(Y) motors are provided with a wound rotor adapted to the insertion of resistance at starting or for obtaining variable speed.

Cutler-Hammer Clutch Company, Milwaukee, Wis.—A recently issued booklet in the form of a miniature magazine is entitled "Lifting Magnets and Recent Improvements in Them." It traces briefly the development of the lifting magnet, illustrates the different kinds of magnets used for handling pig iron, metal plates and other classes of material and explains, by an easily understood analogy, how the magnetic "lines of force" support weights up to 10 tons.

Joseph Dixon Crucible Company, Jersey City, N. J.—"Air Brake Lubrication" is the title of an attractive booklet of 16 pages and cover, 3½ by 6¼ inches, recently issued by this company. The booklet is typographically attractive, being printed in two colors, illustrated and having a cover of pleasing design. The text starts with the description of the air brake testing rack installed at Purdue University by the Master Car Builders' Association. This rack embraces a full air brake equipment for two trains of 50 cars each upon which Professor Goss made his first tests with Dixon's flake graphite. The booklet discusses the preparation and introduction of Dixon's air brake and triple valve grease and details the parts of the air brake system on which this lubricant can be used to advantage. The lubricating troubles ordinarily experienced with the air brake system are pointed out and the remedies given. The book closes with a few pages on the lubrication of air pumps. All those interested in the train service may obtain a copy by writing to the company.

General Electric Company, Schenectady, N. Y.—Recently issued bulletins include No. 4562, which is descriptive of mill type motors, designed to meet the demand of the constantly increasing business done in electrically driven rolling mills, etc. These motors are manufactured for direct and also for alternating current circuits and are designated MD and MI motors, respectively. They are built in sizes from 30 to 150 horsepower, and the direct-current motors, while generally rated at 220 volts, can be supplied for 500 volts, with a slight variation from standard speed. The MI alternating-current motors are wound for either 220 or 440 volts, 25 cycles, three-phase. The illustrations in the bulletin show the particularly heavy construction, and dimension diagrams with other data are given in the text.—Bulletin No. 4559 describes motor-starting rheostats and panels for direct current. It shows a variety of these panels in which different types of starting rheostats are used, the rheostat being combined with a line switch and fuses, or with a double-pole circuit-breaker. Dimension diagrams for the different capacities of rheostats and panels are included.

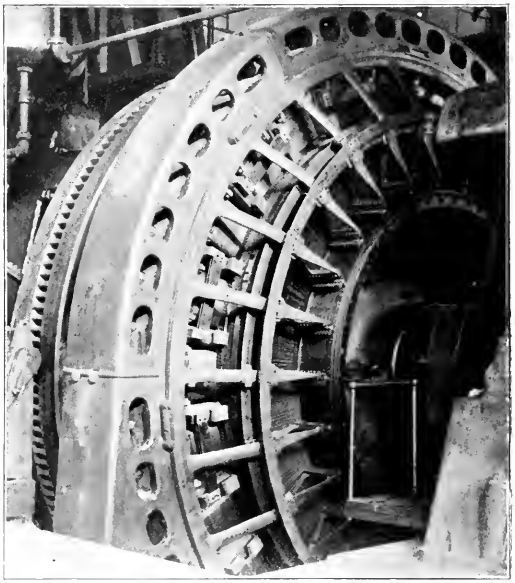
Electric Journal, Pittsburg, Pa.—The Electric Journal has published a pamphlet of 30 pages, 6 by 9 inches, which is its "Four-Year Topical Index." This index contains, in convenient form, references to all of the important engineering articles which have appeared in the issues of The Electric Journal from the first issue to date. By the use of the topical method of indexing all of the articles on a given subject are classified together, so that in looking up any reference one can see not only the article desired, but also all articles which have appeared on the same subject in the various issues of the periodical. An outline scheme of the topical arrangement is given at the beginning of the index, so that anyone, even though unacquainted with the topical system, can easily locate any reference. To persons who have disagreeable recollections of other methods of finding some article in some magazine by looking through a semi-annual, alphabetical index in common use, this index will come as a great relief. The references are arranged so that they can be used in a card index if so desired, the indexes being printed on one side only for this purpose. The index is supplied at 25 cents per copy.

COMMUTATING-POLE GENERATORS, BOSTON ELEVATED RAILWAY.

Among the comparatively recent improvements made in the design of direct-current machines, probably none has done more to mark a distinct advance in the art than the employment of commutating poles. While commutating-pole machines of moderate capacity have been in successful operation for some time past, it is only recently that this feature has been applied to large direct-connected engine-driven generators operating under the severe service conditions generally met with in street railway work.

The two 2,700-kilowatt commutating-pole railway generators recently installed in the Charlestown and Harvard power stations of the Boston Elevated Railway Company by the General Electric Company, present some interesting features in connection with the design, installation and operation of this type of railway generator.

The first of these generators was put in commercial service on October 10, exactly eight months from receipt of order



Near View of Generator, Showing Commutating Poles.

and 21 days in advance of the date specified for delivery. This is said to have been the quickest delivery on record for an engine-driven unit of this size.

These generators are direct connected to McIntosh & Seymour 4,100-horsepower vertical cross compound engines and are designed for 575 volts at a speed of 90 revolutions per minute, but are capable of a wide voltage range at all loads. Although the largest commutating-pole railway generators ever built, at the same time they are of smaller physical dimensions and occupy less floor space than any machines of same output and speed previously constructed. It is interesting to note in this connection that the armature diameter of these machines is approximately 4½ feet less than the armature diameter of the non-commutating pole generators of the same output just installed in the Lincoln wharf station of the Boston Elevated Railway.

The generators are guaranteed to deliver 2,700 kilowatts (4,700 amperes at 575 volts) continuously with a temperature rise not to exceed 35 degrees C. in any part above the surrounding air, also 50 per cent overload or 4,050 kilowatts (7,050 amperes at 575 volts) for two hours following the normal run, temperature rise not to exceed 55 degrees C. and to withstand a momentary overload of 100 per cent or 5,400 kilowatts (9,400 amperes at 575 volts) without injury.

That these guarantees have been fully met has been clearly demonstrated since the machines have been put in service. Their operation under the severe conditions imposed by a fluctuating railway load has been entirely satisfactory in every respect, and tests taken show an extremely low tem-

perature rise that is within the guarantee by a very large margin.

The practically sparkless commutation secured under all conditions of load by conservative design and use of commutating poles reduces wear of commutator and brushes to a minimum, which is an additional source of economy obtained with this type of generator.

No change whatever in the brush setting has to be made from no load to momentary overload condition of 100 per cent, and the circuit-breaker can be tripped under any condition of load between these limits without appreciable disturbance at the brushes. No trouble whatever is experienced in paralleling these machines with others in the stations where they are installed.

TESTS OF STRAIN INSULATORS.

Electrical tests recently made on the No. 7 and No. 10 safety strain insulators recently placed on the market by the Western Electric Company, Chicago, Ill., show some interesting as well as highly satisfactory results.

The electrical value of the No. 7 safety strain insulator ranges between 30,000 and 40,000 volts. One of these arced between loops over the outside surface of the insulator at 40,000 volts; another of the same type arced at 10,800 volts and was maintained at that value for one minute without breaking down. The mechanical strength of the No. 7 safety strain insulator is about 10,000 pounds.

The electrical value of the No. 10 safety strain insulator ranges between 40,000 and 50,000 volts. This insulator arced from loop to loop over the outside surface at 54,000 volts, and was held at that voltage for one-half minute without breaking down. The mechanical strength is about 20,000 pounds.

The company feels confident that when size and strength are considered the new safety strain insulators practically reach the limit of electrical value and greatly exceed all previous records. All metal parts are of drop-forged steel.

THE HENDERSHOT COUPLING.

A new shaft coupling, to be known as the Hendershot coupling, is being placed upon the market by Manning, Maxwell & Moore, Incorporated, 85 Liberty street, New York, and the shells are bolted together. The fits, 3 and 4, true up the coupling and perfect alignment is assured by keeping the two faces, 1 and 2, parallel.

The coupling is easily taken apart by screwing two bolts in holes that are tapped in the shell for the purpose. In coupling shafting this construction permits of a great saving in time, especially in a new factory where it is not convenient to start up to see how the line runs. The manufacturer is sure this feature will meet with the approval of millwrights and mechanics, who have had experience in coupling shafting with compression couplings of the single-sleeve type. It should also appeal to mill owners, as the time saved in using the Hendershot coupling is quite an item. If put on properly the shafting cannot be sprung.

If the shafts to be coupled vary a little in size, are a little out of line, or both, the Hendershot coupling will adjust itself and the compression will be the same the full length of the sleeve, which is not possible with the sleeve in one piece. The sleeves are made thinner and the hubs heavier, thereby greatly increasing the strength without increasing the outside diameter of the coupling.

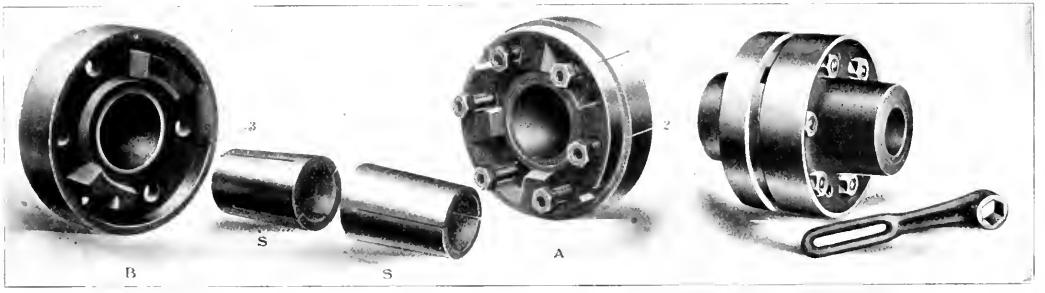
The coupling is made of the best gray iron, and is heavy enough to withstand all stresses. Every coupling is put together on a test pin and inspected before it leaves the factory.

A CLEARING HOUSE FOR ENGINEERS.

The nature of engineering work is such that the men employed in it are periodically looking for new engagements. These men become available, not through any fault of their own, but because engineering work is inherently of a temporary character. A tunnel may require 2½ years to build, yet at the end of that time the engineers who have built it are often compelled to seek other engagements, which may carry them to entirely different parts of the globe.

The business of the Engineering Agency, Incorporated, Monadnock block, Chicago, is to maintain a reliable list of competent engineers, qualified for all the branches of the profession, electrical, mechanical, civil, architectural and mining, for the convenience of employers who may need their services.

It is a centrally located institution, that keeps in touch with all the engineering work in progress, and it has acquired exceptional facilities for aiding the better class of men.



The Hendershot Coupling.

N. Y., which has several new features which give it great strength and facilitate its quick and convenient application.

The general appearance of the coupling assembled and the component parts are shown in the accompanying engravings.

It will be noted that two short taper compression sleeves are provided, S, S, in the engraving. These make it possible to put the two halves of the coupling in place while the shafting is upon the floor, so that it may be hoisted into position and bolted together as easily as with a plain flanged coupling.

The shells, A and B, contain cast lugs, which, interlocked, form a clutch, thereby taking the stress upon the shells and relieving the bolts of all shearing stress and making a most rigid and durable connection.

Although the bolts are relieved of shearing stresses, about half again as many more of them are used than is usual. This is in keeping with the very large compression area of this style of coupling and the unusually large factor of safety provided.

In applying the coupling the shells, A and B, are slipped upon the shafting first. Then the sleeves, S and S, are put into place, so that the shells may be drawn over them. The lugs of shells, A and B, are brought into interlocking position

Through the agency men have been sent to many foreign countries.

The work of every member is carefully watched and only the best men are recommended to clients. The agency has striven to live up to its slogan, "None but competent men need apply."

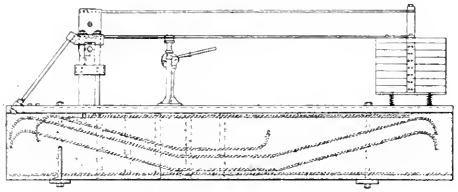
Electric railways contemplating surveys or construction will find the Engineering Agency ready to organize a competent engineering corps on short notice. It is prepared either to conduct the surveys under its own supervision or to furnish the men to the railway company.

The agency was organized in 1893 by Frederick A. Peckham, then western manager for the Engineering News. For 11 years Mr. Peckham conducted the business, until it was acquired by Albert G. Frost and his associates.

The Twin City Rapid Transit Company of Minneapolis, Minn., has contracted with the St. Anthony Falls Hydro-electric Company for 12,000 horsepower of the output of the Hennepin island plant for a term of years. The additional power will be of great assistance to the company in handling its enormous summer excursion traffic.

MACHINE FOR TESTING JACKS.

With known strengths of materials it should be easy to figure quite approximately the safe working load of any jack, but as a final confirmation of all such calculations a test should be made with a known load. For such tests the Joyce-Cridland Company of Dayton, O., has for many years used a hydraulic press, and its jacks, including some 200 or more



Machine for Testing Jacks.

kinds—hydraulic, lever, friction, geared lever and screw jacks, etc.—have been tested on this machine before shipment.

It was noticed, however, that under heavy pressure indications on this machine were not accurate, for it would show loads in excess of the load mathematically possible, even assuming that there was no friction within the jack. After careful investigation the difficulty was found to be in the transfer gauge of the testing machine, and upon taking the matter up with the gauge manufacturers, it developed that the latter were not prepared to guarantee gauges of greater accuracy. The result was that the Joyce-Cridland Company designed and installed the testing machine illustrated herewith.

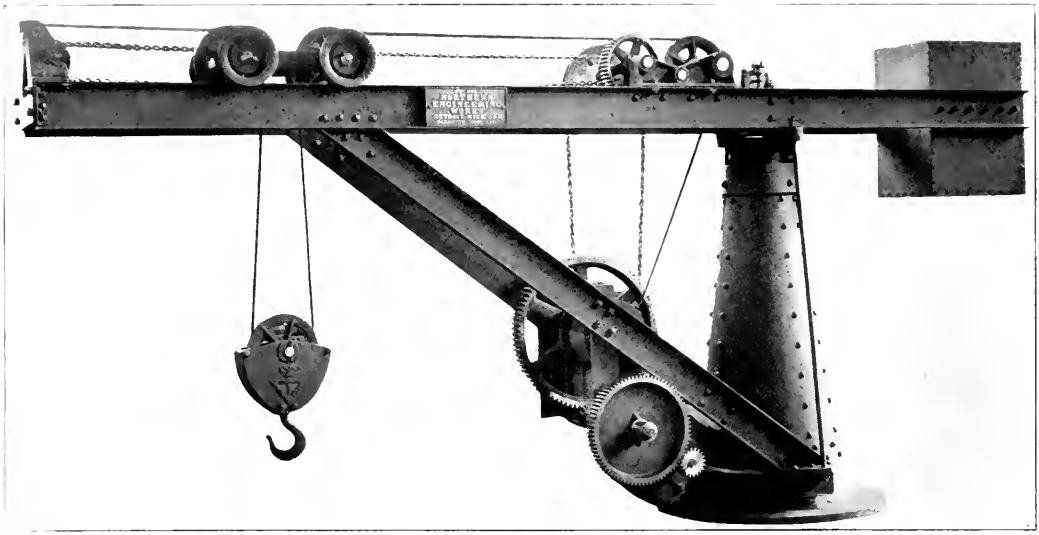
This machine is simply a 16-foot bar with a fulcrum at one end, and weighted at the other with eight 850-pound weights, any or all of which may be used at one time. The bar is an ordinary 15-inch I-beam and the machine is set over a reinforced concrete foundation six feet deep. The weights remain on a spring platform while at rest, and are picked up by inserting pins through the yoke from each side.

The base of the machine consists of two 15-inch channels placed side by side and with the flat side up. The head or fulcrum is braced by round steel struts to a cast-steel head on the ends of the channels. The concrete below the channels is reinforced by twisted steel bars, which are placed to give greatest resistance near the fulcrum, where the stress is greatest.

The vertical rods which hold the fulcrum in place are anchored at the bottom of the concrete, so that the fulcrum withstands any pressure which may be applied by the heaviest jack. The fulcrum, attached to the bar by a steel casting, is a pin which carries knife edges both above and below. When the machine is standing idle the lower knife edges rest on each side of the centering block. When a jack is put under the beam and pumped up the upper knife edges rise against hard steel plates in the head. Graduations in tons are marked on the I-beam, commencing with one ton. The beam is graduated for each number of weights, the place for each graduation being determined by accurate calibration. On the bottom side of the beam is a sliding clamp or block with a V-shaped notch. The jack to be tested is set just under this notch, and a round pin is laid on top the jack so that it will enter the notch. This insures correct bearing during the tests. By shifting the point of application of the jack and adjusting the number of weights any desired load may be thrown upon the jack before the weights will rise. A hydraulic or other heavy jack can thus be tested under precisely the same conditions as if it were lifting a locomotive truck, car or any other weight.

ELECTRIC PILLAR JIB CRANE.

The crane shown in the accompanying photograph is an electric pillar jib crane recently built for the Chicago City Railway. This crane is of three tons capacity and has an effective radius of 10 feet. The jib swings 360 degrees. The crane is designed to be placed on a flat car, to be used for handling rails and track material, and is operated by an 11-horsepower direct-current motor at 500 volts. The conditions required that the crane should not exceed 8 feet above the floor of the car. The trolley travels by hand chain gear and the swinging is done by hand. Cut gearing is used throughout. The central pillar is of plate steel riveted and is equipped with steel ball bearings at the top and steel roller bearings at the base. The hoisting speed is about 30 feet per minute full load.



Electric Pillar Jib Crane for the Chicago City Railway.

Cranes of this kind have been found very useful, not only for placing on flat cars, but for use on stationary foundations where freight is to be transferred from car to platform or from car to wagons. In cases where the cost of electric power would not be justified it could be equipped with hand power throughout; or, if pneumatic power is available, pneumatic motors can be applied instead of electric motors. The crane shown was made by the Northern Engineering Works, Detroit, Mich.

Central Inspection Bureau, 17 State street, New York City, has been given the contract by the Lacroze Company for the complete inspection of six interurban cars built by The J. G. Brill Company and which are for shipment to Buenos Aires, S. A.

Passengers Alight from the Front End of PAY-AS-YOU-ENTER CARS

and the door is under sole control of the motorman. When a stop is made, he throws a lever and the door slides open. Before starting, he releases the lever and the door closes. ¶ Confusion between passengers alighting and those entering is entirely eliminated, as they use separate doors. The time required for loading and unloading is materially cut down, too. ¶ Accidents resulting from attempts to board the front platform while car is in motion and those caused by starting while passengers are in the act of entering or leaving are also eliminated. ¶ And the company gets every passenger's fare before the car is entered.

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the patents on which are owned by

The Pay-As-You-Enter Car Company

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

Position as superintendent of city or interurban line wanted by a man of 15 years' experience in both construction and operation. Best of references as to ability and habits. Open for engagement after February 1. Address "No. 541," care Electric Railway Review, Chicago.

Graduate civil engineer, Cornell University 1902, experienced in field work and trade journalism, now engaged, desires work with technical journal or publicity department of manufacturing establishment. Address "No. 525," care of Electric Railway Review, Chicago.

Position wanted by first-class engineer and machinist with 16 years' practical experience with compound Corliss engines, Allis-Chalmers and Westinghouse steam turbines, surface condensers, A. C. and D. C. electrical apparatus. Age 35. A1 references. Address "No. 532," care of Electric Railway Review, Chicago.

Position wanted—The manager of a large railway, lighting and gas plant must make a change in his position owing to an unfavorable climate. Has held managerial positions for 10 years and is thoroughly familiar with the construction, organization and operation of electric railways. Correspondence solicited. Exceptional references. Address "No. 539," care of Electric Railway Review, Chicago.

An engineer, experienced in the handling and organizing of station crews, with 10 years' experience as chief engineer in both construction and operation, as well as reconstructing old ones on a modern basis. All voltages up to 15,000, both railway and lights. Salary or per cent, depends on results. I am looking for a reputation as well as salary. Address "No. 536," care of Electric Railway Review, Chicago.

Mechanical and electrical engineer, 14 years' experience. Experienced in power station design and for 14 months acting superintendent of power stations on one of the largest street railway systems in America. At liberty April 1. Desires superintendent of power or similar position. Would open office in Boston as New England representative of responsible manufacturer. Address "No. 546," care Electric Railway Review, Chicago.

POSITIONS WANTED.

Position as auditor wanted by a young man of experience in street railway and electric light accounting. Best of references as to character and ability. Address "No. 545," care Electric Railway Review, Chicago.

Position as auditor or assistant wanted by a young single man. Thoroughly experienced in railway, gas and lighting accounting. Now employed. Address "No. 544," care of Electric Railway Review, Chicago.

Master mechanic wants position with interurban city road; medium-sized preferred. Wide and thorough experience in all branches; can also do armature winding and switchboard work. Address "No. 542," care Electric Railway Review, Chicago.

Experienced and efficient engineer with power station experience (both planning and construction, as chief engineer and as superintendent of construction) desires position with operating company as engineer, assistant to manager or superintendent. Address "No. 515," care the Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

Position as chief electrician maintenance and inspection wanted with traction company by young man 27 years of age, technical education, five years' experience in testing, construction and maintenance. Salary a secondary consideration, providing hard work and merit will win advancement. Best of recommendations. Address "No. 547," care Electric Railway Review, Chicago.

POSITIONS OPEN.

Wanted — Electrical salesman who is selling to street railways to take important side line. J. W. Morrison, 29 Griswold street, Detroit, Mich.

POSITIONS OPEN.

Twelve offices, covering entire street railway and manufacturing world. 1,000 technical and office positions open. Confidential service; write today, HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

Wanted—By a large street railway and lighting company, having 14 storerooms, a thoroughly experienced man, capable of taking inventories. Permanent position. Must be able to furnish best of references as to character and ability. Address "No. 538," care of Electric Railway Review, Chicago.

Master mechanic for a property having 150 to 200 cars. Must be experienced, practical and able to run shop on economical basis. Opportunity for good man to make a record. Prefer someone from middle west. Salary $125 to $150. Address "No. 537," care Electric Railway Review, Chicago.

Young man wanted to begin work at once as assistant claim agent by a large interurban system in western Pennsylvania. Man of some experience preferred. Must be able to look after office work satisfactorily, as well as to make investigations and adjustments. Address "No. 540," care Electric Railway Review, Chicago.

BOOKS AND PUBLICATIONS.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 530," care of Electric Railway Review, Chicago.

Copies of the Street Railway Review of March and April, 1904, in good condition for binding are wanted. State price sent postpaid. Address "No. 543," care Electric Railway Review, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

BOOKS AND PUBLICATIONS.

Copies of the Street Railway Review of January and February, 1906, are wanted. Name condition and price. Address "No. 535," care of Electric Railway Review, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

Interstate commerce national legislation to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts expunged from, and the parts added to, the interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

MISCELLANEOUS WANTS.

Want to buy second-hand equipment, machinery or material? A card inserted in the Electric Railway Review, stating just what you want, will bring immediate response. The cost is small—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Send orders to Electric Railway Review, 160 Harrison St., Chicago.

What have you to sell in the way of second-hand equipment, machinery or material? Buyers read the "For Sale" cards on the following page and there is the place to tell your story. "For Sale" cards are inexpensive—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Special rates on contracts for 100 inches or more to be used within one year. Now is the time to send your order to Electric Railway Review, 160 Harrison St., Chicago.

Among the factors which contribute materially to the successful operation of the lines of the Ft. Wayne & Wabash Valley Traction Company are the three associations organized by the management, some of the principal features of which are described in this issue. The regular meetings of the Officers' association of this company give the heads of departments a more thorough understanding of the problems of management than they could acquire in any other way. At these meetings the questions which arise are discussed in their relation to various departments and from the broad standpoint of the good of the company. The Superintendents' association deals with matters pertaining to discipline, and its primary duty is the impartial enforcement of the merit system which was adopted recently. Such a plan, providing for just recognition of all conduct that is prejudicial to the best interests of the company, accompanied by willing recognition of acts which promote the good will of the public toward the corporation and conserve its earnings, might well be adopted by every public service corporation. A loose method of discipline, without systematic records, is likely to cause the retention of employes who are so far below the standard that they do incalculable damage in the service in spite of the painstaking efforts of their superiors; the desire for good records, which will be called to the attention of the management, and the hope of winning the promised prizes, will inspire many to unusual efforts to please. The deep interest felt in the third association, the Employes' Mutual Benefit association, is shown by the fact that the membership now comprises 85 per cent of the total number of employes, although the organization has been established only since October 1 last.

Associations for Officers and Employes.

An important problem in handling traffic in a growing city is the storage of rolling stock which is neither in service nor in the shop. Obviously, a small road operating but a dozen or two cars can usually handle them most economically from a single house; as business increases, however, a decision must be made between more than one car house and a central storage and repair point. To a considerable degree the shop practice of a company is involved with the car storage, but on the whole the most important point to examine is the reduction of dead mileage. It seems to be accepted generally now that while one main repair shop is essential for street railways of almost all sizes, except perhaps in the special cases of one or two very large organizations, inspection can be conducted at subordinate centers of operation just as well as at the main repair shops. Fear that proper inspection will not be given to the equipment at secondary car houses should not deter a company from building such houses. The problem should be attacked along the line of reducing dead mileage at night and morning, and the cost of this mileage balanced against the fixed and operating charges of the new house. Each case must be weighed upon its own peculiar merits in somewhat the following way: A cost estimate should be made for a new car house of a capacity likely to be required in the near future, and located on a site of known value near the operating center of the section of the city which it will directly serve. The saving in dead mileage for this location should then be estimated, in comparison with the cost of the dead mileage to and from the central and original car house of the system. Power should of course be included, as well as labor cost, in getting at the operating expense of the excess miles run.

Subdividing Car Storage.

In a specific instance the average operating cost per car-mile on an entire system may not apply to the expense of actual dead mileage operation on a particular part of the system, and it may pay to check the idle mileage and power by actual measurements. On a road where cars are started out in the morning from a central house to begin their regular runs 20 or 30 minutes later at the distant ends of their routes, with the reverse process of returning late at night over a route practically void of earnings, it ought not to be difficult to secure fairly close estimates of this dead mileage cost. The saving due to the new location should more than offset the fixed charges, extra supervision and attendance at the new house, if a clear-cut solution of the problem is to be secured. Beyond a certain point, possibly 50 cars on a small system and from 200 to 300 on a large system, it is a matter of insurance against fire losses and to some extent blockades, to subdivide the rolling stock storage. The point is that, while no general rule can be laid down, there is a chance for some skilful analysis of the financial aspect of car house location in connection with the expansion of growing systems. Local conditions impose restrictions upon the actual locations of car houses, and sometimes the lack of proper land produces awkward operating results. It costs some time to figure out the economies of different locations, but the problem is no more insoluble than the corresponding engineering question of power and substation location. The dollar side of the feeder problem is scarcely less difficult than the car house money question, viewed from the standpoint of annual operating cost. Rule of thumb methods are no longer applicable to the well-conducted transportation department.

Reducing Dead Mileage.

Electric railway companies have usually been so actively engaged in building new lines and increasing their facilities for handling traffic that their officials have not had opportunity to give as much attention to the development of numerous little refinements in operating methods effecting reductions in operating expenses as have the officials of the older and better organized steam roads. A limiting initial cost also has often been a factor in the building of new lines which has prevented the employment of improved methods. One of the practices through which an appreciable saving can be effected is in the use of treated instead of untreated ties for both street and interurban railways. A fair estimate of the number of ties in use on the electric railways of the United States is 125,000,000. The average life of an untreated tie being five years (it is perhaps less on some street railways where conditions are unfavorable), the number of ties required annually would be 25,000,000. On the steam railways records show that about 16

Treated Ties for Electric Railways.

per cent of all ties used are treated and if we assume that as high a per cent of treated ties is used on electric railways there will still remain in the annual tie order about 21,000,000 untreated ties which, if treated by approved processes, would generally give service five or six years longer than if untreated. Based upon reasonable assumptions as to cost of tie and cost of treatment an annual saving of about one and one-quarter million dollars would result from the complete adoption of treated ties. Reduced to more tangible figures this means a saving in maintenance expense of about $32 per mile per annum. It is usually the practice of such apparently little economies as this which in the aggregate marks the difference between dividends and deficits at the close of the year.

SINGLE-PHASE RAILWAY CONSTRUCTION FEATURES.

With nearly 100 miles of well-built track the Washington Baltimore & Annapolis Electric Railway is now in regular operation. As a magnificent example of the most recently completed large single-phase electric railway we are pleased to describe the constructional features of this road in the present issue of the Electric Railway Review. In the engineering design of this new road features novel and of especial interest to both operators and constructors have been introduced, some with a view to economies and others as the best-known means of meeting conditions imposed.

We know of no other road the rolling stock equipment of which is called upon to operate under so many different arrangements of current supply.

In Baltimore the cars of the new road are fed direct current, at 600 volts pressure, through a single trolley pole and wheel of the type in general use elsewhere. Between cities on the private right of way this same trolley wheel collects current at 6,600 volts pressure. In the streets of Annapolis and likewise in the District of Columbia two trolley poles are used, one for collecting direct current at 600 volts pressure and the other for the return circuit, which is overhead, two trolley wires being used.

Still another method of current collection, one which, while not required at present, may be required in the future, is the use of the underground plow. Should conditions ever be such that the Washington Baltimore & Annapolis high-speed interurban cars can be run over the city system tracks in Washington, then current for their propulsion must be collected from the conductor rails in the underground conduits. Realizing this not altogether improbable condition the engineers have so equipped the cars of the new road that none of the existing apparatus will interfere in the event of the mounting of contact plow supports for city terminal service in Washington. The commutating switches which serve to change the wiring connections for various methods of current supply are built with a view to fulfilling the additional duty of feeding current from an underground plow to the motor circuits, as well as making the 6,600-600-volt transfer.

At present and conditionally all the cars are fitted with only trolley wheels and poles for current collection. The regular schedule for through car service between termini will necessitate speeds of 60 miles per hour; the distance between the terminals in Washington and Baltimore is 38 miles and the schedule time for the run is 60 minutes, including the time required to operate over city tracks and for making regular stops. We believe that operation will demonstrate that the pantagraph trolley or some form of sliding collector is more suitable for this fast service than is the wheel trolley.

The high potential (6,600 volts), of course, reduces the current density at the collecting point very greatly as compared with 600-volt service. Yet with a catenary-supported trolley there are so many more cars under which the trolley must pass that the wear will probably be as great as though lower voltage were used. Another reason, other than because of its longer life and smoother operation, for our view that the sliding current collector will be found better adapted for the service, is that at the high speeds at which the cars of this road will run the jumping of a trolley wheel and pole from the wire will cause no little damage. Especially is this true with the wire catenary-supported. Were a trolley wheel to leave the wire at high speed and catch in the overhead work the results would be far more serious on a road operating at 6,600 than at 600 volts.

We are told that two locomotives being built for the Washington Baltimore & Annapolis will be equipped with pantagraph current collectors. Records of the service rendered by these, as compared with the poles and wheels, will answer our question definitely.

The overhead construction on the new line comprises some novel features that should undoubtedly render it especially serviceable and permanent. Differing from some other of the double-track high-speed single-phase lines steel bridges are not used to support the messenger cables. A combination of wooden poles, steel brackets, span wires and back guys has been devised and so erected that the trolley wires of the new road are as well hung as can anywhere be found.

On the double-track route each catenary messenger cable is carried on porcelain insulators resting on metal pins clamped to horizontal T-iron bracket arms. Each bracket arm is supported from above by a wrought-iron rod bolted through the pole. Center pole construction is not used. The trolley wire over each track is supported by a row of poles set in the outer shoulder of the subgrade, the poles being so spaced and set that they are opposite each other in pairs. This arrangement places the two brackets, one for each track, in line.

The tipping strain toward the track caused by the weight of the wires is transmitted to a solidly planted guy anchor by a back guy fastened to the pole just below the bracket.

The structure as thus far described would seem to be capable of meeting any demands to be placed upon it, but an additional factor of safety has been introduced by the tying together of the poles and brackets standing opposite each other across the track. A $\frac{7}{16}$-inch steel cable spans the tracks, connecting the poles at the points where the back guys are fastened to them. This cable passes through a depending arm hung from the end of each bracket and thus completes the very substantial structure.

Considering the service requirements it hardly seems possible that a more economical structure could have been devised for supporting the messenger and trolley.

These few innovations in single-phase railway engineering and the many others described in the article on the Washington Baltimore & Annapolis road, elsewhere in this issue, are an index of the development that may be expected in high-voltage railway construction during the next few years.

General Manager T. W. Wilson of the International Railway of Buffalo is quoted as saying that the first month's operation of pay-as-you-enter cars on the Niagara line has been so successful that many requests have been made by patrons of the company that it install this type of cars on its other lines. Mr. Wilson says that the warmth and good ventilation of these cars, which are made possible by keeping the front platform doors closed except at stops, have added to the popularity of the cars.

The Cheltenham Press, New Castle, Pa., has recently published an excellent pocket size map of the electric railways in operation and under construction in western New York and Pennsylvania, northern West Virginia, eastern Indiana and southern Michigan. The map is lithographed in five colors.

Communications

PRACTICAL VIEWS ON TRUCKS FOR ELECTRIC MOTOR SERVICE.

To the Editors:

Replying to the communication of C. Loomis Allen in the Electric Railway Review for January 25, 1908, page 103, pertaining to this subject as discussed by me in your issue for October 19, 1907, page 679, I desire that it should be first stated that as author of the paper referred to I did not purposely endeavor to favor any particular make of truck—patented or otherwise—the points brought up being entirely from experience and observation and especially from wide observation.

The type of passenger coach truck universally used by the steam railways and generally known as the M. C. B. standard is not in a technical sense a standard truck and for the purpose of a brief and practical discussion it was not intended nor expected that such inference would be made. We all know that a thing to be technically standard must conform in its entirety in shape, size and substance and that the various classes of steam railway passenger equipment differing widely as to weight and service require trucks of varying capacity, etc., to conform. What I did intend to infer was that the general principles involved in the M. C. B. type of truck were standardized in a practical sense and as such were adopted by the Master Car Builders' Association and universally used before electric motors were used in connection with double trucks of street or interurban railways and therefore were not intended to apply to such requirements as are not yet fully developed.

Referring to my analysis of the so-called M. C. B. type of truck, in connection with Mr. Allen's criticisms of the antagonistic features of the double frame, I believe that my statements are amply justified by observation of excessive wear between the parts in contact, especially between the journal box and the pedestal jaws. The point Mr. Allen raises—of my overlooking the fact that the motors are not rigidly connected to the main frame—is, most certainly, not the case, for I believe that it is largely on account of this "flexible connection" and the consequent uncontrolled flopping of the motors in opposite directions that excessive wear is produced in the double-framed truck. It is principally for this reason that I am inclined to favor the abandonment of complicated trucks and principles. I cannot agree with Mr. Allen as to the good effects of the generous equalizing qualities of the truck named. The extensive use in high-speed interurban service, where only a practical test of real value can be made, of even the so-called M. C. B. type of truck would seem to completely refute all theories in this regard.

My plea is for a truck to accomplish the desired results which will be lighter, cheaper and with fewer pieces than either the so-called M. C. B. truck or the truck named by Mr. Allen, and a single frame, preferably of the diamond form, is entitled to serious consideration. The flexibility of the springs which has proved so effective in taking care of side motion in single trucks may yet demonstrate its effectiveness in double trucks, but certainly not as long as they are placed crosswise of the truck where flexibility is impossible except in the wrong direction, i. e., fore and aft.

Mr. Allen's statement that the type suggested by me has long since been discarded in this country and that its dangers are recognized in Europe is certainly amazing—especially in view of the fact that this single frame is at the front of every fast train in this country—either under the engine or tender and sometimes both. Good or bad riding in any truck is largely a matter of springs and good riding cannot be secured without springs of proper capacity and flexibility, although it is frequently attempted to do so.

It pleases me to note our agreement as to the desirability of a single-frame truck, and I believe that if the subject received the attention it deserves from such men as Mr. Allen a suitable design would be forthcoming and the Scotch verdict of "not proven" could not be rendered.

FRANKLYN M. NICHOLL.

Cincinnati, O., February 7, 1908.

ANNUAL REPORT.

Detroit United Railway.

Gross earnings of the Detroit United Railway increased 16.7 per cent in 1907 over 1906, but operating expenses and taxes were 20.1 per cent larger and net earnings from operation showed a gain of 11.2 per cent. The earnings for 1907, with a comparison, were as follows:

	1907.	1906.	Increase.
Miles of track	741	620	121
Gross earnings	$7,073,246	$6,063,183	$1,010,063
Oper. expenses and taxes	4,465,044	3,718,622	746,422
Net earnings	$2,608,202	$2,344,561	$ 263,641
Other income	60,505	58,758	1,747
Total net income	$2,668,707	$2,403,319	$ 265,388
Charges	1,554,249	1,243,273	310,976
Net divisible income	$1,114,458	$1,160,046	*$ 45,588
Dividends	343,750	625,000	*281,250
Surplus	$ 770,708	$ 535,046	$ 235,662
Depreciation	276,000	250,000	26,000
Surplus	$ 494,708	$ 285,046	$ 209,662

*Decrease.

The figures show the reduced dividend disbursement and the larger appropriation for depreciation. These figures are those presented in the annual report covering the operations of the Detroit United Railway, the Rapid Railway System, the Sandwich Windsor & Amherstburg Railway and the Detroit Monroe & Toledo Short Line Railway for the year 1907, and of the Detroit Jackson & Chicago Railway for the 11 months ended December 31, 1907. The balance sheet of the Detroit United Railway shows $656,906 bills payable. J. C. Hutchins, the president, refers to the organization of the Detroit Jackson & Chicago Railway, which acquired, at a cost of $1,230,000, the properties of the Detroit Ypsilanti Ann Arbor & Jackson Railway, the Jackson Ann Arbor & Detroit Railway and the Detroit Plymouth & Northville Railway. The rolling stock of the company consists of 943 closed passenger cars, 325 open passenger cars, 229 freight and construction cars, 16 line cars, 42 express cars, 6 miscellaneous cars, 2 locomotives, 2,637 motors and 2,019 trucks.

Passenger and mileage statistics for the entire system compare as follows:

	1907.	1906.	Increase.
Revenue passengers	126,601,946	113,011,309	13,590,637
Transfer passengers	36,704,431	32,840,259	3,864,172
Employe passengers	5,274,390	4,939,224	335,166
Total passengers	168,580,767	150,790,792	17,789,975
Gross earnings per revenue passenger, cents	5.25	5.07	0.18
Gross earnings per passenger, cents	3.94	3.80	0.14
Car-miles	30,209,488	25,973,526	4,235,962
Car-mile results, cents—			
Gross earnings	23.41	23.34	0.07
Expenses	14.78	14.32	0.46
Net earnings	8.63	9.02	*0.39

*Decrease.

Wells, Fargo & Co. have taken over the entire express business of the Los Angeles-Pacific Company, Los Angeles, Cal.

THE WASHINGTON BALTIMORE & ANNAPOLIS ELECTRIC RAILWAY.

On February 7 the first regular cars were put in service on the Washington Baltimore & Annapolis Electric Railway. The new road connecting the three cities included in its name is a magnificent example of the latest development of the 6,600-volt trolley system. The present article describes and illustrates the interesting features of construction of this property.

Organization.

The Roberts & Abbott Company of Cleveland, O., has been in complete charge of the design and construction of the new road, M. A. Munn acting as chief engineer. Simonson & Pietsch of Baltimore were architects for the buildings and the Fidelity Construction Company, Detroit, Mich., did the grading, track and line work as general contractor.

The Washington Baltimore & Annapolis Electric Railway has a total capitalization of $10,500,000, of which $4,250,000 is first mortgage bonds, $1,000,000 second mortgage bonds and $5,250,000 stock.

The officers and operating heads of the company are: President, George T. Bishop; vice-president, John Sherwin; second vice-president and general manager, J. N. Shannahan; secretary and assistant treasurer, W. A. Kappler; treasurer and assistant secretary, C. F. Gladfelter; general traffic manager, W. E. Slaughter; purchasing agent, William Stewart; superintendent of transportation, J. O'Hara; superintendent

Washington Baltimore & Annapolis—General View of Baltimore Terminal Station.

of track and overhead, J. J. Doyle; master mechanic, Henry Donovan.

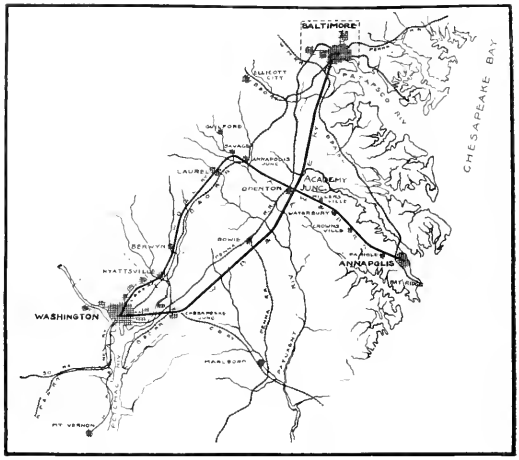
Roadway and Track.

The Washington Baltimore & Annapolis Electric Railway Company's system, as shown on the accompanying map, consists of:

(1) A double-track road, known as the main line, running from the retail center of Baltimore to Fifteenth and H streets, N. E., Washington, D. C. At this point is located a transfer station, where special cars of the Washington Railway & Electric Company connect with the interurban cars, running direct to the Treasury building. The tracks of the new road stop at the District of Columbia line, but the large interurban cars operate from this point to Fifteenth and H streets over the Columbia line of the Washington Railway & Electric Company, a distance of approximately four miles.

(2) A single-track road located practically at right angles to the main line, and crossing it 15.5 miles from the Baltimore terminus. This road, the Annapolis Washington & Baltimore Railroad, one of the oldest steam roads in the country, is now electrified. It connects Annapolis with the Baltimore & Ohio Railroad at Annapolis Junction, with the Pennsylvania Railroad at Odenton, and with the new main line at Naval Academy Junction.

(3) A single-track suburban line running north from Washington, termed the Berwin & Laurel Electric Railway,



Washington Baltimore & Annapolis—Map of Lines.

which connects with the Washington Railway & Electric lines at Berwin, the cars of the latter company operating from Berwin to the Treasury building, Washington. It is proposed in the future to complete the system by extending the Berwin & Laurel road to meet the Annapolis Washington & Baltimore Railroad at Annapolis Junction.

The single-track mileage is as follows: Main line, 67.28 miles; Annapolis Washington & Baltimore, 20.5 miles; Berwin & Laurel, 9 miles. A total of 96.33 miles of track owned.

The main line is laid with 80-pound A. S. C. E. section 33-foot rails on 6 by 8 inch 8-foot chestnut ties, ballasted with gravel. The city tracks are laid with Pennsylvania Steel Company rails, section 273-125, in 50-foot lengths. The maximum grade is 2 per cent, with the exception of one 5.7 per cent grade about 500 feet long in Baltimore. With one exception the curves are of 1 degree or less. Seventy-nine per cent of the main line is tangent track. The track on private right of way is bonded with the American Steel & Wire Company twin-terminal bonds. In Baltimore Lord Electric Company soldered bonds are used and in Annapolis the Crown bonds. All bonds are of No. 0000 capacity. Those on private right of way are painted black.

As the country between Baltimore and Washington is rolling, with the valleys crossing the line, a large amount of grading, approximately 1,600,000 cubic yards, was necessitated in order to obtain the grades and alignment stated.

On private right of way the tracks are laid with 11-foot centers.

Entrance to Baltimore.

From the terminal in Batimore the cars operate over the city streets abont a mile and a half. At the foot of Scott street the cars leave the street level and pass on to a long

elevated roadway. The tracks cross the main line of the Baltimore & Ohio Railroad at a height of 22 feet on a through Pratt truss bridge 115 feet 6 inches long. This is the beginning of a series of three steel viaducts, by means of which a safe and rapid entrance into Baltimore is obtained. The viaducts aggregate approximately one-half mile in length and are separated by fills. The total distance from the north end of the elevated structure to the south end is approximately 1½ miles.

A short distance south of the elevated structure there are two tunnels, the northern one being at the head of a 40-foot cut. These tunnels are rectangular in cross section and are built with reinforced concrete sides and roof. The north tunnel is 88 feet long and the south tunnel is 270 feet long. They are connected by retaining walls 103 feet long. The tunnels pass under two county roads and one residence. They were constructed by making an open cut with a steam shovel; the concrete was then placed and the structures back filled upon completion.

There are no grade crossings of either steam or county roads on the entire main line, with the exception of two public road crossings little used. The under grade crossings consist of timber bridges and the overhead crossings consist of reinforced concrete solid floor girder bridges of the latter type giving a smooth running roadbed.

At Baltimore an attractive terminal building is located at Liberty and Marion streets, extending through the block and facing a cross street. The cars run through the station on the street level. The upper floors provide excellent office accommodations for the railroad operating organization.

Washington Baltimore & Annapolis—Standard Two-Compartment Car Fully Equipped.

The terminal building is built of reinforced concrete throughout, with brick and stone facings on streets. Accompanying halftone illustrations present interior and exterior views.

Overhead Construction.

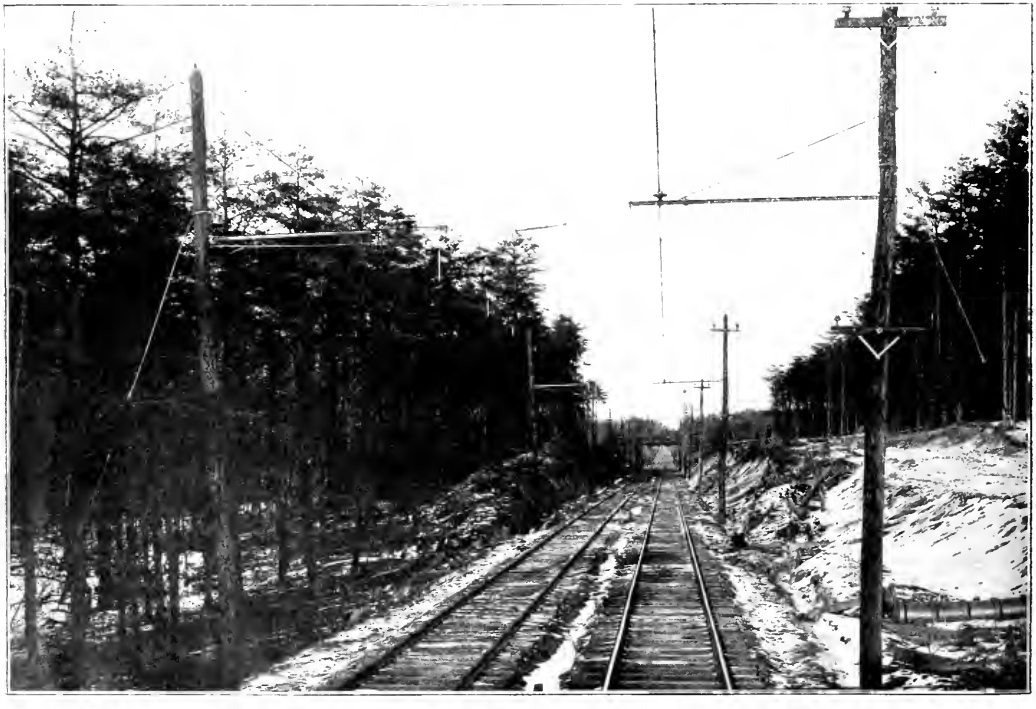
Accompanying engravings show the arrangement and dimensions of the overhead construction and also include a complete "circuit diagram." Compared with other single-phase roads the new Washington Baltimore & Annapolis overhead construction includes many advanced ideas.

Washington Baltimore & Annapolis—Double-Track Steel Viaduct over Steam Road.

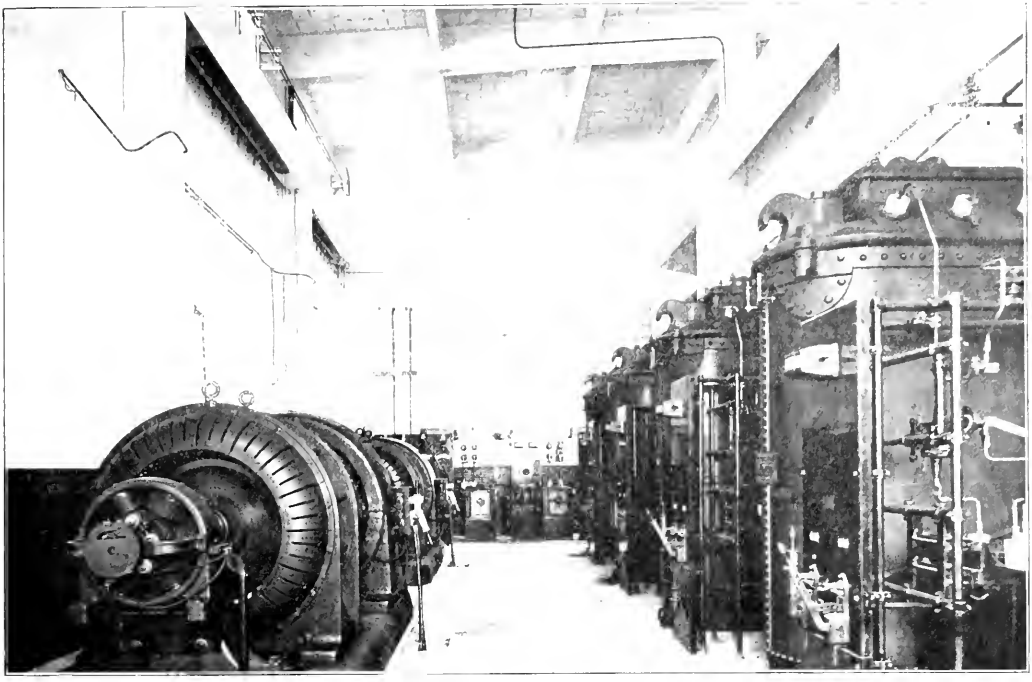
The trolley wires carry current to the cars at 6,600 volts feeding pressure. The single No. 0000 trolley wire over each track is supported from a $\frac{3}{8}$-inch high strength steel messenger cable by hangers spaced 16 feet 8 inches apart.

The messenger wire rests on top of a special insulator designed by C. E. Eveleth, construction engineer for the

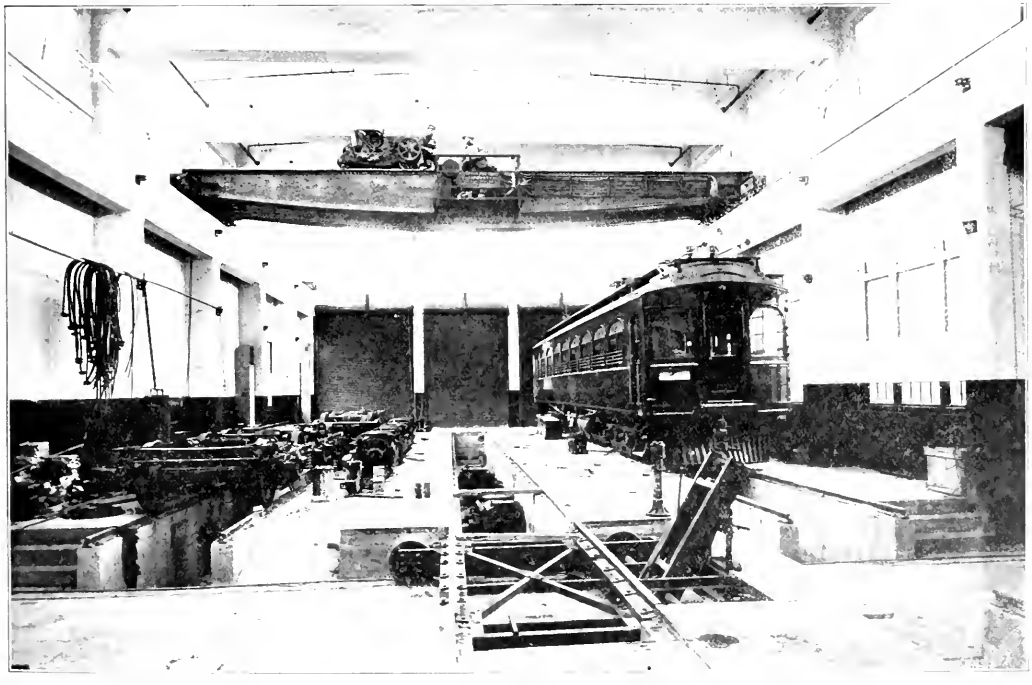
Washington Baltimore & Annapolis—Interlocking Tower at Naval Academy Junction.



Washington Baltimore & Annapolis—Overhead Construction on Main Line.



Washington Baltimore & Annapolis—Interior of Substation at Naval Academy Junction.



Washington Baltimore & Annapolis—Interior of Part of Repair Shops.

General Electric Company. This insulator of porcelain is provided on its upper surface with grooves parallel with and also at right angles to the messenger wire. The grooves are of such depth in the porcelain and are so spaced that any ordinary blow will not damage the entire insulator, but serve merely to crack off one side of the petticoat, leaving the messenger wire in the top still well insulated.

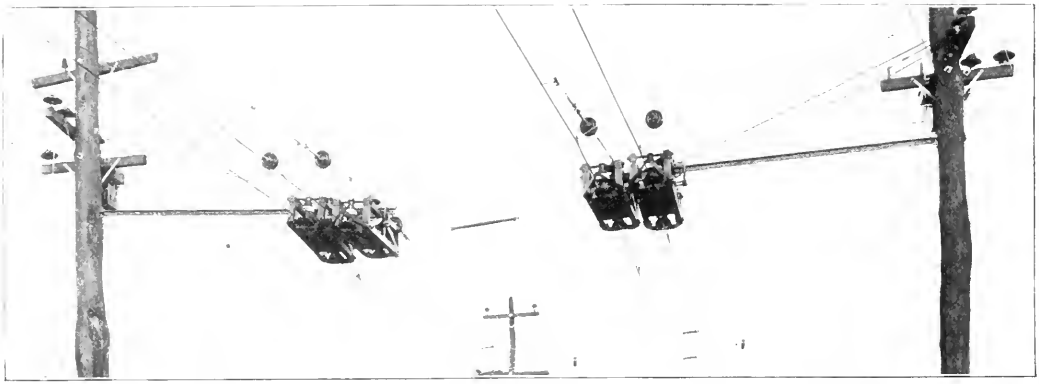
The messenger wire insulators are cemented on malleable iron pins, the pins being adjustable on bracket arms comprising 10-foot 6-inch lengths of T-bar and $\frac{5}{8}$-inch supporting rods, as illustrated in detail.

Where the line is double-tracked from Washington to Baltimore a pole line is erected on each side of the right of way, carrying the side brackets for suspending the trolley wires. The poles, which are painted with carbolineum, are spaced 150 feet apart. This pole spacing is not reduced except on curves sharper than 6 degrees. Each pole carries a bracket of the type illustrated. At the outer end of each bracket is a gnide casting through which is threaded a cable extending across the track between each pair of poles. Other cables extend from each pole obliquely to the ground and there are anchored with Miller guy anchors. The pole line by this arrangement is given ample stiffening against lateral vibration. A 24-inch wood break strain insulates one trolley supporting system from the other on the double-track roadway.

On the branch line running from Academy Junction to Annapolis single-track construction is used with a single pole line.

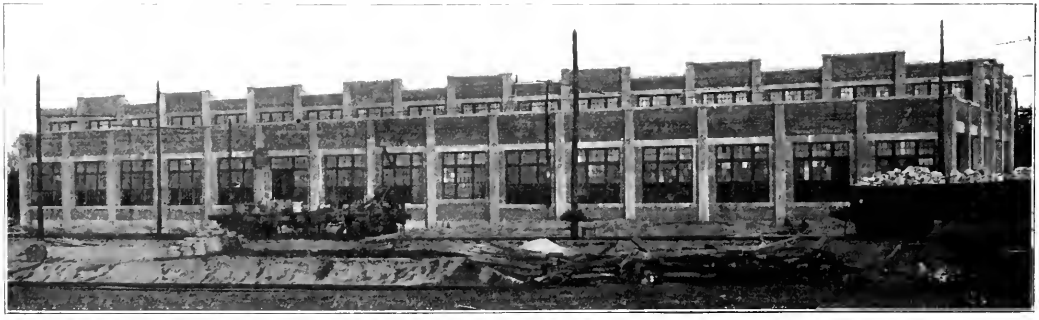
All pole lines are grounded in the following manner: A ground wire of $\frac{1}{4}$-inch galvanized steel strand is strung along the tops of the poles, which line is grounded at every fifth pole. On each bracket at the back of the pole casting, and in electrical contact with the latter, is mounted a ground plate, which is connected by a wire with the ground line extending along the tops of the poles. By this arrangement each bracket is thoroughly grounded.

On curves as conditions demand the messenger and trolley are guyed by wires extending from porcelain strain insulators mounted on the poles, out to the suspension rods on each side of the bracket. On tangent track steady braces are installed on every tenth pole. At sidings the main line and switch track trolley wires are parallel, but no switch pan is used. Where the line passes under bridges the structure overhead is protected by a galvanized iron trolley trough grounded to the rails.



Washington Baltimore & Annapolis—Section Insulators Where Change of Current is Made.

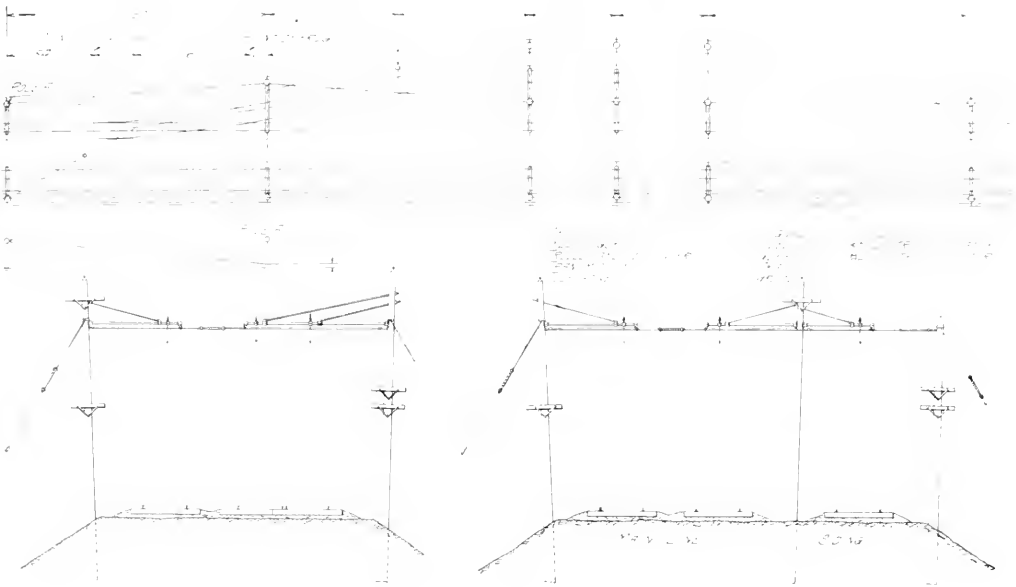
In Baltimore the cars are operated over the city tracks by direct current at 500 volts potential taken from span supported trolley wires of the usual form carried on steel poles. In Annapolis and Washington direct current is also used and a double overhead trolley was required with one positive and one negative wire for each track.



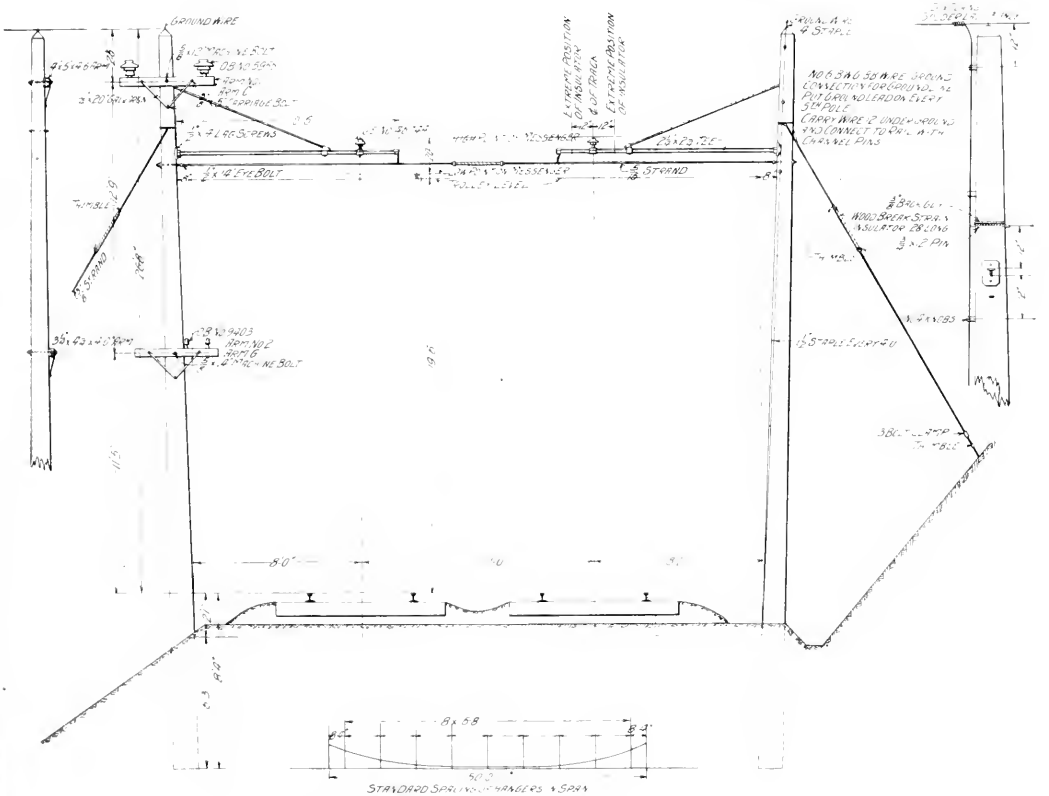
Washington Baltimore & Annapolis—Exterior of Repair Shops.

Illustrations are presented showing the sectionalizing line breakers installed where the change is effected from alternating to direct current or vice versa. The car apparatus is so designed that these changes from trolley wires supplying one kind of current to the other can be made at full speed.

The method used for placing the hangers which support the trolley wire from the messenger wire is of interest because of the economy resulting therefrom. For this work the



Washington Baltimore & Annapolis—Line Construction at Turnout.



Washington Baltimore & Annapolis—Standard Straight Line Trolley Construction.

construction force used a train of five box cars attached to a heavy steam locomotive. Thirty men were spaced along the tops of the cars. Each man was provided with and placed only one length of hanger, so that the disposition of material was greatly simplified. With 150-foot spans and nine supports between poles five different lengths of hangers were required. With a gang working as described about four miles of trolley was hung each day.

Current Distribution.

Current for the operation of the entire line is purchased from the Potomac Light & Power Company, which operates the Bennings station. This generating station (see Electric Railway Review, June 8, 1907, page 747) is located on the line of the new road, so that no difficulties were encountered in delivering high-potential current to the transmission line on the private right of way.

The high-tension transmission line comprises two No. 00 copper wires supported at the top of one of the trolley pole lines. The insulators are of triple-petticoat porcelain construction, with a maximum diameter of 8⅜ inches and a height of 7⅛ inches. They are supported on 9-inch oak pins.

The transmission and trolley line fittings were supplied part by the Ohio Brass Company and part by the General Electric Company. The latter company supplied the messenger wire insulators, catenary hangers, steady braces and section insulators. The other material for the various services in the overhead and transmission system, including Detroit trolley wire clamps and Miller guy anchors, was supplied by the Ohio Brass Company.

Substations.

The current as delivered to the railway company substation in Washington is at 6,600 volts pressure, three-phase, 25-

Washington Baltimore & Annapolis—Concrete Subway at Baltimore Entrance.

cycle. How this current is transformed, distributed and delivered to the cars from the overhead conductor is shown graphically by the circuit diagram and the mileage and copper diagram which are presented herewith.

There are two feeding points which serve the entire mileage operated by alternating current. These are at the Washington and Naval Academy substations. As stated, current at Washington is received at 6,600 volts, three-phase. By means of Scott connected one-to-one transformers the Washington end of the two trolley wires are fed with 6,600-volt current. For the remaining portion of the line a bank of 800-kilowatt oil-insulated water-cooled Scott connected transformers step up the current to 33,000 volts pressure for transmission to the Naval Academy Junction substation, 18.06 miles distant. Here the potential is stepped down by four transformers of like capacity and fed to the trolley wires extending four ways from the junction. The substation which is illustrated is of ample size to receive two more transformers.

To provide direct current for the shops and yards at the junction and for the street trackage in Baltimore and Annapolis there are two synchronous motor-generator sets in substations at each of these places. These motor-generator sets take 6,600-volt current from the trolley at 6,600 volts and regenerate it as 600-volt direct current.

The units at Baltimore and Annapolis have 300-kilowatt single-phase motors, while those in the Naval Acadamy Junction substation have two-phase motors. Normally these operate on the secondaries of the step-down transformers for one

Washington Baltimore & Annapolis—Waiting Room in Baltimore Terminal Station.

phase and on the incoming trolley from Washington for the other phase. They operate equally well, however, on either single phase. There is a tendency for these machines to balance the voltage between the two phases, which feature is valuable under some conditions of loading.

All the substation apparatus is of General Electric manufacture.

Telephone and Signal Systems.

The telephone system comprises a pair of No. 10 galvanized-iron wires mounted on 3 by 3½ inch brown porcelain 5,000-volt insulators and having connected to this pair at each station and at booths along the lines Kellogg Switchboard & Supply Company telephone sets with 5-bar generators and 2,000-ohm ringers. The telephone wires have a single-pin transposition on every fifth pole. Each set of telephone instruments is protected from high voltages by a General Electric 109-Y one-to-one telephone transformer.

On the east and west line from Annapolis to Annapolis Junction Blake signals, supplied by the Blake Signal & Manufacturing Company, Boston, Mass., are being installed. The main line will be protected by automatic electric block signals. The interlocking equipment at Naval Academy Junction tower, shown in the illustration, was supplied by the General Railway Signal Company, Rochester, N. Y.

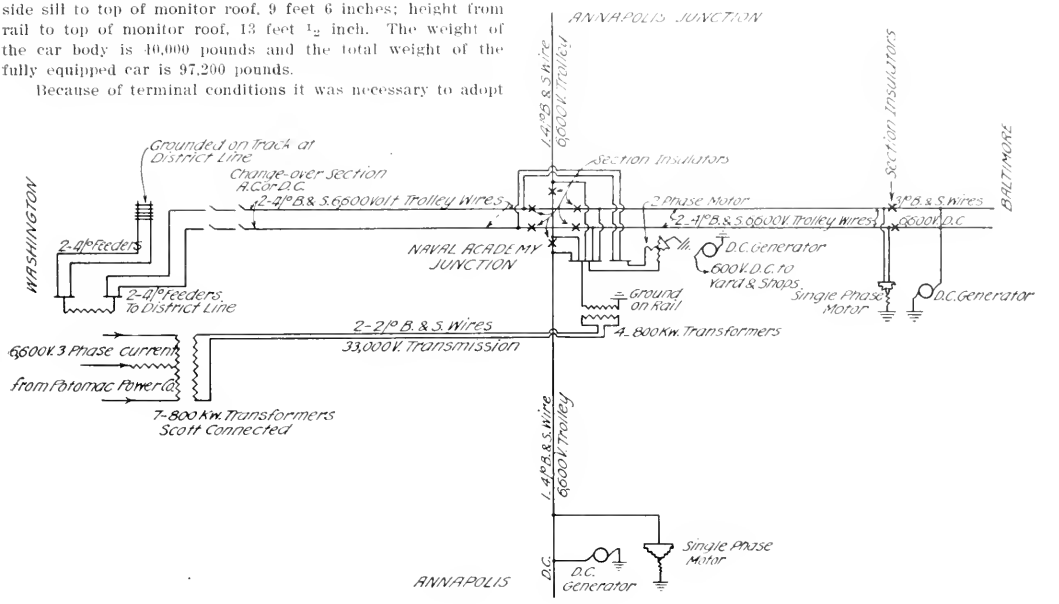
Rolling Stock.

The passenger rolling stock equipment comprises 19 cars for limited service and 4 for local service. These cars were described and illustrated in a very complete article by E. P. Roberts, president of the Roberts & Abbott Company, in the Electric Railway Review for October 12, 1907, page 438.

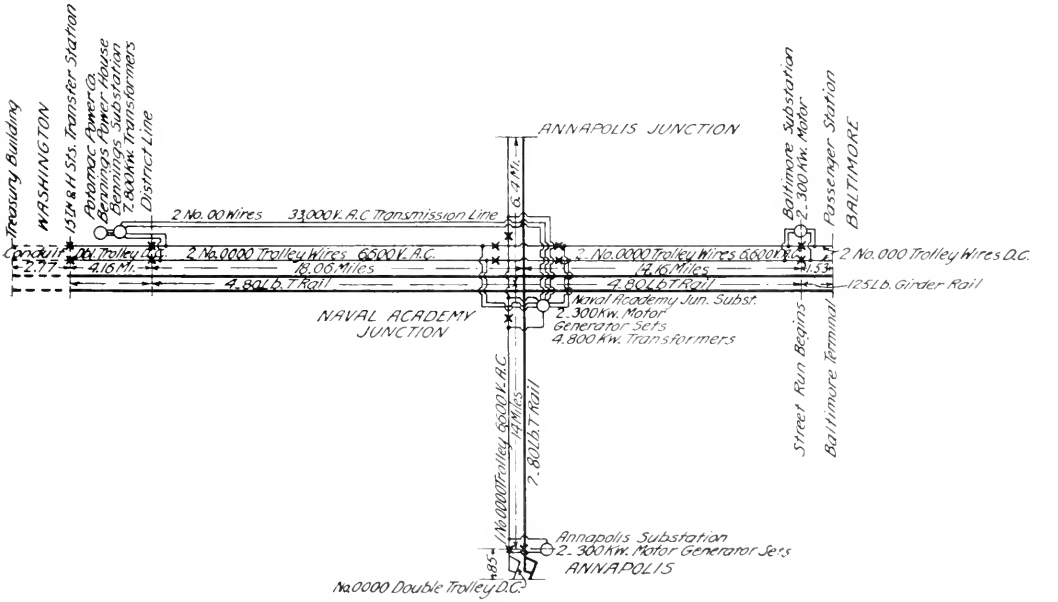
The detail dimensions of the limited cars are as follows: Length of body over corner posts, 51 feet 1¾ inches; length

over spring buffers, 62 feet 2¾ inches; length of smoking compartment, 12 feet 7⅝ inches; length of general compartment, 38 feet 6⅛ inches; width of car body, inside, 8 feet ¾ inch; width over all, 9 feet ¾ inch; height from bottom of side sill to top of monitor roof, 9 feet 6 inches; height from rail to top of monitor roof, 13 feet ½ inch. The weight of the car body is 40,000 pounds and the total weight of the fully equipped car is 97,200 pounds.

Because of terminal conditions it was necessary to adopt double-end cars. Both end platforms have doors and steps on each side and vestibule doors for the convenience of the crews when operating cars in trains. The toilet room is adjacent to the vestibule of the main passenger compartment. The main passenger compartment has a seating capacity of 50. The smoking compartment is located at one end of the car and has seats for 16 passengers. In one corner of this compartment is placed the high-tension cabinet, containing the protective and selective apparatus for the motor control circuits. The seat spacing is unusually liberal and the seats are long, with arm rests and high backs.



Washington Baltimore & Annapolis—Circuit Diagram, Showing Connections for Distribution and Transmission Systems.



Washington Baltimore & Annapolis—Mileage and Copper Diagram, Showing Lengths and Interconnection of Electrical Circuits.

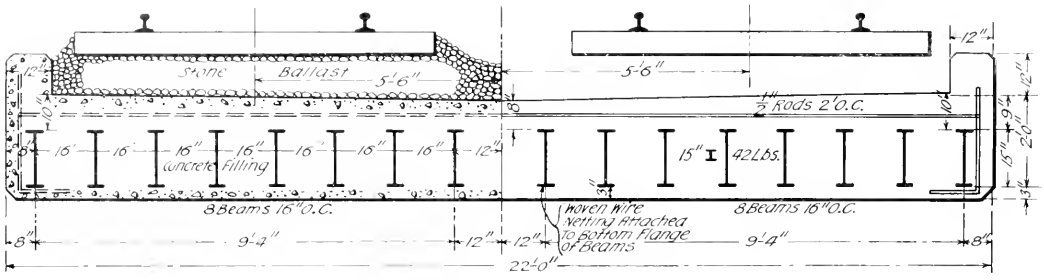
The ceiling is of the full empire type. The interior finish is mahogany and presents an exceptionally rich and attractive appearance, with a minimum of projections to catch dirt. The ceiling is olive green, trimmed with gold. The seats are covered with dark green Pantasote. The windows are protected on the outside by iron bars and the upper portion is finished in cathedral leaded glass.

There are two trolley poles at each end of the car, one for the high voltage and the other for the double trolley overhead return system which is required in the District of Columbia. Provision has also been made so that if it is ever decided to operate in the city of Washington a conduit plow and current collecting shoes may be attached.

The electrical equipment of each car consists of four G.E. alternating-current motors, each rated at 125 horsepower. Each motor weighs approximately 5,800 pounds and the auxiliary equipment for each car weighs about 14,000 pounds. Under and to one side of the car is placed a commutating switch for changing from alternating-current single to direct-current double trolley, or vice versa, at the District of Columbia line. Selective switches are provided to change automatically from alternating to direct current or vice versa at the end of the private right of way in Baltimore.

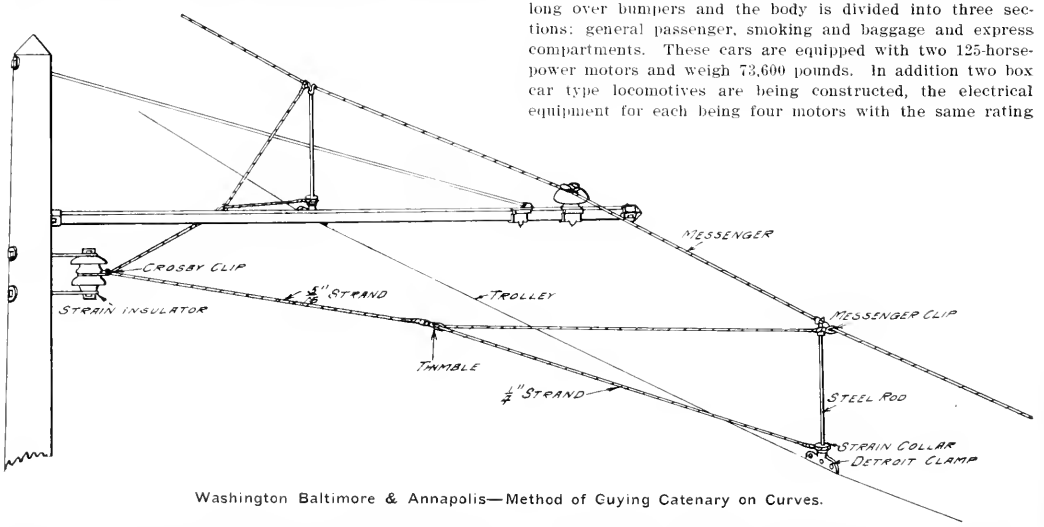
The trucks are of the Baldwin M. C. B. type with 7-foot 6-inch wheel base, weighing 14,900 pounds each. The wheels were furnished by the Standard Steel Works. They are steel-tired, with cast-steel centers, and are 37½ inches in diameter. The dimensions and section of the wheel treads and flanges are illustrated in the accompanying engravings.

The equipment includes the following specialties: Hale & Kilburn Manufacturing Company's seats, Pantasote curtains with Curtain Supply Company fixtures and O. M. Edwards & Co.'s window fixtures, Crouse-Hinds alternating-current-direct-current headlights, Dayton Manufacturing Company's water closets, Ham air sanders, Edwards trap door fixtures, Dayton Manufacturing Company's parcel racks, Knutson trolley retrievers, Royal fire extinguishers, Adams & Westlake signals, Peacock type C hand brakes, Wallace Supply Company's bronze trimmings, Baltimore Ball Bearing Company's center and side bearings, Symington journal boxes, American Brake Shoe & Foundry Company's brakeshoes, Westinghouse automatic air brakes and air couplers, General Electric compressors and Gould drawbars. International fare registers are used in cities.



Washington Baltimore & Annapolis—Details of Solid Floor Bridges.

The local cars are of the same general character of construction as the through cars, but are 54 feet 11⅜ inches long over bumpers and the body is divided into three sections: general passenger, smoking and baggage and express compartments. These cars are equipped with two 125-horsepower motors and weigh 73,600 pounds. In addition two box car type locomotives are being constructed, the electrical equipment for each being four motors with the same rating as for the passenger cars and geared for the same speed as the local cars. The Niles Car & Manufacturing Company, Niles, O., furnished the cars described from plans and specifications prepared by the Roberts & Abbott Company.



Washington Baltimore & Annapolis—Method of Guying Catenary on Curves.

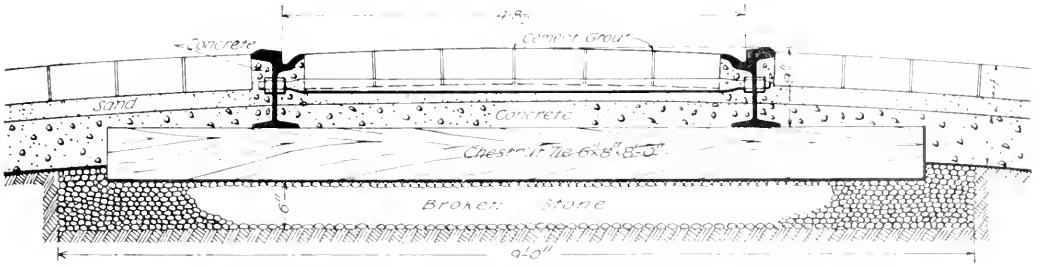
Repair Shops.

Excellent shop facilities have been provided at Naval Academy Junction. Accompanying engravings show the general appearance and details of construction of the new shops. The central substation earlier referred to in connection with

the power distribution is located on the shop property.

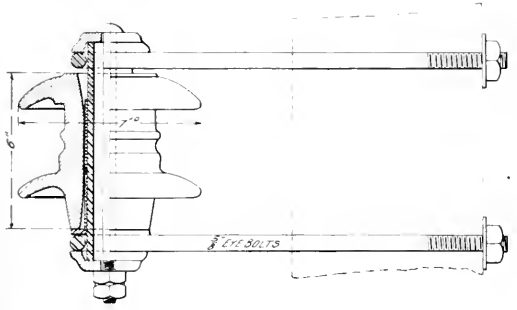
With the exception of the blacksmith shop the several shop departments are under one roof. The shop building is a reinforced concrete structure with brick curtain walls. The

system with an engine-driven American Blower Company fan. The York Engineering Company, York, Pa., had charge of the heating installation. A large Worthington pump furnishes water for fire service and smaller pumps circulate water



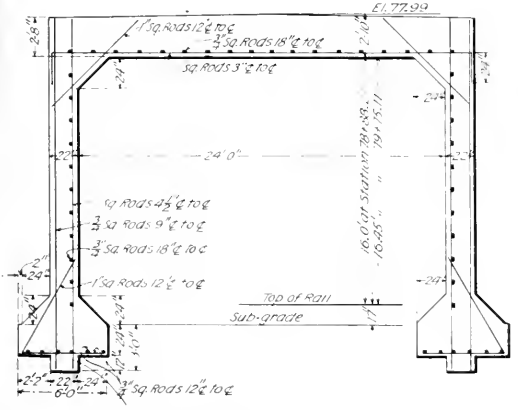
Washington Baltimore & Annapolis—Track Section in Brick Paved Street.

general ground dimensions are 256 feet 8 inches by 83 feet 8 inches. The building is divided by a longitudinal wall into



Washington Baltimore & Annapolis—Strain Insulator.

two bays. One bay is subdivided by cross walls into three rooms to be used as an inspection shop, machine shop and

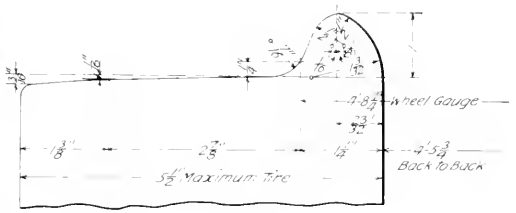


Washington Baltimore & Annapolis—Section of Concrete Subway, Showing Arrangement of Reinforcing Rods.

car-cleaning room. The second bay is subdivided into a carpenter shop, stock room, toilet rooms, offices, armature shop and a paint shop.

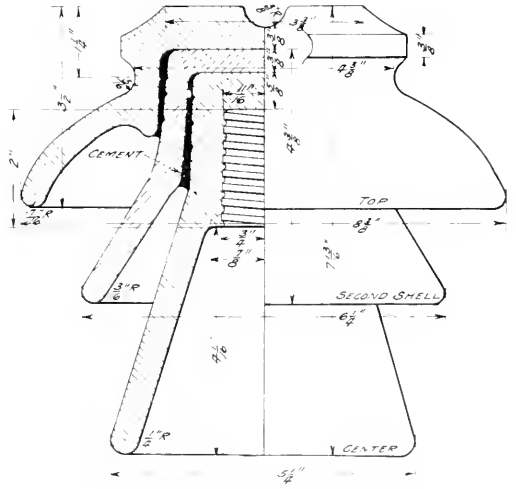
The shop is protected from fire by an equipment of International automatic sprinklers. Heating is by a hot air

through the transformers and elsewhere in the shops. An emergency water supply is provided by a tank on a high steel



Washington Baltimore & Annapolis—Section of Wheel Tread and Flange.

tower, furnished by the United States Wind Engine & Pump Company, Batavia, Ill.



Washington Baltimore & Annapolis—Three-Piece Cemented 30,000-Volt Insulator.

The shops are wired for both alternating and direct current lighting, using 100-volt incandescent and series arc lights, respectively. Plentiful daylight illumination is furnished by side sashes, skylights and rows of sashes above the crane runway. The latter sashes are interconnected for operating by

a Lovell window-operating device, supplied by the G. Drouvé Company, Providence, R. I.

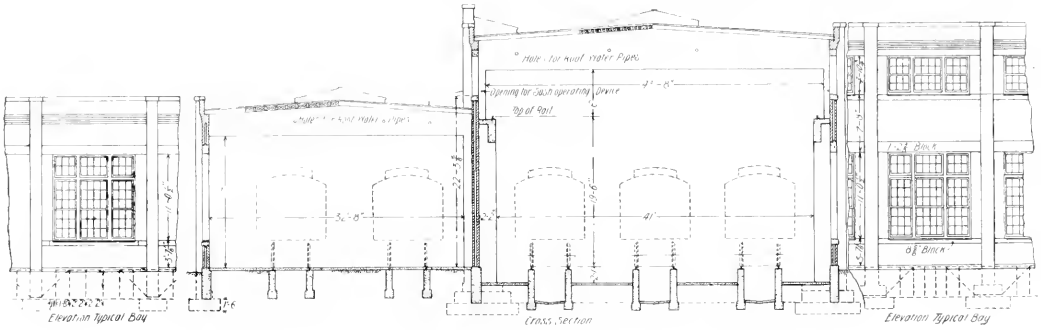
The truck and machine shops are served by an overhead crane of 15 tons lifting capacity. The crane has four electric motors and an auxiliary hoist. It was built by the Whiting Foundry Equipment Company, Harvey, Ill. The very complete equipment of machine tools was purchased from the Niles-Bement-Pond Company.

The track arrangement of these new shops is of especial interest. Outside the building the storage tracks for cars in daily use are served by alternating-current trolley wires, while the shop and adjacent tracks have trolley wires carrying 600-volt current. Switches in the nearby substations control the current supply to the yards and shop buildings.

The track layout in the various divisions of the shops is shown in the accompanying floor plan In the inspection and wash room the concrete floor is sloped so that rapid drainage is provided. One track in this department is raised about six inches above the floor level, so that water will run under the rails. The other two tracks are provided with pits. All tracks ending in the shops are provided with Ellis bumping posts.

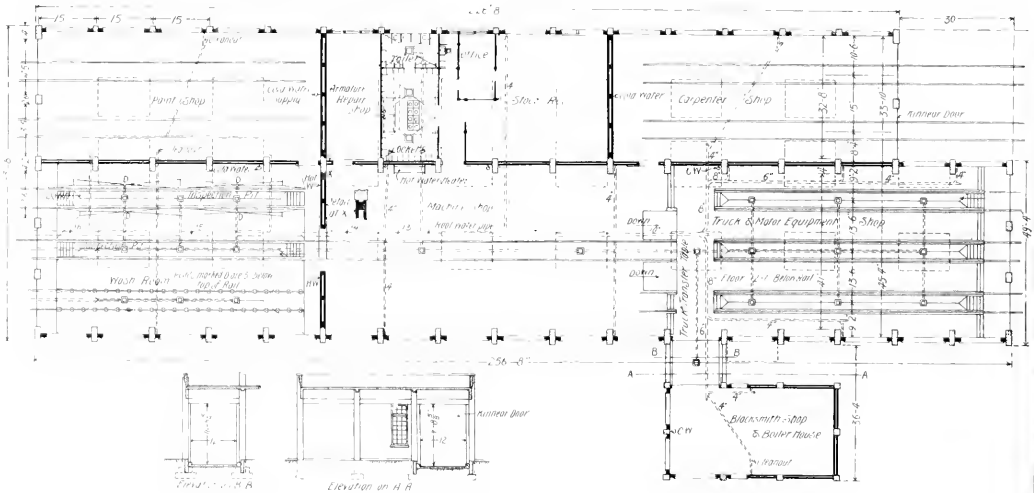
One track extends through the wash room, machine shop and truck shop. In the latter shop there are three pit tracks and a truck transfer table, as shown in the foreground.

If it is desired to change the trucks under a car the car is placed in the shop so that the trucks to be replaced stand on the transfer table. Then with the overhead crane the body is lifted just high enough to let the wheels clear the truss rods. The transfer table can then be moved by hand, out from under the car body, taking the trucks on it. These can be run on to another track and a different set placed on the transfer table. Then the table and trucks are moved under the car body ready for it to be lowered again. A decided advantage in this method of truck replacement is that for removing the trucks it is not necessary to lift the car body so high that the trucks will clear the steps, but only high enough so that the wheels will clear the truss rods.



Washington Baltimore & Annapolis—Section Through Part of Repair Shops.

The Washington Baltimore & Annapolis road has been built for high-speed operation. The territory is one from which little but through traffic may be expected for some time to come, and as the competing steam railroad service between Baltimore and Washington offers 123 trains each day, one-hour running time, the necessity for high speed is apparent. The new road will, when fully in service, operate cars between the Baltimore and Washington terminals, 38 miles, on a 15-minute headway, making the run in one hour, including the time required to operate over the 4.5 miles of track in the District of Columbia, owned by the Washington Railway & Electric Company. The Washington terminal is at Fifteenth and E



Washington Baltimore & Annapolis—General Floor Plan of Repair Shops.

streets, N. E., where passengers will be transferred free to the H street urban line. The Baltimore terminal building of the electric railway is at the corner of Park avenue and Mari.n street, near the heart of the retail shopping district.

Rates of Fare.

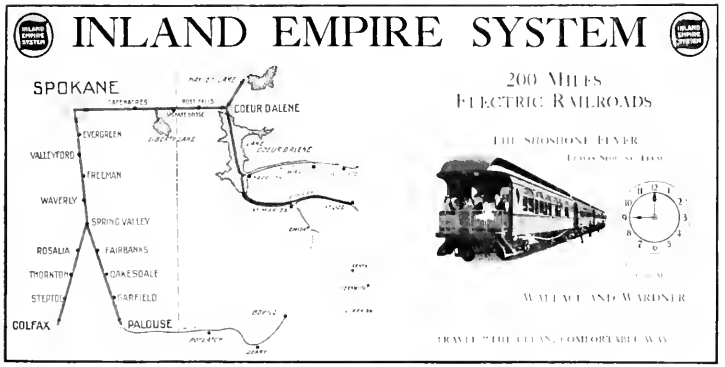
The steam railway fares between Washington and Baltimore are $1.00 one way and $2.00 round trip, except on Saturday and Sunday, when an excursion round-trip ticket is sold for $1.25. The electric railway fares will be 75 cents one way and $1.45 round trip, tickets to be good until used.

Between Annapolis and Washington, about 38 miles, the electric railway will operate four trains per day each way, charging 75 cents one way and $1.25 round trip. The steam roads charge $1.20 one way and $2.00 round trip for the same mileage.

The rates of fare between Baltimore and Annapolis, 29 miles, have not been decided.

ADVERTISING CARDS ON THE INLAND EMPIRE SYSTEM.

We have received from Charles E. Flagg, department of publicity of the Inland Empire System, Spokane, Wash., copies of two display cards issued with the idea of educating people who glance at the poster to memorize the principal points reached by the system. The larger card, which is reproduced herewith, shows the map, which is the sole feature of the smaller card. The larger cards will be used for street railway advertising and the smaller cards will be framed and placed in the cars of the system and in stations, hotels, etc.



Advertising Cards on the Inland Empire System—Large Card.

New Sanitary Regulations for Kentucky Street Cars.

The Kentucky state board of health has instituted a campaign for better sanitary conditions in the street railway cars operated in the various cities of the state and after conferences with local health officers and railway officials has issued a new set of regulations. The officers of the Louisville Railway have offered to co-operate with the board in every way. The regulations adopted by the board are as follows:

"First—All cars operated are to be disinfected once daily by the formalin and permanganate of potassium method or by such other system as may be regarded safe and hygienic by the board. No car not regularly used is to be sent out on duty until duly disinfected as above directed.

"Second—At the terminus of each half trip each car is to have both front and rear doors opened for at least two and one-half minutes, or during the time when running the last square of trip.

"Third—Operatives are to be enjoined, and directed to enforce, the various city ordinances, and the regulations of this board in reference to expectoration.

"Fourth—Each car operated is to be thoroughly scrubbed or otherwise rendered clean daily.

"Fifth—Cars must be properly ventilated and heated.

MEETING OF THE CENTRAL ELECTRIC ACCOUNTING CONFERENCE.

The meeting of the Central Electric Accounting Conference was called to order at 11 a. m. on Tuesday of this week at the Lima house, Lima, O., by the chairman, M. W. Glover, auditor Ohio Electric Railway, Cincinnati. Mr. Glover spoke of the many expressions of opinion which he had received, favoring the continuance of the conference, and said that responses to his letters of invitation to be present at the Lima meeting had been received from a number of accounting officers who would not be able to attend this meeting, but hoped to be at future meetings.

Freight Claims.

The first business before the meeting was the consideration of an agreement for the handling and settlement of overcharge and loss and damage freight claims between carriers. After discussion, rules were adopted. An abstract of some of the loss and damage rules follows:

Claim for concealed loss shall be prorated on revenue, initial point to destination. Such claim sball be verified in manner satisfactory to the paying carrier.

Claim for unlocated loss shall be prorated on revenue from point where freight is last checked in full and in good order to point where loss is discovered.

Claim for concealed damage shall be prorated on revenue, initial point to destination. Such claim shall be verified in manner satisfactory to paying carrier.

Claim for unlocated damage shall be prorated on revenue from point where freight was last checked in good order to point where damage is discovered. When delivering carrier loads freight at junction point and checks it in good order, and receiving carrier rechecks and finds freight damaged, or finds loss arising from damage, under delivering carrier's seals, claim shall be divided between delivering and receiving carriers, 50 per cent each. Claim for unlocated damage by overflow from the clogging of ice boxes, or drip pipes, shall be prorated on revenue from point where car is first iced to point where damage is discovered. Freight in car furnished by refrigerator car company, under contract to provide refrigeration, is expressly excluded from the provision of this paragraph.

Claim arising from delay shall be charged to carrier with which delay is located. When delay is located with two or more carriers, claim shall be charged to such carriers, each carrier being charged with such proportion thereof as delay located with it bears to entire delay.

When freight reaches destination in visibly good order, and is unclaimed or refused, and has to be sold for charges and expenses, and proceeds of sale do not cover same, deficit shall be prorated on revenue by carriers interested in transportation charges, unless it is clearly shown that the deficit is the result of negligence of one or more carriers in the line.

Where a shipment received from another carrier is found to have been damaged by wreck or otherwise, necessitating a return to the shippers for repairs, no charge shall be made for the return movement, provided shipment is returned by the same route it was forwarded, reference to the original billing to be shown on return billing.

The following rule applies to loss and damage and overcharge claims:

No charge shall be made by one carrier against another when the entire proportion beyond charging carrier is less than 25 cents, except that in cases of misrouted shipments through error of carrier's agent, there shall be no minimum; and except as specifically provided for in another rule or ruling. No correction shall be required in bill rendered or authority issued, for any clerical error less than 25 cents.

Other rules concerning overcharges follow:

When claim for overcharge caused by erroneous classification is presented, and it is supported by bill of lading or receipt for freight, published classification and original invoice,

or certificate of delivering agent, it may be settled, and the other carriers in interest will be obligated to pay their proportions of the amount so paid; provided, however, that no deduction shall be made in the advanced charges back of a rebilling point without a full knowledge of what they represent.

When claim for overcharge caused by erroneous rate is presented, and it is supported by published tariff in effect at time of shipment, which has been accepted by all parties in interest, it may be settled, and the other carriers in interest will be obligated to pay their proportions of the amount so paid.

When claim for alleged overcharge is presented, supported by bill of lading, or receipt for freight, naming unauthorized rate, it shall be referred at once to the carrier the agent of which made such unauthorized contract. Such rates shall not be protected.

Overcharge arising through error of agent or other employe through improper routing or waybilling, shall be paid by the carrier employing such agent or employe, except that when contributory negligence on the part of other carriers can be shown, claim shall be charged to the carriers at fault upon the basis of revenue.

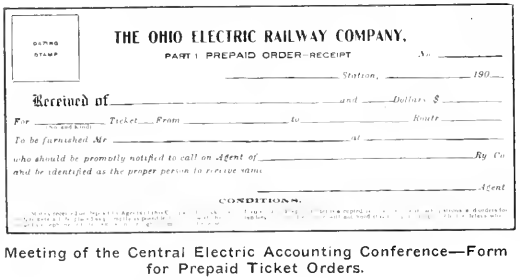
All undercharges occurring through errors in the original division of earnings, which are discovered in handling overcharge claims, shall be credited to the carriers to which they belong in the final apportionment; provided the amount is in excess of the debit minimum and cannot be adjusted through interline freight account settlement.

When an amount is recovered from any carrier through due process of law, such amount and all costs and special attorney fees shall be settled under the appropriate rule, provided that the carrier or carriers which, in course of investigation, signified willingness to participate in payment under appropriate rule, shall be exempt from participation in the expenses incident to litigation. The term, "due process of law," means any settlement by court or attorneys interested, after suit has been commenced, or before suit has been commenced, when general or principal attorney of carrier to which claim is presented advises in writing in claim papers that such suit cannot be successfully defended.

Proceedings of Afternoon Session.

At the afternoon session Frederic Nicholas, associate editor of the Electric Railway Review, spoke on the subject of "Uniform Accounting."

It was decided that vouchers should be mailed on the last day of each month in settlement of interline ticket balances



THE OHIO ELECTRIC RAILWAY COMPANY.

CONDITIONS.

Meeting of the Central Electric Accounting Conference—Form for Prepaid Ticket Orders.

for the preceding month, the minimum amount to be $1.00. Any balance of less than this amount would be carried over to the ensuing month.

The subject of prepaid ticket orders was fully discussed and it was finally decided to adopt a form recommended by Mr. Glover. This form is in four parts, an original and three carbon copies. Part 1, illustrated herewith, is delivered to the individual who makes the deposit for the ticket; part 2 is to be forwarded to the agent who is to furnish the ticket; part 3 is to be sent to the auditor, attached to the daily balance sheet; and part 4 is to be held by the agent for his office record.

The apportionment of interline tickets on a uniform basis was discussed, and Charles F. Price, general passenger agent Western Ohio Railway, who was present, was requested to ask the Central Electric Traffic Association to furnish statements of division of interline freight and ticket rates between lines for use in the apportionment of revenues from such business. The sum of five cents was adopted as the minimum for correction of mistakes on the revenue from a single ticket. Complaint was made of the lack of uniformity in the apportionment of revenue by the traffic departments of connecting lines.

Chairman Glover was authorized to appoint a committee to procure blanks for the presentation of claims, freight and ticket accounts and other purposes, with a view to securing uniformity. This committee will report at the next meeting, which will probably be held in the latter part of May. It was suggested that hereafter the meetings be held at the same time as the meetings of the Central Electric Railway Association and the Central Electric Traffic Association; but in the discussion it developed that many of the accounting officers would be unable to attend the meetings on account of the absence of other officials, who would want to attend the sessions of the other associations. It was therefore thought that the best results would be attained by continuing the present plan of having the accounting meetings separate from those of the other associations. An effort will be made to arrange for a session lasting two days at the next meeting.

Railway Representatives Present.

The following representatives of railways were present:

Ohio Electric Railway—M. W. Glover, auditor; M. White, traveling auditor; F. A. Burkhardt, division passenger and freight agent; C. S. Carl, storekeeper; George Mayer.

Western Ohio Railway—R. H. Carpenter, auditor; C. C. Collins, general freight agent; C. B. Baker, freight auditor; H. H. Stephenson, assistant freight auditor; E. Riddle, traveling freight agent; Oliver Burgett.

Terre Haute Indianapolis & Eastern Traction Company—L. T. Hixson, auditor; T. C. Dodd, freight claim agent.

Indiana Union Traction Company—Walter Shroyer, auditor.

Marion Bluffton & Eastern Traction Company—J. S. Clark, auditor; C. H. Shaffer, local freight agent, Bluffton, Ind.

Ft. Wayne & Springfield Railway—A. G. Kelly, auditor and general passenger and freight agent.

Ft. Wayne & Wabash Valley Traction Company—H. E. Vordermark, auditor.

Indianapolis & Cincinnati Traction Company—W. B. Wright, auditor.

Toledo & Chicago Interurban Railway—William Robins, auditor; G. M. Patterson, general freight and passenger agent.

Toledo Urban & Interurban Railway—W. L. Smith, superintendent; C. J. Laney, assistant general freight agent; W. I. McClure, auditor.

Muncie & Portland Traction Company—E. J. Skehan, auditor.

Lake Shore Electric Railway—A. C. Henry, auditor.

Dayton & Troy Electric Railway—Cyrus Bucher, auditor ticket accounts; L. D. Johnson, general freight agent.

Springfield Troy & Piqua Railway—Gus Kohler, auditor.

Southeastern Ohio Railway Light & Power Company—William H. Neikirk, auditor.

Toledo Railways & Light Company—A. J. Lamb, chief clerk.

J. L. Blake, general manager of the Ft. Dodge Des Moines & Southern Railroad of Boone, Ia., in an address at Humboldt, Ia., last week, declared that the time had passed when interurban companies would buy right of way and expend large sums of money for the privilege of building lines. He said that hereafter the companies would demand more co-operation from the property owners interested and urged that the farmers and business men of communities desiring interurban lines go to the electric railway builders with a proposition to furnish the right of way and grade the roadbed in return for stock. He suggested that they organize according to districts for this work. "With this method," said Mr. Blake, "there is no reason why any well-populated section of Iowa should be without an interurban line."

The Pittsburg & Butler Street Railway last week began operating its cars over the tracks of the Pittsburg Railways Company to Sixth street and Penn avenue. At present only the limited cars, which run every two hours, enter the city, but it is expected that the local cars soon will do likewise.

PAY-AS-YOU-ENTER CARS FOR THE PUBLIC SERVICE RAILWAY.

The Public Service Railway expects to place in operation early in March on its Newark, N. J., lines a portion of an order for 150 pay-as-you-enter cars which are now nearing completion at the works of the Cincinnati Car Company. The first car of this type was received at the Plank Road shops of the company on February 15 and will be operated over the Newark lines during the next two or three weeks for the purpose of thoroughly familiarizing the motormen and conductors with the operating features essential to this type of equipment and also to give the public an opportunity to become sufficiently acquainted with the method for collecting fares so that when the new cars are used exclusively little trouble will be experienced.

The cars in general are not dissimilar to those now in successful operation in Montreal, Chicago and Buffalo, which have been previously described in the Electric Railway Review. They are single-end cars with little variance in the dimensions of the front and rear platforms from the Montreal cars and have two or three new features which are not found on any previous cars of this type. The body of the car over corner posts has a length of 30 feet 8 inches with a 5-foot platform in front and an 8-foot rear platform, making the total length of the car 43 feet. The cars are of the convertible type, the window dropping into a socket in the side of the car, and all the glass is set into the sashes with rubber filling. Twelve Hale & Kilburn cross seats are placed in the center of each car and two longitudinal seats are located at each end, giving a seating capacity of 40 passengers. Push buttons have been installed for the convenience of passengers as well as the more ordinary bell cord to the motorman's cab. The hand straps instead of being movable and hung

Pay-As-You-Enter Cars for Public Service Railway—View of Front Platform.

from a stationary pole are securely fastened at intervals of about two feet, the object being to secure a more even distribution. The interior finish is of cherry, which is standard on this road.

Motorman's Cab.

In the arrangement of the motorman's cab some changes have been made from the plans usually employed. At the extreme left and close to the bulkhead a Jewell No. 60 stove is installed. This is connected to a radiator placed just inside and near the roof of the car, from which the supply of air can be regulated. The location of the stove thus provides a means of keeping the cab at a comfortable temperature. The sandbox is located between the side of the stove and the front of the cab. The controllers are placed a few inches to the left of the center of the cab to provide the necessary space for the operation of the lever controlling the exit door. This lever is fastened to the front of the cab and, operating horizontally, controls two hinged doors which are locked at right angles to the side of the car when open. There are no grab handles on the inside of the front door and it can only be opened by the motorman's lever. There are no grab handles on the exterior of the front end of the car, the presence of which might be the cause of an accident to someone unfamiliar with this type of car, in trying to gain entrance through the front end. The closing of the front exit door automatically locks it so that it is impossible to enter.

Rear Platform.

The rear platform is divided by two railings, one separating the entrance and exit doors, behind which the conductor stands, as in the usual pay-as-you-enter car, and the other running parallel with the end of the car at about two feet distance, behind which smokers may stand without blocking the entrance. This space will accommodate six passengers, but standing on the platform will be discouraged as far as possible after fares have been paid. The entrance door swings inward and the exit door is of the sliding type, being controlled by a lever fastened to the body of the car within convenient reach of the conductor. This door, unlike the exit door on the front platform, can be opened by a passenger from within the car as well as by the conductor, but the conductor can at will prevent the opening of this door by keeping his hand on the lever. This may be desirable where an aged person is trying to get on the step before the car has come to a stop. With the conductor always at his position on the rear platform and both exit doors under control by employes it is hoped that accidents will be reduced to a minimum. At the shops of the Cincinnati Car Company the rear platform was tested by putting upon it 39 persons. It was found that the platform easily withstood the strain and could safely accommodate that number of people, so that in districts where traffic is congested at certain hours of the day few delays would occur in waiting for passengers to board.

It has not been definitely decided at this time just what type of fare box will be adopted. Sterling-Meaker registers have been installed and it is the plan of the company to have the fares registered by the conductor pressing with his heel a small plate connected with the register, but the exact method to be used in collecting the fares has not yet been decided.

Equipment.

The car is equipped with four Westinghouse No. 101 quadruple motors, Brill No. 27-G trucks and General Electric independent air brakes. The destination signs are of the Hunter illuminated type. The marker lights are the Nichols-Lintern type.

The words "Pay As You Enter" will be painted on the right side of the front of the car with either yellow or white letters on a background of red. It is thought that this will facilitate matters a great deal, especially when strangers not familiar with the operation of the cars are boarding. There are many foreigners in the locality served by this company that cannot read or understand the English language and the large red space, which does not appear on any other type of car of this company, will be a guide to what they may expect in boarding the pay-as-you-enter car.

BOOK TABLE.

Standard Handbook for Electrical Engineers. Written and compiled by a staff of specialists. New York, 1908. McGraw Publishing Company, 239 West Thirty-ninth street. Flexible leather, 1,300 pp., 4 by 7 in. Price, $4.00.

Practice in electrical engineering changes so frequently that it is not possible for text books on the subject to be kept up to date, but the latest ones from good authors are usually the most valuable.

The Standard Handbook is intended to be an improvement on other electrical handbooks published in this country and abroad, and in some respects this claim has been well sustained. The work of preparing the material has been assigned to 12 different authors, each of whom has made a specialty of his particular department. The book attempts to cover the entire field of electrical engineering and is divided into 20 sections, each of which is a complete and self-contained treatise on the subject covered by its title.

The section on materials contains much conveniently arranged information on conducting and insulating materials. The section on the design of electrical apparatus is up-to-date in its treatment of the design of transformers, motors and generators, and the constants taken are made from the best practice of the largest manufacturers. The standard practice of transmission line design and construction has been given its proper share of treatment, and several valuable tables are here added to the literature of the subject. There is a large amount of data concerning the cost of materials and labor, based upon recent prices. The report on standardization of the American Institute of Electrical Engineers is brought up to as late a date as October, 1907. The section on electric traction is particularly valuable, as it was written by one who had unusual opportunities for obtaining the best information on the subject, and it may be regarded as an important addition to the literature of modern traction practice and a satisfactory treatise on the entire subject. In this section will be found a large amount of data combined and condensed in the form of curves, much of this information being given to the public for the first time. The sections on transformers, generators, motors and electro-chemistry are all treated in a satisfactory manner, and supply constants for use in design which have not heretofore been available.

The mechanical construction of the book is fully up to the best standards for engineers' pocketbooks in regard to the quality of the paper, binding and printing. The index is unusually full, comprising 54 pages of the book and having 6,000 references. The arrangement combines the alphabetical and topical methods. The most decided departure from the usual method in indexing is the method of dividing the book into sections and paragraphs and referring to these as units instead of to pages. Taken altogether the Standard Handbook is the most satisfactory one for electrical engineers thus far published.

Electric car service was started on the First avenue line of the New York City Railway on January 5, from the Willis avenue bridge over the Harlem river at One Hundred and Twenty-fifth street to Fourth street. The horse car service on this line was abandoned on July 1 and the change to electric motive power was expected to be completed by October 1, but the work was suspended on account of the receivership. Horse car service will be continued on First avenue south from Fifty-ninth street.

MERIT SYSTEM AND OFFICERS' AND EMPLOYES' ASSOCIATIONS OF FT. WAYNE & WABASH VALLEY TRACTION COMPANY.

Both the efficiency of the service and the welfare of employes are promoted by the associations which have been created by the Ft. Wayne & Wabash Valley Traction Company, Ft. Wayne, Ind., under the direction of C. D. Emmons, the general manager. The associations are three in number: The Officers' association, which acts on questions of operation; the Superintendents' association, which considers matters of discipline; and the Employes' Mutual Benefit association, which provides relief and death benefits and is designed also "to promote social relations and good fellowship among the members, and the best conduct of the business of this company for the mutual advantage of the association and the company."

A vital part of this successful inner organization of the company is the merit system, applicable to all lines, which was adopted on January 15, 1908, as a change in the method of discipline "to better promote the interests of this company and employes and at the same time discipline such employes on their individual performance."

The official announcement concerning the new method of discipline and the list of merits and demerits for motormen and conductors have been given to us by Mr. Emmons and are as follows:

The Merit System.

1. The new method of discipline is what is known as the merit system and is introduced with the belief that it will be a benefit and that it will meet with the approval and cordial co-operation of all concerned.

2. The objects to be obtained under the new system are: (a) To avoid a loss of wages by persons employed and suffering to those dependent upon their earnings. (b) To stimulate and encourage employes in the faithful and intelligent performance of their duties.

3. Under this system a certain number of marks will be entered against the record of each employe for violation of rules, etc., instead of suspension, as formerly. The "Discipline" committee of the Superintendents' association will administer such discipline.

4. Where demerits are given for unsatisfactory service it is logical that merits should be given for good service; and merit marks will be credited on an employe's record whenever possible. In addition a prize of $25 will be awarded to the conductor and to the motorman having the best record at the end of six months. If more than one conductor or motorman have an equally good record at the end of six months the prize will be divided equally among them. The first prizes will be awarded on July 1, 1908.

5. Each employe will be notified in writing of any favorable or unfavorable entry against his record, the reasons therefor, and the number of marks given.

6. Whenever merit or demerit marks are given a notice will be posted stating how many marks have been given and on what charge, but omitting name, date, train or location.

7. When an employe's demerits have reached the number of 90 he shall be called in by the superintendent, duly cautioned and advised that when his demerits amount to 100 he will be subject to dismissal from the service.

8. Employes will be permitted to examine their record at any time upon application.

9. All employes affected by this system of discipline shall start on an even basis, that is, without merits or demerits.

10. This company reserves the right to discharge any employe under this system.

Immediate Discharge.

Disloyalty to the company, intoxication, dishonesty, false statements.

Demerits.

Incompetent or unsatisfactory service	10-100
Disobedience of rules governing railroad crossings	10-100
Failing to report accidents	10-100
Smoking on duty	10
Incomplete and poor accident reports	1-20
Inattention to passengers	1-10
Failing to show up or report for duty:	
First time in one month	10
Second time in one month	20
Third time in one month	30
Dirty car	[illegible]
Untidy condition of dress	[illegible]
Reading on duty	10
Unnecessary conversation when on car	5
Drinking intoxicants or frequenting saloons at any time	10-50
Accidents when avoidable	10-100
Ungentlemanly conduct	5-100
Disobedience of orders	10-100
Gambling	50
Bad judgment on special occasions	1-25
Criticizing management of road	50
Talking about accidents to others than proper officials of the company	20
Failure to report negligence or delays	2-10
Failing to protect trains	10-50
Carelessness in taking or transferring order	2-50
Signals improperly displayed or failure to notice and answer signals	2-50
Overrunning an order or getting on the time of another car	10-100
Carelessness with switches or derails	2-50
Running ahead of schedule	10-100
Running away from passengers	5-30
Careless or indifferent operation of car	5-25
Backing car without proper signals and protection	10-25
Injury to equipment caused by improper handling	10-50
Failure to report trouble or any defects with car, roadway or overhead	5-50
Acts detrimental to good service	3-20

Motormen's Special Demerits.

Running over circuit-breakers with current on	1-5
Allowing unauthorized persons to ride in vestibule	1-10
Headlight not burning according to rules	1-10
Feeding current too fast	10
Failing to whistle or ring gong in proper place	10
Starting car without proper signals, except to avoid collisions	10-25
Following car in front too close	10-25
Running too fast when within city or yard limits or over special work	5-25
Flattening wheels except to avoid collisions or accidents	5-20
Reversing car, except to avoid accident	25
Failure to observe stop, slow or caution sign	5-50
Improper use of air	5-10
Splitting switch	5-100
Using current with brake set	5-25
Running too close to wagons	5-25
Leaving car without taking reverse lever, throwing overhead or pulling line switch	5-25
Not obeying conductor's signals	0-25
Seated while operating car, except where permission is specifically granted	25
Running ahead of time	10-100

Conductors' Special Demerits.

Errors in taking register impressions or readings	1-10
Errors in punching transfers	1-5
Missing fares	5-25
Failing to ring up fares	10-50
Carrying people free	5-50
Repeated mistakes in report to auditor	5-25
Inattention to passengers	1-10
Bad judgment and carelessness in regulating heat or ventilators on car	1-10
Carelessness in using hat checks	5-25
Failing to cancel tickets	1-10
Bunching fares	5-25
Failure to turn in report and money on time	5
Sitting down while on duty, unless at authorized points	5-25
Riding inside of car when not necessary	5-25
Failing to hold trolley where necessary	5-25
Failure to be supplied with tickets, transfers and other necessary supplies	5-25
Failure to give proper signals	5-25
Failure to call stations, streets or public places	5-25
Punching transfers to permit passengers taking extra time	1-10

Merits.

Warning persons when in the act of jumping to or from a moving car, thus preventing accident	1-25
Assistance rendered in case of accident, such as to bring commendation from passengers	1-25
Securing the names and addresses of witnesses who saw the accident, other than those on report	5-25
Informing company of matters in the interest of good service	5-25
Politeness and attention to passengers	1-5

Reporting defects in equipment, track or line	5-25
Complete and perfect accident reports	5-25
Good judgment and work in handling blockades or on special occasions	5-25
Neatness in personal appearance	1-10
Striving to keep car neat and clean, lamps, windows, etc.	1-10
Good reports from barn foreman as to care of car equipment	1-25
For driving stock out of right of way	1-10
Using good judgment with sander	1-5
One month without demerits	5
Proper adjustment of windows, shades or ventilators	1-5
Keeping car at proper temperature	1-5
For any meritorious acts, which in the opinion of the discipline board deserve recognition	1-100

Motormen's Special Merits.

Careful handling of car during previous month	5-25
Good stop to avoid accident	5-25
For bringing in defective car without tying up line	5-25

Conductors' Special Merits.

Handling boisterous, unreasonable or drunken passengers with tact and judgment	1-25
Special attention to ladies, children or old and infirm persons	1-25
Perfect reports to auditor for one month	5-25

The Employes' Benefit Association.

The Employes' Mutual Benefit Association of the Ft. Wayne & Wabash Valley Traction Company was organized on October 1, 1907. Mr. Emmons informs us that 85 per cent of the employes of the company are members of the association. Its affairs are administered by a board of trustees, consisting of a chairman and six members, who are: C. D. Emmons, general manager, chairman; H. E. Vordermark, auditor; C. F. Guild, superintendent light and power department; H. L. Weber, chief engineer; H. Bittings, motorman on Lafayette city division; H. J. Waggoner, conductor on Ft. Wayne city division; and N. K. Smith, motorman on interurban division.

The trustees meet monthly and at their last meeting it was shown that since the organization of the association $500 had been disbursed for relief of members, and that there is now $1,000 in the treasury. The employes have requested that they be permitted to pay double dues, if they desire, and receive double benefits. An abstract of some of the principal articles of the constitution follows:

The membership shall be limited to employes now or hereafter employed by the company. Such membership shall cease when a member leaves the employ of the company unless terminated prior thereto.

Any member in good standing is entitled to the following benefits when the necessity for such is not due in any way to intemperate or immoral conduct. Payments while totally disabled or unable to labor by reason of accident, to the amount of 75 cents for each day so disabled, beginning with the first day of accident upon which wages are not earned, and for a period not exceeding 120 days in any one year, and provided that if upon the decision of the medical examiner a member shall have returned to duty after such accident, and shall again be disabled or unable to labor because of sickness resulting from accident within less than two weeks from his return to duty, such disability shall be computed with the prior one in computing the 120 days for which payments may be made. Payments while totally disabled or unable to labor by reason of sickness or injury other than accident in the company's service, to the amount of 50 cents for each day so disabled, after the first seven days, and for a period not exceeding 120 days in any one year; provided that if upon the decision of the medical examiner a member shall have returned to duty after such disablement or inability to labor because of sickness, and shall again be unable to labor because of sickness within less than two weeks from his return to duty, such disability shall be computed with the prior one in computing the 120 days for which payments may be made, and the deduction of seven days shall not be made therefrom. In the event of the death of a member, provided such death was not caused by intemperance or immoral conduct, there shall be paid to the person or persons designated by him, or, if there be no such person or persons, then to his executors or administrators, the sum of $100. Accident and sick benefits shall be paid semi-monthly, and death benefits shall be paid within 30 days after filing with the secretary the proof of death.

The funds of the association shall be derived from contributions of the Ft. Wayne & Wabash Valley Traction Company and the dues. For the several benefits, with the social privileges of the association, each member shall pay in advance 50 cents dues each month, to be deducted by the company from any moneys due such member, and paid by said company to the treasurer of the association. A member shall not be required to pay any dues for any time during which he is entitled to disability benefits, after the month in which the disability begins. If absent from disablement and the member shall recover in a month for which he has not paid, he shall not be required to pay dues for the remainder of that month, but will be entitled to payments for disability or death occurring during that month. The dues for a month or a part of a month are to pay only for the benefits secured to the members for disablement or death occurring in that month and subsequent to the date of payment, and those benefits are secured from month to month by a payment of monthly dues. Each month is to stand by itself and if service terminates at the end of a month nothing is to be returned to the member. If a member leaves the service before the end of the month there shall be returned to him a proportional part of said dues for the unexpired part of the month.

All money paid or received by the treasurer shall be deposited in one of the banks or trust companies in Ft. Wayne, and all money not needed for immediate payments of necessary current expenses, accident and sick benefits or death benefits shall be invested by the treasurer of the association under the direction of the trustees in such securities as trust funds may be invested in under the laws of Indiana.

The general manager of the company shall always be the president of the association. The vice-president, treasurer and secretary of the association shall be elected by a majority vote of the members present at the annual meeting of the trustees, from among their number. The president of the association shall be chairman of the board of trustees, and shall appoint three members of the board of trustees from the Officers' association of the company. The other trustees shall be members of the relief association, and shall be chosen annually in November, by ballot, to serve for one year.

Any employe of the company over 21 and under 45 years of age, both inclusive, who shall have been in the service for at least one month, shall be eligible to membership, upon approval as to his physical condition, upon payment of $1.00 for initiation fee and dues for first month, and 50 cents dues for each and every month thereafter, and a further payment of 50 cents to the examining physician.

The applicant for membership is required to certify that he is correct and temperate in his habits and that, so far as he is aware, he has no injury or disease, constitutional or otherwise, which will tend to shorten his life, and that he is in good health and able to earn a livelihood. Concealment of facts would cause the forfeit of membership in the association. Other provisions follow:

Benefits will not be paid on account of accidents, sickness or death occurring at any place beyond the United States, or on account of death of an epidemic disease at any place where said disease is known to prevail to which duties as an employe of the company or his family relations do not require him to go. Benefits are not to be paid for disability arising from sickness contracted or injuries received while intoxicated, or from injuries received while engaged in unlawful acts, or sickness or death resulting from immorality, or from the intemperate use of stimulants or narcotics, or from death by the hands of justice.

Hydro-Electric Plant for Tokio, Japan.

The first 60,000-volt hydro-electric plant in Japan has just been put into service with signal success. Power is obtained by impounding the Ugigawa river, a narrow and swift but deep river, such as is often found in the mountainous portions of Japan. The normal capacity of the main station is 18,000 kilowatts, furnished by six 3,000-kilowatt 50-cycle 6,600-volt waterwheel-driven alternators.

The generator voltage is stepped up to the line voltage of 60,000 volts through three banks of three single-phase water-cooled 2,000-kilowatt transformers and is transmitted 25 miles to the Waseda substation, just outside the city of Tokio. In this main substation water-cooled transformers of 1,800 kilowatts each step the line voltage down to 11,000 volts, at which potential it is transmitted underground through lead-armored cables to 11 distributing substations situated in various parts of the city.

In each of these smaller substations oil-cooled transformers of 250 kilowatts capacity step the voltage down to 2,000 volts, the line potential of the city circuits.

The entire equipment, including the cable, was furnished by the General Electric Company.

BONUS SYSTEM OF THE AMERICAN KOREAN ELECTRIC COMPANY.

We have received from H. E. Collbran, general manager of the American Korean Electric Company, operating the street railways of Seoul, Korea, the particulars of a plan which the company has adopted of awarding to its conductors and motormen monthly rewards for good service. According to the system which has been in operation for some time monthly bonuses are awarded to the conductors who have turned in the largest number of fares during the month and to the motormen who have had no fatal accident during the month. In regard to the success of the plan Mr. Collbran says: "I am glad to say that the reward system quickly had its effect in increasing the passenger receipts, although the railway is equipped with cash registers on the cars and a proper spotter service is maintained. It was also promptly noticeable when the bonus system went into effect that the car service was much improved and that very considerably less accidents occurred."

Quarterly rewards were also given. It was recently decided to double these prizes, and the following notice, giving the details of the plan, was posted in the carmen's assembly room:

The American Korean Electric Company is glad to be able to recognize the care which nearly all motormen and conductors have used in avoiding accidents and in operating the car service in a proper manner and has decided to double the prizes heretofore distributed every three months, commencing on January 1, 1908, first payments being made for the three months ending March 31, 1908.

In future the prizes awarded to the conductors will be as follows:

First prize.....30 yen	Fourth prize.....10 yen
Second prize.....20 yen	Fifth prize..... 5 yen
Third prize.....15 yen	

The sum of 80 yen will also be divided every three months as special prize money among such motormen as the assistant manager considers have used the greatest care in running their cars and in the general performance of their duties.

The present monthly rewards paid to all motormen and conductors properly performing their duties will be continued.

These rewards will be continued so long as the employes show that they are appreciated and that all are trying to see that the company is honestly and properly served by every employe, but they will be entirely stopped if any general stealing of fares occurs.

The bonuses will be paid subject to the following conditions:

They will be paid only when good service is given.

No reward will be paid to any motorman or conductor for any month in which a fatal accident occurs.

No reward will be paid to any conductor or motorman for any month in which a clear case of stealing fares or giving free rides is found against any one conductor.

If a motorman causes an accident because of neglect or carelessness he will not receive any reward for that month, even though the accident occasions no fatal result.

No conductor or motorman will receive a reward for any month in which he is found to be drunk or to have in any way neglected his duties.

No reward will be paid to conductors or motormen whose cars are continually dirty.

Motormen are specially reminded to approach all bad street crossings slowly and to have their cars under perfect control in going down the steep grades. It will be to the growing interest of every employe to see that all employes do their work properly and honestly.

Extensive Power Project in Washington.

Announcement is made in Spokane that the Pacific Coast Power Company, recently organized by the Stone & Webster interests of Boston, Mass., will erect at the foot of Lake Tapps, near Spokane, Wash., at a cost of $10,000,000, what is said to be the second largest electric power plant in the United States, having ultimately a capacity of 100,000 horsepower. The plant will be developed to 50,000 horsepower at first and subsequently will be increased to its maximum capacity, as fast as additional power is required for the proposed interurban system which will unite the cities of Bellingham, Everett, Seattle, Tacoma, Olympia and Aberdeen, Wash., and Hoquiam and Portland, Ore. It is stated that work will begin in a short time and that it will be rushed to completion. The Seattle-Tacoma Power Company, which controls extensive power rights on the White river, has been acquired. Jacob Furth, president of the Seattle Electric Company, has given out the following statement: "The Pacific Coast Power Company has acquired all the White river lands, so called, which have been the subject of so much recent litigation. This company will develop the property, but the detailed plans for its development have not yet been completed. The White river situation is one of the greatest power projects on Puget sound, and the present settlement of the disputes and litigations concerning it, thus insuring its early development, will be of the greatest benefit. It is expected that more than $5,000,000 will be expended in the initial development."

EARNINGS AND EXPENSES OF STONE & WEBSTER COMPANIES FOR THE YEAR 1907.

§Deficit.

*Includes one-half of the earnings of Sydney & Glace Bay Railway Company, Limited.

The Twin City Rapid Transit Company, Minneapolis, Minn., will manage and operate the Tonka Bay hotel, the largest hotel at Lake Minnetonka, Minn.

News of the Week

Legislation Affecting Electric Railways.

New York.—A bill has been introduced in the legislature providing that all street cars outside of New York City shall be equipped with air or power brakes and that all summer cars shall have aisles for free ingress and egress of passengers.

Ohio.—Representative Hunt has introduced a bill which makes provision for the construction of an elevated railway in Cincinnati.—The Schmidt bill, which provides that franchises may be granted to new companies over routes that have been occupied within a year by an old company, without obtaining new consents from the owners of abutting property, has been passed by the senate unanimously.

Massachusetts.—Recent bills introduced in the legislature include the following: To require "an improved and more efficient car fender"; to require street railway companies to equip cars with heated sand boxes, lifting jacks and emergency apparatus; to require street railways to furnish, subject to the railroad commission's approval, suitable smoking compartments and proper toilet accommodations on all cars used on suburban lines; to require railroads and street railways to maintain distance signals at grade crossings of their respective lines, the railroads to pay for maintenance, but both companies to join in cost of installation; to require passenger cars of steam and electric railways to be equipped with a ventilating system on the suction principle; to amend the hours-of-labor law to provide that a day's work shall be 9 hours in 11 instead of 10 hours in 12; to require railroads or railroads and street railways to pay the cost of abolishing grade crossings with highways; a resolution that the railroad commission investigate the giving of free passes by railroads and street railways and report recommendations; to allow cities of 75,000 inhabitants to make their own terms for granting trolley freight and express rights within their limits, conditional on a referendum where desired by the voters, but not subject to the railroad commission's approval; that street railways be authorized to transport milk and cream anywhere on their lines, subject to the railroad commission's supervision, but to no other board or law or existing charters; to provide temporary locations for street railway companies pending repair or reconstruction of bridges forming part of an existing location; to provide for joint use of tracks by electric railroad and street railway companies, for proper handling of bulk and express freight, subject to the regulation of the railroad commissioners.

Rapid Transit Affairs in New York.

The New York public service commission on February 5 finally approved the plans for the Broadway-Lexington avenue subway. The line will begin at the Battery, continue under Church and Vesey streets to Broadway, and then under Broadway and Lexington avenue to the Bronx side of the Harlem river, where it will branch into two spurs, one going to Woodlawn cemetery and the other to Pelham Bay Park. The estimated cost of the road and a connecting line across town under Canal street is $67,000,000. Because the new route is made up of several modifications of routes laid out by the old rapid transit commission, it was necessary to submit the plans to the board of estimate for approval. The latter board met on Thursday and ordered a public hearing so that the commission could advertise in a short time for bids for construction.

The commission is planning additional subway routes which it hopes to have under way at an early date. Comptroller Metz insists that the city has no resources for building additional subways and that a way must be found to have them constructed by private capital. The commission states that it will be possible to start the work if $10,000,000 can be appropriated.

The commission has suggested, in a report to the legislature, the construction of an elevated freight railroad along the shore of the North river, to take the place of the New York Central's surface line on Eleventh avenue, but the plan has met strong opposition from all sides.

A hearing was held on February 11 on a tentative order for the equipment of the local tracks of the subway with automatic trippers. Frank Hedley, general manager of the Interborough Rapid Transit Company, testified that such a plan would cost $450,000 and would reduce the number of trains that could be operated. He said that since the opening of the subway not a passenger had been killed after boarding a train.

The commission has decided to begin an investigation of the equipment and service of the elevated lines, particularly with reference to heating the cars, and on February 11 issued an order to the Interborough company to show cause why an even temperature of 60 degrees should not be maintained in its cars.

Cleveland Settlement Negotiations.

Mayor Johnson of Cleveland and F. H. Goff, representing the Cleveland Electric Railway, have been engaged for several days in an attempt to estimate the valuation of the unexpired franchises of the company, especially on the lines outside of the city limits, which it is conceded are affected by the life of the franchises within the city. The mayor has suggested that an average date of expiration should be determined. He has also suggested some compromises.

At the meeting on Monday of this week Mr. Johnson submitted a report made by Prof. E. W. Bemis on the earnings of the Detroit line, one of the suburban lines, which tended to show that the suburban portion of the line caused a large deficit annually. In calculating the earnings of the line the average fare was taken as 4.82 cents, of which 3 cents was credited to the city end of the line and 1.82 to the outside line. According to Professor Bemis' report there would be a deficit on that line of $60,000 for 1908, $65,000 in 1909, and $70,000 in 1910, and that the entire loss on the line, if operated until the end of the franchise, 1926, would be $960,000. The mayor said that as this line was the most profitable of the 10 outside lines to be valued the indications were that the outside franchises were of no value after the expiration of the inside franchises. Henry J. Davies, secretary of the Cleveland Electric Railway, replied to the mayor, saying that Professor Bemis had not taken all of the facts into consideration and that he would not concede that the grants had no value.

The Bemis report was discussed further on Tuesday. Mr. Goff said that the building of the outlying lines had been done with the idea of building up the city and with the idea that if they were operated at first at a loss the development of the traffic would bring returns in later years. The company had calculated on a renewal of its city grants and it was not fair, in his opinion, to value the property on the basis of not being able to secure renewals.

Bill for Examination of Company's Books Declared Unnecessary.

Referring to the bill introduced in the Maryland legislature providing for the expenditure by the city of $10,000 a year to maintain a department to make examinations of the books of the United Railways & Electric Company, President W. A. House of that company said in his opinion there was no necessity for this department. He said:

"The company has nothing to conceal, its policy being one of frankness in all its dealings with the city. Furthermore, an act was passed by the legislature of 1894 giving the city practically all that is proposed to be conferred by the pending bill. The city has authority at any time to make an examination of the books of the company to see that a full return is being made of the park tax.

"The city has made examinations of the company's books. These display in full detail the receipts, the trips and the mileage of all the lines of the system.

"The park tax receipts of this company have grown from $253,823.82 in 1897 to $435,065.84 in 1907. In 1897 all the street railways in the city paid $253,823.82 in park tax. In 1907 the total amount of taxes paid by the company, including park tax, street paving (the company caring for 50 per cent of the paving of streets occupied by its tracks) and licenses was more than $700,000. This is fully 10 per cent upon its gross revenue from all sources.

"The company is affording its patrons excellent service in the way of supplying cars of modern design. It has purchased 530 since the fire of 1904. This is about the same number operated over the entire system at the time of the consolidation in 1899. It has also proportionately increased the number of car service miles. The reports for December, 1907, show that there were 40,000 more car-miles made during that month than in December, 1906.

"Several years ago the length of the average car was 18 feet. Today the company has in service 380 cars 42 feet long, increasing the carrying capacity to that extent.

"It was shown by the annual report of 1906 that there had been expended since the fire of February, 1904, about $6,891,734.21 for the general betterment of the property in the reconstruction of tracks and power houses, for the purchase of cars and for extensions. During 1907 $1,000,000 additional was expended upon the property, the policy of the company being to put it in the best physical operating condition so that the traveling public of Baltimore and its suburbs might enjoy transportation facilities second to none in the country. Neither time, money nor effort is being spared to accomplish this result."

Pay-As-You-Enter Cars May be Tried in St. Louis.—Robert McCulloch, general manager of the United Railways of St. Louis, is quoted as saying that the company is seriously considering the adoption of the pay-as-you-enter type of car for one of its lines, with a view to using it on the entire system after a thorough test, but that no definite action has yet been taken.

Accident in Chicago.—In a rear-end collision on the Metropolitan West Side Elevated Railway, Chicago, on the morning of February 9, 19 persons were injured, two of them seriously. A Garfield Park train, just leaving the Center avenue station, was struck from behind by a Humboldt Park train. The motorman of the rear train is blamed for not sufficiently slacking the speed of his train as he approached the station.

American Institute of Electrical Engineers, Chicago Section.—At a meeting of the Chicago section of the American Institute of Electrical Engineers on Tuesday evening, February 18, in the rooms of the Western Society of Engineers, Garrett T. Seely, engineer maintenance of way of the South Side Elevated Railway, Chicago, will present a paper on "Some Recent Improvements in the Mechanical and Electrical Equipment of the South Side Elevated Railway."

Western Society of Engineers.—A regular meeting of the electrical section of the Western Society of Engineers was held in the society rooms, Monadnock block, Chicago, on Friday, February 14. James N. Hatch presented a paper on "The Evolution of the Electric Railway," which was illustrated by lantern slides. At an extra meeting on February 19 Wilson E. Symons will present a paper on "The Passing of the Steam Locomotive," with a discussion of the relation of steam and electric railways, illustrated by lantern slides.

Storm Causes Suspension of Service.—The Georgia Railway & Electric Company of Atlanta, Ga., was obliged to suspend its railway service and its suburban electric lighting service from late Sunday night until noon on Tuesday on account of a heavy sleet, snow and rain storm, which played havoc with the overhead system. Although only a few cases are reported of breaks in the company's wires, so many of the telephone and telegraph wires and poles were broken, tangling up the railway company's overhead wires and causing short-circuits, that it was impossible to operate.

American Institute of Electrical Engineers.—The Philadelphia section of the American Institute of Electrical Engineers held its regular meeting on February 10. The programme included a brief note by Carl Hering, consulting engineer, on "An Error in the Usual Statement of the Fundamental Law of Electro-Magnetic Induction"; "A Talk on the Single-Phase Railway Motor," by Benjamin G. Lamme, assistant chief engineer Westinghouse Electric & Manufacturing Company; "The Present Status of the Single-Phase System," by William McClellan, engineer, Campion-McClellan Company.

Testimonial Dinner to H. H. Vreeland.—Members of the New York Railroad Club on February 7 tendered a testimonial dinner at the Hoffman House, New York, to H. H. Vreeland, for many years the president of the club. Covers were laid for 300 and Mr. Vreeland was presented with a silver water pitcher. Those present included steam railroad, traction, railroad supply men and representatives of interests identified with transportation in the east. W. G. Besler, vice-president of the Central of New Jersey, acted as toastmaster, and the speakers were John F. Deems, general superintendent of motive power of the New York Central Lines; William J. Wilgus; and George Post, president of the Standard Coupler Company.

Considering Car Plans in Chicago.—The Chicago board of supervising engineers has held several conferences in the past few days in the effort to determine on plans for the new cars to be ordered by the Chicago Railways Company, as specified in the city ordinance, which provides for a thorough rehabilitation of the property. As yet no decision has been reached, although it has been practically decided to adopt the pay-as-you-enter type. It is desired to secure a car for the north and west side lines conforming closely to those used on the south side lines of the Chicago City Railway, in order to facilitate through routing, but it seems impossible to secure a standard car for the city because of the physical conditions of the Chicago Railways lines, where there are several undercrossings and curves which require a lower and narrower car than those of the other company. As a consequence the plans for putting through routes in operation will be considerably delayed. The Chicago City Railway Company has received 143 additional pay-as-you-enter cars, which will be placed in service on the Indiana avenue line as soon as additional track connections with the car house at Thirty-eighth street and Cottage Grove avenue can be completed.

Traffic and Transportation

Investigation into Service in Kansas City, Mo.

W. E. Kirkpatrick, vice-president of the Metropolitan Street Railway of Kansas City, Mo., has offered to furnish all information desired by the council committee which is investigating the schedules and physical condition of the property of the company. Mr. Kirkpatrick said in his letter to the committee:

"The tables furnished will be taken from the regular records of our company and subject to verification on the part of your honorable commission or any person assigned by you from the office of the city comptroller as suggested in your favor.

"Permit me to suggest that your inquiry may be made more thorough by a personal investigation of the service of public carriers in other cities of like character with Kansas City. To this end I suggest that a visit be made to such cities as you may designate for that purpose, and, if agreeable, that a representative of this company be permitted to attend with your committee and participate in such investigation."

Hearing on Springfield, Mass., Fares.

The Massachusetts railroad commission held another hearing on February 4 on the petition for lower fares in Springfield, Mass. Bentley W. Warren, counsel for the Springfield Street Railway Company, declared that no other railway outside of Boston gives the people so much for their money as the Springfield company. The city had denied the company's petition for double tracks in order to relieve the traffic.

H. C. Page, vice-president and general manager of the company, said that he would not be willing to try the plan of selling 21 tickets for $1.00 or 41 for $2.00. Mr. Page said that if 21 tickets were sold for $1.00 it would cost the company fully $60,000 a year. When asked if he would sell tickets at reduced rates to workingmen for use between 5:30 and 6:30 p. m. he said that the company could not, as the cars would be so crowded by women shoppers, who would manage to take advantage of the tickets, that conditions would be worse during the evening rush hours than now.

After an argument by Henry A. Booth, attorney for the petitioners, the hearing was closed.

Preventing Passengers from Boarding Cars Before Terminal is Reached.

We have received from C. J. Franklin, general superintendent Portland (Ore.) Railway Light & Power Company, a copy of the bulletin issued recently to trainmen concerning the boarding of incoming cars on the Oregon Water Power & Railway division by passengers before the terminal at Portland is reached. An abstract of the order follows:

"Passengers on inbound cars are being seriously inconvenienced by persons boarding the cars for the outbound trip before it reaches the terminus of the road. By the time the car arrives at First and Alder streets (the terminus) it is so crowded with passengers who have boarded the cars for the outbound trip that the passengers who were on the car on the inbound trip experience considerable difficulty in getting off. Conductors will not permit persons to board incoming cars for outbound trips between Yamhill and Alder streets on First and Second streets. When at any point between Yamhill and Alder streets passengers desire to board the car the conductor will prevent them from doing so, telling them in a polite and gentlemanly way that they will have to board the car or train at the depot or pay the fare to the terminus. When the car arrives at First and Alder streets the conductor will stand on the ground at the rear of his car, after announcing from the rear platform, 'This way out,' and will direct parties desiring to board the car to do so at the opposite end. The motorman will keep both doors closed on the front platform until he arrives at First and Alder streets, when he will open the door opposite the depot and will not allow passengers to leave the car from the front end, but will allow passengers to board the car from that end, announcing upon his arrival at the depot to passengers in the car, 'Passengers off at rear end.'

"In order to assist motormen and conductors in carrying out these instructions, during the hours from 4:30 to 6:30 p. m. employes in full uniform will be detailed. They are for the purpose of assisting and not relieving the conductor or motorman from any responsibility in not carrying out the above instructions. Should it become necessary to use force to keep passengers from boarding the car at the above-named places

on the inbound trip, you will find a policeman stationed at the corner of each block and at First and Alder streets, upon whom you will call for assistance."

For Betterment of Service by Chicago Railways Company.

John M. Roach, president of the Chicago Railways Company, has issued a booklet to employes, calling their attention to what will be expected of them under the contract with the city involving the lines formerly owned by the Chicago Union Traction Company. Mr. Roach says:

"Trainmen will be expected to conduct themselves at all times with the understanding that the public comes first, and courteous treatment of passengers will be insisted upon as an immediate improvement which does not need to wait for new cars or new rails. Show consideration for the comfort of passengers by attending to such things as the cleanliness, ventilation and heating of cars. Do not inconvenience the public by switching short of the ends of routes, unless it can be shown to be good railroading to do so.

"Conductors will be expected to reduce the number of accidents heretofore chargeable to their carelessness. Do not give the bell signals too quickly when persons are alighting from or boarding cars. Guard those who attempt to alight from or jump on moving cars. Collect fares more carefully and more promptly. Be careful to procure witnesses in all accident cases, and use good judgment in all things appertaining to your position as a representative of the company.

"There are many motormen who will be expected to handle their cars with better judgment hereafter and do their share toward reducing the number of accidents. Watch persons, especially small children, playing in or crossing the streets in front of your cars. Avoid collisions at intersecting street car crossings. Discontinue unnecessary conversations with passengers while your cars are in motion. Quit the reckless and thoughtless handling of electric and braking apparatus. Stop flattening wheels by the improper use of air brakes. Observe schedules and time points. Do not pass by passengers unnecessarily. Use good railroad judgment at all times.

"Station employes will be expected to keep our car equipment in better condition. Clean and disinfect all cars thoroughly. Make repairs more promptly. Get the annoying 'flat' wheels off the cars as fast as they develop.

"Remember that much will be expected from now on from the Chicago Railways Company and its employes and there should and must be a marked improvement. To the large number of competent, loyal men who are now working for this company we make this request: Study carefully the changed conditions which confront us all, and let each one do his duty to the best of his ability, to the end that we may build up a street railway system which will become a source of pride to our city and a cause of congratulation for all those who may have a part in the achievement."

Revenue from Owl Cars in Des Moines, Ia.—During the 27 days in December in which owl cars were operated by the Des Moines (Ia.) City Railway the gross revenue was $622.51. During the entire month of January the gross revenue from this service was $732.98.

Hearing on Service Between Boston and Cambridge, Mass.—The Massachusetts railroad commission held a hearing on February 6 on a petition of residents of Cambridge that the Boston Elevated Railway be required to make various changes in its service. The commission took the case under advisement.

George Weston to Report on Chicago Elevated Loop Situation.—George Weston, member of the board of supervising engineers Chicago traction, has been selected by Alderman M. J. Foreman, chairman of the committee on "Local Transportation" of the city council of Chicago, to prepare a report on the elevated loop situation.

Modification of Increased Service Orders Requested.—The Interborough Rapid Transit Company has asked for a modification of some of the orders for increased service issued by the New York public service commission, first district. The commission has ordered the Interborough Rapid Transit Company to begin on February 10 the operation of 22 additional trains during rush hours on the Third avenue elevated road.

Freight and Express Privileges Desired.—The selectmen of Longmeadow, Mass., held a hearing on January 29 on the petition of the Springfield Street Railway for permission to use its cars and tracks through the town as a common carrier of newspapers, baggage, express and freight. Henry C. Page, vice-president and general manager of the company, said that the trolley express in that vicinity was no longer in an experimental stage. He spoke of the advantages to small towns located near cities of the service afforded by the electric express, and of the benefits to farmers.

Construction News

FRANCHISES.

Augusta, Ga.—The Atlanta & Carolina Construction Company, Atlanta, Ga., has secured a 32-year franchise for the operation of its interurban cars in Augusta. The company is to pay the city $1,666.66 annually for the privilege and the line must be completed within two years. Matthew Mason, vice-president and general manager, Atlanta, Ga. (Noted December 28, 1907.)

Batavia, N. Y.—Preliminary arrangements for a hearing to be called by the highway commissioners on the application of the Rochester Scottsville & Caledonia Electric Railroad Company, were made through the company's attorney, D. C. Salyerds of Rochester, on January 31. The company plans to build a line from Rochester to Leroy and extend it to Batavia, building on a private right of way. A hearing has been arranged for in Stafford on February 20. The Batavia hearing may be held the same day. A hearing will also be held in Leroy on February 18. (Noted December 7, 1907.)

Chicago, Ill.—An ordinance is now pending before the local transportation committee of the Chicago city council which provides for a consolidation of the Calumet Electric Street Railway and the South Chicago City Railway. The ordinance is modeled after those of the Chicago City Railway and the Chicago Railways Company and provides that the city shall receive 55 per cent of the net receipts. Provision is made for a thorough rehabilitation of the properties and for the construction of several extensions, but not for exchange of transfers with the Chicago City Railway. It is stated that the consolidation will be effected as soon as the ordinance is passed.

Claremore, Okla.—George Whytell of Claremore and Joseph McDermott of Virginia have secured a franchise to operate an electric railway in Claremore.

Decatur, Ill.—After more than a year of delay the city council has granted a franchise to the Decatur Sullivan & Mattoon Transit Company for an entrance into Decatur with its interurban line from Mattoon to Decatur by way of Sullivan, Ill. Right of way has been obtained and franchises secured in several of the towns along the proposed route and it is believed that construction work will be started as soon as the weather permits.

Houghton, Mich.—James T. Healy, Houghton, Mich., representing the South Range Street Railway Company, has applied for a franchise to build an electric line from Houghton to South Range, Mich. If granted it is stated that the line will be constructed and in operation inside of a year. It will serve a rich copper mining district in this section. C. C. Douglass and C. D. Hanchette also are interested.

Walla Walla, Wash.—The Washington & Oregon Traction Company will apply to the county commissioners on April 6 for permission to cross the county roads with its proposed 75-mile interurban line in southern Washington and extending into Oregon. (Noted November 16, 1907.)

RECENT INCORPORATIONS.

Baltimore & Pennsylvania Railway & Power Company.—Incorporated in Maryland to build a railway from Reisterstown in Baltimore county, Maryland, through Carroll county and into Pennsylvania. Incorporators: William Massenheimer, Charles J. Wells, Jesse A. Davis, Henry M. Foster and C. Dickerson Day.

Hancock & Lake Linden Traction & Power Company, Portland, Me.—Incorporated in Maine to build traction and power lines. Capital stock, $800,000. Incorporators: J. E. Manter, president; C. E. Eaton and M. W. Baldwin, all of Portland.

Paris & Subiaco Traction Company, Paris, Ark.—Incorporated in Arkansas to build a 5-mile electric line from Paris to a point at or near Subiaco, Logan county, where the monastery and college of the Benedictine order is located. Capital stock, $60,000. Incorporators: D. J. Young, Conrad Elsken, G. G. Dandridge, Henry Stroup and Charles J. Jewett.

Yakima Intervalley Electric Railroad, North Yakima, Wash.—Incorporated in Washington to build an electric railway from North Yakima to Granger, Wash., in the Sunnyside valley. It is intended to complete the line in time to care for the grain and fruit crop of next fall. It will be 36 miles long and include Zillah and the Parker bottom in the route. Capital stock, $1,000,000. Incorporators: Mayor Henry H. Lom-

bard, North Yakima; J. H. Thomas, A. B. Wilcox, C. H. Furman, George P. Eaton, R. E. Page and Walter N. Granger. (Noted February 8.)

Indianapolis & South Bend Traction Company.—Incorporated in Indiana to build an electric railway from South Bend to Indianapolis, serving the following towns and cities: Westfield, Sheridan, Kirklin, Michigantown, Burlington, Logansport, Rochester, Plymouth, Lafayette, Clarkshill, Linton and Veedersburg, with branch lines from Delphi to Flora and Kokomo, from Frankfort to Tipton and from Lebanon to Noblesville, Ind. Capital stock, $10,000. Incorporators: Robert H. Keller, John H. Keller and Edward N. Bowman, all of Indianapolis.

TRACK AND ROADWAY.

Arkansas Valley Traction Company, La Junta, Colo.—Surveys are being made and financial backing secured for the construction of this 12-mile interurban line from La Junta by way of Swink and New Dale to Rocky Ford, Colo. The company may issue $100,000 of 6 per cent bonds but no contracts will be let until funds are available for pushing the construction work. Most of the right of way has been secured and franchises obtained in La Junta, Rocky Ford and Swink, as previously announced. It is proposed to equip the line with gasoline motor cars. J. E. Gauger, president, Rocky Ford; F. T. Lewis, chief engineer, La Junta. (Noted October 12, 1907.)

Atlanta & Carolina Construction Company, Atlanta, Ga.—Financial arrangements are being concluded and it is stated that construction work will be started on this proposed road about March 1. The line will connect Atlanta, Athens and Augusta, Ga., and will be equipped for passenger and freight business. The power house probably will be located at Athens. Matthew Mason, vice-president and general manager, Atlanta, Ga. (Noted December 28, 1907.)

Blue Ridge Traction Company, Bethlehem, Pa.—This company has filed notices of extensions from a point on the Walnutport-Davidsville road to Poplar Grove, Cherryville, Alliance, Weaversville and Bath; also from Allianee, where a bridge will be built, to Catasauqua, a total distance of 16 miles. A. N. Brown, general manager, Bethlehem, Pa.

Brownsville Masontown & Smithfield Street Railway, Masontown, Pa.—Grading will be resumed on this proposed electric line between Brownsville and Smithfield, 20 miles, some time this month, surveys for which already have been made. About half a mile of grading has been completed between Masontown and West Masontown. The line will extend south by way of Masontown to New Geneva and from thence northeast by way of Smithfield to Uniontown, Pa., making a total distance of 36 miles. The route as planned requires the construction of several viaducts. Contracts will be awarded in February and March. W. J. Sheldon, president, McKeesport, Pa.; E. C. McCullugh, chief engineer, Uniontown. (Noted July 6, 1907.)

Chambersburg Greencastle & Waynesboro Street Railway, Waynesboro, Pa.—J. F. Geiser, electrical engineer and superintendent, writes that the line is being extended from the present terminus at Greencastle to Chambersburg, 11½ miles. Tracklaying and the erection of trolley poles and wires have been completed for about half the distance.

Chicago City Railway.—The Chicago board of supervising engineers has authorized the purchase of 8,000 tons of rails and other building materials for use in the reconstruction of this company's lines, which has been in progress for several months.

Chicago South Bend & Northern Indiana, South Bend, Ind.—It is stated that this company will let contracts and push its western extension from South Bend to Laporte, where connection will be made with a line now in operation between Laporte and Michigan City, Ind., with the intention of having cars in operation by next June. Cars and equipment for this branch are said to have been ordered. Samuel Riddle, general manager, South Bend, Ind. (Noted November 2, 1907.)

Denver & Interurban Railway, Denver, Colo.—Surveys have been made for the city lines in Boulder, Colo., which will be operated in connection with the electric line from Denver to Boulder. Cars are expected to be operating between these points by June 1.

Dickinson & Southern Railway, Dickinson, N. D.—This company is being organized to build and operate an electric railway from Dickinson, N. D., south to connect with the Chicago Milwaukee & St. Paul Railway.

Donora & Eldora Street Railway, Pittsburg, Pa.—Surveys have been made and right of way obtained for this proposed electric railway which will be built between Donora and Eldora, Pa., 3.3 miles. Contracts will be let in the spring. A 350-foot viaduct will be built and 38,000 cubic yards of grading will be done. Gisli Gudmundson, chief engineer, Empire building, Pittsburg, Pa. (Noted November 30, 1907.)

Elkins, W. Va.—It is stated that the electric line which is being built from Elkins to Belington, W. Va., by J. C. McSpadden, will be completed this spring. With the completion of this line and the proposed extension of the Fairmont & Clarksburg Traction Company from Fairmont to Belington nearly the entire distance between Elkins, W. Va., and Pittsburg, Pa., 200 miles, will be covered by trolley lines, the only remaining gap being between Uniontown and Fairmont. The line from Elkins to Belington will be an independent line and will be operated by Mr. McSpadden when completed.

Fayetteville, N. Y.—The Fayetteville Gypsum Company has secured right of way for an electric line 1½ miles long which it proposes to build this spring from its quarries to the Erie canal. The road will be for freight service only. A power plant and a crushing plant will also be built. George E. Dougherty, superintendent.

Ft. Dodge Emmetsburg & Spirit Lake Railway, Ft. Dodge, Ia.—It is stated that the entire right of way for this proposed 116-mile interurban road will have been secured within a month and that construction work will be started in the spring. Much of the right of way has been donated and a considerable portion of the stock subscribed by residents along the proposed route. Financial arrangements are said to have been concluded with an eastern company and funds are now available for pushing the work as soon as weather permits. The line will connect with the Ft. Dodge Des Moines & Southern Railway, thus affording direct electric rail communication from Des Moines to the lake region of that section. M. H. Miller, vice-president, Ft. Dodge, Ia. (Noted December 28, 1907.)

Ft. Worth Weatherford & Mineral Wells Interurban Construction Company.—At a meeting held in Weatherford, Tex., on February 4 this company was formed for the purpose of building the Ft. Worth Weatherford & Mineral Wells Interurban Railway, which has been promoted by G. R. Turner of New Orleans, La. Considerable grading already has been done and it is expected that the road will be completed by January, 1909. G. M. Bowie, Weatherford, and J. T. Hill, Mineral Wells, were elected president and secretary respectively of the new company. Stuart Harrison, Ft. Worth; Charles McFarland, Weatherford; and Cicero Smith also are interested. (Noted February 1.)

Goose Creek Railway & Power Manufacturing Company.—Application for a charter will soon be made by this company for the purpose of building, equipping and operating a power generating plant on Goose Creek and operating an electric railway system, cotton factory and a cottonseed oil mill. D. M. Clark, Jesup, Ga., and D. G. Zeigler, Columbia, S. C., are attorney and architect and engineer, respectively. The capital stock will be $300,000, to be increased later to $500,000. Others interested are W. H. Whaley, F. E. Breen, S. E. Cohen, J. H. Wilkins, J. F. Breen, W. M. Roberson, J. T. Winn, A. L. Kicklighter and E. Crummey, all of Jesup, Ga.

Grafton Traction Company, Grafton, W. Va.—This company has placed in operation its 2½-mile electric railway which was started last summer. It is reported that another extension will be built this year. (Noted May 25, 1907.)

Grand Central Traction Company, Indianapolis, Ind.—Survey for this company's right of way through Warrick county, Indiana, has been completed and J. H. Hutchinson, construction engineer, announces that work probably will begin on February 15. The survey extends from Evansville through Millersburg, Holland, French Lick and thence north to Indianapolis by way of Bloomington. (Noted December 21, 1907.)

Kokomo Frankfort & Terre Haute Traction Company, Frankfort, Ind.—This company was organized on February 3 for the purpose of constructing an interurban railway in Indiana. Articles of incorporation will be filed within a few days and the work of obtaining right of way and franchises will be started immediately. Capital stock, $3,000,000. Officers were elected as follows: President, Dr. Oliver Gard, Frankfort; first vice-president, J. C. De Weese, Kokomo; second vice-president, D. W. Bolen, Indianapolis; secretary, E. B. Swift, Kokomo; treasurer, M. W. Eikenberry, Kokomo; general counsel, Judge J. V. Kent, Frankfort. W. H. Eikenberry, Russiaville; Albert E. Betts, Frankfort; and Adam Ridenhour, Forest, are also interested.

Lima & Toledo Traction Company, Lima, O.—Application for permission to build a drawbridge over Swan creek, near

the foot of Division street, in order to complete its entrance into Toledo, has been made by this company to the United States war department. The company has its own right of way, which is along the west bank of the old Miami & Erie canal, and by crossing the creek at this point would parallel the Clover Leaf and continue its tracks on the Wabash right of way, across South Eleventh street and thence into the downtown section.

Lowell & Fitchburg Street Railway, Ayer, Mass.—This company has applied to the Massachusetts railroad commission for permission to extend its tracks in Ayer, Mass., about 250 feet in order to connect with the line of the Fitchburg & Leominster Street Railway. This involves crossing the Boston & Maine Railroad tracks at grade. If the grade crossing is abolished the company agrees to pay the town's share of the cost of the improvement.

Mexico Santa Fe & Perry Traction Company, Mexico, Mo.—This company, which commenced grading on its proposed 27-mile electric railway between Mexico and Perry, Mo., by way of Molino and Santa Fe, last November, has completed three miles of grading. It is expected that the entire line will be in operation by September, 1908. An extension from Mexico to Columbia, Mo., probably will be built later. The plans call for a number of bridges, for which contracts will be let in the near future. J. M. Wolfe, Collinsville, Ill., has the contract for the grading, some of which has been sublet. S. L. Robison, president and general manager; C. L. Thon, chief engineer, Belleville, Ill. (Noted November 9, 1907.)

Morgantown & Dunkard Valley Electric Railway, Morgantown, W. Va.—Grading is in progress on this proposed 4-mile electric line from Morgantown to Star City, W. Va. The plans include a bridge 600 feet long. W. W. Smith, secretary and treasurer, Morgantown, W. Va.

Northwestern Elevated Railroad, Chicago, Ill.—It is announced that through service between Chicago and Evanston, Ill., over an electrified line of the Chicago Milwaukee & St. Paul Railway, will probably be established by May 1. Construction material and substation equipment is now ready for delivery as soon as the weather is favorable for the resumption of work. The work to be done includes the construction of the incline from the elevated to the surface tracks at Wilson avenue, the completion of stations and platforms, the equipment of the Evanston substation and a portion of the track work.

Olney, Ill.—At a meeting held recently in Olney a company was organized to build an electric railway from this city to Mt. Carmel, Ill., and across the Wabash river to Evansville, Ind. P. J. Kolb, Mt. Carmel, is interested.

Pacific Coast Railway, San Luis Obispo, Cal.—This company, which last year completed an extension of 2.1 miles from Betabel to Bonetti, Cal., is now building an electric railway between Santa Maria and Guadalupe, eight miles. A portion of the track is laid and it is hoped to have the line in operation by next summer. The new road will develop the oil fields to the south, connecting them with the Southern Pacific at Guadalupe. James Anderson, chief engineer. (Noted January 11.)

Puget Sound Electric Railway, Tacoma, Wash.—Construction work has been started on the extension of this line from Tacoma to Puyallup and it is expected that cars will be operated within a few months. The right of way lies straight up the Puyallup valley through a rich farming section and will make a much shorter route than by the existing steam lines. After the road has been completed to Puyallup it will be continued to Sumner, McMillan, Alderton and Orting. W. S. Dimmock, manager, Tacoma, Wash.

Rock Island Southern Railroad, Monmouth, Ill.—This company has completed surveying its route between Monmouth and Oquawka, Ill., 17½ miles. F. H. Lanchshire, chief engineer, Davenport, Ia. (Noted May 4, 1907.)

San Angelo, Tex.—The project of building an electric street railway system in San Angelo is said to have been revived by Col. J. H. Ransome of Hereford, Tex., who secured the franchise in San Angelo. It is said that the site for a power house is being selected and that work will be started on the first mile of track in the near future in order to comply with the terms of the franchise which expires next September.

Steubenville & East Liverpool Railway & Light Company, Steubenville, O.—Service was started on the new 30-mile interurban line of this company when a party of officials and guests made a trip over the line in special cars on February 10. The road is double-tracked the entire distance and is laid with 85-pound T-rails on stone ballast. It skirts the Ohio river and serves the towns of Toronto, Empire and Wellsville between its Steubenville and East Liverpool termini. At Steubenville it connects with a 21-mile electric line reaching to Wheeling on the south, and at East Liverpool with the Ohio River Passenger Railway extending to Beaver, Pa., where connection is afforded with the Beaver Valley Traction Company under the control of the Pittsburg Railways Company. J. C. Rothery, general manager, Steubenville, O.

Spokane & Inland Empire Railroad, Spokane, Wash.—This company has awarded contracts to Grant Smith & Co., Rosalia, Wash., for the construction of its eastern division extension from Palouse, Wash., southward to Moscow, Idaho, 15½ miles.

Twin City General Electric Company, Ironwood, Mich.—Contracts for poles, ties and rails for an electric railway from Ironwood to Bessemer and Wakefield, Mich., have been let by this company, and as soon as the weather permits construction work will be started. E. D. Nelson, president and general manager, Ironwood, Mich.

Washington Frederick & Gettysburg Railway, Frederick, Md.—It is announced that the location of the route for this company's southern extension from Frederick by way of Buckeystown to the west of Sugarloaf mountain, has been selected. From the mountain it will pass through Dickinson station, Poolesville and Seneca, 31 miles, and cross the Potomac river at Great Falls, where it will connect with the Great Falls & Old Dominion Railway for entrance into Washington. D. Columbus Kemp, Frederick, Md., president; Theodore J. King, Washington, D. C., chief engineer. (Noted February 8.)

West Chester & Wilmington Electric Railway.—Announcement is made that the two companies of this name, incorporated under separate charters in Pennsylvania and Delaware, will be consolidated in the near future and a construction company organized to build the proposed line. Thomas E. O'Connell, West Chester, Pa., is president. (Noted December 28, 1907.)

West Penn Railways, Connellsville, Pa.—J. L. Fritsch, chief engineer, writes that tracklaying has been completed from Leckrone to Masontown, 2.3 miles, and that tracklaying and overhead work have been completed from Footdale to Orient, 2.5 miles. Surveys have been completed from Orient to Brownsville, 13.5 miles, and grading has been completed and overhead work is being erected between Orient and Merrittstown, 2 miles. Grading is in progress between Merrittstown and Brownsville. The overhead construction is of the bracket type.

Wheatland Street Railway.—This company has filed a notice of extension with the state department at Harrisburg, Pa., for 800 feet on Church street in Wheatland, and from Wheatland to West Middlesex, 2½ miles, two miles of which will be on private right of way.

Winnipeg Electric Railway, Winnipeg, Man.—This company is pushing the work on its 22-mile extension to Selkirk and it is expected that cars will be running by March 1. The trolley wires have been strung and the substations are nearly completed. The cars for the new road are being built in the shops of the company at Ft. Rouge. Two-car trains will be operated. W. A. Henderson, general manager, Winnipeg, Man.

POWER HOUSES AND SUBSTATIONS.

Chambersburg Greencastle & Waynesboro Street Railway, Waynesboro, Pa.—Joseph H. Geiser, electrical engineer and superintendent, writes that this company will increase the generating capacity of its power house at Waynesboro to furnish power for the extension from Greencastle to Chambersburg now being built. Sealed bids are asked on the following equipment, including installation: 500-kilowatt 2,300-volt 60-cycle three-phase steam turbine or engine-driven generating set; jet condenser and cooling tower; 30-kilowatt steam-driven exciter set and switchboard panel; also a 14-mile transmission line, 23,000 volts, three-phase, to be erected on existing poles; transformer and substation equipment complete; 10½ miles No. 0000 direct-current feeder, erected.

Chicago South Bend & Northern Indiana Railway, South Bend, Ind.—Since January 29 this company has used electric power from the Indiana & Michigan Electric Company's Hen Island plant, where a large dam has been constructed in the St. Joseph river at a cost of $1,500,000.

Macon Railway & Light Company, Macon, Ga.—Orders are said to have been placed by this company for a new turbine and generator to be installed in its Macon power plant this spring. The new machinery will develop 2,500 horsepower and is designed for a 50 per cent overload in case of emergency. W. J. Massee, president, Macon, Ga.

Personal Mention

Mr. Judson Bibb has been appointed general manager of the Sheridan Electric Light & Traction Company, Sheridan, Wyo.

Mr. John Z. Murphy, chief engineer of the Chicago Railways Company, has been appointed as the company's representative of the Chicago board of supervising engineers.

Mr. John T. Young, general manager of the Muskegon (Mich.) Traction & Lighting Company, has been elected a director of the company to succeed the late Thomas Munroe.

Mr. V. L. Havens has been appointed chief engineer of the Compania Limitada de Tranvias Electricos de Mexico, City of Mexico, Mex., succeeding Mr. Paul H. Evans, resigned.

Mr. C. E. Graves, who was formerly in the service of the Grand Trunk and Great Northern railways, has been appointed district passenger agent of the Niagara Gorge Railroad, with office at Toronto.

Mr. Osborne Shryock has been appointed superintendent of the Meadville Conneaut Lake & Linesville Trolley Company, Meadville, Pa., succeeding Mr. John Allen, resigned. He was formerly assistant in the company's shops.

Mr. H. D. Murdock has been appointed mechanical and electrical engineer of the Indianapolis & Louisville Traction Company at Scottsburg, Ind. Mr. Murdock formerly was in the mechanical department of the Brooklyn Rapid Transit Company.

Mr. J. Walter Ackerman has been appointed resident engineer of the Ithaca (N. Y.) Street Railway, with entire charge of the reconstruction work which is planned by the company. Mr. Ackerman came from Auburn, N. Y., where he was city engineer.

Mr. C. E. Palmer, who recently resigned as superintendent of the Cincinnati Northern Traction Company, northern division, as announced in our issue of January 18, has been appointed superintendent of railways of the Eastern Pennsylvania Railways, Pottsville, Pa.

Mr. J. B. Hanna writes that the report that he had resigned as president of the Chicago Lake Shore & South Bend Railway, as published in the Electric Railway Review of February 8, is incorrect and that he is completing the construction of the road as fast as possible.

Mr. Henry C. Dalton, who has been connected for a number of years with the Louisville & Southern Indiana Traction Company's street railway systems in Jeffersonville and New Albany, Ind., has been appointed general manager of the Boise & Interurban Railway at Boise, Idaho.

Mr. W. E. Boileau, assistant mechanical engineer of the New York West Chester & Boston Railway, under construction from New York to Portchester and White Plains, N. Y., has resigned to become general manager of the Chattanooga Electric Company, Chattanooga, Tenn.

Mr. E. E. Lillie has resigned as superintendent of the Spokane & Inland division of the Inland Empire System, Spokane, Wash., to become superintendent of car service of the Portland & Seattle and the Astoria & Columbia River railroads, with headquarters at Portland, Ore.

Mr. Fred A. Martin, formerly chief operating inspector of the New York Central Railroad, has been appointed general manager of the Minneapolis St. Paul Rochester & Dubuque Traction Company, which proposes to build an electric line from Minneapolis and St. Paul to Dubuque, Ia.

Mr. Frank H. Brown, Pawtucket, R. I., has been appointed superintendent of the Rhode Island Company's lines north of Providence, with supervision over 110 miles of track. He formerly was in charge of the Pawtucket Street Railway system and the interstate line from Pawtucket to Attleboro.

Mr. J. H. Hansen of New York City has been elected president of the Toledo & Chicago Interurban Railway, succeeding Mr. A. B. Shepard of Cleveland, who has resigned to re-enter the electrical supply business, with headquarters in Cleveland. Mr. Shepard will continue as a director of the company.

Mr. J. L. Heins has tendered his resignation as president of the Coney Island & Brooklyn Railroad, Brooklyn, N. Y. He has been in continuous service with this company and the Brooklyn City & Newton Railroad since 1884. He will remain a director of the company and at the solicitation of the board of directors will act as its chairman and also be retained in a general advisory capacity. As chairman of the board he will have general charge of the road and continue to discharge the duties of president until a successor has been chosen.

Mr. George B. Hippee, heretofore treasurer and general manager of the Des Moines (Ia.) City Railway, has been elected president and treasurer of the company, to succeed the late Jefferson S. Polk, who died last November. Mr. A. G. Maish, heretofore general superintendent, has been appointed general manager.

Mr. John S. Bleecker, for the past three years manager of the Paducah (Ky.) Traction Company, one of the Stone & Webster properties, has been transferred in a similar capacity to the Columbus Railroad at Columbus, Ga. He will be succeeded at Paducah by Mr. F. E. Reidhead, formerly manager of the Columbus property.

Mr. Watson Townsend, formerly assistant engineer of the Great Northern Railway, has been appointed chief engineer of the St. Paul Minneapolis & Seattle Electric Railway, St. Paul, Minn., which recently was incorporated to build an electric railway from St. Paul and Minneapolis, Minn., to the Pacific coast with branches to Fargo, N. D., and Aberdeen, S. D.

Mr. J. L. Nash, general foreman of the armature department of the Boston Elevated Railway, Boston, Mass., has resigned. Mr. Nash has been engaged in this work for a number of years, having served with the old American Electrical Company of New Britain, Conn., the Thompson-Houston Company and the General Electric Company. He has been with the Boston Elevated Company for the past 16 years.

Mr. C. A. Smith, whose appointment as superintendent of maintenance of way for the Georgia Railway & Electric Company at Atlanta, Ga., was recently announced in connection with several other changes in the personnel of the company, was born in Lawrence, Mass., in 1875. He was educated in the public schools of that city and later entered the civil engineering department of the Massachusetts Institute of Technology, where he graduated in 1899. In the fall of the same year he was appointed assistant engineer for Ford, Bacon & Davis, New York City, who at that time were constructing the Atlanta Rapid Transit Company's lines in Atlanta, Ga. He remained with this firm until the fall of 1903, serving successively as assistant engineer, superintendent of construction and engineer in charge of construction work on various electric railway properties throughout the south. Since 1905 he has been connected with the Georgia Railway & Electric Company as engineer in the roadway department. In his new position as superintendent of maintenance of way he succeeds Mr. W. H. Glenn, who was appointed manager of railways, vice Mr. Thomas K. Glenn, resigned.

C. A. Smith.

Announcement is made of the appointment of Prof. C. F. Harding as head of the school of electrical engineering of Purdue University. Professor Harding is a graduate of Worcester Polytechnic Institute and has had a broad practical training as an engineering teacher. His special training has been along the line of high-tension railway work and he was electrical engineer for the first railway of that character in New England. He has been engineer for the D. & W. Fuse Company of Providence, R. I., publication manager for the Ft. Wayne Electric Company, associate professor of electrical engineering at Cornell University and engineering expert for Stone & Webster of Boston.

Mr. Richard Hapgood, superintendent of tracks of the Boston Elevated Railway, has just observed his fiftieth anniversary as an active street railway man in Boston. He began as stableman on the old Union Railroad, Cambridge, in 1858; after several years of platform work he became superintendent of the Cambridge Railroad; left that position in 1885 to

spend two years in the west for his health; returned to become roadmaster of the Boston Consolidated Street Railway; succeeded in 1892 to the same position after the West End Street Railway was formed, and with the lease of that company by the Boston Elevated Railway assumed his present position. The first company he served built its own cars, costing $850 and weighing 4,500 pounds. The tracks he now supervises carry electric semi-convertibles, weighing 56,000 pounds and costing ten times as much as the old horse cars.

Mr. S. A. Redding, heretofore electrical engineer of the Georgia Railway & Electric Company, Atlanta, Ga., has been appointed general superintendent of the electrical department of the company, effective on February 4. Mr. Redding is a native of Atlanta and is a graduate of the electrical engineering department of the Alabama Polytechnic Institute at Auburn, Ala. In 1894 he entered the service of the Georgia Electric Company at Atlanta, where he remained until January 1, 1895, when he resigned to go to Schenectady, N. Y., as a student in the practical electrical department of the General Electric Company. After three years of service with this company he was sent to Manaos, state of Amazonas, Brazil, which is 1,000 miles up the Amazon river, to install an electric lighting plant in that city. After completing the installation he was appointed chief engineer of the Manaos Electric Railway Company, where he remained until 1903, when he returned to Atlanta to take a position in the engineering department of the Georgia Railway & Electric Company. In the spring of 1906 he was appointed assistant electrical engineer and later electrical engineer, where he has remained until his present appointment. In his new position he will have charge of all generating stations, substations and wires and conduit, succeeding Mr. G. W. Brine, who had charge of these details before his recent appointment as general manager.

Mr. Peter C. Dolan, whose election as president of the Pittsfield (Mass.) Electric Street Railway was announced in our issue of February 1, has been identified with street railway interests since he was 22 years old. At that time he, together with his brother, P. H. Dolan, bought the controlling interests in the New Britain (Conn.) Traction Company, then operated by horse-power. Under their management the line was converted for electrical operation and is said to have been the first successful trolley system in the state of Connecticut. In 1891 the road was sold to the Connecticut Light & Power Company and in 1892 the Dolan brothers purchased the Pittsfield Street Railway, which had recently been converted into a trolley system, although the old single-truck horse-car equipment was still in use. Under their direction the road was improved and extended, a new office building, waiting stations and car barns were erected and more recently the new Seymour street power station has been built and equipped. Mr. Dolan is 50 years old. He was general manager of the company until his election as president to succeed the late Joseph Tucker.

Peter C. Dolan.

Obituary.

Othniel F. Nichols, who from 1888 to 1895 was general manager and chief engineer of the Brooklyn Elevated Railroad, died at his home in Brooklyn, N. Y., on February 4. He was formerly chief engineer of the department of bridges of New York City and was connected with the construction of various

Murdock McAulay, superintendent of the Detroit Monroe & Toledo Short Line Railway at Monroe, Mich., died of apoplexy on February 11, aged 45 years. Mr. McAulay had been with the Detroit United Railway for a number of years, serving from 1901 to 1902 as carhouse foreman, and from 1903 to 1906 as assistant superintendent of its Orchard Lake division. On July 1, 1906, he was appointed assistant superintendent of the Detroit Monroe & Toledo Short Line, and on January 1, 1908, became superintendent of the road, succeeding Mr. E. B. Taylor, as announced in an earlier issue.

Financial News

Boston Elevated Railway.—The committee on "Street Railways" of the Massachusetts legislature held a meeting on January 30 to consider the bill providing for absorption of the West End Street Railway by the Boston Elevated Railway. W. A. Bancroft, president of the Boston Elevated Railway, said that unless the bill should be passed, "instead of developing one company, we shall be developing two. Almost a million dollars' worth of real estate is lying idle now which we cannot sell—although we ought to sell it—owing to the provision that the property of the West End company must be returned at the end of the lease, 14 years from now, exactly as it was received by us." Frederick M. Bushnell of Stone & Webster testified to the enormous cost of operating the system as two roads over what it would be if they were consolidated.

Chicago & Milwaukee Electric Railroad.—Arthur Young & Co., public accountants, have been employed by the receivers to make a detailed report regarding the accounts of the company.

Cleveland Southwestern & Columbus Railway, Cleveland, O.—At the annual meeting of stockholders J. O. Wilson, the treasurer, was elected a director.

International Railway System, Buffalo.—Earnings for the quarter ended December 31, 1907, with comparisons, were as follows:

Quarter ended December 31—	1907.	1906.	1905.
Gross earnings	$1,307,663	$1,366,876	$1,136,021
Operating expenses	843,715	724,842	702,954
Net earnings	$ 463,948	$ 642,034	$ 433,067
Charges	351,101	295,730	288,047
Surplus	$ 112,847	$ 346,304	$ 145,020

Maryland Electric Railways, Baltimore, Md.—The $1,200,000 capital stock of this company has been listed on the Baltimore stock exchange.

Metropolitan Street Railway, New York.—The interest due on February 1 on the $12,500,000 of general mortgage collateral trust 5 per cent bonds was not paid. Alexander J. Hemphill, Donald Mackay and Edward H. Ladd, Jr., will act as a protective committee representing the interests of holders of these bonds. The committee requests that information as to the amount of holdings of these bonds be sent to the Guaranty Trust Company of New York.

Montreal Street Railway, Montreal, Can.—Shareholders authorized on February 1 the issue of $1,000,000 additional capital stock at 125 and the issue of £460,000 of 4½ per cent 14-year debentures.

Ohio Electric Railway, Cincinnati, O.—This company has absorbed the property of the Cincinnati Northern Traction Company. The Cincinnati Enquirer states in substance: "The merger has been approved by the directors and stockholders of both corporations. The completion of this consolidation will mean that the Schoepf interests will have under one direct management 700 miles of interurban track, with an additional 100 miles when construction work now under way is completed. This will leave the Schoepf properties in Ohio in two corporations, the Ohio Electric Railway, the interurban system, and the Ohio Traction Company, which controls the Cincinnati Traction Company. It is the intention to continue the Ohio Traction Company as a separate organization. The Cincinnati Northern Traction Company controls by lease the Cincinnati Dayton & Toledo Traction Company. This lease will be assigned to the Ohio Electric Railway. The road of the Cincinnati Northern company is being rebuilt. It extends from Spring Grove avenue, Cincinnati, to Dayton, about 60 miles, where it connects with the interurban lines which extend in four directions—to Columbus and Zanesville on the east, Toledo on the north and Richmond and Ft. Wayne on the west and northwest. The grading on the line which is under construction to Toledo has been fully completed and rails are now being laid."

South Side Elevated Railroad, Chicago.—Wallace Heckman has been elected a director to succeed William B. Walker.

Third Avenue Railroad, New York.—The Central Trust Company of New York has asked permission of the United States circuit court of New York to intervene as party defendants in the receivership of the subsidiary Forty-second Street Manhattanville & St. Nicholas Avenue Railway and Dry Dock East Broadway & Battery Railroad. The Central

Trust Company states that one of the last acts of the officers and directors of the Dry Dock company, who represented the New York City Railway, was to pay over to the receivers of the latter corporation checks aggregating $20,000 for alleged indebtedness. Payment on the checks was immediately stopped, but $8,000 had been collected, it was found. The trust company also states that payment was stopped on checks aggregating $45,000, issued to the New York City Railway receivers by the Forty-second Street Company. Representatives of the trustees and holders of the first consolidated mortgage bonds of this company have been elected directors of various subsidiary lines.

Toronto (Ont.) Railway.—Gross earnings in 1907 were $3,511,197, an increase of $401,458, or 12.9 per cent, over 1906. Operating expenses were $1,893,326, or 53.9 per cent of gross earnings. There was a surplus of $122,781 after provision for all charges and for dividends. During the year the city of Toronto received from the company for taxes, percentages and pavement charges the sum of $542,090.53, an increase of $74,725.09 over the previous year.

Twin City Rapid Transit Company, Minneapolis, Minn.—M. B. Koon has been elected a director to succeed N. D. Munn.

United Railways Company of St. Louis.—At the annual meeting of stockholders on January 28 the directors were re-elected. The directors re-elected all the officers.

United Railroads of San Francisco.—Patrick Calhoun, the president, is quoted in the San Francisco Chronicle as confirming the report that he has negotiated the sale of $3,500,000 of preferred stock, the proceeds of which, with $1,500,000 arranged for previously, will make $5,000,000 available for the construction of a new power plant, and reconstruction.

West End Street Railway, Boston.—The issue of $700,000 of 15-year bonds, to bear not over 5 per cent interest, has been approved by the Massachusetts railroad commission.

Wilmington & Edgemoor Electric Railway.—Robert Glendenning & Co. of Philadelphia are offering at par and interest $65,000 of first mortgage 5 per cent bonds. The bonds are guaranteed by the Wilmington (Del.) City Railway, the stock of which is now deposited as security for the Wilmington & Chester Traction Company 5 per cent bonds.

Winnipeg Electric Railway.—Gross earnings in 1907 were $861,571, of which 5 per cent was paid to the city of Winnipeg.

Winona Interurban Railway, Winona Lake, Ind.—The capital stock has been increased to $1,200,000 to permit the issue of $600,000 of 6 per cent cumulative preferred stock on account of the construction of the Peru division, extending from Peru to Warsaw, 14 miles, of which 11 miles are now in operation and the remainder will be completed on June 1, 1908. The amount of bonds on the Peru division is $850,000, and on the Goshen division $750,000 bonds are outstanding. The common stock of this company is held in trust for the Winona Assembly.

ELECTRIC RAILWAY EARNINGS.

American Railways Company, Philadelphia (Subsidiary Companies).

Gross earnings—	1908.	1907.
January	$ 209,287.28	$ 210,716.55
July 1, 1907, to January 31, 1908...	1,780,859.40	1,701,548.62

Seattle (Wash.) Electric Company.

December—	1907.	1906.
Gross earnings	$361,369.91	$309,476.33
Operating expenses (including taxes)	252,883.77	196,963.89
Net earnings	108,486.14	112,512.44
Interest charges	40,990.63	28,306.77
Balance	67,495.51	84,205.67
Bond sinking fund	4,583.34	4,583.37
Balance	62,912.17	79,622.30

Dividends Declared.

Georgia Railway & Electric Company, Atlanta, Ga., common, quarterly, 1½ per cent.

Grand Rapids (Mich.) Railway, preferred, quarterly, 1¼ per cent.

Harrisburg (Pa.) Traction Company, 3 per cent.

Philadelphia Company, Pittsburg, preferred, 2½ per cent.

Union Street Railway, New Bedford, Mass., quarterly, 2 per cent.

The Havana Central Railroad, which operates an electric railway 70 miles long, between Havana and suburban towns, contemplates the building of 50 miles of additional track, a large terminal station and a number of piers. It is the intention of the company to operate, in the future, a ferry from Havana to Regla.

Manufactures and Supplies

ROLLING STOCK.

Mattoon City Railway, Mattoon, Ill., is in the market for one double-truck car.

Third Avenue Railroad, New York, is in the market for 50 new equipments for installation on its summer cars.

Toledo Urban & Interurban Railway, Toledo, O., has purchased three sets of trucks from the Curtis Motor Truck Company of Decatur, Ill.

Ft. Wayne & Springfield Railway, Decatur, Ind., has built in its own shops one refrigerator car. The specifications include the following details:

Weight ..... 20,000 lb.	Width, inside .....7 ft. 10 in.
Wheel base .....5 ft.	Over all .....8 ft. 1 in.
Length of body.....36 ft.	Height, inside .....8 ft.
Over vestibule.....39 ft.	Body .....Wood
Over all .....40 ft.	Underframe .....Wood

The special equipment includes Washburn couplers and English varnish.

Los Angeles & Redondo Railway, Los Angeles, Cal., is building six open and closed section double-truck cars in its own shops at Redondo Beach, Cal. These cars are to be finished by June 1, 1908. The specifications include the following details:

Seating capacity..... .....52 passengers	Length, over all...47 ft. 6 in.
Weight .....50,000 lb.	Height, inside.....8 ft.
Wheel base.....5 ft. 10 in.	Sill to trolley base..... ..... 9 ft. 2 in.
Width, inside.....7 ft. 7 in.	Height track to trolley base ..... 12 ft. 2 in.
Over all.....8 ft. 5 in.	Body .....Wood
Length of body.....36 ft.	Underframe, Wood and metal
Over vestibule...46 ft. 6 in.	

Special Equipment.

Air brakes.....Westinghouse	Hand brakes.....St. Louis vertical ratchet wheel
Center bearings ....Baltimore ball bearing	Headlights .....Mosher
Control system..Westinghouse	Interior finish..Spanish cedar
Couplers .....Nor-wood & Bonny automatic	Journal bearings.....Babbitt
Curtain fixtures.....Forsyth	Markers .....Lintern
Curtain material...Pantasote	Motors...4 Westinghouse 101
Fenders .....Eclipse	Safety tread.....Stanwood
	Seats .....Wheeler

Denver & Interurban Railroad, Denver, Colo., as reported in the Electric Railway Review of February 8, has placed an order with the St. Louis Car Company for eight double-truck closed motor cars with smoking and baggage compartments and four double-truck trailers. The contract was closed January 25, 1908, and delivery is to be made June 1, 1908. The specifications call for the following details:

Eight Motor Cars.

Seating capacity— Six cars.....58 passengers Two cars....46 passengers	Height, inside.....9 ft. 2¾ in. Sill to trolley base..... ..... 10 ft. 6 in.
Weight .....100,000 lb.	Height track to trolley base ..... 14 ft. 3 in.
Wheel base.....90 in.	Body .....Wood
Length, over all....55 ft. 6 in.	Underframe .....Metal
Width, inside....8 ft. 10½ in.	
Over all.....10 ft. ¼ in.	

Four Trailers.

Seating capacity ....58 passengers	Height, inside.....9 ft. 2¾ in. Sill to trolley base..... ..... 10 ft. 3 in.
Weight.....About 60,000 lb.	Height track to trolley base ..... 14 ft.
Wheel base .....66 in.	Body .....Wood
Length, over all...55 ft. 10 in.	Underframe .....Metal
Width, inside....8 ft. 11½ in.	
Over all .....10 ft. ¼ in.	

Special Equipment.

Air brakes ....Westinghouse automatic	Journal boxes.....Franklin
Bolster, body.....Steel	Motors.....4 Westinghouse
Bolsters, truck.....Cast steel	Safety tread..... .....Mason's carborundum
Brakeshoes ....Sargent Diamond S	Sanders..... Nichols-Lintern
Control system..Westinghouse	Seats .....St. Louis
Curtain fixtures.....Forsyth	Springs..Ry. Steel-Spring Co.
Curtain material...Pantasote	Trolley poles and attachments .....Pantagraph
Hand brakes.....Peacock	Trucks.....Am. Loco. Co.
Heating system.....Consolidated Car-Heating Co.	Varnish .....Murphy
Journal bearings.....Hewitt	Trap doors..... .....Edwards

Twin City Rapid Transit Company, Minneapolis, Minn., has placed an order with the General Electric Company for 150 motor equipments. The car bodies will be built in the railway company's shops.

Massillon Wooster & Mansfield Traction Company, G. A. Bartholomew, president, 1429 Williamson building, Cleveland, O., advises that it expects to order a portion of its rolling stock during the coming summer.

New York New Haven & Hartford has placed an order with the Westinghouse Electric & Manufacturing Company for six single-phase electric locomotives, which are to be duplicates of those now in use on this road and which have been described in detail in these columns.

Rochester Syracuse & Eastern Railway, Syracuse, N. Y., was reported in the Electric Railway Review of February 8 to be in the market for two double-truck interurban cars. This order has practically been placed with the Cincinnati Car Company and will include the following details: Weight, 90,000 pounds; length of body, 43 feet 6 inches; length over all, 53 feet 6 inches; air brakes, Westinghouse; controlling system, Westinghouse multiple unit; motors, four Westinghouse, 125 horsepower; trucks, Baldwin.

TRADE NOTES.

Allis-Chalmers Company, Milwaukee, Wis., has received orders recently for motors from the Lincoln (Neb.) Traction Company, Crane Company, Chicago, and Devoe & Reynolds, Chicago.

Southern Car Company's plant at High Point, N. C., was destroyed by fire on February 8. Twenty-three cars, almost completed, were burned. The loss is estimated at from $80,000 to $100,000.

C. Lee Cook Manufacturing Company, Louisville, Ky., has recently installed in its plant a high-speed automatic engine, direct connected to a 50-kilowatt generator, which has several new features.

Minneapolis Steel & Machinery Company, Minneapolis, Minn., has recently installed for the Mankato Electric Traction Company, Mankato, Minn., one of its 18 by 36 inch Corliss engines, direct connected to a 150-kilowatt Westinghouse generator.

Robert McF. Doble, consulting and supervising engineer, making a specialty of hydro-electric power development and transmission, formerly of San Francisco, Cal., announces the removal of his office from Colorado Springs to 528 Majestic building, Denver, Colo.

Massachusetts Chemical Company, Walpole, Mass., reports a healthy reaction in business. The company has lined up many new customers for substantial contracts on its No. 264 tape and other brands, and the volume of business in Armalac shows that electric railways are getting their summer equipment into shape.

Westinghouse Electric & Manufacturing Company's reorganization committee has issued a synopsis of the plan for the readjustment of the company's debt. The committee calls the attention of creditors to the importance of the immediate deposit of their bonds, notes, claims or obligations, setting forth that if the plan can be speedily declared operative and an early termination of the receivership effected and the property and assets of the company promptly restored to its stockholders, the value of this great company and of its good will as a going concern will be preserved to the creditors and stockholders. The time to make deposits expires March 1.

H. W. Johns-Manville Company, 100 William street, New York, in accordance with its usual custom, held a convention of its branch managers in New York from January 29 to February 1. The managers of the various branches of the company throughout the United States were present at the meeting and a general discussion of the business affairs of the company took place. As a fitting wind-up of the convention a banquet was given to the managers at the Union League Club on Friday evening, January 31. The convention was pronounced a decided success by all present.

G. Drouvé Company, Bridgeport, Conn., at the annual meeting of the directors, held February 3, 1908, elected G. Drouvé president and treasurer and William V. Dee secretary of the company. Mr. Dee, who recently resigned from The Railway Age to take an interest in the company, has been appointed general sales manager. The company manufactures the "Anti-Pluvius" skylight, of which 125,000 square feet has been installed on the Hoboken terminal of the Delaware Lackawanna & Western Railroad, and the Lovell window-operating device, now used in the shops of the New York Central & Hudson River, Harmon, N. Y.; the Delaware Lackawanna & Western, Scranton, Pa.; and a number of other railroad shops; also Drouvé ventilators, drying stoves, etc.

R. W. Marshall & Co. of New York, after two years of much success with their Passburg vacuum drying and impregnating apparatus, have found it necessary to install a larger plant at their new factory, in addition to the present one, to properly care for increased business in this line. This new plant is one of the extremely large models, which, when in operation, about February 10, will enable them to impregnate more than 400 standard railway motor field coils a day. R. W. Marshall & Co. report that they are doing this work for practically all of the most important railways throughout the eastern territory, and are having remarkable success, which is due largely to the careful thought and study which the process has received at their hands. They will be glad to go into full detail with any railway company regarding this work, and will contract to impregnate all of their discarded field coils which have not been short-circuited, and also supply new ones on a very interesting basis. Their new factory is also fully equipped for making armature coils and overhauling and repairing all kinds of motors, controllers, large electrical machinery, etc.

ADVERTISING LITERATURE.

Kalamazoo Railway Supply Company, Kalamazoo, Mich.—A special catalogue is devoted to Root railway spring scrapers and fenders, a number of types of which are described and illustrated.

Ohio Blower Company, Cleveland, O.—A comprehensive catalogue, soon to be ready for distribution, will, it is stated, excel anything in this particular line, that of centrifugal steam and oil separators, cast-iron exhaust heads and gravity closing ventilators.

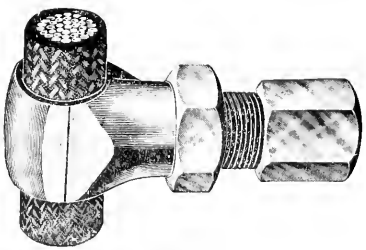
T. H. Symington Company, Baltimore, Md., and Chicago, Ill.—A recent publication is an attractive catalogue, briefly worded, but illustrating very fully by fine halftone cuts the various types of Symington journal boxes manufactured to suit different classes of service. The recently adopted standard of the American Street and Interurban Railway Association and several special types of journal boxes are illustrated. This company is the first producer of journal boxes to study the requirements of electric railway companies, with the result that the Symington box is said to be used on the majority of heavy electric trucks built in the past two years.

USE OF DOSSERT CONNECTORS.

Dossert solderless connectors, as illustrated in the accompanying cuts, are now being extensively used by the Chicago City Railway. The 2-way connector is being used to join

Solderless 2-Way Cable Connector.

cables of all sizes at points where there is no strain on the joint. As shown in the illustration, the ends of the cables to be joined pass into split double-cone compression sleeves,



Cable Tap Connector.

which lie between a nipple and compression nuts at either end. When the parts are screwed together the compression sleeves are made to contract and grip the wire firmly, the action being like that of a wire chuck.

The Dossert cable tap connector is used for taps from the

feeder to the trolley wire. A substantial hook, carefully machined to fit the cable, is the principal part of this joint. The hook is large enough to give plenty of contact. The shank of the hook is drilled and threaded so as to form the nipple of the standard Dossert joint for the size of bleeder required. The casting which fits in the space between the cable and the base of the hook is held snugly in place by means of a jam nut. The hook is secured to the feeder cable with a vise-like grip and the copper wire, which is tapped onto the trolley wire, is inserted in the shank of the hook.

These connectors are manufactured by Dossert & Co., 242 and 244 West Forty-first street, New York.

SPECIALISTS IN RAILWAY LUMBER.

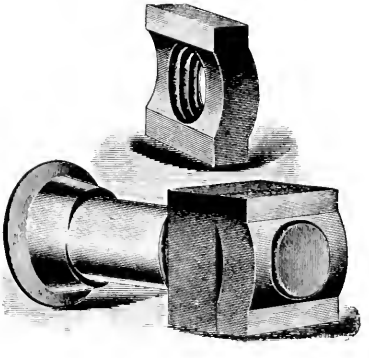
One of the lumber companies which has devoted practically all its attention since the organization to the railway business is the G. H. Barnes Hardwood Lumber Company of St. Louis, Mo.

In 1889 G. H. Barnes organized G. H. Barnes & Co. He was succeeded in 1896 by his son, G. H. Barnes, Jr., who is now president of the G. H. Barnes Hardwood Lumber Company. The other officers are M. D. Barnes, secretary, and M. H. Stiles, treasurer.

For 19 years the company and its predecessor have specialized on the railway business, handling all the different woods that this industry demands. In February, 1906, a yard was opened at Main and Warren streets, St. Louis, in which is carried a stock of walnut, mahogany, cherry, poplar, ash, hickory, white pine and plain and quarter-sawed oak. At the same time a supply of sawed and hewn ties is held in the country. The company has especial facilities for furnishing either white or red oak car stock, as well as bridge timber. In the St. Louis yards it is now carrying 1,500,000 feet of hardwood lumber and ties.

THE GRIP NUT.

The grip nut, as shown in the accompanying engraving, is a 1-piece self-locking nut designed to cure the loose and lost nut troubles. The distinctive feature of the grip nut is that it will not work loose no matter to what working stress, vibration or jar it is subjected. It is made of special steel and, as may be seen from the illustration, it is made with an arched section at the thread portion. It is tapped the same as an ordinary nut and then given a slight deflection along the crown of the arch, which changes the pitch of the threads in the arched section to a slight downward curve, while the threads in the straight portion remain in true plane with the



The Grip Nut.

bolt threads, causing it to grip the bolt threads with a positive friction lock, regardles of its contact with the main nut.

In ordinary double-nut practice the use of a check or jam nut, as commonly applied, results in making the first nut act simply as a washer, because the pressure of the upper nut when wrenched hard on the first nut forces the first nut down so that its threads have no pressure against the under side of the bolt threads and the second nut carries the load. The use of a grip nut as a second nut does not affect the holding power of the first nut. Its function is simply to prevent the first nut from backing off under vibration and working stress. The pressure of the threads in the arched position of the nut is against the upper side of the bolt threads, while the pressure of the threads in the straight position of the nut is against the under side of the bolt threads. The grip nut thus insures full service from the first nut while giving additional load strength.

The grip nut when used as a second nut is applied with a wrench on top of the main nut and automatically locks itself positively and permanently on any part of the bolt to which it may be wrenched. It should not be wrenched so tightly against the main nut as to take the set or curve out of it, as it does not require to be jammed to hold. It causes no injury to the threads and can be readily removed with a wrench at will and used many times over. It requires no special thread, hole, slot or other change in the standard bolt, and does away with the use of ordinary nut locks, jam nuts, spring washers, cotter pins, keys or other auxiliary fastenings.

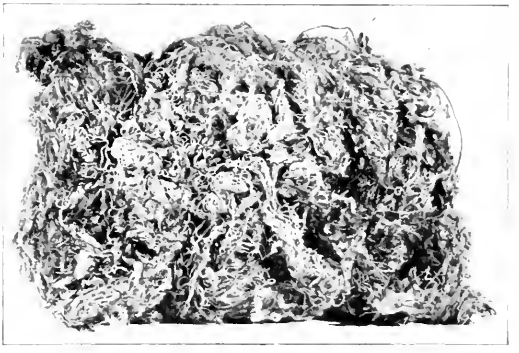
In addition to its use as a check nut the grip nut may be used as a single nut for any service within its own load strength and where the principal stress is on the bolt and not on the nut it has many advantages.

Nuts of this kind have been tested in severe service during the past three years and have fully demonstrated their usefulness and effectiveness on both steam and electric railways. They have been used extensively for the severe service of crossing frogs, switches, etc., and are especially adapted for holding absolutely tight nuts on bolts used in gear cases, split gears, motor axle bearings, armature bearings and at various other points on cars and trucks. The agency for electric railways has recently been taken by the Electric Service Supplies Company, Philadelphia, Chicago and Keokuk.

The grip nut is made in standard dimensions in both square and hexagon shapes.

STEEL WOOL JOURNAL PACKING.

Until very recent years no special engineering work has been devoted to the betterment of lubricating methods for electric railway journals and motor bearings. Of late, however, the increased service demanded of such journals and bearings has brought forth many types of special journal boxes and lubricating methods. These have grown more or less in favor, but have not by any means supplanted the formerly used oil and waste methods of lubricating car journals One of the most important advancements in lubricating methods for the services mentioned has been the introduction of "Steel Wool Journal Packing," manufactured by W. Robertson & Co., fifth floor Great Northern building, Chicago. This material has been carried far beyond the experimental stage and is said to effect a saving of 33⅓ per cent in oil alone over former methods. Steel wool journal packing is suitable for armatures as well as for journal boxes and for such use is now in service on the South Side Elevated Railroad, Chicago, and other representative electric railways in the United States and abroad.



Steel Wool Journal Packing.

A brief description of this valuable material may be of interest. Steel wool journal packing is a mixture of 50 per cent of the best long fiber cotton waste and 50 per cent of steel wool, cut by special machinery from raw material manufactured from a special analysis. This produces a cutting low in carbon yet with ample resiliency to secure to this product sufficient spring to carry the weight of the oil and stand well up against the journal—and that, too, without packing the journal tightly.

It is the cousensus of opinion that cotton waste has

greater capillarity for oil than wool. Used alone its tendency to sag, cake and roll renders it unsatisfactory. Steel wool overcomes these difficulties by imparting to the waste the necessary expansiveness, resiliency, flexibility and wearing qualities. Steel wool is a preventive of the formation of the metallic incrustation ever present on the surface in contact with the journal, which, as is well known, is fatal to proper lubrication and the cause of 60 per cent of all hot boxes.

The packing is always free and porous, allowing the dust and dirt to sift through it, and thence down to the bottom of the cellar of the journal box. This keeps the waste comparatively clean and is one of the reasons for its long life. That 90 per cent of the dust and dirt does not remain in the waste, but sifts through and is held in the bottom of the journal box, has been shown by tests covering a period of two years under extraordinary and adverse conditions. Only clean oil remains in the packing.

Steel wool journal packing is guaranteed by the manufacturer to keep its good condition and position for 15 months from the time it is applied. In other words, its shortest life is, with but little attention and no renewals, 15 months.

The hot box is reduced to the minimum and is positively overcome where it can be attributed to the fault of the packing. The success of this packing, as earlier stated, has been carried beyond the experimental stage, and is now a standard product in the warehouses of a number of lines.

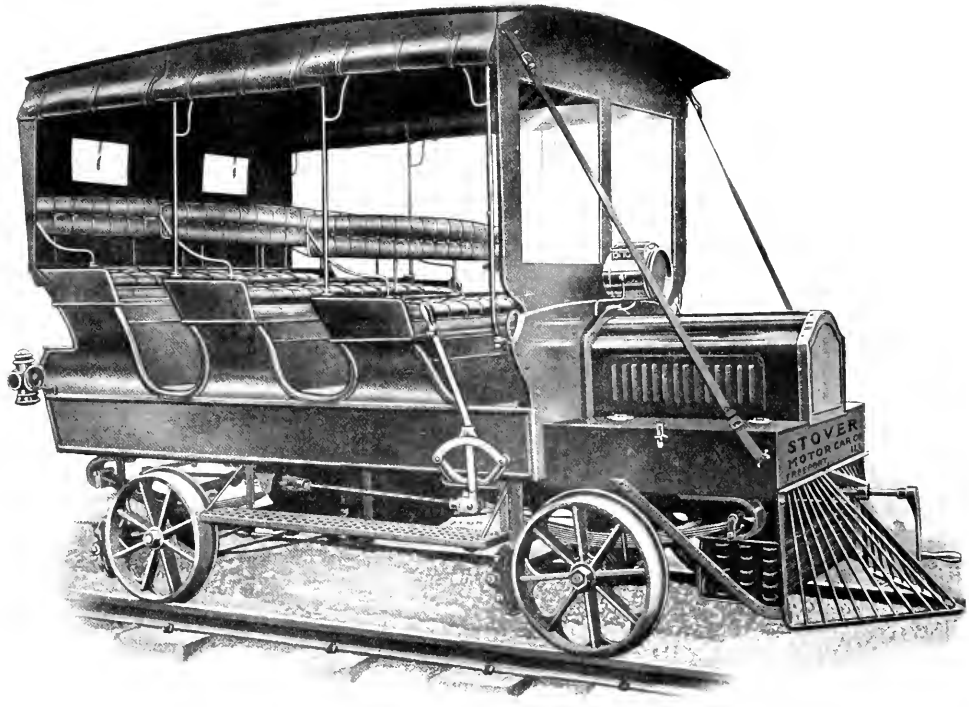
STOVER 12-PASSENGER MOTOR CAR.

The accompanying engraving illustrates a new 30-horsepower motor car which accommodates 12 passengers, recently designed by the Stover Motor Car Company of Freeport, Ill. For small roads not electrically equipped and for short branch lines on which the traffic is periodic and not sufficient to justify the expense of electrification it has developed that there is often use for a car of this character on which the power cost is only for the time the car is actually in operation, and the manufacturer is confident that the field for the car is to be a large one. For night service on certain lines, such as branches to manufacturing plants which run all night during a part of the year, or in other cases where it is desirable to give service at times when the traffic would not warrant keeping the power house in operation this car is especially adapted. Logging roads have found it especially suited to their needs. Experiments made by the Stover company indicate that the car is very economical in the use of fuel, the consumption being not to exceed one gallon of gasoline for a run of from 12 to 15 miles.

The car is equipped with the Stover 4-cylinder gasoline engine which develops 30 horsepower. The cylinders are each 4½ inches in diameter and 5 inches in stroke. The details of design and particulars concerning materials used in the Stover motor are doubtless familiar to our readers, having been described in connection with illustrations of other cars built by this company which we have published recently. In connection with the motor the Hill precision oiler, driven mechanically by the engine, is used. The ignition is with an Exide storage battery, though the motor is so wired that a set of dry cells may be used in case of emergency.

The transmission is of the friction type and the car may be driven either forward or backward. The connection to the drive axle is by a Morse silent chain. The control of the car is by two levers, placed conveniently in front of the operator and mounted on the same post with brake wheel. One lever governs the amount of gas entering the cylinders of the motor through the carbureter and the other lever times the ignition. Ordinarily the car would be geared for 30 miles per hour with full load on level track.

The frame of the car is of heavy channels, and the body is suspended on long semi-elliptic springs. The wheels are of cast steel, mounted on steel axles with Hyatt roller bearings. Brakes are provided on all four wheels. The car is furnished with an acetylene headlight, nine inches in diameter; a complete carbide generator; oil tail lights are used.



Stover 12-Passenger Motor Car.

W. H. S. Wright Supply Company, St. Paul, Minn., has been incorporated to conduct the business established by the late W. H. S. Wright. The officers of the company are B. W. Parsons, president and treasurer, and Mrs. W. H. S. Wright, secretary. The new concern has retained all the accounts handled by Mr. Wright, among them the St. Paul representation of the Railway Steel-Spring Company of New York.

ST. LOUIS CAR CO.
ST. LOUIS-MO.

ILLUSTRATED herewith is one of twelve single-end combination passenger, smoking and baggage compartment cars for the Pittsburgh, Harmony, Butler and Newcastle Railway.

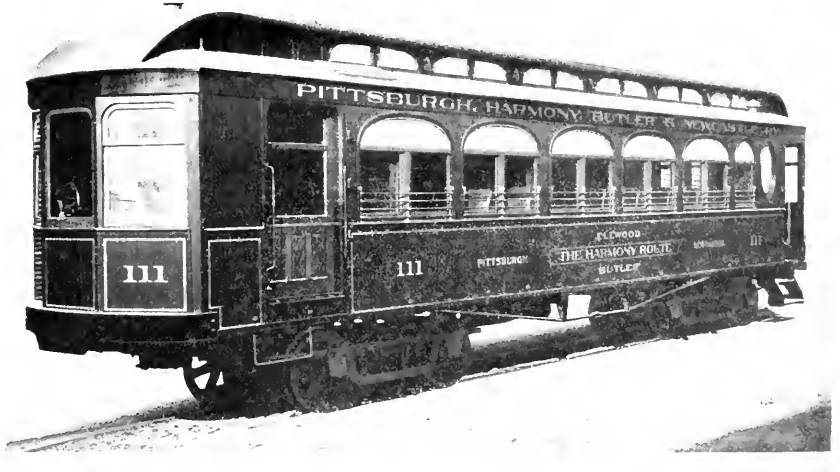
These cars are of the St. Louis Car Company's semi-steel frame construction. Principal dimensions: total length, 46 feet; rear platform, 4 feet 5 inches; main passenger compartment, 22 feet 9½ inches; smoking compartment, 7 feet 8½ inches; baggage compartment, 10 feet 4 inches, including motorman's cab.

The sides are constructed with 12 window sashes and one baggage door. The lower sashes are arranged to raise, while the upper sashes are stationary. The side sashes are glazed with plate glass and the upper and deck sashes with opalescent glass.

The passenger compartment has 15 St. Louis Car Company's stationary seats, upholstered in brown plush with high head roll. In the rear of this compartment is a saloon, the side walls of which are covered with metal up to the window capping. The smoking compartment has six stationary seats, upholstered in dark green leather. The baggage compartment has three folding seats to be used when there is no baggage.

The motorman's cab is separated from the baggage compartment by an iron pipe railing. In the cab is a hot water heater on the left side of the motorman.

The cars are equipped with St. Louis Car Company's illuminated signs on the front of cars, vertical brake wheels on the front end and St. Louis Car Company's self-releasing brake handles on the rear end. They are mounted on high-speed trucks with air brakes and air sanders.



MADE IN THE LARGEST AND BEST EQUIPPED FACTORY OF ITS KIND IN THE WORLD

CLASSIFIED ADVERTISEMENTS

Undisplayed advertisements are inserted under this heading at the uniform rate of one cent a word; minimum charge twenty-five cents. Replies directed to this office will be forwarded when required to any address in the United States, Canada or Mexico without extra charge. Advertisements received at the Chicago office by 9 a. m. Thursday will appear in the issue for the same week.

POSITIONS WANTED.

An experienced business getter and manager would like to secure position as traffic manager for large electric system. Highest references. Address "No. 548," care of Electric Railway Review, Chicago.

Master mechanic wants position with interurban city road; medium-sized preferred. Wide and thorough experience in all branches; can also do armature winding and switchboard work. Address "No. 542," care Electric Railway Review, Chicago.

Experienced master mechanic desires position. Has thorough knowledge of high-speed electric railway equipment, on third rail or trolley. Is good executive, tactful and able to organize work of departments. Best of references furnished. Will consider position with high-speed interurban or city railway. Address "No. 550," care Electric Railway Review, Chicago.

Young man, 30 years of age, who has nearly completed a course of "Electric Lighting and Railway" in the International Correspondence Schools, desires position which will give him practical experience in power house and switchboard work. Willing to start at a nominal salary. Address "No. 526," care of Electric Railway Review, Chicago.

Position by draftsman; have had nine years' experience in electric railway work, instrument work, mechanical and electrical drafting. Experience: assistant to master mechanic and inspector of car construction, equipment and maintenance; track work and buildings. Also familiar with operation. Thoroughly reliable. Address "No. 549," care of Electric Railway Review, Chicago.

Position wanted—The manager of a large railway, lighting and gas plant must make a change in his position owing to an unfavorable climate. Has held managerial positions for 10 years and is thoroughly familiar with the construction, organization and operation of electric railways. Correspondence solicited. Exceptional references. Address "No. 539," care of Electric Railway Review, Chicago.

POSITIONS WANTED.

Position as auditor wanted by a young man of experience in street railway and electric light accounting. Best of references as to character and ability. Address "No. 545," care Electric Railway Review, Chicago.

Position as auditor or assistant wanted by a young single man. Thoroughly experienced in railway, gas and lighting accounting. Now employed. Address "No. 544," care of Electric Railway Review, Chicago.

Position as superintendent of city or interurban line wanted by a man of 15 years' experience in both construction and operation. Best of references as to ability and habits. Open for engagement after February 1. Address "No. 541," care Electric Railway Review, Chicago.

An engineer, experienced in the handling and organizing of station crews, with 10 years' experience as chief engineer in both construction and operation, as well as reconstructing old ones on a modern basis. All voltages up to 15,000, both railway and lights. Salary or per cent, depends on results. I am looking for a reputation as well as salary. Address "No. 536," care of Electric Railway Review, Chicago.

Mechanical and electrical engineer, 14 years' experience. Experienced in power station design and for 14 months acting superintendent of power stations on one of the largest street railway systems in America. At liberty April 1. Desires superintendent of power or similar position. Would open office in Boston as New England representative of responsible manufacturer. Address "No. 546," care Electric Railway Review, Chicago.

POSITIONS OPEN.

Superintendents, street railway, machine shop, car works, power house, engineers, electrical and mechanical, draftsmen, electrical and mechanical. Salaries, $800 to $5,000. Other positions open. Write, HAPGOODS, 305 Broadway, New York, or 1010 Hartford Bldg., Chicago.

POSITIONS OPEN.

Wanted — Electrical salesman who is selling to street railways to take important side line. J. W. Morrison, 29 Griswold street, Detroit, Mich.

MISCELLANEOUS WANTS.

Want to buy second-hand equipment, machinery or material? A card inserted in the Electric Railway Review, stating just what you want, will bring immediate response. The cost is small—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Send orders to Electric Railway Review, 160 Harrison St., Chicago.

What have you to sell in the way of second-hand equipment, machinery or material? Buyers read the "For Sale" cards on the following page and there is the place to tell your story. "For Sale" cards are inexpensive—only $1.20 an inch (measuring 1 inch deep by 1⅝ inches wide) per insertion. Special rates on contracts for 100 inches or more to be used within one year. Now is the time to send your order to Electric Railway Review, 160 Harrison St., Chicago.

BOOKS AND PUBLICATIONS.

Wanted—Copy of the Electric Railway Review of January 12, 1907, in good condition. State price in your answer. Address "No. 530," care of Electric Railway Review, Chicago.

We want your friends to read the Electric Railway Review. You will do them—and us—a favor by sending their addresses. We will gladly mail free sample copies. Electric Railway Review, 160 Harrison Street, Chicago.

Wanted—Copy of the Street Railway Review of August, 1903 (Vol. XIII), also complete sets of Vols. X and XI (1900 and 1901). State price, condition and whether latter two volumes are bound or unbound. Address "Street," care of Electric Railway Review, Chicago.

BOOKS AND PUBLICATIONS.

Ask us about any book on electric railway and allied subjects. We publish some and sell all that are in print. The Wilson Company, 160 Harrison Street, Chicago.

Copies of the Street Railway Review of January and February, 1906, are wanted. Name condition and price. Address "No. 535," care of Electric Railway Review, Chicago.

Copies of the Street Railway Review of March and April, 1904, in good condition for binding are wanted. State price sent postpaid. Address "No. 543," care Electric Railway Review, Chicago.

If interested in any phase of steam transportation, you will find every development covered fully and accurately in The Railway Age. It is the leader and acknowledged authority in this field. Ask for free sample copies. The Railway Age, 160 Harrison Street, Chicago.

A copy of "The Motorman and His Duties," the standard handbook on the theory and practice of electric car operation, is worth many times its cost to every man interested in the subject. Send for 16-page pamphlet of sample pages. The Wilson Company, 160 Harrison Street, Chicago.

Interstate commerce national legislation to July 1, 1906, is fully covered in our reference pamphlet. It contains the full text of the act to regulate commerce as amended, including the Elkins and Hepburn acts, and of the supplementary act relating to the testimony of witnesses before the interstate commerce commission. It also contains the texts of the expedition act, the anti-trust act of 1890, the employers' liability act and the safety equipment laws. Difference in type shows the parts expunged from, and the parts added to, the Interstate commerce and Elkins acts by the Hepburn act. This pamphlet is of special value to railway men and lawyers. Mailed prepaid for 25 cents in stamps or coin. Special prices for quantities. The Wilson Company, 160 Harrison St., Chicago.

If You Have a Position for a High Grade Man

you can quickly secure his services in one of two ways

→ by answering "Positions Wanted" advertisements on this page, or

Doing Double Duty.

The introduction of the pay-as-you-enter fare collection plan has brought good results in more than one way. The new scheme has worked successfully wherever cars designed for it have been put into service, and to the credit of the new system it must be said that several quite severe tests have successfully been undergone. So much for the pay-as-you-enter car serving its intended mission. A second and even more widespread benefit comes about as a result of the publicity given the new system by the newspapers and its promoters. We venture the statement that there is hardly an electric railway manager who has not considered for his own property whether or not its cars and passenger handling methods are the best to be had—and these considerations must make for better results. Various managers and superintendents are now, with renewed vigor, attacking the fare collecting problem. This study will surely bring about beneficial results through means peculiar to individual properties. Therefore we say that the introduction of an improved fare collecting plan has performed a double mission.

Protection in Engraved Tickets.

The use of tickets involves a danger of loss from counterfeiting or theft, as the recent experience of the Washington Railway & Electric Company at Washington, D. C., has shown. When printed lithographic or other mechanically produced tickets are used the danger from counterfeiting will be materially reduced if watermarked or other protective papers and cardboards are used. But even with these duplication or a reasonably close imitation can be effected and it may be only after a large number of counterfeit tickets have been used that the fraud will be detected. The most reliable protection is engraved tickets, the plates for which it is practically impossible to duplicate. The geometrical lathe work can be reproduced only by those having expensive machinery and the hand tooling is practically impossible to duplicate exactly. Because expensive machinery and highly skilled labor are required for the production of engraved tickets they are more expensive than other sorts. After the initial expense the cost, however, is not materially higher when the additional safeguard in their use is taken into consideration. With them the danger from counterfeiting is practically eliminated and owing to the precautions exercised by the reputable engraving companies the danger from theft of plates is very small.

Saving Oil and Brakeshoes.

The duties of the superintendent of rolling stock and shops on any large system should be such that he may have ample time to thoughtfully consider economies—small, perhaps, for each unit, but of considerable amount when all the equipments of the road are summed. When a superintendent has his full time occupied with humdrum routine work it is hardly possible for him to give to the economy problem the thought which it warrants. As an example of how profitable it is to study some particular class of expenditure, we recall that on one of the large city systems operating about 2,000 cars, no special study had been made of car oiling and brakeshoes until about a year ago. At that time the department head in charge of rolling stock employed an assistant to whom the especial duty was assigned of lowering the unit costs for the oil and brakeshoes. It was expected that his wages at $150 a month would more than be paid out of the savings anticipated. The expectations have been met. About a year ago armature bearings were oiled regularly once in five days. Careful attention to the details of the work and an especially watchful inspection have resulted in these same bearings receiving oil but once every three or four weeks. Similar attention has been paid to the inspection, adjustment and reversing of brakeshoes so that during the last six months the life of brakeshoes has been increased 6 per cent.

Troubles of the Coal Dealer.

The purchasing department of an electric railway must ever be on its guard. In a paper on the subject "Selection of Coal," by E. G. Bailey, chief of coal testing department A. D. Little's laboratory, Boston, Mass., presented before the New England Street Railway Club during the past week, the speaker not only recited the various difficulties with which the coal miner is confronted in his attempts to deliver uniform grades of coal, but also gave his audience some valuable suggestions about determining the value of coal both before and after purchasing. A purchaser should not base his judgment entirely upon price and quality, whether these characteristics are gained by measuring the heat units or evaporation of power. Besides these qualities there are certain practical things that must be considered, such as delivery and the question of spontaneous combustion. A definite money value cannot be placed on these, but each purchaser is called upon to exert his own judgment. When a contract for coal has been made the purchaser should take every means to assure himself that he gets the value contracted for. This may seem like an unnecessary caution, but, as the speaker assured his audience, the most honest coal dealer cannot always deliver the quality of coal contracted for.

Special Operating Signals.

The Market Street Elevated Railway of Philadelphia, Pa., includes in its design many features of especial engineering interest. These have, from time to time, been described in the Electric Railway Review and elsewhere in the technical press. Of interest, however, to operating men is a detail seldom made use of in any railway and one which we are assured adds greatly to the reliability of schedules, meanwhile reducing to a minimum the power demand. It will be remembered that on account of various permanent structures the profile of this road is uneven. The trains leaving the subway under the business portion of the city must climb a rather severe grade to reach the level of the elevated structure. A little farther on in the journey these trains dip under the elevated structure of a steam railway and so on, until the western portion of the city is reached, the trains must alternately ascend and descend short grades. To assist the motorman in maintaining schedules, meanwhile

obtaining the desirable features earlier mentioned, there are placed, at properly located points along the right of way, signs indicating to the motorman that he shall turn on or off his power as he passes a particular sign. Inasmuch as the equipments are operated in multiple-unit trains with motors on each car, the variation in the length of a train does not affect the acceleration, either negative or positive; and it is found that this small detail contributes largely to the success of maintaining the trains on schedule time, as well as assuring that the power is not unnecessarily wasted by a thoughtless motorman. Probably there are but few situations where a similar practice could be used throughout the length of the road, but on the other hand there is, undoubtedly, no road that could not find a number of locations along its route at which, if such signs were placed, a direct gain could be obtained.

THE LOST CAPITAL ACCOUNT IN CLEVELAND.

Valuation of the Cleveland Electric Railway will determine the true extent of its "lost capital account," to which reference has been made repeatedly in the negotiations that have been in progress in Cleveland since December 4. F. H. Goff, the arbitrator representing the Cleveland Electric Railway, speaks of the extent of this lost account as due to a misguided but sincere belief that the city of Cleveland would willingly grant a renewal of franchises when they expired. Throughout the years when advantage was taken of these franchises it was assumed by the company that its right to continue to operate in the streets of Cleveland would be conceded without hesitation by the municipality, and that the existing large investment would indefinitely constitute a capital asset of great value. Such an assumption, always unsafe, has proved particularly distressing in Cleveland, where Mayor Johnson, with a fortune made from the promotion of street railways, pictured the traction question as the sole political issue before the voters, promoted an independent company to harass the Cleveland Electric Railway and has zealously protected the investment in the competing line. Such conditions may not develop soon again in any large city of this country; but, as Mr. Goff has indicated, it was thought a few years ago that the Cleveland Electric Railway would have only a peaceable renewal of its franchises to arrange.

Until the final figures are determined it is impossible for anyone to do more than guess what the amount of the difference between the capitalization of the road and the agreed value of the property will be; Mr. Goff and Mayor Johnson have been wise in endeavoring to discourage speculation in the stock by making this fact plain. That the discrepancy will be serious, however, is clear.

The outstanding stock of the Cleveland Electric Railway is $23,400,000, all of one class. The three outstanding issues of bonds aggregate $9,026,000, maturing as follows: On July 1, 1909, $2,026,000; on March 1, 1910, $1,000,000; on March 1, 1913, $6,000,000. The total outstanding capitalization, therefore, is $32,426,000. In the issue of the Electric Railway Review of February 1, 1908, an account of the work accomplished upon the valuation up to that time was published; and later developments have been given in subsequent issues. With nearly all of the items of the physical property agreed upon, the total agreed value so far is $14,319,924; but there still remain to be settled the value of auditor's stores, including rails, ties and track, and the amount which shall be allowed for overhead charges. Pending the final decision upon these questions, H. J. Davies, secretary of the Cleveland Electric Railway, and Prof. Edward W. Bemis, representing the city, are engaged upon the work of determining the value of the unexpired franchises. As was to be expected, more wide differences of opinion have developed over this feature of the valuation than over any other. The worth of the unexpired franchises is to be computed by determining the earning power of the various lines and capitalizing the net earnings. The Cleveland Electric Railway would be willing to allow 60 per cent for operating expenses (including depreciation) and taxes, but Mayor Johnson thinks that the rate should be 65. Compromise upon 62.5 per cent has been suggested, but it is probable that a special investigation will be made before a definite agreement is concluded upon this point.

It is apparent that there must be a number of arbitrary decisions concerning the value of franchises. Mayor Johnson wants to assume that the Cleveland Electric Railway has suffered a depreciation in the value of its franchises because its original monopoly in urban business has been destroyed by the franchises granted by the city council, under his direction, to the lines which he has promoted. While this competition has been a source of trouble to the Cleveland Electric Railway, it must be admitted that without the paternal and unfair assistance of the city administration of Cleveland the competition would never have reached a point where it would have been worthy of respectful consideration. The standards of the service and the equipment of the Forest City Railway, notwithstanding the fostering care of the city officials, have been far below the standards of the Cleveland Electric Railway. In speaking of his desire that the new arrangement shall permit the financing of future extensions on an economical basis, Mr. Goff has urged that the security franchise to be granted to the Cleveland Electric Railway shall be sufficiently broad in terms to assure the protection of abundant capital; and he has emphasized the fact that in the reconstruction and extension of the property no construction of the character of that of the Forest City Railway will be allowed. It should be recognized that the Forest City Railway has added to the burdens of the Cleveland Electric Railway not because it had great resources or an enterprise which promised to yield abnormally large profits, for neither of these conditions was true of the property, but because Mayor Johnson was able to pervert the power of the city council; if this legislative body had not used its authority to bolster the operations of the independent company, and city time and labor had not been given free of cost, the competitive effect upon the Cleveland Electric Railway would have been very slight. Shorn of the backing of the mayor of Cleveland the Forest City Railway would soon be forced to show the inadequacy of its resources to provide a service equal to, or closely approaching, that offered by the Cleveland Electric Railway, and to clear up the question as to the profit or loss which would result from its operations on a low-fare basis if proper accounting methods were followed. The widespread acceptance of these facts makes it seem likely that Mayor Johnson has raised the talk of the effect of competition in order to "help the trade."

The present experience of the Cleveland Electric Railway illustrates the dangers of limited urban franchises. Attempts to secure renewals of such franchises may be met by insurmountable obstacles. When municipalities urge the construction of new lines and offer franchises therefor extending beyond the maturity of the rights held by terminal lines in congested districts, companies should resist the bait unless they are assured that the rights of outlying properties are substantially protected by franchise privileges in the central district. The only positive safeguard against the "lost capital account," when the right of a company to furnish transportation service in an urban community is based upon limited franchises, is the creation of a reserve fund to provide for the amortization of the investment.

Samuel Kahn of the San Antonio Gas & Electric Company, editor of the Southwestern Electrical and Gas Association question box for 1908, is sending out invitations for questions for the next convention question box. The convention is to be held at El Paso, Tex.

ANNUAL REPORTS.

Chicago City Railway.

The report of the Chicago City Railway for 1907 is made up in new form because the company operated for 11 months of the year under the ordinance providing for a distribution of net earnings with the city. The income account shows:

Passenger receipts (January excluded)	$7,160,634.96
Receipts from other sources (January excluded)	102,059.20
Gross earnings	$7,562,694.16
Operating expenses, taxes, renewals and interest on capital investment, as approved by board of supervising engineers	6,410,272.66
Net earnings for 11 months	$1,152,421.50
City's proportion, 55 per cent, as per ordinance	633,831.83
Company's proportion, 45 per cent	$ 518,589.67
Interest on capital as certified by board of supervising engineers	1,116,386.77
Income from operation for 11 months	$1,634,976.44
Other income from January operation, etc., net	281,581.88
Net income	$1,916,558.32
Dividends	1,215,000.00
Surplus	$ 701,558.32
Value of property December 31, 1907, as per certificate of board of supervising engineers	$28,168,980.58
Percentage of annual income on above valuation (based on 11 months' operation)	6.33
Percentage of net income upon capital stock at par.	10.64

In his statement T. E. Mitten, the president, says:

Three hundred cars of the new pay-as-you-enter type have been purchased, 150 of which have been placed in service, resulting in almost entirely eliminating the large number of accidents brought about by passengers attempting to board or leave moving cars. The proportion of fares collected to passengers carried has also been materially increased, due to the collection of fares by conductor upon the rear platform.

The entire number of double-truck cars required to be supplied under the ordinance during the 3-year period has now been secured. The company has 805 double-truck cars and 251 single-truck cars, making 1,056 cars required by ordinance.

A total of 31.5 miles of new track has been reconstructed during the past year under the provisions of the ordinance, of which 10 miles were in replacement of cable tracks.

Three new modern substations, suitably located for the distribution of power, have been placed in service.

Two new car stations of large capacity and modern equipment are practically completed, which when in use will make possible the systematic and economical inspection and cleaning of cars.

The result of operation of your property for 1907 comprises 11 months' operation under the partnership arrangement and one month (January) for individual account.

The passenger earnings for the year were $8,087,000.88, an increase of 4.1 per cent. The average fare was unchanged, namely, 3.1 cents per passenger carried.

As the operating expenses for 11 months of the year were arbitrarily fixed at 70 per cent, to comply with the provisions of the ordinance, there is no opportunity for comparison with the results of previous years.

It is a source of gratification that as the provisions of the settlement ordinance, by which the city participates in the net earnings of the company, become more generally understood, the public and the city authorities are showing an increasing willingness to co-operate with the management in removing obstructions to rapid transit and in such of its other undertakings as have clearly for their purpose the improvement of the service.

The number of fare passengers increased 3.99 per cent in 1907 over 1906 and the number of transfer passengers showed an increase of 2.69 per cent. The increase in the total number of passengers was 3.5 per cent. Traffic statistics follow:

	1907.	1906.	1905.
Fare passengers	162,422,148	156,177,363	145,500,483
Transfer passengers	97,171,371	94,623,106	87,911,785
Fare and transfer passengers	259,593,519	250,800,469	233,412,268
Percentage of transfer to fare passengers	59.83	60.59	60.42
Miles of single track	244.30	242.56	219.14

Communications

MEXICO STREET RAILWAYS.

To the Editors:

Many derogatory accounts have been given and published of the bad condition of street railways in the city of Mexico. So much have I seen and heard of this kind that upon my arrival here recently I was happily surprised to find a system, with very few exceptions, quite as much up to date as may be found in any city of the same size in the United States. And I will say further that, considering the conditions, especially the class of people the management has to contend with, it is remarkable what is being accomplished. I am certain that those in charge have not been given sufficient credit for what they have done and are doing.

To begin with, all employes in subordinate positions, as well as many of those in positions of trust, are natives. Nearly all speak and understand only the Spanish language. I was told that in the great shops of the Compania Limitada de Tranvias Electricos de Mexico only two men, the master mechanic and his assistant, could speak English. Both are Americans, as are many of the heads of departments. Mexicans, however, are fast fitting themselves for the higher positions and eventually will become the actual operators.

The lower classes, from which the great majority of employes must be selected, are as a rule ignorant, dirty, stupid

Fare Receipt Used in Mexico City.

and short on morals. They have no ideas of responsibility, own nothing but the scant clothing on their backs and perhaps a blanket, which is used for a bed. From such material the management is making responsible, clean and orderly motormen, conductors, clerks, machinists, carpenters, painters, electrical workers, etc. It is no easy task, but it is being done by the establishment of all sorts of ways and means to teach and compel honesty, morality and cleanliness, such as schools for instruction, baths, barber shop, reading rooms, lockers and a tailor to press and clean their clothes, all of which are absolutely free to the men (no games have yet been put in).

Notwithstanding all this it will and does take a long while to make the ordinary native a good, orderly, appreciative employe. It is the right course, however, and is bearing rich fruit in the north. One example I must mention simply to illustrate the patience required in operating in Mexico, where nothing is done today, but promised tomorrow.

Many conductors, after quite a long service on certain lines, do not know the names of the streets they run on, nor the names of the cross streets, hence never dream of calling out any stops. One must know by some means where he wants to go and what car to take before he gets aboard or else he will be sure to go the wrong way. Conductors only collect fares and attend to the trolley. They have no care for the passenger; it makes no difference how he or she gets off or on, except sometimes they will give the starting bell. The motorman generally watches carefully, however, and has mirrors at each side of him so that he can see what is going on behind without turning his head.

The conductors are not entirely to blame for not calling

the names of the streets, because many streets change their names every block or two, although running in straight line.

Fares are collected by the conductor, who gives a thin paper ticket to the passenger, punched with the date. Inspectors board cars at many places, examining tickets in the hands of the passengers to see that they have been properly issued. Should the conductor have missed a fare the passenger is promptly obliged to pay and get his ticket, which, like all the others, the inspector either punches or tears partly in two. This plan is good and works well, especially on cars where several rates are charged to different places. It is quite similar to the system used in London and other parts of England on tramways and buses. On a few lines the regular American fare register is used; but, although inspectors are used with this system, I am quite sure it does not equal the ticket in fare collection.

The tickets used are printed at the company's head office. The counting, checking and caring for all tickets are done at the printing office. Smoking is permitted on all cars and in all places in and about the car offices, shops, banks, and, in fact, everywhere except in the churches. Several attempts have been made to stop the smoking on the inside of cars, but they have failed.

The motorman seems to understand his business very well and is much more careful than in the United States. This is quite necessary, because the peons and people generally on the narrow streets are the most careless that I have ever seen, both in walking and driving. Stops are always made before crossing a street intersection and the rule for passengers to board by the rear and alight by the front step is well enforced. No one is permitted to ride with the motorman, but the rear platform is almost always crowded; hence the management does not believe the pay-as-you-enter car would be a success in this city, on account of its large platforms.

The front doors of the cars are painted the same color as the car body so as to protect the sight of the motorman at night. Many of the cars of this company are single-ended, turning on loops. All cars pass around loops in the great plaza in front of the celebrated cathedral. This is a great convenience to the public, as it is the real center of the city. Should one make a mistake it is easily remedied by remaining on the same car, which, although it probably will return by another street, will inevitably reach the plaza. The reason for using different streets for the return trip is that generally they are too narrow to accommodate street cars with double track and vehicular traffic also; so only one track is laid on the street, and that usually from three to four feet between the curb line and the nearest rail.

The company has several cars already built without monitor roofs, with ventilators along the top similar to the General Electric gasoline-electric car, illustrated on page 110 (January 25, 1908), of your valuable journal. These cars seem to give perfect satisfaction and the difference in style is not noticed, while both cost and weight have been cut down considerably.

T. J. NICHOLL.

Mexico City, February 13, 1908.

The Western Ohio Railway has arranged, in connection with the New York Chicago & St. Louis Railroad, an excursion to Cleveland on February 22. The route is via the Western Ohio Railway to Mortimer, where connection is made with the steam road for the balance of the trip to Cleveland. Round-trip rates were as follows from points on the Western Ohio road: Wapakoneta, $2.50; Cridersville, $2.25; Lima, $2.00; Beaver Dam, $2.00; Bluffton, $1.80; Rawson, $1.55. The return tickets are good until and including the regular train leaving Cleveland at 7:33 p. m. on February 24. In advertising this excursion by poster, Charles F. Price, general passenger agent Western Ohio Railway, called attention to various attractions at Cleveland theaters.
